Mr. President, this amendment, cosponsored by Senators AIKEN, HUMPHREY, BENNETT, TUNNEY, BURDICK, MOSS, MAGNUSON, MCGOVERN, JACKSON, MUSKIE, and HART will strike the language reported in the Senate version of H.R. 14896. At the present time vending machines are permitted in school cafeterias if they are part of the school lunch program, but vending machines are not permitted for the distribution of competitive food items. However, vending machines are permitted outside the cafeteria for distribution of items such as soft drinks, if the school so permits.

I ask this amendment be accepted without any desire to cut off entirely the use of vending machine devices. These are in wide use now and my amendment would have no effect at all on their continued use. Indeed, the fact that this legislation authorizes $40 million for school equipment, some of which will be spent on vending devices, makes clear there is no effort to discontinue their present use.

The purpose of this amendment is to retain the integrity of the existing school lunch program, and nothing more.

Mr. President, under current law the Secretary of Agriculture has authority to regulate competitive food services. The Senate version of H.R. 14896 would remove this authority from the Secretary and, in effect, leave the question of competitive food services up to the States and local school districts. School lunch directors are fearful they would be forced to allow vending machines in school cafeterias. Certainly this would weaken their effort to provide balanced and nutritious meals for all children.

The House version of H.R. 14896 would allow competitive food services to offer the sale of "nutritious food through vending machines—where the proceeds of such sales will inure to the benefit of the schools or of organizations of parents approved by the schools and (where) such sales will not substantially interfere with the (school lunch) programs so authorized."

Unfortunately, there is no workable definition of "nutritious foods" which could well mean "empty calories" and there would be substantial pressure not only to install such machines but, also, to use them to the advantage of fund-raising organizations.

In my view we should retain the existing system while continuing to improve the quality of meals offered in the national school lunch program.

Returning to the original language of the School Lunch Act does not foreclose the option in the hands of the Secretary of Agriculture to allow certain exceptions. For example, senior high school students may desire soft drink machines in school cafeterias and if, in the Secretary's opinion, there is no sound reason to prohibit soft drink machines, the authority exists for him to take action.

Now, however, I think it is best to proceed as we have in the past and safeguard as well as we can the school lunch program. I urge the adoption of my amendment.

Mr. President, I cite my friend, the Senator from Vermont (Mr. AIKEN) on this, and he will back me up, I am sure. They want the Secretary to have the exercise of this authority.

Mr. AIKEN. Mr. President, probably in some sections school authorities would come under considerable pressure to install vending machines.

Mr. CASE. Mr. President, I thank the Senator from Vermont. Whenever one finds that he is on the same side as the Senator from Vermont, he usually finds himself to be quite comfortable. I am quite comfortable in this instance.

This is not an antivending machine amendment at all. It is quite possible to have vending machines. The Secretary has permitted them in numerous instances under the existing law. And that would still stand if my amendment were to be adopted.

Mr. President, I ask unanimous consent to have printed in the RECORD a letter from the American Dental Association in support of my amendment.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AMERICAN DENTAL ASSOCIATION,
Washington, D.C., August 14, 1972.

Hon. CLIFFORD P. CASE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR CASE: Enclosed is a partial bibliography of sources and explanatory material on the relation between sugar-rich foods and dental decay to document the statements in our letter to you of August 8, 1972. We hope this material is of use in restoring proper regulatory authority over competing food services and vending machines in this country's school systems.

Sincerely,

CARL A. LAUGHLIN, D.D.S.,
President, American Dental Association.
EDDIE G. SMITH, D.D.S.,
President, National Dental Association.

PARTIAL BIBLIOGRAPHY

The relationship between sugar-rich foods and dental decay was positively established and recorded in the Journal of the American Dental Association, in a well documented

study published in 1953 by the Council on Dental Health and the Council on Dental Therapeutics of the American Dental Association.

Because of the Associations' responsibility for safeguarding the dental health of the American public, the Councils were charged to document the known or potential hazards to dental health resulting from the frequent consumption of sweetened beverages and other sugar-containing substances. The Councils concluded:

"From the health point of view, it is desirable especially to have restriction of such use of sugar as is represented by the consumption of sweetened carbonated beverages and forms of candy which are of low nutritional value. The Council believes it would be in the interest of the public health for all practical means to be taken to limit the consumption of sugar in any form in which it fails to be combined with significant proportions of other foods of high nutritive value."

The report may be found in the October, 1953 issue of the Journal of the American Dental Association, p. 387.

Since that report, several independent studies have added to and amplified the conclusions reached by the Associations Councils. A partial listing of the most recent studies follows:

USE OF VENDING MACHINES IN SCHOOL LUNCH CAFETERIAS

Mr. HUMPHREY. Mr. President, I rise in support of the Senator from New Jersey's amendment. I joined as a cosponsor in offering this amendment because total removal of the Department of Agriculture's authority to regulate competitive food services in schools where school lunches are offered is not the answer. The committee amendment would totally remove the current authority of the Department of Agriculture to issue such regulations. The amendment which Senator Case is offering would restore—or maintain—existing law on the matter, which for the present, is what I believe should be done.

Many of us recognize the desire on the part of high school students and some local school officials to further the use of vending machines in schools. However, we also recognize that unless such a move is carefully handled, the entire school lunch program can be easily subverted.

As Senator Case has indicated, vending machines are now permitted in schools, in a limited fashion. They are permitted in offering certain school lunch items and are also permitted outside school cafeterias as it relates to soft drinks and the like.

Removal of the Department's existing authority to regulate this matter would likely subject local school officials to an onslaught of pressure by local vending machine owners to invade school lunchrooms with food items containing "empty calories" and other items which contribute little or nothing to meeting the daily dietary needs of students.

I have received close to 300 telegrams and letters from school food service officials in opposition to the Senate Committee amendment.

The House passed version of this bill contains a provision to permit the use of vending machines in offering "nutritious" foods, with the proceeds from such sales going to student organizations or the schools themselves. The House language also requires that such sales will not substantially interfere with the school lunch programs. In that the terms "nutritious food," and "substantially interfere with" are not defined in the House bill, I am concerned about altering existing law with that language as well.

It would seem to me that the Secretary of Agriculture has all the authority he currently requires to either restrict or permit the use of these machines in schools without making any changes in the law, including permission to use such machines to offer "nutritious" foods—the specific criteria for which he should determine, not Congress.

I believe the Senate should support the amendment being offered by Senator Case and keep existing law intact on this matter. The Secretary should then be urged to examine this matter carefully to determine to what extent, if any, current regulations concerning the use of these machines should be liberalized in keeping with the basic dietary objectives of the school lunch program.

Mr. President, I want to point out that in the State of Minnesota, while we do permit vending machines, they are only permitted during what they call the school lunch hour because of the concern of school authorities over the lack of what we call nonnutritional food items. An effort has been made to keep the school lunch program a real nutritional program.

Mr. CASE. Mr. President, I thank the Senator from Minnesota.

Mr. ALLEN. Mr. President, among other things section 10 of the Child Nutrition Act of 1966 requires the Secretary of Agriculture to prescribe such regulations as he may deem necessary relating to the service of food in participating schools and service institutions in competition with the programs authorized under that act and the National School Lunch Act.

As a result of the statutory language and the legislative history as contained in Senate Report 91-641, the regulations promulgated by the Secretary of Agriculture effectively prohibit the operation for profit of food services or vending machines, in competition with the nonprofit school lunch program.

Section 7 of H.R. 14896, as approved by the House of Representatives, amends section 10 of the Child Nutrition Act of 1966 to provide that regulations governing school food programs permit the sale of nutritious foods through vending machines where the proceeds of such sales will inure to the benefit of the school and such sales will not substantially interfere with the programs authorized.

In its consideration of the bill now before the Senate the Senate Committee on Agriculture and Forestry adopted a subcommittee recommendation to rescind the statutory authority of the USDA to regulate the sale of food items in competition with programs authorized under the Child Nutrition Act and the National School Lunch Act.

In so rescinding this authority, the committee intends to leave the regulatory authority regarding competitive food services up to the States and local governments.

In its report the committee indicated that it did not wish to imply that it disapproved of the regulations issued by the USDA pursuant to their statutory authority. However, the committee did feel that the wide range of conditions which prevail around the country can best be taken into account by State and local authorities.

Under no circumstances is it the intent of the committee to expressely authorize competitive food services being served in competition with the school lunch and school breakfast programs.

Under the committee language, each State and local jurisdiction has the full right to adopt whatever regulations it deems appropriate under those local conditions which exist. Further, each State and local jurisdiction may continue the existing prohibition with respect to competitive food services. The committee is entirely silent in this area.

In essence, under the amendment adopted by the Committee on Agriculture and Forestry, each State or local jurisdiction is free to act in its own best interest and in the best interest of the children who participate in the school lunch and school breakfast programs.

Mr. President, the amendment now before the Senate would, in effect, continue the authority for the Federal Government to control from that level such food services which are complementary, supplementary or even in competition with the regular lunch and breakfast programs.

Although proper nutrition is the primary purpose of the programs the Committee on Agriculture feels that this can best be accomplished at the local level.

I hope the amendment will be defeated.

In other words, the committee bill would allow that decision to be made by the local school authority. The local school authority would decide whether peanuts, candy, or other food items could be sold in the school building.

As it is now, the Secretary promulgates rules that withdraw from the States and local governments the authority to decide this question.

So the committee recommended and the bill reported by the Committee on Agriculture and Forestry would leave that authority in the hands of the local authority. It does not require that other items be sold over the counter or through vending machines, but it does permit the local school board to decide the question, to prescribe the rules, and set the conditions as to the items that may be sold.

It occurred to me it would be a whole lot better for a child to be able to purchase an apple, a bar of candy, or peanuts, or other food items in the school cafeteria, rather than to spend it on cigarettes or worse items which he might do if he wanted to spend his money somewhere else for something other than the school lunch program.

Possibly many children would not want to participate in the lunch program but would prefer to bring a sandwich from home and might want a soft drink or a bar of candy to go with the food that is brought from home.

Under the present regulations, the Secretary sets rules that forbid local governments, local school boards having their own regulations. Many of these counter sales or vending machine sales inure to the benefit of an athletic association or a student organization. Many of them inure to the benefit of a band. If the local school people want to permit the sale of nutritious school items there in the school for whatever purpose they want to have it, let the local people decide. Let the local people decide how they are going to run the program, without specific directives from Washington.

I understand the chairman of the committee, the Senator from Georgia (Mr. TALMADGE) received a number of communications from high school students saying they need the funds from these operations to carry an extracurricular activities at the schools, and we hear a lot of talk about letting the students in our high schools and colleges have some little say, some little part of the action, some little right to decide some of these questions.

Here we cut them off, here we cut off the taxpayers and the school boards and the students, if the amendment of the distinguished Senator from New Jersey is agreed to. Local authorities would have no control over whatever, except upon leave of the Secretary of Agriculture, whether nutritious food items outside the school lunch program may be sold in the schools. That does not sound like fair play to me. Leave these local matters to local control and local decision. The amendment of the Committee on Agriculture and Forestry merely leaves this question for decision by the local authority and takes that out of the hands of the Federal Government.

Mr. COTTON. Mr. President, will the Senator yield for a question?

Mr. ALLEN. I yield.

Mr. COTTON. I understand the Senator makes plain the authority involved, but has the Secretary of Agriculture or has any Secretary of Agriculture tried to keep these vending machines out of the schools?

Mr. ALLEN. Yes, sir.

Mr. COTTON. In other words, in this present year are there schools not permitted to have them?

Mr. ALLEN. The Senator is correct. That is my understanding.

Mr. COTTON. On what ground would it be? Would it be that the profit is made by someone who should not make the profit?

Mr. ALLEN. No; I have not seen the grounds, but I assume the grounds would be that if the child had a candy bar he might not go in and eat a school lunch. I assume that is the reason.

Mr. COTTON. I thank the Senator.

Mr. CASE. Mr. President, I yield myself such time as I may require, and I yield to the Senator from New Hampshire for a question.

Mr. COTTON. I thank the Senator.

The PRESIDING OFFICER. The Senator from New Hampshire is recognized.

Mr. COTTON. I find myself still a little confused. It would be my own feeling that it is a good thing to have people have access to peanut bars and candy, for the reason suggested; it is better than marihuana or something else. But it is not clear to me whether the exercise of the authority of the Secretary has been to keep them out or to forbid private profit to be made, or what the Secretary has heretofore done that my friend from New Jersey wants to change.

Mr. CASE. I would be happy to give the reasons, as far as my experience and knowledge go. We are talking about an experience that has existed. My amendment would retain the present situation and present authority of the Secretary of Agriculture. As far as I know that authority has never been exercised capriciously or to the disadvantage of any school or any school district.

The matter of the kinds of things that are permitted has been decided by the Secretary under broad guidelines, and I think well, insofar as it is possible for school children to buy things in the hall right outside that are not permitted to be bought in the cafeteria. But to permit the purchase of things that are not a part of the school lunch program by permitting them to be sold in vending machines in a school cafeteria seems to be unwise. As the Senator from Vermont sagely commented before, school districts in his State and school districts in my State are very happy to have it handled by the Secretary of Agriculture so they are immune from the kinds of pressure from profit-making institutions that are not in the interest of the children.

Mr. COTTON. I gather, then, that these vending machines have been allowed in the building, but not in the lunchroom?

Mr. CASE. That is exactly right.

Mr. President, if I have any more time, I yield to the Senator from Kentucky.

Mr. COOPER. Mr. President, the Senator from Alabama makes a persuasive case for local rights and also the right to let children make their choice. Nevertheless, I support the amendment of the Senator from New Jersey for this reason: We have worked with the school lunch program and also the school breakfast program. Their purpose is to prevent hunger and, beyond that, to provide nutrition for them. I know the experience of the town I live in, and I am sure it is true of others, and the wonderfully nutritious food that has been provided there. It is human nature for children to like candy bars, and to bypass a nutritious lunch and buy a candy bar. If we had no school lunch program, I would not object to that, but it seems to me we are compromising the effort of this Nation to provide nutritious food for children by providing competition for the food served in the lunchroom. If they want to, they can still buy it out in the hall.

Mr. TALMADGE. Mr. President, will the Senator yield?

Mr. COOPER. I yield.

Mr. TALMADGE. Most of these schools are located in areas where they are in close proximity to drugstores, filling stations, various selling enterprises of all kinds. If these foods are not available for them in the schoolhouse, all they have to do is walk across the street, off the schoolground, and buy them across the street. They then run into the problem of the risk of being hit by an automobile and also being proselytized by the peddler of drugs. It seems to me that if they want to buy these commodities, which are legal and legitimate, that right ought to be placed in the authority of the local people. They ought not to be left the choice of having to buy them across the street, and run the risk of being hit by automobiles when they leave the schoolhouse grounds and the possibility of being proselytized by purveyors of drugs.

Mr. COOPER. I still say we should not have that competition.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. CASE. I yield to the Senator from Vermont.

Mr. AIKEN. Mr. President, I would say that in areas with populations less than 20,000 new schools are not generally located across the street from the drug store. They are located a considerable distance out of town. This adds to the cost of transportation, of course, but in my State, at least, the majority of new schools are not located in the vicinity of drugstores.

The amendment of the Senator from New Jersey does not prevent a vending machine where the vending machine is found to be desirable by the Secretary of Agriculture.

Mr. CASE. I appreciate the contribution of the Senator from Vermont and also the contribution of the Senator from Kentucky. I think that is in accord with the experience over the country as a whole.

I want to make one point finally. Of course, we are not against vending machines. If vending machines are to be used, they can be used, under the act, for the purveying of the school lunch itself, so this is not an antivending machine amendment at all.

Mr. AIKEN. May I add that in my Vermont they seem to be almost solidly in favor of letting the Federal Government decide whether vending machines shall be located there, because it is very hard to resist them when vending machine companies are willing to make substantial contributions toward buying basketballs or something else that the school needs.

Mr. CASE. Mr. President, I can think of no better support than that from the Senator from Vermont. When he supports me, I think of Damon and Pythias.

Mr. BEALL. Mr. President, will the Senator yield?

Mr. ALLEN. I yield to the Senator from Maryland.

Mr. BEALL. I thank the Senator. I ask for the attention of the Senator from New Jersey and the Senator from Alabama because I want to be sure I understand the amendment. As I understand the amendment, it does not apply just to vending machines; it applies to any discretionary authority local schools may have with regard to the selection of the food items that are going to be served in the various schools. As I understand the bill as it is written, the local school authorities may, if they choose, add certain items to those already prescribed by the Secretary of Agriculture to be served in school cafeterias or on school premises.

Let me give Senators an example, if I may. In suburban Maryland we have two very large school districts in Prince Georges County and Montgomery County. Those two school superintendents, as well as those in the three larger school districts in my State, have come to my office and asked if we could do something about the authority that the Secretary of Agriculture exercises over their school lunch programs. It has been pointed out to me that in the largest county in our State in the year 1969–70 the school system lost $239,000 from the school lunch program mainly because the students were not buying the food prescribed. They were leaving the school or were not buying at all because they did not like the menu being offered. The next year the school authorities allowed the students to have an a la carte menu in addition to the lunch prescribed, so a student had a choice of two menus. He could buy the lunch prescribed by the Department of Agriculture or could go through the a la carte line and buy a hamburger or hotdog and a Pepsi-cola or whatever else he had in mind.

As I understand the amendment offered by the Senator from New Jersey, it would allow the Secretary of Agriculture, as he has already done, to prohibit these school districts from offering an a la carte menu.

Mr. CASE. It would leave the same authority he has now in the Secretary of Agriculture.

Mr. BEALL. The point is the Secretary of Agriculture has prohibited these school districts from having this choice.

When we talk about high school students, we are talking about sophisticated young people who have achieved an age to make a choice as to what they are going to eat. All we are asking is that the school officials have a choice of offering a menu that students would like rather than that prescribed by the Secretary of Agriculture.

School officials who have come to me have indicated the Secretary has created a very serious problem because he prohibited them from allowing the students to make a choice. As a result, the students either are not buying lunch in the school or they are going outside to buy food. Therefore, the school is not realizing the financial benefits from operating the a la carte line.

Mr. CASE. Mr. President, will the Senator yield?

Mr. BEALL. I yield.

Mr. CASE. The Senator from New Jersey has no desire to abolish any reasonable control. How would the Senator feel about an amendment which left to the local school districts in the case of high schools that choice but took it away from the grade schools?

Mr. BEALL. I am concerned with the high schools.

Mr. CASE. I think that is not unreasonable.

Mr. BEALL. I think that amendment would satisfy my objection.

Mr. CASE. If I may, and if there is no objection, Mr. President, I would like to amend my amendment so that it applies only to schools below high school.

The PRESIDING OFFICER. The Senator has a right to modify his amendment.

Mr. CASE. I so move.

The PRESIDING OFFICER. Would the Senator send his modification to the desk?

Mr. CASE. Yes; if we may have a couple of minutes to write it up.

Mr. ALLEN. Mr. President, I suggest the absence of a quorum and ask unanimous consent that it be charged to both sides.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ALLEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered. Who yields time?

Mr. CASE. Mr. President, I have sent a modified amendment to the desk which we have worked out to meet the points according to the understanding we tentatively had with the Senator from Maryland (Mr. BEALL).

Mr. ALLEN. Mr. President, will the Chair have the modification read?

The PRESIDING OFFICER. The amendment, as modified, will be stated.

The assistant legislative clerk read as follows:

On page 15, strike out all after line 22, over to and including line 13 on page 16, and insert: "Such regulations shall not prohibit the sale of competitive foods in senior high school level food service facilities or areas during the time of service of food under this Act or the National School Lunch Act if the proceeds from the sales of such foods are deposited into the account of the food service programs under this Act and the National School Lunch Act."

On page 16, line 14, strike "Sec. 8" and insert "Sec. 7."

The PRESIDING OFFICER. Who yields time?

Mr. ALLEN. Mr. President, I hope that the distinguished Senator from New Jersey will explain the effect of his modification, and then I shall make some comments.

Mr. CASE. I shall be happy to.

Mr. President, the effect of the amendment as it now stands would be to restore to the Secretary of Agriculture, or to retain in the Secretary of Agriculture, authority in regard to the school lunch food and competitive items of food in all but senior high schools. It would retain, in effect, the committee language, insofar as the senior high schools are concerned. That is the substance of it.

Mr. ALLEN. Mr. President, I yield myself such time as I may require.

I do not feel that the modification removes the objection to the amendment. What it does is to withdraw from the Secretary the right to make regulations as to sale of food items outside the school lunch program in junior high schools and grade schools, leaving him forbidden from making such regulations for high schools.

I do not believe that the Secretary should have any such split authority. Either give him authority to make regulations or give the local governments the right to make the regulations.

If the local governments want to permit sale of nonlunchroom items in high schools, let them do it. If they want to permit such sales in grammar schools and junior high schools, let them do it. If they want to forbid sales in all schools, let them do it. Do not just give either side half a loaf.

That is exactly what would happen here. We would have split authority and always be wondering just what the Secretary was going to do with the grade schools, and then he would have no authority over the high schools. There we would give the local governments authority, over the high schools, but not give them authority over the grade schools. If we are going to entrust the local governments with authority over high schools, we should give them authority over the grade schools as well.

Mr. TALMADGE. Mr. President, will the Senator yield?

Mr. ALLEN. I yield.

Mr. TALMADGE. Is it not true that in some places in this country we have grade schools and high schools in the same building?

Mr. ALLEN. Yes, that is true.

Mr. TALMADGE. Is it not also true that there, under such a provision as the Senator from New Jersey has suggested, we would have local authority over the grade schools and grammar schools, and Federal authority over the high schools, all in the same building?

Mr. ALLEN. Just the other way around.

Mr. TALMADGE. The other way around?

Mr. ALLEN. Yes.

Mr. TALMADGE. Will the Senator from Alabama tell me how it would be possible to enforce such a regulation? Would it not be necessary to place a guard at a certain door in the school building to tell the seventh grader, "You cannot go through this portal, because the Secretary of Agriculture has authority there," and would it not be necessary to place a guard at another door to tell the high school student, "You cannot go through that portal, because it comes under the regulations of the local authority?"

Mr. ALLEN. That would seem to be the situation.

Mr. TALMADGE. Does not the Senator feel that that would be a preposterous situation?

Mr. ALLEN. That is the feeling of the Senator from Alabama.

Mr. TALMADGE. It is the feeling of the Senator from Georgia also.

Mr. ALLEN. Mr. President, I reserve the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. CASE. The chairman of the committee is a most loquacious debater. He presents a situation which is a verbal monstrosity, but a very practical thing. It is perfectly possible to have a line for high school students in a mixed cafeteria, if you want to. It is not very difficult to separate high school children from other children. I do not know what the experience is in the Senators State, but I do not think armed guards are needed to maintain this kind of thing.

I think the Senator's colorful language and enthusiastic support of the committee in this regard is great, but I do not think it is terribly persuasive to those of us who are trying to solve a problem. The problem is simply that we do not want this money wasted; and, even more important, we do not want the health of children to be undermined by the kinds of things that are likely to happen, especially with smaller children, when they are given money to buy food and cannot be guided in their choice of nutritious food. This is the whole business.

I know that the Secretary has not misused or abused his authority here. It is my hope that the Senate will support a continuation of the present authority, with the modification in respect of high school cafeterias which I have been happy to make at the suggestion of the Senator from Maryland.

I ask unanimous consent to have the names of the Senator from Minnesota (Mr. HUMPHREY) and the Senator from West Virginia (Mr. RANDOLPH) added as cosponsors of the modified amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. TUNNEY. Mr. President, I am pleased to join today with my distinguished colleague from New Jersey and other distinguished Senators in offering Amendment No. 1433 to H.R. 14896, the National School Lunch Act.

This amendment, which has received strong support from the American Dental Association and the National Dental Association, would continue the authority of the Secretary of Agriculture to regulate the use of vending machines in school cafeterias.

Dietitians, nurses, teachers, parents, and other concerned adults are eager to insure that their children receive nourishing, balanced lunches at school. Obviously, parents cannot always be at school to supervise the food their children choose to eat. The purpose of this amendment is to assure that children receive that balanced meal—and are not enticed to spend their money on "filler" foods or on sweets, which alone cannot substitute for a nutritionally balanced meal.

I have two concerns, Mr. President. First, I desire that our children be provided meals which are high in nutritional content. Many families cannot afford to give their children balanced meals every day, and thus the school becomes the place where a child may obtain such a balanced meal. To tempt that child with the novelty of purchasing food from a vending machine would destroy his incentive to purchase the regular, balanced meal offered in the school cafeteria.

My second concern is with regard to the effect on children's health which a diet of sweets from a vending machine would surely affect. School age children are so often tempted by sodas and candy bars, which do have their place in a child's diet as snacks, that I fear they will become a steady replacement for what is considered a balanced lunchtime meal. Products rich in sugar can supplement but cannot substitute for a meal which includes foods from the basic nutritional categories. The hazards to sound oral health are especially great at the age of schoolchildren, and we must take care to see that we do not inadvertently encourage overconsumption of sweets and sugar-rich snacks in place of well-balanced lunches.

As we strive to improve the quality of the existing national school lunch program, we should be careful to insure that we do not undermine the efforts already underway to keep the meals now being provided at the highest possible level of nutrition. I believe our schoolchildren deserve nothing less.

Mr. ALLEN. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator has no time remaining on the amendment.

Mr. CASE. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from New Jersey.

Those who favor the amendment will say "aye;" opposed, "no."

The Chair is in doubt.

Mr. CASE. I ask for the yeas and nays, Mr. President.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from New Jersey. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. ROBERT C. BYRD. I announce that the Senator from Georgia (Mr. GAMBRELL), the Senator from Alaska (Mr. GRAVEL), the Senator from Oklahoma (Mr. HARRIS), the Senator from Wyoming (Mr. MCGEE), the Senator from South Dakota (Mr. MCGOVERN), and the Senator from Rhode Island (Mr. PELL) are necessarily absent.

I further announce that, if present and voting, the Senator from South Dakota (Mr. MCGOVERN), the Senator from Wyoming (Mr. MCGEE), and the Senator from Alaska (Mr. GRAVEL) would each vote "yea."

I further announce the Senator from Georgia (Mr. GAMBRELL) would vote "nay".

Mr. GRIFFIN. I announce that the Senator from Colorado (Mr. ALLOTT), the Senator from Delaware (Mr. BOGGS), the Senator from Tennessee (Mr. BROCK), the Senator from Kansas (Mr. DOLE), the Senator from Nebraska (Mr. HRUSKA), the Senator from Texas (Mr. TOWER), and the Senator from Connecticut (Mr. WEICKER) are necessarily absent.

The Senator from Illinois (Mr. PERCY) is absent to attend the funeral of former Senator Ralph T. Smith.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

If present and voting, the Senator from Illinois (Mr. PERCY) and the Senator from Texas (Mr. TOWER) would each vote "nay."

The result was announced—yeas 46, nays 39, as follows:

So Mr. CASE's amendment was agreed to.

Mr. CASE. Mr. President, I move that the vote by which the amendment was agreed to be reconsidered.

Mr. HUMPHREY. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. JAVITS. I have an amendment which I send to the desk and ask that it be stated.

The PRESIDING OFFICER (Mr. MONTOYA). The amendment will be stated.

The legislative clerk read as follows:

> On page 3, line 8, strike out "service institutions," and insert in lieu therof the following: "service institutions. The term 'service institutions' shall include licensed family day care sites."

Mr. JAVITS. Mr. President, I yield myself 5 minutes.

The PRESIDING OFFICER. The Senator from New York is recognized for 5 minutes.

Mr. JAVITS. Mr. President, this amendment which was called to my attention by the New York City Agency for Child Development, would make licensed family day care sites eligible for the breakfast program.

The only source of funds for the day care breakfast program is section 13—special food service programs—in the National School Lunch Act. Although the act states day care, Headstart, and other nonschool programs shall be eligible for money appropriated for this program, the regulations promulgated under this act exclude family day care sites from participation.

The welfare reform bill already passed by the House and proposed by the Senate Finance Committee, and HEW plans for implementing the provisions of this legislation indicate that about 80 percent of welfare mothers will be referred to family day care sites to enable them to work. Furthermore New York City is just completing a demonstration program funded by an OEO grant that not only developed the capability for but proved the feasibility of family day care breakfast programs. If we are calling for increased usage of family day care sites we must begin to make available to these sites avenues of funding to feed breakfast to these children.

I would like to emphasize the point that this amendment would cover only licensed family day care sites. An OEO funded survey done by Westinghouse Learning Corp., in 1971, entitled "A Day Care Survey," indicates that—

> Less than 2% of the estimated 450,000 family day care homes are licensed, as compared with 90% of the day care centers.

Thus, we are only talking about approximately 9,000 sites which would be brought in under this amendment.

This study also indicates that an average of 1.8 children attend the family day care sites. The usual maximum permissible number is six, although in New York the average attending each site is three; therefore, the extrapolated national average is 3. Figures on the cost per child, a cost of $60 per child per year for breakfast is achieved. In terms of cost for the entire country under this amendment, if every eligible site applied for this program, the cost would be no more than $1.5 million. If only average participation by these sites is evidenced, the anticipated cost would be less than $1 million.

Thus, for a relatively small amount of money needy children in the family day care setting could be served a nutritious breakfast for which I believe they are eligible under the act already.

Another matter of great concern to me which I think appropriate to note at this point also is the fiscal year 1973 funding for special food service programs. In New York City alone there will be 15,000 children newly eligible under the section 13 breakfast program who will not be fed unless the intended full funding is carried out.

Because the fiscal year 1973 appropriation for the special food service program provides only enough funds to continue at the current level of enrollment, Senator HUMPHREY, on July 27, 1972, introduced an amendment to the appropriations bill to increase the child nutrition program appropriations from $526 to $782 million; of this amount approximately $50 million would have been provided for nonschool food programs. After an agreement with Senator MCGEE, Senator HUMPHREY withdrew his amendment—on the assurance from Senator MCGEE that "there are sufficient funds in the bill to take care of the present—funding levels—and that a review can be made when the new legislation becomes a reality."

The new legislation to which he was referring was H.R. 14896, the bill before us now. As my colleagues are aware this legislation would extend special—nonschool—food assistance through June 30, 1975, and increase the appropriation to "such sums as are necessary." The understanding in this particular authorization item is that all institutions making application for such assistance, which agree to carry out the program in accordance with the act, will receive such financial assistance. To cover the children already eligible but not receiving breakfast for lack of funds and to cover anticipated eligibility—that is, those children New York State expects to enroll in preschool programs during the fiscal year—my own State of New York would need $3 million over and above what they can expect to receive from the recently passed legislation.

I point this out to the Members of the Senate in an effort to assure that this promised funding will be available, and to suggest that the members should read the congressional intent to mean more money than appeared in the President's budget request for special food service programs. I urge also that supplemental fund adequate to carry out this program be appropriated by the Congress at the earliest possible time.

With reference again to the particular amendment which I have called up I think we should assume that something in the area of 25,000 children would be protected under this particular provision. In terms of the cost, if every eligible site applied, the cost would be no more than $1.5 million as I have mentioned. If only the average number participated, that would be two-thirds, it is then anticipated that the cost would be less than $1 million.

My reason for offering the amendment is because we do have such a tremendously low ratio of such day care centers as compared with the total number. My estimate, and I think it is rather general, is that it is not very much in excess of 15 percent, if it is that high. It is probably closer to 10 percent.

Under these circumstances, encouragement should be given to those operations which give promise to relieving this strain without an enormous cost on the day care center.

That is why the family day care idea is such a good one. And we would be proceeding fairly cautiously and conservatively in view of the fact that the amendment is only confined to the licensed slopchutes.

That is why I emphasize the comparatively small number which are licensed. If the number increases, it will be helpful rather than harmful to the country if the program is enlarged.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. AIKEN. Mr. President, when the Senator refers to day care centers licensed by Government agencies, is he referring to Federal, State, or local agencies?

Mr. JAVITS. Yes, I am. In our case it is the State which does the licensing. It would depend upon State law. However, in our case it is the State which does the licensing.

Mr. AIKEN. Mr. President, normally I would probably support the Senator. However, school begins pretty soon. If this bill goes to conference, the probability is that it will not get passed very soon. I have not the slightest idea whether the House will accept it or not.

Mr. JAVITS. I think the House will accept it. I do not think they will bridle at this particular amendment. It is not such a big deal. It does try to deal with the problem I have described.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. JAVITS. Mr. President, I yield myself 2 additional minutes.

The PRESIDING OFFICER. The Senator from New York is recognized for 2 additional minutes.

Mr. JAVITS. Mr. President, it is worthy of encouragement. I would hope very much that the manager of the bill—in view of the fact that it does not involve a great deal of money and that it does represent an excellent incentive and that it is not dreamed up out of my head, but is asked for by a very representative agency—might consider possibly taking the amendment to conference along with the rest of the bill and see if it can be worked out with the House so as to contain this amendment in the bill.

Mr. President, I reserve the remainder of my time.

Mr. ALLEN. Mr. President, would the Senator yield on my time?

Mr. JAVITS. Of course.

Mr. ALLEN. Mr. President, I understood the Senator to say that this would make family day care centers eligible for breakfast programs. Did he mean also lunch programs?

Mr. JAVITS. No, just breakfast, for which they are licensed.

Mr. ALLEN. A family day care center,

which as the Senator says is licensed, is a profitmaking concern, is it not, where a family would take in children and care for them during the day for compensation either from public agencies or from the parents of the children involved?

Mr. JAVITS. Mr. President, if the Senator will allow me to say so, I do not think that it is fair to characterize them as profitmaking any more than one necessarily makes a profit out of taking in boarders.

Mr. ALLEN. They are not like a school lunch program.

Mr. JAVITS. That is true. However, even for the school lunch program, the student pays something. I think it is in that respect in a somewhat twilight zone. The Government entity pays compensation to the family for maintaining that child instead of the child going to a day care center.

I think it is straining the question somewhat, because of the small numbers involved, to say that this is any kind of a profitmaking operation.

Mr. ALLEN. Mr. President, I believe the Senator said that there are some 9,000 such entities.

Mr. JAVITS. Yes; I stated that it is only 2 percent of the aggregate number.

I said that, because of the amendment I have offered, we might get more to apply for a license. There are about 450,000 such day care centers in the United States. However, less than 2 percent of them are licensed. Indeed, what I am suggesting might be a useful way to get them to apply for a license, which I think would be a very highly desirable thing.

Mr. ALLEN. Mr. President, the financial assistance then would be to this family or day care center operated, I assume, by a husband and wife team having between two and three children in the center. How would the Senator determine, with all of them eating there as a family, which was Government assistance and which portion of the meal was paid for by the parent?

Mr. JAVITS. This is all under State supervision. The State pays for the maintenance of the child. And the relationship of the free meal would be to what the State is paying. If the State is paying for three children, the three children would be the only ones available for the free breakfast.

Mr. ALLEN. Mr. President, do these family day care centers qualify under the social programs that the States are now submitting to the Federal Government under the social services program of the HEW?

Mr. JAVITS. I would imagine that some States may seek to do that. I do not think that we could at this stage proceed specifically to ascertain that in all cases, what part of the family day care home is being treated by the State as an expenditure. As to the social services program—on which the Finance Committee under the Senator from Louisiana (Mr. LONG) is considering a ceiling—right now I am sure there is a relation. However, I do not think I could give that in order to give a finite estimate of its relation.

Mr. ALLEN. Mr. President, would they qualify under the day care centers contained in legislation recently passed by the Senate?

Mr. JAVITS. I would think they would, where licensed. I would think it is an effective licensed activity. And the argument made under this amendment would be the same as the argument made for the day care centers generally. In other words, there is no reason why, because they are in a home where the State has supervision and is paying for them, they should be excluded from the opportunity to have breakfast.

Mr. MILLER. Mr. President, will the Senator yield?

Mr. ALLEN. Mr. President, I yield to the Senator from Iowa.

Mr. MILLER. Mr. President, I wonder if the Senator would mind modifying his amendment so that it would read "shall include licensed nonprofit family day care sites."

Mr. JAVITS. That is all right. I will accept that.

Mr. MILLER. Although the Senator pointed out that the line between profit and nonprofit can be rather tenuous, I do believe that the enforcement powers of the State would probably be a little stronger if this were done, and it would diminish the opportunities for abuse.

I would like to suggest to the Senator from Alabama (Mr. ALLEN) that with that modification, including the word "nonprofit" before the word "family" in line 2 of the amendment, that we take the amendment and it will at least give us a chance to review it a little more in conference.

Mr. ALLEN. Very well. That would be satisfactory if the Senator would modify the amendment.

The PRESIDING OFFICER. Does the Senator so modify his amendment?

Mr. JAVITS. I modify my amendment accordingly. I am very grateful to the Senator from Iowa and the Senator from Alabama.

Mr. ALLEN. Mr. President, a point of order.

The PRESIDING OFFICER. The Senator will state it.

Mr. ALLEN. Has the amendment been agreed to?

The PRESIDING OFFICER. The modification is now before the Senate. The clerk will report the amendment as modified.

The amendment, as modified, was read as follows:

On page 3, line 8, strike out "service institutions." and insert in lieu thereof the following: "service institutions. The term 'service institutions' shall include licensed non-profit family day care sites."

The PRESIDING OFFICER. Does the Senator so modify his amendment?

Mr. JAVITS. I so modify my amendment.

Mr. President, I yield back the remainder of my time.

Mr. ALLEN. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from New York as modified.

The amendment was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I wish to express my support for H.R. 14896, the Child Nutrition Act of 1972, which was reported by the Senate Committee on Agriculture and Forestry on August 8, 1972, and to express my admiration and appreciation to the chairman of the subcommittee (Mr. ALLEN) and other members of the subcommittee for developing and reporting this legislation.

This bill was developed to insure that adequate funds will be available for the conduct of the summer food service programs for children located in poor economic areas, and in areas which have a high concentration of working mothers. It also updates existing legislation and expands and strengthens the various nutritional programs currently in operation. It was deservedly handled by the Senate Agriculture Committee on an "emergency basis" because these changes are needed to clear up existing uncertainties in the school lunch program, prior to the forthcoming 1972–73 school year. The improvements contained in H.R. 14896 will:

Extend the special food assistance program and the school breakfast program and increase the appropriations authorization for these two programs to "such sums as are necessary."

Authorize the use of $25 million of section 32 funds for the special food assistance program during the period of May 15, 1972, to September 15, 1972, and require the use of section 32 funds "in the amounts necessary" to carry out the regular section 4 operations of the school lunch program.

Provide for an average reimbursement rate of not less than 8 cents per meal in each State in fiscal 1973.

Provide that free lunches will be served to every child whose family income does not exceed a guideline fixed by the State educational agency.

Increase the nonfood assistance—equipment—appropriations authorization to $40 million for each of fiscal years 1973, 1974, and 1975, and $20 million for each succeeding fiscal year thereafter.

Provide for advance payments to the States for the regular school lunch program as well as for the school breakfast program.

Ever since my election to Congress, I have supported the school lunch program and the various changes to improve and strengthen the program which have been enacted into law. I have always believed that we should do all possible to improve the educational opportunities available to the children of this Nation, and by passing this bill we are not only providing nutritious meals for the children of this Nation, but we are also improving their education capacities. Poor nutrition or malnutrition not only arrests the physical development of children, but also impedes their ability to learn.

Mr. President, this program has been in operation for over 26 years, ever since it was started by the late and respected Senator Richard B. Russell of Georgia. I am pleased to note that Senator TALMADGE, who is chairman of the Agriculture Committee, is continuing to improve the child nutrition program. I believe the pending measure is a welcome and needy addition to existing legislation and that it will go far toward making good nutritional programs available to all needy children.

I urge passage of this bill.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment of the amendments and third reading of the bill.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill (H.R. 14896) was read the third time.

The PRESIDING OFFICER. Do Senators yield back the remainder of their time on the bill?

Mr. ALLEN. Mr. President, I would like to commend the distinguished Senator from Georgia (Mr. Talmadge) and the distinguished Senator from Iowa (Mr. Miller), the distinguished Senator from Vermont (Mr. Aiken), and the distinguished Senator from Minnesota (Mr. Humphrey) for their contribution toward the passage of this bill. The bill marks a great milestone in the school lunch program and the whole field of child nutrition. I think it is a great bill that is now ready for passage by the Senate, and it has taken the cooperation of all parties. It is a nonpartisan, bipartisan approach and I feel that the Senate has an excellent bill. I hope the House will accept the bill.

Mr. TALMADGE. Mr. President, will the Senator yield?

Mr. ALLEN. I yield.

Mr. TALMADGE. Mr. President, as I stated earlier, I have the highest regard for the distinguished Senator from Alabama, who is chairman of the subcommittee that held hearings and acted so expeditiously on this matter. He has carried a very heavy load in the Committee on Agriculture and Forestry this year. No burden assigned to him has been too onerous. He has been punctual and he has heard a host of witnesses. I commend the distinguished Senator from Alabama, the floor manager of the bill, and also the ranking minority member, the Senator from Iowa (Mr. Miller), and all the other members of the committee who contributed to the bill. They are entitled to the highest plaudits of the people of this country and particularly the schoolchildren who will benefit by this program.

Mr. MILLER. Mr. President, will the Senator yield?

Mr. ALLEN. I yield.

Mr. MILLER. Mr. President, I echo the sentiments made by the distinguished Senator from Alabama and the distinguished Senator from Georgia. I particularly commend the chairman of the Committee on Agriculture and Forestry and the chairman of the subcommittee for conducting all proceedings related to this legislation in a completely bipartisan fashion. Never once to my knowledge was there anything to indicate any other motive than to do the best we could for the improvement of nutrition in the diets of the schoolchildren of this country. It has been a pleasure to work with and to collaborate with my colleagues on this very important piece of legislation.

Mr. ALLEN. I thank the distinguished Senator. I wish to express appreciation to Michael McLeod, a member of the staff, for his diligent and able work and for his assistance to the committee and to me as manager of the bill. Without his assistance we would not have been able to bring the bill to the Senate at this time. I also express appreciation of the committee as well as my personal appreciation of the committee as well as my personal appreciation to Mr. McLeod.

The PRESIDING OFFICER. Do Senators yield back the remainder of their time?

Mr. MILLER. I yield back the remainder of my time.

Mr. ALLEN. Mr. President, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. ALLEN. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is, Shall the bill pass? The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. ROBERT C. BYRD. I announce that the Senator from Georgia (Mr. Gambrell), the Senator from Alaska (Mr. Gravel), the Senator from Oklahoma (Mr. Harris), the Senator from Wyoming (Mr. McGee), the Senator from South Dakota (Mr. McGovern), the Senator from Wisconsin (Mr. Nelson), and the Senator from Rhode Island (Mr. Pell) are necessarily absent.

I further announce that, if present and voting, the Senator from Georgia (Mr. Gambrell), the Senator from Alaska (Mr. Gravel), the Senator from Oklahoma (Mr. Harris), the Senator from Wyoming (Mr. McGee), the Senator from South Dakota (Mr. McGovern), and the Senator from Wisconsin (Mr. Nelson) would each vote "yea."

Mr. SCOTT. I announce that the Senator from Colorado (Mr. Allott), the Senator from Delaware (Mr. Boggs), the Senator from Tennessee (Mr. Brock), the Senator from Kansas (Mr. Dole), the Senator from Arizona (Mr. Goldwater), the Senator from Michigan (Mr. Griffin), the Senator from Nebraska (Mr. Hruska), the Senator from Texas (Mr. Tower), and the Senator from Connecticut (Mr. Weicker) are necessarily absent.

The Senator from Illinois (Mr. Percy) is absent to attend the funeral of former Senator Ralph T. Smith.

The Senator from South Dakota (Mr. Mundt) is absent because of illness.

If present and voting, the Senator from Colorado (Mr. Allott), the Senator from Delaware (Mr. Boggs), the Senator from Arizona (Mr. Goldwater), the Senator from Illinois (Mr. Percy), the Senator from Texas (Mr. Tower), and the Senator from Connecticut (Mr. Weicker) would each vote "yea."

The result was announced—yeas 82, nays 0, as follows:

So the bill (H.R. 14896) was passed.

Mr. ALLEN. Mr. President, I move that the Senate insist on its amendments to H.R. 14896, request a conference with the House on the disagreeing votes thereon, and that the Chair be authorized to name conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. Talmadge, Mr. Allen, Mr. Humphrey, Mr. Miller, and Mr. Aiken conferees on the part of the Senate.

Mr. MANSFIELD. Mr. President, it is with the greatest pleasure that I rise to commend the distinguished Senator from Alabama (Mr. Allen). The outstanding manner in which he steered this measure to such overwhelming success was truly exemplary. Its unanimous acceptance is tribute enough.

I must say that the distinguished Senator from Georgia (Mr. Talmadge) and the distinguished Senator from Minnesota (Mr. Humphrey) also deserve praise. First, as the chairman of the Committee on Agriculture, Senator Talmadge paved the way for the efficient handling accorded to this proposal. The contribution of Senator Humphrey is equally notable. That he was successful in urging his views was due mainly to his strong and compelling advocacy.

Other Senators deserve similar commendation. The distinguished Senator from New Jersey (Mr. Case) was successful in making his case and as always, his views were most welcome. The same may be said for the contribution of the Senator from Maryland (Mr. Beall) and the other Senators who joined to provide this overwhelming achievement in behalf of the Nation's schoolchildren.

THE JACKSON RESERVATIONS

Mr. TUNNEY. Mr. President, I am deeply troubled by the proposed reservations to the SALT agreements. Those reservations stem from two erroneous premises: First, that the United States struck a bad deal in Moscow, that the agreement somehow puts the United States at a disadvantage with regard to the Soviet Union. Second, that a policy which is predicated upon equality of weapons is preferable to a policy which is predicated upon sufficiency of weapons.

Neither of these assumptions is accurate. As to the first, the United States struck a good deal in Moscow, one which enhances the security of both sides and which assures that the United States will maintain a credible deterrent. As to the second, nothing could be more disastrous than predicating our defense policy upon equality of weapons systems and ignoring efficiency. American sufficiency remains so vastly superior to its needs that it strikes me as fanciful to talk in terms of "inferiority" in terms of weapons. We have many times the capacity necessary to cripple and destroy the Soviet Union. To argue under those circumstances that we need more weapons, or that we should measure the number of our weapons rather than their impact, is counterproductive.

Furthermore, Mr. President, it appears to me that the Senator from Washington is anxious to restrict American negotiators in the second round of SALT talks. He wishes to restrict them in needless ways, with language which is predicated upon the two misplaced assumptions I have just mentioned. I believe that such restrictions would be a mistake. They would needlessly complicate future negotiations and they would be likely to impair our ability to conclude meaningful arms control agreements in the future.

I have already set forth in some detail my views on the executive agreements which were concluded in Moscow. They are excellent examples of constructive arms control negotiations. They are a testimony to the solid work of the Nixon administration in the arms control area. They enhance American security.

I cannot, therefore, support reservations which will operate to undermine the agreements which were made in Moscow between the United States and the Soviet Union. These reservations are an attempt by one country, unilaterally and without consultation with the other country, to change the terms of the agreement which was negotiated and accepted by both countries. Elementary standards of Anglo-American jurisprudence indicate that once a bargain is struck, it cannot be altered without the consent of both parties to it. We should not attempt to undermine that principle. Such reservations will serve to inhibit rather than to enhance arms control efforts which are so vital to the needs of this Nation.

ENROLLED BILLS PRESENTED

The Secretary of the Senate reported that today, August 16, 1972, he presented to the President of the United States the following enrolled bills:

S. 559. An act for the relief of Albina Lucio Manlucu;

S. 889. An act to restore the postal service seniority of Elmer Erickson; and

S. 2704. An act for the relief of Rita Rosella Vallerini.

LEGISLATIVE PROGRAM

Mr. SCOTT. Mr. President, I rise to inquire of the distinguished majority leader as to what is the order of business for tonight and thereafter.

Mr. MANSFIELD. Mr. President, in reply to the distinguished Republican leader, the Senate will shortly take up the disaster relief appropriation bill, which was reported by the Appropriations Committee this morning.

It had been contemplated that following that we would take up the continuing resolution, but at the request of the distinguished chairman of the committee, that will be the first order of business tomorrow morning.

Mr. JAVITS. Mr. President, will the Senator answer a question on that point?

Mr. MANSFIELD. Yes.

Mr. JAVITS. When can we get a copy of that continuing resolution? Apparently there are some serious questions which will depend on the text.

Mr. MANSFIELD. It will be the first order of business tomorrow.

Mr. JAVITS. I mean when can we get what the committee reported?

Mr. MANSFIELD. I have to yield to the distinguished chairman of the committee for an answer to that question.

Mr. McCLELLAN. Mr. President, I understand we have copies. It has not been printed. But we will supply them, anyway.

The PRESIDING OFFICER. Copies will be distributed.

Mr. JAVITS. I thank the Senator.

Mr. MANSFIELD. Following that, and I am sure the distinguished Senator from New York as well as the distinguished Senator from Massachusetts will be interested, we will take up S. 32, the National Science Foundation bill; and following that, we will either return to the interim agreement or lay before the Senate the revenue sharing bill. I do not think it will be possible to complete either of those before the Senate recesses in deference to the Republican Convention beginning on Monday next, as the Senate recessed in deference to the Democratic Convention previously. Both of those measures will require a good deal of discussion, and I am sure there will be some votes; but when the votes will occur I am unable to say at this time.

Mr. SCOTT. I might say that I have heard from various Governors, and I am sure the mayors also are very much interested, as to when we can consider revenue sharing. I hope we will find a way to lay it down, along with the interim agreement, before we recess, or that we can give assurances that it will be, with the interim agreement, one of the two tracks we will pursue upon our return, so that Governors who are busy with their budget preparations may be able to do some contingency planning. I know it would reassure them very much if we could make it clear that the Senate does not intend to adjourn without disposing of revenue sharing.

Mr. MANSFIELD. The Senator is correct, and I can assure him that at the very least the revenue sharing bill will be made the second track business, along with the interim agreement, which is still the pending business.

I have been informed that there may well be rollcall votes on the Hurricane Agnes bill tonight.

Mr. SCOTT. Let me put that in the form of a question. Does the distinguished majority leader expect there will be rollcall votes on the Hurricane Agnes relief measure?

Mr. MANSFIELD. Making a 180-degree turn, is there any possibility that there will be rollcall votes on that bill tonight, either on amendments or on passage?

Mr. McCLELLAN. Mr. President, I have no information. No one has suggested to me that he intends to offer any amendment to that bill. If no amendments are offered, I think it can be disposed of rather quickly; and I do not know whether it is the wish of any Senator to have a rollcall vote on passage. I do not know that it will be necessary, but I would like to ascertain now if there is anyone who desires a rollcall vote, so that we can all be apprised of that fact and be governed accordingly. If there is no demand for it, I see no need for it, unless it is asked for.

Mr. MANSFIELD. That is fair enough. The joint leadership has no desire to ask for a yea-and-nay vote. It is late enough, and will be later when we get to the question of passage.

There is no indication that there will be amendments at all. This is a most important bill.

Mr. McCLELLAN. Will the majority leader yield?

Mr. MANSFIELD. Yes.

Mr. McCLELLAN. Of course, if there are amendments offered, and if amendments should be agreed to, it may be advisable to have a rollcall vote; but assuming no amendments are agreed to, I see no need for a rollcall.

Mr. SCOTT. I thank the majority leader.

Mr. CANNON. Mr. President, will the majority leader yield?

Mr. MANSFIELD. I yield.

Mr. CANNON. Is there a time limitation on the disaster relief bill?

Mr. MANSFIELD. No.

SUPPLEMENTAL APPROPRIATIONS FOR DISASTER RELIEF, 1973

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of the disaster relief bill.

The PRESIDING OFFICER. The bill will be stated by title.

The legislative clerk read as follows:

A bill (H.R. 16254) making supplemental appropriations for disaster relief for the fiscal year ending June 30, 1973, and for other purposes.

The PRESIDING OFFICER. Without objection, the Senate will proceed to its immediate consideration.

Mr. McCLELLAN. Mr. President, the pending bill, the Disaster Relief Supplemental Appropriations Act, 1973, provides funds to aid hundreds of thousands of Americans who are struggling to rebuild their lives after the destruction wrought by tropical storm Agnes, the worst natural disaster in American history in terms of property damage and the territory affected in the following seven States:

Florida, Virginia, West Virginia, Maryland, Ohio, Pennsylvania, and New York.

In addition, the pending bill contains funds applicable to the recent destructive flood which devastated Rapid City, S. Dak.

As stated in the report of the committee:

> In a disaster of this magnitude, the full impact on thousands of persons affected cannot be measured solely in dollar amounts or estimates of damage to real and personal property. Individual losses must also be considered in terms of loss of loved ones, loss of jobs, disruption of families, personal privation and anxiety about the future.

Mr. President, the pending bill recommends new obligational authority in the amount of $1,587,300,000, the same as approved by the House. This sum is an increase of $17,500,000 over the amounts requested in House Document 92-325, totaling $1,569,800,000. Also, the bill provides for transfer authority in the amount of $20,000,000 for the Small Business Administration which also has been approved by the House.

In addition to the $1,587,300,000 recommended by the committee, it is also proposed to provide $50,000,000 for the relief of flood victims by the reprograming of funds already available to the Department of Commerce for repair of public works, by the Department of Labor to hire workers for cleanup and restoration, and by the Department of Housing and Urban Development to assist communities in planning their reconstruction efforts.

Chapter I relates to the Department of Agriculture, Farmers Home Administration. For this agency, the sum of $1,800,000 is recommended to provide additional funding for administrative expenses which will be incurred in meeting the increased workload. The Farmers Home Administration estimates that, although $120,000,000 will be required to make housing loans in recently declared disaster areas, such loans can be made from presently available loan authority.

Chapter II of the bill relates to the Department of the Army, Corps of Engineers, for which the committee recommends a total of $29,500,000, which sum is $17,500,000 over the supplemental request of $12,000,000 contained in House Document 92-325. The first item under this chapter provides $3,500,000 to accelerate land acquisition from hardship cases resulting from tropical storm Agnes, as well as highway relocation in connection with two flood control projects which are integral units of the comprehensive flood control plan for the North Branch Susquehanna River Basin.

For the second item in this chapter, "Flood Control and Coastal Emergencies," the committee recommends a total of $26,000,000. Of this sum, $19,000,000 is to take care of emergencies arising from tropical storm Agnes, and $7,000,000 is to replenish the emergency fund for future disasters which might occur in fiscal 1973.

For the Appalachian regional development programs, Executive Office of the President, the last item in chapter II, the committee recommends a total of $16 million. Of this sum, $11 million is for subsurface restabilization of anthracite mine areas in Pennsylvania; $1,500,000 is for housing site grants to assist displaced families; and $3,500,000 is for research, new town studies, and additional area planning support to minimize future subsidence damage to structures resulting from destructive floods.

Chapter III relates to the Department of Commerce and the Small Business Administration. For the Economic Development Administration, a total of $40 million is recommended for the three appropriation accounts, as follows:

For development facilities, the committee recommends $30 million, of which $10 million is to finance public works and development facilities projects, and $20 million is for the public works impact program to provide immediate useful work to unemployed and underemployed of the local areas affected by the tropical storm. To permit all of the funds provided to be used exclusively in such local areas, the committee has included a proviso in the bill to exempt these funds from the provisions of section 401(a)(6) of the Public Works and Economic Development Act of 1965, as amended.

The second appropriation account is for planning, technical assistance, and research, for which the committee has provided $9,100,000. This sum will be used in those areas devastated by tropical storm Agnes.

Third, to provide for additional operating and administrative expenses incurred by the Economic Development Administration relative to tropical storm Agnes, the committee recommends $900,000.

For additional capital for the disaster loan fund of the Small Business Administration, the committee recommends a total of $1,300,000,000. This additional sum, together with available balances and the additional funding originally requested for fiscal 1973, will enable the Small Business Administration to provide assistance on favorable terms to victims of tropical storm Agnes and the flood in Rapid City, S. Dak.

Also approved is authority to transfer $20,000,000 from the disaster loan fund to the "Salaries and Expenses" appropriation to cover the increased costs incident to the enlarged disaster program.

During the hearings on this supplemental request, the committee again questioned the officials of the Small Business Administration on the policies and procedures that are now being and will be utilized in making loans to the victims of these two recent disasters, both to insure the legitimacy of the damage claimed and to insure that the loan proceeds are utilized solely to repair or restore damaged property. The committee is still not satisfied that the loan and followup procedures being used by the Small Business Administration are sufficient to minimize to the fullest possible extent, fraudulent applications, and the misuse of loan proceeds.

Accordingly, the committee has requested the Comptroller General to immediately undertake a careful monitoring of this program in the field, and to first, keep the committee advised on a continuing basis of the manner in which the Small Business Administration is carrying out its responsibilities with respect to the disaster loan program, and second, make recommendations as quickly as possible as to the policies and procedures that will be most effective and which can be instituted administratively by the Small Business Administration. Further comments on this matter are contained in the committee's report in chapter III.

Chapter IV relates to funds appropriated to the President for disaster relief, which are expended by the Office of Emergency Preparedness. For this agency, the committee has provided the sum of $200,000,000, which is in addition to the $200,000,000 contained in Public Law 92-337, approved July 1, 1972, and the $92.5 million provided in the regular appropriation bill for fiscal year 1973.

In the seven States for which the President has declared disasters as a result of tropical storm Agnes, as well as in South Dakota, it is estimated that a total of $400,000,000 will be required in fiscal 1973.

Mr. President, the need for these disaster relief funds is immediate and of the greatest urgency. I sincerely hope that there will be no floor amendments so that this bill can be enacted into law without delay.

Mr. YOUNG. Mr. President, will the Senator yield?

Mr. McCLELLAN. I am glad to yield to the distinguished Senator from North Dakota.

Mr. YOUNG. Mr. President, I wish to associate myself with the comments made by the distinguished Senator from Arkansas (Mr. McCLELLAN).

All of the funds contained in this bill are for disaster relief and are badly needed. Probably the two most severe storms we have had in recent years were at Rapid City, S. Dak., and in the Hurricane Agnes area of the United States.

I see no reason for any long discussion. All the provisions of the bill were considered very carefully by the Committee on Appropriations and were approved unanimously. I hope the Senate will do the same.

Mr. SCHWEIKER. Mr. President, will the Senator yield?

Mr. McCLELLAN. I yield. The Senator may have the floor in his own right.

The PRESIDING OFFICER (Mr. HARRY F. BYRD, JR.). The Senator from Pennsylvania is recognized.

Mr. SCHWEIKER. Mr. President, I commend the committee and the chairman of the committee for acting so promptly on this bill.

First of all, the President very quickly sent a message to Congress suggesting legislation for funding the flood disaster in the various States affected.

Second, the Senate acted within a day after the House acted, which I think sets some kind of record. It certainly shows that Congress and the Government are responding very quickly and no doubt set many records in passing this amount of money this fast for a natural disaster. I believe that this will go down in history as the quickest response Congress has made to any disaster. Considering that Hurricane Agnes ravaged Pennsylvania and the other States only a few short weeks ago, I think it is a real tribute to the legislative process that this vast amount of money and the comprehensive program that this supplemental flood disaster appropriation covers could come through the legislative process of this Government. This puts plenty of money in the pipeline now for the agencies, the departments, and for the people on the spot in Wilkes-Barre, Harrisburg, and other places, in order to proceed with the authorizing of legislation that we had earlier passed. So that there are no delays or tieups from the legislative end bringing equity and relief to flood disaster victims.

I particularly commend the Appropriations Committee for including two very critical flood projects, Tioga-Hammond Lakes project, and the Cowanesque Lake project. These are vital to the Susquehanna River basin. They play an important role in the Susquehanna situation. I am glad to see them included.

I urge immediate adoption of this supplemental appropriation and, once again, commend the chairman and the ranking Republican member for their prompt action and sensitive response to a great and urgent need.

Mr. HUMPHREY. Mr. President, I want to take just a couple of minutes for two reasons; first, to commend the Committee on Appropriations and its distinguished chairman and the ranking member for the supplementals on this appropriation and the response they have given to this incredibly difficult and painful tragedy that has befallen vast parts of the country because of Hurricane Agnes, and the flood conditions which occurred in Rapid City, S. Dak., and other parts of the country, as well as in my own State of Minnesota.

I am grateful for the work that the committee and its chairman have done and want to express on behalf of the people of Minnesota, as well as for myself and that of my colleague (Mr. Mondale), our thanks.

Now what else I wanted to say is that yesterday some of our colleagues spoke a word of tribute to the distinguished Senator from Arkansas (Mr. McClellan) for his remarkable work as chairman of the Committee on Government Operations.

I was not here at the time, so I am going to take this moment to say that I have never served with a finer chairman, a man who always gave every one of us on the committee the opportunity to do our job as we saw fit, respecting our points of view, and giving us committee assignments that permitted us full use of whatever talents we had.

I have put this down on paper and written about it, that I look on Senator McClellan as "my" chairman. He is "my" kind of chairman. I want to compliment him for his work not only on this bill, which is so important, but also over the many years that I have had the privilege of serving with him.

Mr. President, it is my great privilege to join in paying high tribute to Senator John L. McClellan for his outstanding service to the Senate and to the Nation as chairman of the Senate Committee on Government Operations.

The resolution adopted yesterday by the Senate, expressing warm affection and deep appreciation to my distinguished colleague from the State of Arkansas, and honoring his great ability, initiative, and statesmanship, fully expresses the deep respect which I hold for this great American. Documenting the major governmental reorganizations and reforms accomplished during Senator McClellan's chairmanship of over 21 years of the Senate Committee on Government Operations, the resolution also takes proper note of his role as a vigorous and effective investigator to strengthen the hand of law enforcement against organized crime, to combat corruption, and to substantially improve fiscal accountability in the Federal Government.

It was my privilege to have been appointed to the Senate Committee on Government Operations on the same day in 1949 that Senator McClellan initially assumed the chairmanship, and I count it a distinct honor to have served with him on this vital legislative arm almost continuously during my prior service in the Senate through 1964. As I have said publicly many times, Senator McClellan is one of the finest committee chairmen under whom any Senator could be privileged to serve. And I can testify from direct experience that he gave his subcommittee chairmen full opportunity to dig deeply into any subject of importance to the Nation on which they had an immediate concern.

Last year marked the 50th anniversary of the creation of the Senate Committee on Expenditures in the Executive Departments, which ultimately become the Committee on Government Operations. Serving the longest term of any of the 11 distinguished chairmen of this committee, Senator McClellan fully met the challenge of the committee's far-reaching authority by setting the highest standards for workmanship and responsibility in committee proceedings, and he truly merits a reputation for impartiality and fairness. I know all members of the committee welcome his continued participation in the work of this committee, and applaud his appointment as chairman of the Senate Committee on Appropriations.

Mr. McCLELLAN. Mr. President, I want to thank my distinguished friend and colleague from Minnesota. Frankly, I am a little embarrassed. It did not come to my attention until about 30 minutes ago that this action had taken place on the floor of the Senate yesterday.

I did know that the committee had passed such a resolution a few days ago, but I did not know it had been printed in the Record until a little while ago when the distinguished Senator from North Carolina (Mr. Ervin), who placed it in the Record, called it to my attention.

Mr. President, I am grateful to the Senator from Minnesota for his very kind expressions of confidence, of good will, and of approbation of my humble services as chairman of the Government Operations Committee for many years.

It was a delight, indeed, to have him serve on that committee with me, and the other Senators, too, who served with me on that committee during that period. It has been a joy to work with them. Hopefully, I have tried to be fair. I can say that in almost all of our deliberations on that committee, particularly on the full committee, I cannot recall a single moment of unpleasantness during the time I have served as chairman. There have been disagreements and differences of opinion but always with due respect to those who may have differed with us. The efforts of the committee, with the fine membership that we have had serving on it, have always been constructive, with dedication and seriousness of purpose to accomplish worthwhile legislation and to meet the responsibilities that are incumbent on the committee in the legislative process. I certainly am grateful to each one.

This tribute is something unexpected for me. I can only say, in all humility, that I am grateful. I know that under the chairmanship of the distinguished Senator from North Carolina (Mr. Ervin) who succeeded me as chairman, I will be followed by a very distinguished Senator who is a very able Senator and will make a great chairman of that committee.

I am going to remain on the committee, not any longer as its chairman, because I chose to take the chairmanship of the Committee on Appropriations by reason of a vacancy that occurred there under circumstances with which we are all acquainted. But I still have a great love and a consuming interest for the work of the Government Operations Committee. I am glad that I am privileged to remain on it and to continue to serve, not as its chairman but to serve with my colleagues on that committee as a member thereof.

Again, I am most grateful to all who signed the resolution—I believe every member of the committee signed it—which was placed in the Record yesterday. I am grateful to each one of them. This is an unexpected tribute and I am very happy about it. Thank you very much.

The PRESIDING OFFICER (Mr. Tunney). The bill is open to amendment. If there be no amendment to be proposed, the question is on third reading of the bill.

The bill was ordered to be read a third time, was read the third time, and passed.

Mr. McCLELLAN. Mr. President, I move that the vote by which the bill was passed be reconsidered.

Mr. SCHWEIKER and Mr. ROBERT C. BYRD moved to lay that motion on the table.

The motion to lay on the table was agreed to.

ORDER FOR RECOGNITION OF SENATOR CHILES TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on tomorrow, following the remarks of the distinguished Senator from Oklahoma (Mr. Bellmon), the distinguished Senator from Florida (Mr. Chiles) be recognized for not to exceed 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF HARRY F. BYRD, JR., ON FRIDAY, AUGUST 18, 1972

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on Friday, August 18, 1972, following the remarks of the two leaders under the standing order, the Senator from Virginia (Mr. Harry F. Byrd, Jr.,) be recognized for not to exceed 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION FOR CERTAIN PRINTING FOR THE COMMITTEE ON VETERANS' AFFAIRS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 988, House Concurrent Resolution 553.

The PRESIDING OFFICER. The resolution will be stated.

The assistant legislative clerk read as follows:

> H. Con. Res. 553, authorizing certain printing for the Committee on Veterans' Affairs.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution.

Mr. ROBERT C. BYRD. Mr. President, on behalf of the Senator from Indiana (Mr. Hartke) I send to the desk an amendment and ask that it be stated by the clerk.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

> At the end of the concurrent resolution, add the following new section:
>
> Sec. 2. After the conclusion of the second session of the Ninety-second Congress there shall be printed for the use of the Committee on Veterans' Affairs of the United States Senate twenty thousand copies of a publication similar to that authorized by the first section of this concurrent resolution, but with emphasis upon matters relating to veterans' affairs considered by the Senate or by the Committee on Veterans' Affairs of the Senate.

Mr. ROBERT C. BYRD. Mr. President, I have called up this resolution at this time at the request of the Senator from North Carolina (Mr. Jordan), the chairman of the Committee on Rules and Administration. The Hartke amendment meets with the approval of the Senator from North Carolina, and it also meets with the approval of the other side. The resolution and the amendment have both been cleared with the other side, as I understand it.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

The PRESIDING OFFICER. Without objection, the concurrent resolution (H. Con. Res. 553) as amended is agreed to.

The title was amended so as to read:

> Concurrent resolution authorizing certain printing for the Committee on Veterans' Affairs."

ORDER FOR RECOGNITION OF SENATOR TUNNEY TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that at the conclusion of the remarks of the distinguished Senator from Florida (Mr. Chiles) on tomorrow, the distinguished Senator from California (Mr. Tunney) be recognized for not to exceed 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. HARRY F. BYRD, JR. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

SENATOR JACKSON—NEWS ARTICLE BY HOLMES ALEXANDER

Mr. HARRY F. BYRD, JR. Mr. President, the nationally syndicated columnist, Holmes Alexander, has written a very interesting column on our colleague, the Senator from Washington (Mr. Jackson).

Mr. Alexander points out the very prominent role which the Senator from Washington is playing in the Senate, especially in connection with the interim agreement signed by President Nixon and Chairman Brezhnev in Moscow recently. The Senator from Washington, as we in the Senate know, is a man of outstanding ability and a man who has a wide experience and wide knowledge in the military field.

Mr. President, I ask unanimous consent that the article by Holmes Alexander, published in the Harrisonburg, Va., Daily News Record of August 14, 1972, be printed in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

Jackson's Presence Felt

(By Holmes Alexander)

Washington.—When he comes to write his further Memoirs, President Nixon may tell us why he didn't include a couple of U.S. senators when he went to Moscow last spring to sign the Disarmament Accords.

The warnings of history would have told him to do so. President Woodrow Wilson made that colossal error at the end of World War I. He went to Paris to put over the League of Nations, turned his back on Sen. Lodge and other powerful members of the upper body, and the results were heard round the world.

The treaty that would have brought us into the League was defeated. Wilson was so shocked that he suffered a stroke. The country so much agreed with Lodge in mistrusting Europe that it elected Republican Presidents Harding, Coolidge and Hoover in succession.

NIXON WILL GET ACCORDS

Nothing so drastic impends today. Mr. Nixon is craftier than Wilson and not nearly so egocentric and vain. He is going to get his accords. The first section, the ABM Treaty, passed the Senate with brief debate and dissenting votes only from Allen of Alabama and Buckley of New York. The second section, a five-year Interim Agreement on offensive weapons, will earn the Senate's consent in all likelihood, but not quite in the way that Mr. Nixon originated it. He still has to treat with Sen. Jackson, who distrusts Communists as much as the late Sen. Lodge distrusted Europeans.

Scoop Jackson (D-Wash.), a Senate powerhouse on defense matters, would not have been an easy rider on the Presidential trip to Moscow. He likes to describe Soviet Russia as a "hotel burglar" who tries every door on the corridor until he finds one unlocked.

Jackson was the author of "safeguard" amendments to the Test Ban Treaty of '63, and no doubt would have made similar demands in Moscow. This would have slowed the Moscow schedule, marred the slick scenario that called for well-timed toasts in champagne, but it would have accomplished earlier what Jackson was sure to do later.

SENATE FLOOR FIGHT

Jackson still demands "safeguards," and has opened his fight on the Senate floor. His three-point amendment says that the five-year Interim Agreement will be interrupted and canceled whenever Soviet weapons-deployment "have the effect of endangering the survival of our strategic deterrent."

Jackson's purpose is not, like that of Lodge, the overthrow of a President. He clearly prefers the Nixon military programs to those of Candidate McGovern, and it is not inconceivable that he may be the President's choice for Secretary of Defense next year, as he was in 1969.

Jackson has several related intentions in mind. One is to put a rude end to the build-up of national euphoria, to the mistaken belief that the Moscow Accords spell peace-in-our-time.

Jackson also intends to fire a warning shot across the bows of the Soviet state. The Interim Agreement permits Russia to "modernize" existing weapons, but the senator wants to prevent the abuse of this right. Jackson is looking toward next month's renewal of disarmament talks, SALT II, and wants to head off Soviet pressure for American concessions.

There are two ways in which Jackson expects to apply psychological counterpressure. One, by amending the Interim Agreement with this threat of cancellation. Two, by holding the Senate vote of approval to the closest possible margin.

SUBTLE AGREEMENT

Rather than directly oppose Jackson, the President has chosen to encourage Republican co-sponsorship in the Senate of the Jackson Amendment. It is a subtle way of agreeing with Jackson on the danger of national euphoria.

Finally, it is an indication that, while Jackson was not invited to make the Moscow trip, the President did not wholly leave him behind, as Wilson did Lodge. Mr. Nixon had the shadowy presence of Senator Jackson with him at the Kremlin, and was never altogether deaf to the Senator's advice.

QUORUM CALL

Mr. HARRY F. BYRD, JR. Mr. President, I suggest the absence of a quorum.

THE PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

THE PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR HARRY F. BYRD, JR., TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that at the conclusion of the remarks by the distinguished junior Senator from California (Mr. Tunney) on tomorrow, the distinguished senior Senator from Virginia (Mr. Harry F. Byrd, Jr.) be recognized for not to exceed 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR TRANSACTION OF ROUTINE MORNING BUSINESS TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that following the orders for the recognition of Senators on tomorrow there be a period for the transaction of routine morning business for not to exceed 15 minutes with statements therein limited to 3 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR CONSIDERATION TOMORROW OF HOUSE JOINT RESOLUTION 1278, CONTINUING RESOLUTION—1973

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that at the conclusion of the routine morning business tomorrow the Senate proceed to the consideration of House Joint Resolution 1278, a continuing resolution for 1973, and that the unfinished business be temporarily laid aside and remain in a temporarily laid-aside status until the disposition of the continuing resolution or until the close of business, whichever is earlier.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR CONSIDERATION OF S. 32—NATIONAL SCIENCES POLICY AND PRIORITIES ACT OF 1972

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on the disposition of House Joint Resolution 1278 on tomorrow, the Senate proceed to the consideration of S. 32, a bill to authorize the National Science Foundation to conduct research, education and assistance programs to prepare the country for conversion from defense to civilian, socially oriented research and development activities and for other purposes; and that the unfinished business be temporarily laid aside and remain in a temporarily laid-aside status until the close of business tomorrow or until the disposition of S. 32, whichever is the earlier.

The PRESIDING OFFICER. Without objection, it is so ordered.

QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT TO 9 A.M.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate adjourns today it stand in adjournment until 9 a.m. tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROGRAM

Mr. ROBERT C. BYRD. Mr. President, the program for tomorrow is as follows:

The Senate will convene at 9 a.m. After the two leaders have been recognized, the following Senators will be recognized in the order stated, and each for not to exceed the time stated: Mr. Bellmon, 15 minutes; Mr. Chiles, 15 minutes; Mr. Tunney, 15 minutes, Mr. Harry F. Byrd, Jr., 15 minutes; after which there will be a period for the transaction of routine morning business for not to exceed 15 minutes, with statements limited therein to 3 minutes.

At the conclusion thereof the Senate will proceed to the consideration of House Joint Resolution 1278, the continuing resolution for 1973.

Upon the disposition of the continuing resolution the Senate will proceed to the consideration of S. 32, a bill to authorize the National Science Foundation to conduct research, education and assistance programs to prepare the country for conversion from defense to civilian, socially oriented research and development activities, and for other purposes.

The unfinished business, Senate Joint Resolution 241, with respect to an interim agreement, will be laid aside temporarily tomorrow and remain in a temporarily laid aside status until the Senate has disposed of the continuing resolution and the National Science Foundation bill.

There is an agreement on the National Science Foundation bill of 2 hours on the bill, 1 hour on any amendment in the first degree, one-half hour on any amendment in the second degree, debatable motion, or appeal.

Yea-and-nay votes may occur on the continuing resolution, and it is anticipated that yea and nay votes will occur on the National Science Foundation bill.

The revenue sharing bill will be laid down at the close of business tomorrow.

ADJOURNMENT TO 9 A.M.

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move in accordance with the previous order that the Senate stand in adjournment until 9 a.m. tomorrow.

The motion was agreed to; and at 6:21 p.m. the Senate adjourned until tomorrow, Thursday, August 17, 1972, at 9 a.m.

CONFIRMATIONS

Executive nominations confirmed by the Senate August 16, 1972:

In the Air Force

The following officer to be placed on the retired list in the grade indicated under the provisions of section 8962, title 10, of the United States Code:

To be general

Gen. Jack G. Merrell, [redacted]FR (major general, Regular Air Force) U.S. Air Force.

The following officer to be assigned to a position of importance and responsibility requiring the rank of general, under the provisions of section 8066, title 10, United States Code:

Lieut. Gen. George B. Simler, [redacted]FR (major general, Regular Air Force), U.S. Air Force.

In the Army

The following-named officer under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066, in grade as follows:

To be general

Lieutenant General *Donald Vivian Bennett*, [redacted] Army of the United States (major general, United States Army).

The following-named officer to be placed on the retired list in grade indicated under the provisions of title 10, United States Code, section 3962:

To be lieutenant general

Lieut. Gen. Alexander Day Surles, Jr., [redacted] Army of the United States (major general, U.S. Army).

The following-named officer for temporary appointment in the Army of the United States to the grade indicated under the provisions of title 10, United States Code, sections 3442 and 3447:

To be major general

MEDICAL CORPS

Brigadier General George Joseph Hayes, [redacted] Army of the United States (colonel, Medical Corps, United States Army).

U.S. Navy

Rear Adm. Damon W. Cooper, U.S. Navy, having been designated for commands and other duties determined by the President to be within the contemplation of Title 10, United States Code, Section 5231, for appointment to the grade of vice admiral while so serving.

U.S. Marine Corps

The following-named officers of the Marine Corps for temporary appointments to the grade of major general:

Samuel Jaskilka
Edward S. Fris
Thomas H. Miller, Jr.
Robert H. Barrow
Herbert L. Beckington

The following-named officers of the Marine Corps for temporary appointments to the grade of brigadier general:

Clarence H. Schmid
Edward A. Wilcox
William L. Smith
Arthur J. Poillon
Kenneth McLennan
Joseph Koler, Jr.
George R. Brier

EXTENSIONS OF REMARKS

SUCCESSFUL PREDICTIONS BY COLUMNIST ROBERT S. ALLEN

HON. HARRY F. BYRD, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 16, 1972

Mr. HARRY F. BYRD, JR. Mr. President, those who write columns, editorials, and articles about government and politics frequently are embarrassed when some of their old predictions are called to mind.

A large number of the so-called pundits have had to eat crow because of forecasts about the Democratic nomination for President. It has not been a good year for prophecy.

Every now and then, however, a writer is able to point with pride to a prediction he has made. A recent instance of this was the column by Robert S. Allen, published in many newspapers on May 23. Mr. Allen has not, so far as I know, tried to take any bows for this column, but a constituent of mine recently called it to my attention.

In his May 23 column, Mr. Allen predicted that former Secretary of the Treasury John Connally would head an organization to gather Democratic support for President Nixon; that Representative William Ryan, of New York, would win his primary contest; and that the administration would increase efforts to expand trade with the Soviet Union. This is three out of three, which is a pretty good day.

I ask unanimous consent that the text of Mr. Allen's column, "No Mystery, Connally To Work for Nixon," be printed in the Extensions of Remarks.

There being no objection, the article was ordered to be printed in the Record, as follows:

No Mystery, Connally To Work for Nixon

(By Robert S. Allen)

Washington.—Despite the still-continuing flood of rumors, conjections, hush-hush reports and what-have-you (so typical of Washington), there is no mystery about the sudden resignation of Treasury Secretary John Connally.

The inside story is very simple.

The tall, white-crested former Texas governor quit to be free to organize and actively head a new campaign organization—Democrats for Nixon.

It will be national in scope and operations, and work parallel to and in close conjunction with the Committee for the Re-Election of the President, directed by former Atty. Gen. John Mitchell.

SECOND TERM

Mitchell and Connally and their organizations will be the principal instrumentalities of the President's drive for a second term.

Still undecided is the timing of the formal announcement of the launching of the Democrats for Nixon Committee—whether before or after the Republican national convention in August. Inside opinion favors the former.

The President, Connally and Mitchell discussed the contemplated electioneering setup at an unannounced meeting at the Camp David weekend retreat.

SAME PARTNER

Highly significant—while there was no mention of or reference to Vice President Agnew, the whole tenor of their talk held a clear implication that he would again be Nixon's running-mate.

There was quite a bit of conjecture about the most probable Democratic slate.

The President indicated he is still adhering to his long-held belief that the candidate who will oppose him will be Sen. Edward Kennedy.

VIEW OPPOSITION

Mitchell was inclined to view Sen. George McGovern as a very real possibility. This opinion was based chiefly on Mitchell's contention that the Democratic convention will be dominated by militants, activists and extremists of all types, ages and hues—the primary source of McGovern's support.

The President, Connally and Mitchell were agreed that if McGovern is the Democratic standard bearer, there would be widespread defection to the Republicans.

They were also in accord in giving Sen. Humphrey little more than an outside chance of winning renomination.

POLITICALS

Rep. William Ryan, Dem.-Lib., N.Y., appears to have a lead over Rep. Bella Abzug, New Left Democrat, N.Y., in their torrid primary battle in a new district combining parts of both their old ones. Ideologically there is no choice between the two leftists, but polls show six-term Ryan definitely out in front of one-term "Bellowing Bella." Apparently, Ryan's longer record of doing personal services is paying off. Also, seemingly adversely affecting Mrs. Abzug among older ethnic voters is her persistent and vociferous women's lib clamoring. . . . Now you can learn all about how to maneuver and manipulate to get a government job for the insignificant sum of $2.75. It's all spelled out in a newly published book, "Strategy and Tactics for Getting a Government Job," by two women, Susan Lukowski and Margaret Piton. They are described as holding "well-paying jobs in the areas of their preference"—with no hint of what that is. The book is a serious how-to-do-it guide.

Friends of the FBI, Inc., is holding a "unique conference" in Washington May 30-June 1 on the subject of "Law Enforcement and the Media." Announced participants are prominent Tom Reddin, former Los Angeles police chief, and Gary, Ind., police chief Charles Boone.

Harvard Prof. John Kenneth Galbraith, former head of the New Left-controlled Americans for Democratic Action, wants to run against Sen. Edward Brooke, liberal Republican from Massachusetts, but only if he is sure of an ample campaign kitty. Gailbraith, who has made a lot of money with best-selling books, lecturing for fancy fees and an endless stream of well-paid articles, is saying he will make the race only if assured of $1 million electioneering fund.

MORE RED TRADE

President Nixon is offering the Kremlin rulers concrete concessions to do more large-scale buying in the U.S.

One of these trade lures is designed to produce huge grain and feed sales to the Soviet.

During the President's Moscow visit he is proposing to suspend again the 1963 requirement by President Kennedy that 50 per cent of grain and flour shipments to Communist countries must be carried by American flag ships—thus considerably increasing the cost. Last year, after President Nixon set that order aside, Russia bought $140 million in corn, barley and oats.

The basis for another huge commodity sale to the U.S.S.R. was laid by Agriculture Secretary Earl Butz in a trip to Moscow in April. He conferred with agriculture minister Vladimir Matskevich, who expressed interest in purchasing more farm products "if we are treated right."

FAVORABLE BALANCE

Matskevich and other Kremlin officials talked particularly about establishing most-favored trade relations with the U.S. so as to increase exports to this country. They asserted Russia wants particularly to expand its trade in furs, oil and gas, diamonds, tobacco, chrome ore and rare metals.

Last year U.S. exports to the Soviet totalled $177.2 million as against imports from that country of $56.8 million. In 1970 the contrasting figures were $103 million and $58 million.

Secretary Butz also reported to President Nixon that Russian officials stressed the desire of obtaining credits to increase purchases in this country. No specific figures were mentioned, but it was indicated the Soviet Union was prepared to negotiate arrangements totalling upwards of $500 million.

FORECASTS PACT

Significantly, following a conference with the President before he flew to Moscow, Commerce Secretary Peter Peterson stated he anticipated that during the President's visit there would be considerable discussion of liberalizing trade and credit arrangements.

"I confidently expect," said Peterson, "that a year from now we will be doing substantially more business with the Soviet. I would say both countries are desirous of doing a lot more trade with each other."

SIXTH ANNUAL QUESTIONNAIRE

HON. JOHN P. HAMMERSCHMIDT

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. HAMMERSCHMIDT. Mr. Speaker, I am sending my sixth annual questionnaire to postal patrons of the Third Congressional District. So that my colleagues of the Congress may know the substantive content of this mailing, I ask that it be printed at this point in the Record.

Please Give Me Your Views

Important business remains in the final weeks of the 92nd Congress. Crucial specific questions must still be answered. Other general questions are constantly with us on goals, methods, procedures, priorities, etc. The choices made will determine the course of our country.

In the past, your responses to the annual questionnaire have been extremely helpful in letting me know your thinking on issues and problems.

As your representative in Congress, the ultimate "yes" or "no" vote is mine alone, but insofar as possible I hope that vote accurately reflects the feelings of Third District residents, and is a true echo of the collective majority voice.

I also hope the questionnaire will bring you closer to government in the Jeffersonian tradition: "That government is the strongest of which every man feels himself a part." In answering the questions you will be recommending specific action on matters which concern us all. I recognize that "yes" or "no" answers may not be adequate to express your feelings on particular issues. I welcome your additional views.

Please complete the questions below and mail to me in Washington. You do not need an envelope. I shall tabulate the returns and report them in the Congressional Record. Thank you for your help.

Sincerely yours,
JOHN PAUL HAMMERSCHMIDT,
Member of Congress.

LIST OF QUESTIONS

(NOTE.—Space provided for "yes" and "no" answers under "his" and "her" categories.)

1. Do you believe wage and price controls are working reasonably well in cutting the rate of inflation and stabilizing the economy?

2. Are stronger laws needed to deal with prolonged strikes which harm the public interest?

3. Do you support the all-volunteer army concept for national defense?

4. Should Congress approve a program to establish government-subsidized day care centers and nursery schools?

5. Do you favor an increase in the minimum wage to $2.20 per hour?

6. Do you favor the Family Assistance Plan which subsidizes working lower income earners and provides work incentives to replace the present welfare system?

7. Would you favor a "Value Added" tax, in effect, a national sales tax, as a method to reduce property taxes?

8. Do you favor national health insurance for all, with the federal government underwriting the cost for low-income families?

9. Should food stamps be available to persons on strike?

10. Do you favor federal prohibition on the sale of cheap, short-range handguns (so-called "Saturday Night Specials"), not including longer range pistols and revolvers, rifles and shotguns?

11. Do you approve busing children to meet racial quotas in public schools?

12. Do you generally approve the course taken to end the war in Vietnam?

13. Should the federal government reduce penalties for possession and use of marijuana?

14. On programs agreed to by both the executive and legislative branches, when congressional appropriations bills greatly exceed budget recommendations, which would you support? (Choose One) (A) The full appropriation. (B) The budget recommendation.

15. When Congress considers desirable new or expanded programs, how would you vote? (Choose One) (A) For the programs, financed by tax increase. (B) For the programs, financed by debt increase. (C) Against the programs.

16. Congress meets virtually the entire year. When in session, I must be in Washington for committee meetings, to vote, and to handle problems for constituents. Though I return to work in the District most weekends, I cannot attend all meetings which pertain to federal matters. Should my policy be: (Choose One) (A) To return to Arkansas even while the House is in session and some important votes might be missed. (B) To stay in Washington at all times the House is in session.

FRENCH BOYCOTT SUCCESSFUL

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. RANGEL. Mr. Speaker, last fall I called for a citizens' boycott of French products until the Government of France takes decisive steps to wipe out the processing and smuggling of heroin.

The outrage of the American people has produced results which were unheard of when our Government relied simply on diplomatic niceties to try to persuade France to cooperate with us in stopping the trafficking of heroin to the United States. In the past few months we have seen increased seizures of narcotics, arrests, and raids on clandestine refining laboratories. At the same time, the French Government has become increasingly aware of its own spreading addiction crisis.

One of the groups most active in the French economic boycott has been the Long Island Restaurant and Caterers Association of New York. This organization has taken a leadership role in awakening its customers and community to the heroin menace. I am pleased to share with my colleagues the statement of the association on this critical issue:

WINE BOYCOTT HAS PROVEN SUCCESSFUL

LONG ISLAND RESTAURANT
AND CATERERS ASSOCIATION,
Hicksville, N.Y., July 24, 1972.

On January 31, 1972, the Long Island Restaurant and Caterers Association launched a boycott of French wines, as a means of impressing the French government that the American people were concerned over the laxity of French officials in cracking down on the processors of heroin, in the Marseilles area of France.

This boycott was adopted by many Restaurant Trade Associations; Federation of Labor Unions; L. I. Federation of Women's Clubs; civic, religious, service organizations, and hundreds of thousands of American people, in fifty states of the Union.

The effect of this effort has reduced the imports of French wine approximately 30%, according to many importers, and this must have created some reaction in the French government official circles. As a result, much action on the part of the French government is now evident, with the reported discovery of the fourth clandestine narcotics manufacturing laboratory in the past four months. This is a great improvement over the previous record of finding only two laboratories in the previous eleven years.

For this great effort on the part of the French police we are greatly appreciative, and we extend our sincere thanks. However, continual effort is absolutely necessary by the French government, to completely terminate all the laboratories in Marseilles, France.

In the meantime, the American people cannot let down the pressure now exerted, because new sources of heroin supplies are now reaching the United States from Burma, Thailand, Laos, China, through Central and South America, Mexico, Canada, and directly by means of ships, air and couriers.

It is now necessary that the many organizations, and hundreds of thousands of the wine boycott supporters, extend their sphere of influence to alert our own public officials—local, state and national—that an all-out effort *must* be made by our government, using every available means, physical and financial, to see that the heroin menace that was originally French oriented, does not develop in other areas, and establish a further market in this country.

We, as a naiton, may now be turning the corner on the heroin importing problem, and only a strong all-out effort by our own government officials can stop this menace once and for all.

The Long Island Restaurant and Caterers Association, and all its supporters, request that all public officials now seeking office, should make the heroin and drug problem part of their platform, and dedicate their efforts in terminating this menace. All the voters are therefore requested to cast their vote accordingly.

WARREN R. SPELLMAN,
President.

NOTRE DAME COLLEGE DEDICATES NEW BUILDINGS TO EXPAND EDUCATIONAL SERVICES IN CLEVELAND

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. VANIK. Mr. Speaker, on September 23, 1972, I will have the honor of attending the dedication of three new buildings at Notre Dame College in Cleveland, Ohio. The three buildings to be dedicated are Connelly Center, Alumnae Hall, and Clara Fritzsche Library.

Connelly Center, a dining hall and student center, opened in 1968 and was named after the Connelly Family. Daniel S. Connelly, a member of the Notre Dame College board of advisers, and his father, who organized the board, and the Connelly family in general were foremost benefactors of the Notre Dame College over the past 50 years.

Alumnae Hall, the largest dormitory on the Notre Dame College campus, was also opened in 1968. This facility is capable of housing 160 resident students. It was named after Notre Dame's alumnae because of their loyal, dedicated support to the college since it was founded.

Clara Fritzsche Library, opened in the fall of 1972, was constructed to house 100,000 volumes. It offers many conveniences such as private study and reading units. Clara Fritzsche, the mother of Paul Fritzsche, a member of Notre Dame College board and a benefactor of the college, attended and graduated from the Notre Dame Academy before the college itself was established.

Notre Dame College has served the Greater Cleveland area well during the 50 years of its existence. Among its achievements, it is noteworthy that 2,300 bachelor degrees have been awarded to graduates who will serve the community and the Nation. Notre Dame is a college that has met the challenge of changing times by adapting class hours and courses as the needs arose. For example, today many married women return to the college to enrich their minds or to work toward a degree which circumstances forced them to forego some years earlier. In addition, special programs have been arranged for students who feel that they cannot spend 4 years in college but do want education beyond high school; among these are a bio-technician program and a shortened business education program.

Thus, in this golden jubilee year of Notre Dame College, it seems fitting to pay tribute to the Sisters of Notre Dame who operate this school. They have worked in greater Cleveland for almost a century. Their service has been in schools where they have played a strong role in the education of the children of immigrants from many countries: Germans, Irish, Czechs, Slovaks, Poles, Slovenians, Lithuanians, and Italians—for greater Cleveland is a highly cosmopolitan community.

Notre Dame College is a valuable community asset. This institution has consistently maintained high scholastic standards and training for responsible citizenship. The entire community is grateful for what Notre Dame College has achieved for our community and for the Nation.

STALINIST TACTICS IN SAIGON

HON. HENRY HELSTOSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. HELSTOSKI. Mr. Speaker, the New York Times of August 13 contained a dispatch from Saigon detailing some of the barbaric, totalitarian policies recently adopted by the Thieu regime. Ruling by decree, Thieu has undertaken to close down all newspapers in Saigon save a few puppet journals faithfully echoing the government's line. Is it for the preservation of this type of democracy that over 55,000 Americans have died in Vietnam?

The Times' correspondent, Sidney Schanberg, provides fresh and shocking details on the torture of political prisoners held by the Thieu government. Revelations of torture come as no great surprise. It will be recalled that Members of this House exposed the tiger cages at Con Son over 2 years ago. Torture of political prisoners has been standard operating procedure under this showcase of democracy in Saigon for years. It is only the outer limits of barbarity achieved by the Thieu apparatus which surprises us. Is it for this too that so many Americans and Indochinese have died or been maimed?

The barbarity of the Saigon Government is matched only by the barbaric results of the endless war in Indochina. Both can be ended only by ending the war.

The article referred to follows:

THIEU'S CRACKDOWN: HE CALLS IT "CLOSING THE GATES TO COMMUNISM"

(By Sidney H. Schenberg)

SAIGON.—Police crackdowns, prison torture and arbitrary government behavior in general are nothing new to the South Vietnamese, but President Nguyen Van Thieu's latest steps to tighten his control over all aspects of life here have alarmed even his long-suffering countrymen.

Operating under the emergency powers he pushed through the National Assembly in June—on top of the martial law regulations imposed after the start of the North Vietnamese offensive March 30—the President has, among other things, imposed harsh new regulations on the press. Aimed apparently at eliminating all opposition, comment, and criticism, these controls seem certain to force most of the Vietnamese-language newspapers to shut down and leave only pro-Government papers on the streets. One paper closed last week, and several others are in the process of closing.

The new special powers permit Mr. Thieu to legislate by decree, bypassing the National Assembly. In effect, he can now do virtually what he pleases. One of his most recent orders was for "preemptive sweeps" to unearth Communist agents and sympathizers. The police thus far have arrested at least 15,000 persons. About 5,000 of them are said to have been released, but the arrests are continuing, and reports have been filtering out of the prisons of severe and widespread torture.

Needles driven through fingertips, breasts burned with lighted cigarettes, objects shoved up vaginas, relentless beating with wooden rods and forced ingestion of water to bring a person close to drowning are some of the tortures being reported. These reports are based on documents smuggled out of prison and on extensive interviews conducted by The New York Times with prisoners recently released.

Here is part of a typical account, given by a former prisoner who was not herself beaten: "Two women in my cell were pregnant. One was beaten badly. Another woman was beaten mostly on the knees, which became infected and full of pus. One high school student tried to kill herself by cutting both wrists on the metal water taps in the washroom, but she failed."

It is impossible to verify these accounts; the Saigon Government bars journalists from its prisons, which it calls "re-education centers." The United States mission, which provides the bulk of the financial support and expert advice for Saigon's police and prison system, also refuses to discuss the situation on the record, arguing that it is an internal South Vietnamese affair.

Nor can one establish that the scars and other marks one sees on the bodies of former prisoners were inflicted by the police. Yet the weight of the evidence seems to support the allegations of widespread torture. One high American source, who granted an interview but insisted on anonymity, acknowledged that "all kinds of deplorable things may well be going on." However, he emphasized, some of those arrested are known Communist activists charged with terrorism.

The danger of Communism and the argument that the country's survival is at stake is the justification given by the Government for the crackdown on the press. A pro-Government Senator said the decree was aimed at "purifying the press." Mr. Thieu said in a recent speech that the press was one of the "wide-open gates for Communist penetration—if we are not vigilant."

"I will keep abiding by democratic principles," Mr. Thieu said, "but the more wide open are the gates of democracy, the more fissures it will have. The Communists will then be able to enter, not only by the main gate but by the side gates as well, and South Vietnam will be lost politically."

If life for the stoical South Vietnamese has become even more repressive under the Thieu Government, they have also been tyrannized in some districts by their Communist "liberators." For example, in the northern half of Binhdinh province, which was captured and held for nearly three months by the North Vietnamese and the Vietcong, allied intelligence officials now report that the Communists installed a regime characteristized by heavy taxes, forced labor and the summary execution of several hundred Saigon Government officials.

However, many analysts here do not think that the Binhdinh experience, though it could foreshadow selective executions, necessarily means that the Communists would engage in a country-wide "bloodbath," as predicted in hawkish American circles, should they take control of all of South Vietnam. These analysts reason that when in full control, the Communists would presumably feel less insecure and could afford to be conciliatory.

Whatever the future for the South Vietnamese, their present—whether under the Thieu regime or Communist occupation—bears little resemblance to the democracy the United States says it is trying to foster here. Until the Communist invasion last spring the Saigon Government was at least observing some of the forms of democracy. Now even this veneer has been discarded.

"If Thieu is smart," said one Vietnamese journalist last week, "he will relax his controls before it is too late. If he doesn't, no matter how many special powers he has, the discontent could explode."

CHILD CARE IN THE 1970'S

HON. ORVAL HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. HANSEN of Idaho. Mr. Speaker, keynoting the Early Childhood Conference I sponsored in Idaho this spring was Dr. Edward F. Zigler, then Director of the Office of Child Development of the Department of Health, Education, and Welfare. Dr. Zigler is one of the Nation's most articulate spokesmen and respected authorities on young children, and his very direct and thought-provoking address set the tone for a stimulating and informative conference. I would like to include portions of Dr. Zigler's remarks in the RECORD:

CHILD CARE IN THE 1970'S

(By Dr. Edward F. Zigler)

I mentioned to you earlier the naive environmentalism which caused Head Start to be oversold in the early days. Would any sane, sensible person that knows anything about child development ever say to this nation: you give me a child for some magic little program for eight weeks, and three years later you'll see the gains and the benefits thereof? Utter nonsense. We were captured by the notion that these kinds of minimal interventions, which are nothing but token programs, would make a difference in children's lives. Even the laymen finally said: you can't inoculate a child in eight weeks, there's all those years before and all those afterwards. You need something more than that.

Thus Head Start evolved into a one-year program, and one year was certainly better. You could do something with the child for one year. Obviously the gains from Head Start are not huge with the one-year program, and the nation became a little bit disenchanted with Head Start. So we began our search for magic periods, with, of course, infancy being the magic period that captured most of our attention. Soon we had the Harvard/MIT group clearly implying in Life magazine that "we're home free if you just put a mobile over the child's crib."

Americans are impatient people, and we too frequently seek simple solutions to complex problems. Ladies and gentlemen, there is no magic period for the simple reason that *all* of the years of a developing child are magic periods. The President made a step in the right direction when he indicated that what we've got to be concerned about is a block of time in a child's life from zero to five. Those are important years; years of great change. A theorist could argue whether this change is due to maturational readouts or environmental input. That's unimportant, but clearly we're seeing a very rapidly changing organism thru this period in the life cycle and these are very important years.

I would gladly go on record with you today and say that this is not enough either. If you do everything that you can for a child between zero and five, you will wind up with a better human being, but that will not result in what I consider to be the optimal development of the child. One has to read nothing but Piaget to appreciate the stage-like progression, even in the cognitive system, which takes place at least to the fourteenth year of life. These stages each are built upon the other, and the fact that the first stage got there at the right time because of the right interweave of the biological factors in growth and the environmental factors, doesn't guarantee very much about the next stage. This is true of social as well as cognitive development. When you see our adolescents pursuing a life course that is self destructive, you begin to appreciate that if one cares about children, one needs concentrated efforts that take place, not from birth, but at minus nine months—from conception, where growth began—through the high school years at least. I am simply asserting that there is a basic continuity to all aspects of life, and our efforts for children must respect this fundamental fact of human development.

I believe that, early in its history, Head Start made another mistake. Its very name created a backlash because it served only the poor. I wish we could have named it something else. What we really meant when we coined the name was that these children would have a head start over *themselves*. Unfortunately, the way most people read it was: "Those children are getting a head start over *my* children. Just because I'm $50 above this income, and someone else is $50 below it, they get all these services and their children get this and that, usually with my tax dollars, and they are paying nothing." There was a backlash against Head Start, not because it was bad, but because it was good and because all people wanted it for their children. It's clear that programs in the future are going to have to employ realistic fee schedules which will permit the participation of children from all income groups.

There are three reasons for this and I shan't go into them at great length. The first is the reason I mentioned. Programs that are mounted just for poor children will always remain vulnerable for a very simple reason. Poor people have little political clout. When we begin developing programs that serve all of the nation's children, with fees charged to those families who are able to pay, we will have programs that will have wide appeal for our citizenry and therefore for our Congress.

There are other reasons that are a little bit more salient to my own thinking about such programs. One is developmental. Basically, I still don't conceive of myself as a politician as much as a developmentalist. Again my reading of developmental literature tells me that children grow best when they have many models to interact with. While all research findings are not in, I believe we will discover that we should be mixing children across economic class lines. It isn't just that a middle-class child can give something to a child in impoverished circumstances, but the middle-class child can receive something as well. Research that I personally am still engaged in with my colleague Dr. Yando in the Boston area, has indicated that our poor children have certain qualities that our more affluent children could well model themselves after: greater creativity, greater earlier independence. I am pretty much convinced that if we mount programs that allow children to mix with each other, there will be great gains to all of our children in terms of their development.

Finally, and this is, of course, a very touchy issue, I think such mixing is necessary for social-psychological reasons as well. The nation cannot continue to segregate very young children across socioeconomic class lines and expect the kind of tolerance and interaction, one with the other, that makes this country what it is supposed to be. When you fractionate people into groups, you do develop in-group feelings, but you invariably develop out-group hostilities, and, ladies and gentlemen, I don't know how much more out-group hostility our society can stand. It is for this reason that we must develop programs, at least for our very young children, that do everything they can to promote interaction between children of different backgrounds.

One final problem with Head Start is that it did not remain true to its own experimental nature, but instead became a new orthordoxy. What started as an experimental program and, by congressional fiat, remains an experimental program, in many cases is not treated as an experimental program at all. It has become a new orthodoxy to be defended against its critics, at all cost never to be changed to provide different services or better services as we gain more knowledge.

Head Start should return to its experimental orientation—not get smaller, but get bigger and more experimental. Let us be the kind of pioneers with Head Start in 1972 that we were in 1965. Let us try new forms, let us discard the rigid concepts that we started with which are now out-moded. Does every child need Head Start simply because his family makes X number of dollars? I think we've downgraded the poor with that kind of concept. Many of these children do but many do not. Let's not confuse economic criteria with the nature of the child rearing that a child receives.

Of those children whom we serve in Head Start, who do not need Head Start, who do need preventive or compensatory programs, does every one of them need five half days a week? What's magic about that? We must use what we know, and one thing we know is that there are many ways to help families and children, and we should begin packaging a variety of services in Head Start centers and take a more individualized approach to the needs of families and children. Let's save the expensive, intensive programs for children who need them, and provide different programs for children with different needs.

I see a Head Start of the future in which something like Family and Child Centers will provide a variety of programs that will help children and families. These programs will include care of pregnant mothers and Home Start programs where, instead of bringing children into centers, trained individuals will go into the home and help parents in raising their own children, upon the request of the parents. I see Health Start programs for children. I see two or three day programs. I see five day programs and intensive programs, beginning much earlier than the age of five, or four, or even three, for handicapped children and children whose development is at high risk. Let's see how good a prognosticator I turn out to be.

Let's move to the last area that I wanted to discuss with you this morning, and that is probably the most pressing child care need in the nation today; day care for the children of working mothers. It's not accidental that this was named as the number one priority of the 1970 White House Conference on Children. Working mothers, as the Governor pointed out to you, have now become almost the majority in terms of the mothers of this country. Approximately 50 percent of mothers with preschool and school age children do, indeed, work. I think the question of what to do with their children has become a problem of tragic proportions. There are today one and one-half million children who are latch-key children. No one cares for them. They have a latch key about their neck, they let themselves in and out, they're uncared for. It is very surprising that this is the pool of children from which we draw so many of our juvenile delinquents? We're getting about what we pay for.

We have another group of children, three quarter million in this nation, cared for by a sibling under 16, much too young to have such responsibility for children. Not only are we denying the very young child the kind of socializing experiences he should have, we're also denying the caretaker child that most precious commodity, his own childhood.

Finally, what about the quality of day care that is available? The centers in this country are not splendiferous centers mounted by the Bettye Caldwells, or Susan Grays or the Spriggles. Day Care in this country is 80 percent noncenter: 40 percent in home, 40 percent in family group homes. There is a recent report on the quality of this day care in this nation prepared by Mary Keyserling for the National Council of Jewish Women, in which the description of family group care reads like a horror story. Children are being cared for by alcoholics, children are being cared for by women too senile to care for themselves, children are tied to chairs so they won't cause trouble for the caretaker.

The problem of day care for the children of working mothers must and will be met in this nation. The real issue is not whether we're going to have day care: we already have day care. The real issue is what the quality of the day care in the new legislative initiatives is going to look like. Is it going to be custodial, which in many cases is little more than a euphemism for stultifying care that destroys children? Or is it going to be developmental with a health component, an educational component, a nutritional component, a parental involvement component?

There is a major new source of funds on the horizon in the day care provisions of HR 1, the Administration's welfare reform plan. I want to take this opportunity to tell you how troubled I have become by the pronouncements that have been made both in the Congress of the United States and upon the part of many experts in the area of child development. These pronouncements assert that the quality of day care in HR 1 that is being planned by the Administration, of which I am a part, will be custodial in nature. This is not true. The President of the United States' commitment to the quality of this day care, which is contained in his message introducing welfare reform legislation, makes it abundantly clear that it will be not custodial and that it will be developmental in nature. I've had several discussions with Secretary Richardson on this point, who is just as troubled as I am, but somehow or other this myth is abroad in the land. I promise you that OCD's role, and my most important commitment, will be to see that when the welfare reform plan is passed, the day care provided under that piece of legislation will be of a developmental sort that will be conducive to the growth of children. If this is not the case, we will be sacrificing a very important segment of the next generation of America's population. We cannot go in this direction. I will be disclosing in the next few weeks the 1972 Federal Day Care Standards. I hope that it will be clear, by the amount of money we will pay for the different kinds of day care, that we will indeed provide day care far superior to the $500 or $700 day care which the Governor reported to you as being so common in our nation.

I want to say one final thing, and it underlines a point that Governor Andrus made. I'd like to end this talk on a note of caution. I do not think that the solution to the nation's problems is to provide every child age three with a preschool education or to place every child from a certain age on in child care centers. I believe that we should do everything in our power to strengthen and support family life rather than supplant it in any way. We must provide good substitute socializing settings for children of mothers who choose to work. Obviously that's how you support that family's life. But we should be wary of those who suggest that centers or experts are intrinsically superior to home settings.

The Governor is correct in pointing out to us that we must be aware that the nature of the family has changed. The ability of our society to provide a child with a good family and good child rearing experiences is not what it once was. We must be aware of this and begin developing social institutions that are not just centers for children, but also institutions that work directly at supporting family life.

What's happened to the family? Well, the decline of the extended family is one case in point. Once a grandparent and uncle and many other relatives were involved in raising the child, and that was great for a parent. That was the kind of support parents need and children need. That's no longer with us. We now have typically the nuclear family.

We also see a lessening of community support for child rearing. Let me use myself as an example. I don't even know who lives three doors from me. I'm not too atypical; people move in, people move out, I'm busy, they're busy, I commute, I do this, I do that. I don't know their children and they don't know my children. I wouldn't mix in how these parents are raising their children.

I remember when I was a boy, under much less affluent circumstances than I'm living under now, there was a woman that was the bane of my existence. If I ever smoked behind a barn, that woman would invariably show up at my house that evening and report to my parents. There was no hiding from her, and I hated that woman with a passion. I'm very fond of that woman today because she cared about me. Her acceptance of a share of responsibility for children in the neighborhood is what I mean by community support for parents. We don't provide that support any more. We're in our own little homes and we worry about our own. The mobility in our society, doesn't give us a chance to become involved in a community to that extent.

Urie Bronfenbrenner puts it very well when he says that, in so many homes, the children's hour has become the cocktail hour. We must strengthen family life. How? By doing a number of specific things. First, I think women deserve a real choice. Women have made the decision to work. Fine. They should have a choice, but we should also support those women who would like to raise a family, and we should also do much more than we are doing today to help those women who would like to do both. Remember, most of the children who need day care are school-aged children. Why is it that, in an industrial society that can move towards a ten hour day, four-day week, we can't have the vision to move to a day which is exactly the same length of a school day?

We must do much more in the area of Home Start programs for the parents who have children. This cuts across economic class. We must train helpers, outreach people, who will go into homes and help parents, upon their request in understanding child rearing. We must begin using T.V. to support family life much more than we do. With cable television imminent, we must see that in every city where there's cable television, a channel is reserved for family life in which interesting, entertaining and informative programs are provided to help parents be parents.

Finally, one of the cheapest things that we can do, cheap in terms of dollars spent, but rich in terms of outcome, would be to realize what's happened to family life. We should say: why wait for young people to be parents and then try to help them? Why doesn't every high school in this nation have an interesting course in parenthood? There are some courses in some schools, but in many of these places what we call family and child life are rather transparent efforts to inculcate middle class values and little more. We must develop interesting courses loaded with knowledge, and these courses should be an integral part in the overall curriculum. Students should not just passively receive didactic information. Our adolescents should work with younger children in day care and Head Start Centers, so that what they learn becomes the material of this course. I'm pleased to report to you that the Educational Development Center, in Cambridge, Massachusetts is developing just such a course. Over the next year or two, we will bring in education people, show them the course, help pay for teacher training, and see if we cannot induce large numbers of the high schools of this country to begin teaching our young people about what is going to be the most important role that they are going to assume in our society: the role of a parent.

In conclusion, I would say that much has been done; much remains to be done; and I certainly do agree that this is an exciting time. We are at a critical juncture in deciding what we are going to do about our nation's children. It's going to take all of us to provide the kind of care that the Governor was talking about, and that your Congressman has been working so hard to bring about at a national level. Certainly if there is any group of people I would expect to really roll up their sleeves and get with it, it is the people of Idaho.

MISS SOFTBALL AMERICA

HON. ALAN CRANSTON

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 16, 1972

Mr. CRANSTON. Mr. President, during a time when so many are concentrating on what is wrong with America, I should like to take a few moments to point out an event that shows what is right with America.

The week of August 22 to August 26 will be highlighted by the Miss Softball America Tournament of Champions in Anaheim, Calif. During this week, girls ages 9 to 15 from all over the country—California's winning team is from Covina—will come to Anaheim to participate in the efforts of their teams to win this national tournament. They will have the opportunity to form friendships with girls from other States. They will have a chance to play a healthy and invigorating sport. They will work with their team toward a mutual goal. They will utilize skills which they have worked long hours to develop. They will display sportsmanlike behavior.

I commend all the girls who are participating for their accomplishments in winning their States' championships. A special mention is due Dr. Bill Smith through whose efforts the tournament is being made possible. I wish the best of luck to all of the participants—may the best ladies win.

PUBLIC BROADCASTING AUTHORIZATION

HON. ROBERT O. TIERNAN

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. TIERNAN. Mr. Speaker, yesterday I voted against authorizing legislation for the Corporation for Public Broadcasting. I felt it necessary to express my dissatisfaction in this way and would like to take this opportunity to explain my action.

I think that there are some very fundamental issues involved in the debate over public broadcasting, not all of which have been made explicit.

It seems unnecessary at this point to restate the arguments that have been made, except possibly to point to the excellent comments made yesterday by my distinguished colleague from California (Mr. VAN DEERLIN). What I think his remarks point to, and what I know to be true, is that the administration's motives were not related to the protection of local broadcasters from centralized authority. The arguments made in the veto message, indeed throughout the debate by the administration, were simply too easily refuted.

This view has been confirmed by officials in the President's Office of Telecommunications Policy. Their real concerns, they say, were the following: First. Victory in the power struggle with the House Subcommittee on Communications and Power. After their testimony before the subcommittee, OTP policymakers determined to let the Congress know that they would be listened to on questions of telecommunications policy. A veto was the mechanism chosen to make Congress sit up and listen to what they had to say;

Second. The emasculation of NPACT—the National Public Affairs Center for Television. The Republicans did not want aggressive public affairs reporting by public television in an election year, particularly by newsmen with an alleged "liberal bias."

I think there are lessons to be learned from this experience. The first is that we cannot allow officials in the White House who are not accountable to Congress or the people to manipulate congressional authority for their own purposes. We should identify the phony issues created by OTP to advance its own interests and expose them for what they are. We should not sit idly by while the White House staff grows and takes over the functions of legislatively created agencies like the Corporation for Public Broadcasting and the Federal Communications Commission. A good example that this is happening is the fact that neither CPB nor the overwhelming majority of local public broadcasters who supported H.R. 13918 were consulted by OTP in the formulation of their policies. At issue is nothing less than the question of who shall rule: Constitutionally elected representatives and their appointees or faceless bureaucrats.

Second, we cannot allow an administration out to turn the electronic media to its own ends to control the programing and personnel policies of public broadcasting. This is what they want to do and Congress must respond with a resounding "No." Men like John Macy who are essential to public broadcasting's success cannot be sacrificed to political and bureaucratic opportunism. Aggressive, important public affairs programing like "Banks and the Poor" must not be done away with because campaign contributors do not like it.

As I have said time and time again, the way to do this is through a system of permanent financing which will insulate public broadcasting from control by the political operatives at the White House.

THE GEORGE G. HOBERG VISTA POINT

HON. DON H. CLAUSEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. DON H. CLAUSEN. Mr. Speaker, in late June I had the privilege of participating in a unique dedication ceremony in Lake County, Calif., which was only recently made a part the First Congressional District which I am privileged to represent.

Dedication of the George C. Hoberg Vista Point is unique because it represents the first roadside rest on a California freeway featuring a full-time tourist information office that has been financially supported by the Department of Public Works, California Division of Highways. This "first of its kind" project in the State of California is named in memory of George C. Hoberg, 1904–70, dynamic civic leader and pioneer Lake County resort owner.

The Vista Point, is, indeed, a living memorial to a great American who, like the point itself, was dedicated to serving the traveling public at the Hoberg Resort on Cobb Mountain in Lake County which he developed and successfully managed from 1928 until his untimely passing in 1970. George Hoberg's many contributions to his community and the area he loved so much are chronicled in the information which I am inserting in the Record at this point:

The George G. Hoberg Vista Point

(By Marion Geoble)

The George G. Hoberg Vista Point is the first roadside rest offering full-time information service for the traveling public, on a State Highway. This project was completed through the joint efforts of the State of California, the County of Lake and the City of Lakeport, at a cost of $100,000. Site preparation was done by the Department of Public Works, the County of Lake provided the funds for the construction of the building and the underground utilities installation, and the City of Lakeport furnished the 2.8 acres of land. Much of the material and labor was donated by the citizens of Lake County, in this, the first project of its kind, in the State today.

A Senate Concurrent Resolution named the Vista Point in memory of George Hoberg, Sr., was introduced by Senator Randolph Collier of the First Senatorial District, a long time friend of the Hoberg family.

George G. Hoberg, Sr., known as "Mr. Lake County" for his unflagging promotion of Lake County, was born January 29, 1904 at his parents home, and died July 19, 1970, at his home, just a few hundred feet distance from the place of his birth at Hoberg's Resort on Cobb Mountain.

He attended and graduated from the county schools and attended Cogswell Technical College in San Francisco from 1919 to 1923 where he graduated with honors.

On November 16, 1927 he was married to his beautiful and gracious wife, the former Gertrude Suhr, and two children, a son George, Jr., and daughter Marilyn Angelley were born of this union.

In 1928 he and his 2 brothers, Paul and Frank took over Hoberg's Resort enterprise from their parents Max and Theresa Hoberg, and under their regime (the third generation of Hobergs), the resort business was perfected and developed into the largest privately owned resort in the state, as well as being one of the first convention centers, with facilities for more than 1,000 guests, including display rooms and a vast auditorium.

He was president of the Lake County Chamber of Commerce from 1938 to 1941; the Redwood Empire Association from 1944 to 1947 (the only person to serve in the office of president for 3 terms); district chairman of the California State Chamber of Commerce from 1939 to 1944; director of the California Safety Council; past president of the Resort-Hotel Committee of the American Hotel Association; past president of the Western America Convention and Travel Institute and a member of many fraternal and civic organizations including the Shriners, Masons, Native Sons, Footprinters Association, Lions, Elks and Moose Lodge.

He was completely dedicated to the advancement and betterment of the entire county, and gave wholly of his time, talents and money to achieve these goals. He was a crusader for better highways throughout California and proponent of the Federal System of Highways throughout the United States, and was known as the "Father" of the Highway System working closely with the State Highway Commission for more than a quarter of a century. He was a volunteer weather observer for the U.S. Weather Bureau from 1939 to 1969 (so he could spread the word about "beautiful Lake County") besides serving as director, chairman, aide, assistant or advisor to practically every county or state-wide program, project or activity.

A brass plaque at the Vista Point reads: George G. Hoberg—1904–1970.

Born, lived and died at Hoberg's the largest privately owned Resort in California (founded in 1885) which he developed and successfully managed from 1928 until his death.

A proud and respected citizen, dynamic Civic leader, consistent supporter of good State Highways, he never tired of extolling the merits of Lake County and California.

Served as President of the Redwood Empire Association and the Lake County Chamber of Commerce.

A giant among men, his prophetic foresight guided the development of the area he loved and served so well.

ABORTION PROBLEM IS WITH US

HON. LAWRENCE J. HOGAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. HOGAN. Mr. Speaker, many individuals, from all walks of life, have spoken out against abortion. As one concerned about every person's right to life, I was deeply moved by the words of Washington's Patrick Cardinal O'Boyle at St. Matthew's Cathedral on August 6, 1972. Cardinal O'Boyle, a leader in the fight for life, said in part:

> The abortion problem is with us and it presents the basic options of human existence: life or death. Let us choose life. Let us reaffirm its inviolability and its value. Let us oppose fear with hope. Let us replace escapism with responsible action.

Mr. Speaker, for the information of my colleagues, I place Cardinal O'Boyle's address into the Record.

Homily Given by Patrick Cardinal O'Boyle at Saint Matthew's Cathedral, August 6, 1972

"The thief comes only to steal and kill and destroy", Christ says. "I have come so that they may have life and have it to the full." (St. John, 10: 9–10)

During the past few months, there has been considerable public discussion concerning the performance of abortion in the District of Columbia. This discussion has been generated by the efforts of the District of Columbia to formulate regulations that would control the abortion procedures in non-hospital related clinics. Unfortunately, these regulations, which were passed unanimously by the members of our city government, give an aspect of legitimacy to an immoral and inhumane procedure that is responsible for the death of 20,000 unborn children in the District of Columbia during 1971.

Prior to the City Council's action, upwards of 10,000 signatures requesting public hearings were placed before the City Council. These were the signatures of blacks and whites, of Protestants and Catholics. The City Council ignored them. Because we have been ignored, and because these regulations deal with procedures that deprive the unborn child of a basic human right—the right to life—I am prompted to speak again on the matter of abortion.

I speak to you today as the Bishop of the Catholic community of Washington, D.C. But I do not feel that I speak alone. I join my voice to that of the Rabbinical Alliance of America, the Black Baptist Conference of Washington, to the leadership of many other Christian churches in condemning abortion. I find basis for my position, as they do, in the biblical command, "Thou shalt not kill," and in the reasoned arguments of contemporary moralists, Catholic and non-Catholic. And I address my remarks not only to Catholics, but to the entire community because abortion is a moral problem transcending any particular religious belief. I speak for the millions who honor and respect human life and for the thousands who will die if this horrendous practice is allowed to continue. Abortion is totally and absolutely unacceptable because it is the killing of human beings and because it marks the precipitous end of civilized society.

The Nuremberg war crimes tribunals called aborton promoted among the Jews in Germany a "crime against humanity." Can it be that what was a crime in Germany thirty years ago has become a civilized action in Washington today? Or is it that history is repeating itself? Surely not so soon again, not so very soon.

Let us see what we have been asked to accept. First of all, abortion is a procedure that kills the developing human infant in the womb of its mother. Medical science has provided us with accurate information on the beginning of human life. At the moment of fertilization, there comes into existence a new and unique human life in the microscopically tiny egg cell. Contained in this cell is the blueprint for the development of the whole human person, including the temperament, physique, eye, hair and skin color, and other characteristics of human nature. From microscopic beginnings, already stamped with molecular uniqueness, the human being grows, develops normally to the time of birth. Birth marks a new mode of existence, but the new-born baby is the same unique individual that has been maturing in the mother's womb during the long months since conception.

Abortion puts an end to this marvelous process of human development. Abortion, whether performed in the hospital, the clinic or a clandestine place, is the killing of a developing human being, and it is morally wrong. Regardless of the reasons that lead to abortion, or the circumstances where the act is performed, abortion is evil, and nothing can make it good. The anti-life mentality which is rampant in our society today is a disease—a disease which has infected some doctors—even some ministers of religion are not immune. If it were merely a private mental attitude, we could ignore it. But it is not a private attitude. It is an attitude which affects everyone who believes in the innate dignity of human life.

It is imperative that we address ourselves seriously to the problems that women sometime face attendant on pregnancy. Patience and understanding are required of all of us in the face of these real problems.

But the present propaganda effort in the District of Columbia is not founded on compassion for women with difficult pregnancies. Abortion is now being forced upon us as a spurious solution to social problems and as a means of family planning. In a city that is 71% black and that includes a measurable amount of poor people, no one can ignore the implications of genocide.

Those who work for a more permissive abortion climate and seek to increase the already shocking number of abortions, use delusive arguments to justify their stand.

Some attempt to justify abortion by denying the humanity of the fetus in its early life. For them, human life begins at some magic moment during pregnancy. This is scientifically untenable.

Others try to ignore the humanity of the fetus altogether or they consider it a matter for religious belief only. While we understand the psychology behind this position it is nevertheless dishonest and wrong. The humanity of abortion's victims cannot be ignored. Abortion at ten weeks is the killing of a tiny baby with all of its vital organs already present. It looks like a little baby—it is a little baby. And it is not religious belief that makes it so. It simply is so in fact.

There are others still, and these are many, indeed, who do not deny the humanity of the fetus. They readily admit that abortion kills human beings. They justify this killing on the basis of three principles of what is called the new morality. The three principles are: (1) only wanted children should be born; (2) a woman has the right to control her body, and (3) the survival of mankind is at stake.

On the basis of the first of these principles, namely, that only wanted children should be born, it is argued that death is preferable to being born into miserable poverty, or into overcrowded conditions, or with a mental or physical defect. The decision in each case is left to the mother or the doctor, or to overzealous social engineers. The victim, of course, cannot be consulted and is not considered. This is a shocking rejection of civil rights and due process. It is also a social policy fraught with dire consequences. Professor Leo Alexander, an expert at Nuremberg, speaking of the war-time atrocities in Germany, says: "It started with the acceptance of the attitude, basic in the euthanasia movement that there is such a thing as life not worthy to be lived." This attitude started in Germany, among the intellectuals, before 1900.

The argument based on the second principle, namely the woman's right to control her body, runs like this: the fetus is within the woman's body and is totally dependent on her for survival—hence in practice it can be considered part of her, and so she can dispose of it as she chooses. This argument has no validity. First, the fetus is in no way a part of the woman's body. It is a genetically different human life. It is alive because it has the ability to reproduce dying cells. It is human because it can be distinguished from other non-human species, and once implanted in the uterine wall it requires only nutrition and time to develop its whole potential. The fetus's dependence on the mother for continued life does not make the fetus subservient to her—else we are all slaves of the air we breathe. Secondly, although pregnancy involves great inconvenience, one simply cannot justify killing on the basis of inconvenience. Whatever the rights of privacy may entail, we must insist that the right cannot include the killing of another human being. It was Albert Camus who said: "the existence of another individual places a limit on my freedom."

The third principle used by the anti-life crusaders to justify abortion is the survival of the species. The human race, they say, is quickly overpopulating this finite planet. Pollution is already a critical problem. For the good of humanity we must stop this rush toward overpopulation, for humanity's sake we must kill human beings. For the good of our grandchildren we must kill our children. This line of reasoning is morbid, and it is brutally and woefully misguided. It is cruel to pretend that the quality of our national life will be in any way improved by the slaughter of babies. The killing of babies will not clear pollution, or improve our cities, or relieve the real suffering of our people. To suggest that it will is only to distract from the real causes of our national and world problems.

Even if abortion helped solve a real overpopulation problem, it still would not be acceptable—because it involves the subordination of the individual man to society. It is total subordination because it involves the forced death of the individual for the benefit of society. And that is an inversion of values. Society is for man, not man for society. If the subordination of the individual is accepted in principle, no man is safe. Any class of people can become unwanted and be listed as victims, simply by extending a definition.

Such a society is unacceptable in principle. It is alien to the American spirit. A society whose citizens depend for existence on the fact that someone else "wants" them is already a society of slaves. A society which struggles for its survival through the mangled bodies of its young is ugly and brutal. Such a society has lost its meaning, its purpose and its dignity.

My dear people. I share my thoughts and worries with you today for a very good reason. As Catholics, we have a special commitment to the dignity of man. We believe that man has a special sacredness because he lives his life in God's presence and is the recipient of God's special care. Jesus did not die for an abstraction like "humanity" or "mankind." On His own admission, He died for His friends—and His friendship extends to every person. He emphasized the special personal character of His love. He is the Good Shepherd who will leave the ninety-nine in the desert to go in search of the one that was lost. And so we are reinforced in our conviction that the value of the human person transcends all other values—a value which cannot be price-tagged and traded or bartered in the market place.

Let me address myself specifically and briefly to the legal situation in the District of Columbia. The District Code prohibts abortion except by a physician and only when necessary to preserve the life or health of the mother. This law is not an adequate statement on the morality of abortion. But the current practice of abortion in the District goes far beyond what the law allows. Those who argue for even greater permissiveness ignore the intent of the law that has been promulgated by the Congress and upheld as constitutional by the Supreme Court of the United States. Justice Byron White in his concurring opinion in the Vuitch case which decided the statute's constitutionality wrote: "It should be absolutely clear that a doctor is not free to perform an abortion on request without considering whether the patient's health requires it. No one of average intelligence could believe that under this statute abortions not dictated by health considerations are legal." Are we to believe then that the 20,000 abortions performed last year in abortion clinics in the District were possibly operating within the limits of the criminal statutes?

The recently-formulated Regulations for the abortion clinics also fail to consider the intent of the law. The Regulations exhibit no concern that abortions be done only for *bona fide* health reasons. The overall effect of these Regulations, then, will be to encourage the performance of abortion on a wide scale.

In Section 13 the Regulations imply that abortion is but another method of birth-control. They direct the District government, with public funds, to advertise the private abortion clinics to all the District's residents, with the youth of the District singled out as a target group. This is contrary to the intent of the Congress expressed in the Family Planning Act of 1970, which prohibits abortion as a means of birth control.

By passing these Regulations, the District government has demonstrated neither imagination or leadership. The District government must reconsider its action. Therefore, I urge continued activity from all concerned citizens to bring to the attention of the D.C. Council and the public at large the abuses and violations of the D.C. law which are not effectively offset by the recent adopted regulations.

The abortion problem is with us and it presents the basic options of human existence: life or death. Let us choose life. Let us reaffirm its inviolability and its value. Let us oppose fear with hope. Let us replace escapism with responsble action.

To this end, and in the name of the Archdiocese of Washington, the following commitment is made to any woman living in the Archdiocese, who is looking for an alternative to abortion. The Birthright organization is prepared to help such a person with counseling and, if necessary, with financial assistance so that she may give birth to her baby.

As of today, a Defense for Life Fund is hereby established with the help of generous friends to assist such women in need. It is my earnest hope that our faithful people, anxious to defend the rights of the unborn to life, will contribute to the fund. Contributions may be mailed to Defense for Life Fund, 2800 Otis Street, N.E., Washington, D.C. 20018.

Birthright may be contacted, day or night, at the following telephone number, 526-3333.

I, indeed, would be remiss if I failed to take this occasion to commend everyone who has taken a stand in defense of human life, especially Birthright and the Right to Life groups in our Archdiocese. I urge them and all of you to greater efforts to preserve the innate dignity of human life. We face the great option: life or death. Let us choose life so that God may be served and all people may rediscover their purpose, their courage and their honor.

YANKEE ON OLYMPUS

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. ROBISON of New York. Mr. Speaker, I am certain that I am not alone in missing our former colleague from Massachusetts, F. Bradford Morse. Some months ago, of course, Brad left us to assume new responsibilities as United Nations Under Secretary General for Political and General Assembly Affairs. In the July/August issue of Vista magazine, Tristram Coffin has written a perceptive and sympathetic article on Brad Morse at the United Nations and has entitled it—appropriately enough—"Yankee on Olympus." I share it now with my colleagues, because of their continuing affection for one of the finest men in American public life. The article follows:

YANKEE ON OLYMPUS

(By Tristram Coffin)

Washington watches with fascination what may turn out to be one of the miracles of the year. This is a brave try by an uncommon matchmaker to revive an old love affair. On the surface the odds are against him, but no one who knows Brad Morse discounts any of his projects.

Bradford Morse, new UN Under-Secretary-General for Political and General Assembly Affairs, wants to restore the romance that bloomed a quarter century ago between the American political establishment and the world organization. This faded away during the Cold War and American's ambitious and costly try at playing world gendarme. But with the Cold War breached by President Nixon's journeys to Peking and Moscow, and the United States eager to take off its policeman's suit, this may be exactly the right hour for Morse's mission.

He is the former Republican Congressman from Massachusetts, and in his new job is responsible for political and General Assembly affairs in the U.N. The important fact is: Brad Morse is one of the saviest politicians ever to hit Washington. He is a brilliant backstage maneuverer whose name rarely finds the headlines. He has a quiet but evangelical zeal about world peace and the UN.

Morse has one great asset in trying to patch up the old love affair. He talks the language of the American politician, and he enjoys practical politics. In the past, most Americans affiliated with the UN, either as Ambassador or in the Secretariat, preferred the role of stateman to politician. The American politician, whether Harry Truman or the Congressman from Muncie, Indiana, wants to be talked to in his own language and in terms of his own realities. He resents high-hat treatment, whether real or imagined.

Morse has what counts with the American politician and the leaders of the Establishment. One associate remarks, "Brad is the best natural politician I've ever known." This is proven by his own record. He is a Republican, but was consistently sent to office by a district with a 70–75 percent Democratic registration. It is one of the most diverse of House districts, from the broad lawns of Concord to the mill towns of Lowell and Lawrence. It has an ethnic mix of old Yankees and those whose fathers and grandfathers came from Poland, Greece and the Arab Middle East. He has been able to get along famously with all of his electorate.

He has an amazingly wide acceptance in the political community. When he was nominated for the UN post by President Nixon, Senator George McGovern told him, "Brad, you're the only person I know that Nixon and I could agree upon." Charles W. Yost, the scholarly former U.S. Ambassador to the UN (1969–71) wrote: "Few appointments could give more encouragement to those concerned with the future of the United Nations than that of Representative Morse. . . . President Nixon is to be congratulated for nominating, and Secretary-General Kurt Waldheim for appointing, so able and well-qualified a man for this important post."

The question arises—can a man who has spent his life in the nitty gritty of American politics adjust to a wider arena and the tough problem of world peace?

Morse brings to the job a zeal for the job, a good basic understanding of the problems, and an extraordinary adaptability. When he joined Members of Congress for Peace Through Law (a bipartisan group who would like to move American policy closer to a concept of world law), his spirit was evident. One associate there comments: "What surprised a lot of us was that Brad really cared. This wasn't a game or a luncheon conversation with him. He wanted to get on with peace and world law." He has constantly moved from one world to another, adapting himself without any apparent hitch. An old ally on Capitol Hill told me, "He can go to a Polish picnic in his district, drink beer and dance, then catch a plane for Washington, sit down with a dozen Ph.D.'s at Brookings Institution for a discussion of world problems, and put on a display of intellect and knowledge that grabs you."

As far back as 1969, Morse spotted the major dislocation in the world. He told a graduating class at Worcester: "Around the world nations are uneasy because they no longer control, as they once could, their ultimate destiny. They exist in a world environment which is dominated by two superpowers, the United States and the Soviet Union, and they know that their future is inextricably bound up with the actions of those two countries.

"The Cuban missile crisis of 1962 demonstrated this fact in compelling terms. President Kennedy and Chairman Khrushchev confronted each other, and for a moment the world literally held its breath. And in that moment nations around the world realized not only that their own future hung in the balance, but that they were powerless to affect the outcome. For nations as well as individuals, this is a frightening proposition."

He believes honestly that the big-power control of events is unwise and impractical, and that the UN offers a chance for all countries to get into the act and so modify the risks of big-power strategy.

Brad Morse has taken to the UN two other traits that should help him as a matchmaker. He is one of those rare individuals in public life who is content to work in the background and let others take the bows in the spotlight. He does not have an itch for histrionics or headlines. He has none of the William Jennings Bryan look, manner or rhetoric. And he has what seems to be limitless energy. He moves and talks at so fast a pace few have been able to keep up with him, even in the superheated atmosphere of American politics.

At first glance, Morse is deceiving. He looks rather like a rumpled bureaucrat in the second or third tier of, say, the Department of Agriculture. He has none of the strut of the ordinary politician. Once he is accepted as a politician, it is easy to put him in the category of a cautious tory who votes with party and spends his time getting dams and military contracts for the home district. Nothing could be further from the actual facts. In the House he led fight after fight to cut the Pentagon budget, although his own district was heavily endowed with military contracts. In terms of the realities of American politics, this could be called "heroic." Yet it worked. He was the only Republican in the House to come from a district with such a heavy Democratic registration.

His congressional operations show a mix of the pragmatist and the idealist. When he became chairman of Members of Congress for Peace Through Law he brought in a tough and realistic stance. He began a campaign in the 91st Congress that has jolted the U.S. military machine. Morse decided its Achilles' heel, in terms of practical politics, was its wanton spending and waste. At his persuasion, the group undertook an investigation of military budgets. This has since been picked up by the Chairman of the Senate Armed Services Committee and by the Chairman of the Joint Economic Committee, and has brought important cuts.

There are few clues in Morse's background. He is an Elk and an American Legionnaire, a product of the public schools of Lowell, Massachusetts, and Boston University, where he later taught in the Law School. His initial entry into politics was modest, as a member of the Lowell City Council. Senator Leverett Saltonstall, the blue-blood Republican, brought him to Washington and placed Morse on the staff of the Armed Services Committee, where "Salty" was the ranking minority member. Brad Morse proved so valuable the Senator moved him into his own office as executive assistant. Many believe that Morse's skill at politics kept the shy and aloof Saltonstall in office despite the heavy Democratic and Irish vote in Massachusetts. During the Eisenhower Administration, Morse was Deputy Administrator of Veterans' Affairs. In 1960, the year John Kennedy of Massachusetts was elected President, Bradford Morse, a Republican, came to Congress.

His interest in world affairs was relatively late in blooming. A constituent, Stillman Williams of Lexington, Massachusetts, introduced him to the book *A Plan for Peace*, by Grenville Clark and Louis B. Sohn. This was in 1960. Most politicians would say thank you, and put the book up on the shelf. But Brad Morse sat down and read it. He saw a vision, if you want to be dramatic about it. He saw that peace, this chimera that glows and fades on the far horizon, was possible and practical. He put his energy and talents behind this goal. In the House he could have been a member of the powerful Armed Services Committee, but chose instead the lesser Foreign Affairs Committee, and joined Members of Congress for Peace Through Law.

At the time, Members of Congress for Peace Through Law was a luncheon club. When he became chairman, the organization grew in power and accomplishments. He pushed away the tax-exempt status, because he felt this limited the society to exhortations, and he wanted to lobby and move mountains. Yet, despite his personal fight on war and the policies that bring it about, he has always managed to stay on good terms with the Establishment, and to sit with them and make meaningful deals.

When the death of Ralph Bunche left the deputy UN post open, Morse saw this as an opportunity, a chance to move into an area that fascinated him. He could have stayed in his congressional seat until the cows came home. He could have had the Republican nomination for Governor of Massachusetts on a platter, and probably would have won election without much trouble. This did not interest him. The United Nations did. He lined up the kind of backing that would impress President Nixon and was, of course, named.

In his first year at the UN, Brad Morse is likely to be fairly quiet. He will be listening and learning, finding out where the keys are. Yost says Morse "deeply believes in the United Nations" and "is a happy augury that henceforth both the executive and legislative branches of our government may be induced to resume that United States leadership in the UN which contributed so much to its earlier successes."

The problem in Washington, and Morse is said to see it clearly, is twofold. Congress is disillusioned and disheartened by world affairs. It seems unable to modify the drift toward presidential domination or to alter the policies that have put the United States in a bad light. So it says, in effect, a plague on the world.

The Presidency, whether under Kennedy, Johnson or Nixon, appears immune to suggestions from outside. Presidents or their aides seemingly go to great lengths to block out ideas which run counter to their own. Kennedy with the Bay of Pigs, Johnson with the massive war escalation, Nixon with the Cambodian invasion and the mining of Haiphong ignored Congress and less militant advice from the State Department.

Morse is said to believe that Mr. Nixon, if he can reach him, will buy the United Nations as an alternative to the heavy burden of world policeman. At some point the President, whether Mr. Nixon or a successor, will want to shake off the burden of wars and military costs that playing world policeman brings. At this point, Brad Morse will slip in with practical thoughts.

His argument with the political establishment is that America's attempt to regulate the world by force or threat of force has failed, has been extraordinarily expensive (around a trillion and a half dollars) and has made us look like King Canute and his command to the sea. We should now try the kind of multilateral negotiations so successful in the congressional cloakrooms, where a consensus is formed from the antagonistic blocs. The Congress doesn't indulge in fistfights; it plays the old game of horse trading. Why can't this be applied to the world?

While Morse does not put down big-power summitry, he sees this is leaving out and alienating the rest of the world, and so contributing to instability as new alignments try to break through the big-power hold. It also creates an uneven world society with some gorging at the table while others starve. He has complained of this lack of balance in the United States: "In the midst of the greatest affluence the world has yet known, poor Americans, black and white, go hungry in some parts of the country. Others subsist on diet that is far below what is necessary for basic nutrition."

In purely practical terms, if there are too many have-nots, if they are denied a voice in policy making, there will be rebellions and violence. In a time of instant communication, people and nations will not indefinitely accept poverty, manipulation and war. So, you make accommodations. You get the boys together in the cloakroom, and you work out a face-saving deal. In his own practical operations, Morse has never been particularly interested in those shibboleths of American politics, "victory" and "defeat." He doesn't regard them as particularly relevant. The main thing is to bring people together, and start moving.

Morse recognizes, as Yost has pointed out, that his effectiveness will depend in good part on how the United States behaves, and what influence he can have on Washington. Yost writes: "If the U.S. Administration chooses to bypass the UN in its handling of the great international political issues of our times, if Congress chooses while voting billions for armaments to be niggardly in providing for the very modest needs of the world's chief peacekeeping organization, then neither the United Nations nor its American Under-Secretary is likely to play a significant role in the world our troubled times demand."

That is the crunch.

But, looking at Brad Morse through those who know him well, he has an almost fanatic faith that men and nations can manage peace and world order. He wants personally to be successful in proving it. One friend says, "The United Nations post is the apogee of Brad Morse. There is nothing more he wants than to prove he can do a damn good, effective piece of work in steering the world back from the brink."

The warring powers are exhausted from war and military spending and threats to peace. They are too suspicious of one another to take big strides toward peace in bilateral talks. The world desperately needs skilled mediators whose interests are global rather than parochial. Today's United Nations may be just the arena where the new American Under-Secretary can practice his own brand of practical politics.

The kind of bargaining that goes on almost every day on Capitol Hill, as differences are patched over to pass legislation, could make possible a compromise if the mediator had the respect of both sides. No one expects Brad Morse to be able to fall into this role overnight. He is still an unknown quantity to most of the world. But what his associates do say is that he has the capacity to become this kind of bargainer for peace—if he has the time. No one knows whether events will rush too quickly, or whether he can "sweeten" the American political establishment's view of the UN.

Everyone I have talked to agrees Brad Morse is the best hope that has appeared in a long time. This is, in itself, an extravagant compliment, and one that he shies away from. He likes to start in any labor quietly, without fanfare, without headlines.

MRS. NIXON COMMENTS

HON. CARLETON J. KING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. KING. Mr. Speaker, I have previously joined with other Members of Congress in taking issue with the recent statements attributed to Jane Fonda and Ramsey Clark concerning the bombing of North Vietnam. Unfortunately, thanks to these self-appointed guardians of the Nation, millions of people around the world now believe that the United States is deliberately bombing the dikes in North Vietnam.

An editorial which appeared in the Troy Record newspaper on August 10, applauded Mrs. Richard Nixon for rising to a White House challenge and taking a strong stand against the actions of Jane Fonda in Hanoi. The First Lady commented that the actress should have used the opportunity afforded her for more constructive ends.

Under leave to extend my remarks in the Congressional Record, I would like to include the editorial from the Troy Record, an outstanding newspaper in the 30th Congressional District. I fully agree with Mrs. Nixon and the sentiments expressed in the editorial. I believe that Miss Fonda and Mr. Clark could have done their country a great service by asking the North Vietnamese leaders to end their aggression rather than allowing themselves to be brainwashed by Communist propaganda.

I have called upon the Department of Justice to make a complete investigation of their remarks to determine if there has been a violation of any Federal statute.

The editorial follows:

Mrs. Nixon Comments

Being the wife of the President of the United States requires more than presiding over pink teas.

The first ladies of earlier years may have remained in the background but this is no longer possible even if they so desired. They are swept along with the new movement of greater participation of women in all affairs.

Mrs. Nixon takes well to the trend. Although essentially a homebody she unhesitatingly rises to the White House challenges.

How well she does was demonstrated in her press conference this week. She took Jane Fonda to task about her charges of Americans bombing dikes in North Vietnam and well she might. She said that the actress should have asked Hanoi to stop its aggression.

With Mrs. Nixon we concur. The right of dissent should not be and is not denied in this country but Miss Fonda carries the right of dissent too far.

One could possibly say that her attitudes are due to naivete, that she is gullible and falls for Hanoi propaganda. There are many others who are critical of the role in Vietnam but who do not go hook, line and sinker for the whole North Vietnamese line as Miss Fonda appears to do. Miss Fonda finds few flaws in the Hanoi line.

She has strengthened the Hanoi line on the damage to dikes. It is becoming increasingly apparent that the North Vietnamese are cleverly preparing for the approaching flood season when dikes may be breached by high waters. Then they can blame the trouble on the Ameriacns.

With the entre she had to Hanoi, Miss Fonda could have done her country a service. Instead she did it a disservice. She did her part in encouraging Hanoi and thus possibly prolonging the war and deferring still longer the return of prisoners.

Mrs. Nixon is well justified in her criticism of Miss Fonda and her role in the Vietnam situation.

McGOVERN'S LACK OF INTEREST

HON. BEN B. BLACKBURN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. BLACKBURN. Mr. Speaker, it has recently come to my attention that Senator McGovern has refused to receive briefings by the National Security Council regarding the strategic situation of the United States. Senator McGovern has the right to refuse the briefings, but it is most unusual for a major candidate for the Presidency to wish to stay in the dark regarding the strategic position of the United States. It does not surprise me that Senator McGovern does not want a briefing on the security needs of our country. His public statements have demonstrated not only a lack of interest but hostility to those needs. That is one reason he will be soundly defeated at the polls next November.

PRICE BILL TO RESCIND DES BAN

HON. ROBERT PRICE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. PRICE of Texas. Mr. Speaker, an old proverb says that one should not throw out the baby with the bath water. And yet, the Federal Food and Drug Act which has required a ban on the further use of diethylstilbestrol—DES—in animal feeds has accomplished this result.

The intentions of Congress in enacting legislation to protect the quality and purity of our food supply have undoubtedly been well meaning, and the pure food and drug laws have prevented the use of hazardous substances which might otherwise have found their way to the consumer in a strictly "buyer beware" marketplace.

However, our laws must be the product of reason and must deal with real instead of imaginary problems; they must not impose a "cure" that is worse than the "disease." And yet in the application of the Delaney amendment toward the use of DES we have achieved an injustice which demands corrective action. Commissioner Charles Edwards of the Food and Drug Administration has acted to order a ban on DES in animal feeds in spite of the fact that no known hazard to human health has ever been established after two decades of prescribed use.

DES in levels established and monitored by Government has been a boon to the American meat-consuming public and has allowed livestock producers to provide our people with an abundant supply of wholesome and nutritious meat at reasonable prices. The Delaney amendment, however, because of its zero toleration standards now threatens to ban this most useful product without any compensating benefits. If residues of a food additive appearing in food destined for human consumption are a definite threat to human health, we ought to take action to prevent their presence. However, because of increasingly sophisticated technology, our ability to find residue traces has reached a point where we can detect parts per billion and perhaps even parts per trillion. At what point do residues cease to be a threat to health, or put another way, what is to be gained by requiring a zero toleration of residues?

Mr. Speaker, the Delaney amendment requires the complete ban on DES in animal feeds assumingly because insignificant residues somehow pose a threat to health. Automobiles have killed more Americans than have been lost in all the wars this Nation has ever fought combined and contribute to pollution, congestion, and urban decay—and yet who among us will propose legislation to abolish the automobile, especially those of us who drove to work today?

Every year multiple thousands of Americans suffer injury and death from accidents in the home—but do these justify prohibiting the manufacture of bathtubs, tableknives, or staircases?

Fluoride is a known poison—but are we to deny the obvious benefits of using fluoride in our water supply in trace amounts for the prevention of tooth decay?

The threat to human health posed by trace amounts of DES residues nowhere approaches the risks involved in smoking a cigarette or getting into an automobile—in fact, the threat is nonexistent according to the best information available. We need, therefore, to amend the law to provide for the flexibility needed to administer the law in a reasonable manner. Some Americans are livestock producers and they will be adversely affected by a prohibition on DES; however, all Americans are consumers, we all eat meat, and we will all pay the penalty of higher prices without any demonstrable improvement in the quality of the meat that comes to our dinner table.

Mr. Speaker, I am today introducing legislation to modify the Delaney amendment to permit the continued use of DES in animal feeds when residues arising out of such use will not induce cancer in the insignificant amounts detected. Furthermore, I am writing to Commissioner Charles Edwards to request that full hearings on the use of DES in animal feed be promptly called so that the maximum consideration can be given to the best interests of the public and the cattle industry by a thorough study and examination of this matter. I insert into the RECORD at this time the text of my letter to Commissioner Edwards, and I call upon my colleagues in the Congress to take prompt action on this needed legislation:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., August 16, 1972.

Hon. CHARLES C. EDWARDS,
Commissioner of Food and Drugs, Food and Drug Administration, Department of Health, Education, and Welfare.

DEAR MR. COMMISSIONER: As one who has been in contact with your office many times in recent months and as the representative in Congress of a district where livestock production represents a significant part of the regional economy, I am writing to express my deep concern over the decision not to hold hearings which had been under consideration concerning the use of diethylstilbestrol in animal feeds.

While the "Delaney Amendment" requires a zero toleration of residues of additives appearing in food destined for human consumption, and in spite of the recently announced findings of lingering DES residues in tests conducted by the United States Department of Agriculture, nevertheless, I believe a mistake has been made in the decision not to hold the DES hearings.

I realize that the law gives the Food and Drug Administration no leeway in banning DES in animal feed because of persisting residues, however, in view of your own candid admission that DES in amounts being detected constitutes no known threat to human health, the decision to go ahead and hold hearings would allow a more thorough and open consideration of this whole issue and would help focus needed attention upon the advisability of amending the highly restrictive Delaney clause.

We must apply the rule of reason to the law if we are to maintain public respect for those who enact and administer the law.

Thank you for your consideration, and I look forward to hearing from you with great interest.

Sincerely,

BOB PRICE,
Member of Congress.

FORMER MASSACHUSETTS GOV. ENDICOTT PEABODY SERVES PARTY AND NATION IN FOCUSING ATTENTION ON THE VICE PRESIDENCY

HON. ROBERT L. LEGGETT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. LEGGETT. Mr. Speaker, yesterday's action of the Democratic National Committee, establishing a commission on the Method of Selection of the Democratic Nominee for Vice President, was most appropriate for a very particular reason. The vote came on a resolution that had been submitted by Endicott Peabody, former Governor of Massachusetts and the man who has done more than anyone else in modern times to focus serious attention on the office of Vice President.

This sound and well-reasoned resolution directs that the new commission submit recommendations by January 1, 1974. The commission's report, with any revisions made by the DNC, will become part of the temporary procedural rules of the 1976 Democratic National Convention.

As you know, Peabody was a candidate this year for the Democratic vice presidential nomination—the first man ever to actively campaign for the office. In the course of his campaign, he set forth a number of principles on the vice presidency. Briefly stated, they are:

That the Vice President belongs to the people and not to any one person, and should be selected in a free and open convention;

That the traditional means of selection of the vice presidential nominee, by his designation in advance of the nominating session by the presidential candidate, demeans the Office of Vice President and the man who holds the Office;

That with the Vice President a heartbeat away from the Presidency, and the history that 12 of our 36 Presidents have been Vice Presidents, no man should come to the Vice Presidency without a mandate from the people;

That our vice presidential nominee should only achieve this position by running for the office in party primaries and conventions, and that the delegates to the national convention should have a choice, not an edict, when they make their decision.

Apart from his activity this year, his wide reading, and his energetic analyses, Peabody has an enviable record of action in the realm of practical governmental reform. In 1963–1964, when he was Governor of Massachusetts, his administration engineered a great many improvements in the government of that State—so many that I will not attempt to list them all at this time. However, it should be noted that constitutional reform for improvement of the structure of Massachusetts government was high on his list of priorities. When his term started, the Massachusetts office of Governor was one of the Nation's weakest. When he returned to private life, it was as strong and effective as the office in any other State in our land. Eighty-four percent of his forward-looking legislative program was approved by a legislature that was initially resistant to many of the administration measures.

The people of Massachusetts still derive great benefit from that reform administration of nearly a decade ago. The Boston Herald said:

> Governor Peabody's legislative achievements are likely to be a target for future governors to set their sights on for many years to come.

He has served in other posts, State and Federal, with great distinction. At the end of 1971, after much thought about the Vice Presidency, he announced that he would run for that Office.

His announcement was greeted with some disbelief and even amusement. In fact during his campaign he more than once had to answer the question, "You mean you're really serious about running for Vice President?"

Such reactions were not entirely unfamiliar to "Chub" Peabody. His first political race, in the 1950's, was from a district that had never before elected a Democrat. He was seeking a seat on the Massachusetts Governor's Council. Newspapers and other observers did not take him very seriously at first. But disbelief began to change to respect; the odds gradually changed, and he finally won the race.

He did not win the vice-presidential nomination in 1972. But his 7-month campaign in 37 States had a real impact. In March, in New Hampshire, he became the first man ever to win a Democratic vice-presidential primary, and he got 85 percent of the vote—more than Senators MUSKIE or MCGOVERN, more than Richard Nixon or SPIRO AGNEW.

Columnist Clayton Fritchey wrote:

> Since most politicians laughed when Endicott Peabody, the former Governor of Massachusetts, decided the way to become Vice President is to run for the job, it is only fair to note that the public itself doesn't seem to think that the idea is at all ludicrous.

Roscoe Drummond said:

> Endicott Peabody has done the most ridiculous and constructive thing at just the right time . . . I believe . . . it will be good for politics and good for government.

On the eve of the Democratic National Convention, July 8, the New York Times editorially said:

> Mr. Peabody has performed a service by focusing attention on the Vice Presidency and campaigning for the nomination as if it were in fact already open.

And after the convention, as our party sought to solve the perplexing problems precipitated by an antiquated vice presidential selection process, Milton Viorst wrote:

> We all tended to laugh, I'm afraid, when Endicott Peabody, the former Governor of Massachusetts, announced some months ago that he would campaign for the Democratic vice-presidential nomination. . . . I must concede now that his reasoning in promoting his candidacy was valid.

In fact, the words spoken by Peabody in his long and frequently lonely campaign have in recent weeks been echoed and reechoed by newspapers, radio, television, political observers and plain citizens.

Mr. Speaker, I submit that no one in the United States is better qualified for chairman of the new DNC Commission, by reason of foresight, practical experience, energy and serious original thought, than Endicott Peabody. He has long been a valuable member of our party—and he announced soon after the convention that he would campaign for the entire Democratic ticket this fall—but in the midst of vigorous campaign activity, "Chub" Peabody never loses sight of the future and the need for sensible party reform. Very obviously, he should be a member of the Commission. I think just as obviously that naming him as chairman would insure sensible and valuable results for the Democratic Party and for the Nation.

CONGRESSMAN FISH SUPPORTS THE INTERIM AGREEMENT OF THE LIMITATION OF STRATEGIC OFFENSIVE WEAPONS

HON. HAMILTON FISH, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. FISH. Mr. Speaker, the House is asked to concur in an agreement reached between the United States and the Soviet Union, which would impose a 5-year limitation on the construction and deployment of ICBM's. This interim agreement limiting offensive strategic arms, along with ABM Treaty, is the product of over 2½ years of negotiations by the Nixon administration at the SALT talks in Helsinki. Together these agreements represent a truly historic first step in controlling the nuclear arms race and decreasing the possibility of the outbreak of nuclear war.

They are without parallel in history. Never before have the world's two most powerful nations, deeply divided by competing political systems and conflicting national interest, formally agreed to place limitations and restraints on their strategic nuclear arsenals. Throughout history nations have sought to accumulate more military power than their rivals in order to acquire the political strength such power might confer. But now both the United States and the Soviet Union, realizing that each additional increment to military power does not necessarily represent an increment of usable political strength, have abandoned their quest for military superiority and have instead attempted to stabilize the parity of power that now exists.

I clearly recognize that these agreements are no panacea insuring world peace. But they do represent a significant step down what can be a long but vital road to real peace. For nuclear weapons, particularly in the area of strategic arms with their power to destroy entire populations, form the hinges upon which the terror of modern war is hung. Until those hinges are cut, we can have no genuine generation of peace, and only a pious hope for the survival of civilization.

Toward this end I have urged including in the Republican platform a pledge to expand and build upon the successes of the historic SALT talk agreements signed by President Nixon in Moscow. In another move toward this goal, I am presently drafting a House Concurrent Resolution to urge the President, at the conclusion of SALT talks-2 to call a conference of all nuclear powers to negotiate a "no first use" nuclear agreement and a further reduction in strategic arms with the ultimate goal of total abolition of nuclear weapons.

A brief review of what has been accomplished through negotiation over the past 10 years indicates clearly that eventual success could lay at the end of the negotiations road. For example: a limited test ban treaty has been in effect since 1963; a nonproliferation treaty has been in force since 1970; an underseas arms control treaty was ratified only this year; a ban on biological agents and toxic weapons has been negotiated by the Committee on Disarmament; and the ban on antiballistic weapons has now been ratified.

In view of these successes, I feel it is now essential that the Congress commit this country to a national policy aimed at working toward the reduction of nuclear arms and eventual total nuclear disarmament.

The approval of this Interim Agreement legislation (H.J. Res. 1227) is essential in this quest. I strongly urge all my colleagues in the House to support it.

TRIBUTE TO THE LATE SUPERINTENDENT OF BUILDINGS, EMMANUEL RIDGELL

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. EVINS of Tennessee. Mr. Speaker, it was with sincere sorrow that I recently learned of the passing of our longtime and faithful Superintendent of Buildings, Emmanel "Manny" Ridgell of Maryland.

For approximately 25 years, "Colonel" Ridgell, as he was affectionately called by many, worked diligently and efficiently in carrying out the difficult responsibilities of House Office Building Superintendent in the allocation, assignment and maintenance of office space and committee rooms for Members. In working with the Members, he was always cooperative and helpful. He always was friendly and understanding.

Despite the many problems that he faced each day in supervising the House Office Buildings, "Manny" Ridgell somehow managed to keep things running smoothly. He was faithful, cooperative and helpful. He will be greatly missed by the Members of the House and his successor in office will need much skill and talent to maintain the high standards set by Superintendent Ridgell.

My deepest sympathy is extended to the members of Colonel Ridgell's family.

FOURTH ANNIVERSARY OF INVASION OF CZECHOSLOVAKIA

HON. LIONEL VAN DEERLIN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. VAN DEERLIN. Mr. Speaker, despite obvious conflicting views, frequent disagreements and continuous controversy associated with our election process, this country enjoys a freedom of expression which encourages constructive reform. In any election, a majority of the voters may implement reform at local and national levels of government. And once elected, a representative is free to carry out the wishes of his constituency in a responsible manner. But even as the majority acts to implement its own programs, any segment of the population is free to petition and dissent, persuade and debate.

In January of 1968, Alexander Dubcek became the First Secretary of the Central Committee of the Czechoslovakian Communist Party. He responded to the wishes of the Czechoslovakian people by promising the "widest possible democratization" of the bureaucracy. But he emphasized that this was to be accomplished within the existing political system, without recourse to violence or threat. In commenting on a public appeal for reform as stated in the "2,000 Words" letter of June 27, Premier Oldrich Cernik specifically rejected recommendations for reform which "go so far as to call for demonstrations, strikes, picketing in front of the doors of officials, pressures and threats." [1]

But in disregard of this clearly stated policy for peaceful and constructive internal reform, Communist governments outside Czechoslovakia addressed themselves to a mythical issue—a manufactured concern over "enemy forces" which would "divert Czechoslovakia from the path of socialism and expose it to the danger of being torn from the Socialist community." After inventing the threat, they then sought to justify their militant stand against it:

> We shall never be resigned to imperialism making a breach in the Socialist system, by peaceful or unpeaceful means, from inside or outside.[2]

These statements are, quite obviously, alarming and unfounded. Yet they were apparently not complete without a suggested solution to the Czech "problem," one consisting of "resolute and courageous attacks on the rightest and anti-Socialist state; cessation of the activity of all political organizations acting against socialism; that the Czechoslovakian Communst party must take into its own hands the means of mass communications—the press, radio, and television—so that they should be used in the interest of the working class, the workers, and socialism."

The deplorable action on the part of the Soviet Union, consisting of an armed invasion of the country of Czechoslovakia, was based on these phrases—a rationale devoid of logic, truth, or reason. That invasion took place August 21, 1968, without warning or, as is clear, justification. It is to the great credit of the Czechoslovakian Government that bloodshed was avoided. The announcement of the Presidium of Czechoslovakia reflects the concern of the people of that country, providing us a plaintive commemoration of that day:

ANNOUNCEMENT BY THE PRESIDIUM OF THE COMMUNIST PARTY OF CZECHOSLOVAKIA OF THE INVASION OF SOVIET, POLISH, HUNGARIAN, AND BULGARIAN MILITARY FORCES, AUGUST 21, 1968

To the entire people of the Czechoslovak Socialist Republic: Yesterday, on August 20, around 2,300 troops of the Soviet Union, the Polish People's Republic, the GDR, the Hungarian People's Republic, and the Bulgarian People's Republic crossed the frontiers of the Czechoslovak Socialist Republic. This happened without the knowledge of the President of the Republic, the President of the National Assembly, the Premier, or the first secretary of the Czechoslovak Communist Party Central Committee.

In the evening hours the President of the Czechoslovak Communist Party Central Committee held a session and discussed preparations for the 14th Czechoslovak Communist Party congress.

The Czechoslovak Communist Party Central Committee Presidium appeals to all citizens of our Republic to maintain calm and not to offer resistance to the troops on the march. Therefore, our army, security corps, and people's militia have not received a command to defend the country.

(Prague Domestic Service in Czech at 0330 GMT on August 21 rebroadcast the Czechoslovak Communist Party Central Committee Presidium announcement with the following addition: "Therefore, our army, security corps, and people's militia have not received a command to defend the country because defense of our state frontiers is now impossible.")

The Czechoslovak Communist Party Central Committee Presidium regards this act as contrary not only to the fundamental principals of relations between Socialist states but also as a denial of fundamental norms of international law.

All leading functionaries of the state, the Communist Party, and the National Front: Remain in your functions as representatives of the people and organs to which they have been properly elected according to the laws and other norms valid in the Czechoslovak Socialist Republic.

Constitutional functionaries are immediately convening a session of the National Assembly of our republic, and the Presidium is at the same time convening a plenum of the central committee to discuss the situation that has arisen.

(Signed) Presidium of the Czechoslovak Communist Party Central Committee.

WASHINGTON REPORT

HON. JOHN WARE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. WARE. Mr. Speaker, I am placing my Washington Report for July in the RECORD:

WASHINGTON REPORT

Almost everyone, personally or through friends and relatives, was affected by the devastating floods which inundated much of Pennsylvania last month. Before the torrential rains of Agnes ended and the President declared Pennsylvania a Disaster Area, the Federal Government's disaster relief efforts, encompassing 44 separate programs, were being activated, and legislative efforts were underway to make more help available to the victims.

Military services were pressed into rescue work, the Corps of Engineers directed the fight against the flooding rivers, and the Office of Emergency Planning summoned help from every unaffected state in the union. As the disaster moved into the recovery stage, virtually every agency of the federal government became involved. Congress passed and the President signed a bill clearing $200 million for immediate relief measures. Now the President has asked the Congress for $1.8 billion to help rebuild flood damaged communities, and I will support him.

He also proposed special disaster loans to affected homeowners and businessmen, with the first $5,000 as a grant, and only a one percent interest rate on the balance. Five days after Agnes struck, 23 colleagues joined me in re-introducing legislation to double the present $2,500 foregiveness feature. I introduced this bill after the September, 1971, floods struck my district, but it languished in committee. My bill provides a number of new features, including increasing the forgiveness feature of Small Business Administration loans from $2,500 to $5,000. The President has adopted this feature in the Administration bill.

I also joined in sponsoring legislation requiring homeowners with FHA or VA mortgage loans to carry government-subsidized flood insurance, as now required with fire insurance; and providing financial help to restore or replace essential railroad facilities and equipment lost or damaged by the flood.

SOCIAL SECURITY

Social Security benefits will increase by 20% beginning with checks received in October. To finance this needed raise for the retired, which I supported, and keep the Social Security Trust Fund solvent, it was necessary to raise the contributions of both employee and employer next January.

POLL RESULTS

Approximately 20,000 constituents responded to my April newsletter poll. Your answers have been tabulated and will prove helpful to me as a guide as I vote on legislation in the Congress. Some respondents lamented that only "yes" or "no" answers were called for in the poll. This type of response was necessitated by two things—(1) the task of tabulating the answers, and (2) these are the only choices I have when I vote. Many times I would like to vote "yes, but . . ." on a bill, but I cannot qualify my votes. Again, my appreciation to you who helped by suggesting the questions or answering them, and now for the results, with the "yes" vote shown first and percentages in parentheses:

1. Busing: 1,335 (3.8); 18,075 (96.2); 2. Financing secondary education by state: 6,915 (40.5) by federal government: 6,990

---

[1] Speech by Premier Oldrich Cernik to the Czechoslovak National Assembly, June 28, 1968.

[2] From the "Warsaw Letter" condemning "antisocialist developments" in Czechoslovakia, July 15, 1968.

(40.8) and neither: 3,150 (18.7); 3. Value-added (national sales) tax: 5,895 (33.5), 11,743 (66.5); 4. Increasing $1680 limit on earnings for those on Social Security: 16,203 (87), 2,401 (13); 5. Increasing Social Security benefits by 5%: 4,110 (25), 10%: 4,874 (30), 15%: 1,803 (11), 20%: 4,119 (25), none: 1,231 (9); 6. Reducing "age of responsibility" to 18: 15,307 (79), 4,011 (21); 7. Granting Amnesty to those who fled the U.S. to avoid Vietnam service: 4,771 (25), 14,385 (75); 8. Approval of President's China trip: 16,185 (85), 2,657 (15); 9. Support of Phase II wage and price controls: 13,980 (75), 4,756 (25).

Presidential Poll—Nixon: 11,505 (62); Wallace: 2,663 (14); McGovern: 1,331 (7); Humphrey: 615 3-⅓); Muskie: 569 (3) and Kennedy: 316 (1.7). All others received less than 1-½ percent of total.

FEDERAL SPENDING

Lately, I have been forced into opposing some worthwhile federal programs in an effort to stem the election year spending rate forced on us by the majority in Congress. Several billion dollars have been added to President Nixon's budget, and the Congress seems headed toward adding several billion dollars more. These inflated costs, added to our existing deficit of $30 billion, are pointing toward something you and I want to avoid—increased taxes. Economies must be effected—and it can be done. As an example, a year ago, the Congress was nationally criticized for operating its restaurant and cafeterias at a loss of $340,000—a loss made up by taxpayers. The House Administration Committee, of which I am a member, worked on the problem—cut staff, streamlined operations, realigned prices and this year will reduce that deficit to only $70,000. I believe this will be eliminated by year's end. Many of us in Congress are economy-minded and are trying to cut costs of operating your government. Personally, although I am authorized a staff of 16 people, I find I can effectively operate my Washington office and my district offices with half that number. These comparatively small savings, if put into effect throughout our entire Federal government, can amount to a substantial reduction in our budget.

VIETNAM

We have now withdrawn our last combat infantry brigade from South Vietnam and officially ended our ground combat role there. When President Nixon took office 550,000 American troops were there. That is now down to 49,000 and the reduction is continuing. There are hopeful signs an official end to this distasteful conflict, not just our participation, is close. There are hopeful signs efforts now underway will bring peace to this area in a manner that will not appease Communism's aggressive forces.

NATIONAL HEROIN HOTLINE

Want to join the national fight against drug abuse? The Office for Drug Abuse Law Enforcement, directed by President Nixon, has established the below phone number, manned constantly, to receive information you have on heroin traffickers. The problem is serious, with over 500,000 heroin users in the country today, feeding a habit costing $17 million daily. Federal expenditures for narcotics law enforcement has increased from $20 million in 1969 to $164 million in 1972. Phone: 800—368–5363.

SEARCH FOR MENTALLY RETARDED CHILDREN

Mentally retarded children are entitled to an education. State and federal governments are cooperating to locate 40,000 such children. If you know of such a child, please call the below phone number, also manned 24 hours daily. 717—787–3990.

REVENUE SHARING

This new approach, returning federal money to local control, which I supported since first campaigning for Congress, should eliminate red tape, speed up federally-funded projects and produce more money for local work. After two years of effort, it passed the Congress and has been signed by the President.

SALT TREATY

One of the greatest hopes for a peaceful world future is now in the hands of the Senate. I believe it will be approved easily, opening vast possibilities for even greater breakthroughs in the arms race.

NATIONAL COUNCIL OF AFRO-AMERICAN REPUBLICANS

HON. PAUL N. McCLOSKEY, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. McCLOSKEY. Mr. Speaker, the National Council of Afro-American Republicans, Inc., recently had some good things to say about President Nixon, and also some comments of interest to people of both parties who seek an end to racial discrimination in this country.

The council's position was expressed last month in a letter from its national coordinator, Curtis T. Perkins, to Senator ROBERT DOLE of Kansas:

NATIONAL COUNCIL, AFRO-AMERICAN REPUBLICANS, INC.,
New York, N.Y., July 21, 1972.

Senator ROBERT J. DOLE,
Chairman, Republican National Committee, Washington, D.C.

DEAR SENATOR DOLE: On the eve of the 1972 Republican Convention set for Miami Beach, August 21, the moment of truth as it affects Blacks in the Republican Party stares us all in the face.

The National Council of Afro-American Republicans has fought sincerely and courageously against great odds to get the Party to face up to its responsibilities and the aspirations of Blacks and other minorities. Yet the achievements in this direction, although resulting in some progress, are still not encouraging or hopeful.

We joined in the doings of the Black Political Convention in Gary—speaking vigorously to all comers, the common sense of Blacks—for their own good—to belong in larger numbers to the Republican Party so as to achieve some political balance. Equally we defended the achievements among Blacks by President Nixon. We also spoke candidly and hopefully of the shortcomings of the Party as it relates to Blacks and other minorities. On the latter, it is not a positive image here that we can feel proud.

We stood up for President Nixon when there was villification by certain of the NAACP leadership at their conference in Detroit a fortnight ago.

We watched with chagrin when the Democratic National Convention had Blacks playing visible and dominant roles in their proceedings. We know our Party is not prepared here.

But beyond all this is the moral justification, despite that Black Republicans constitute only 16% of the Black vote, that they should participate fully in their Party.

Our aims which are spelled our here as follows—are very explicit:

At least 10 Black Republicans (At large by change of rules) on the Republican National Committee. There is not one Black on this Committee (A disgrace).

Responsible Black representation on all policy and executive committees of Republican State and County Committees where large numbers of Blacks are concentrated. Such is not the case now.

At least a Black Co-Chairman or Vice-Chairmanship of the Republican National Committtee and at least one paid deputy assistant Chairman with decision making responsibility (with assistants).

A paid Black assistant State Chairman on all Republican State Committees where Blacks live in large numbers.

An increase to full 200 Black delegates for the 1972 Republican National Convention. There were only 26 Black delegates in 1968 and only 50 alternates.

More accountability to Blacks by Black Republican appointed officials.

A greater share of the Republican political dollar from the national, state and county committees to help defray the expenses of Black Republican candidates on all levels and for voter education and registration of Blacks as Republicans.

Fielding 10 Black Republican Congressional candidates in the 1973–74 elections. Recent surveys show that this is possible in 10 congressional districts not presently held by Black Democrats.

An increase in Black Republican strength to 33⅓% of the Black registered vote by 1974 through a concentrated grass roots program to attract Blacks.

Administrative Black Republican assistants on the staffs of all Republican U.S. Senators, Governors and U.S. Representatives in states and districts with large Black populations.

Use of more Black Republican campaign managers and consultants.

More contributions by Black Republicans to all levels of the Republican structure. Blacks should help pay their own way and not wait for handouts only.

The presentation of a Black Republican Program on all aspects of matters affecting Black American to the 1972 Republican National Convention's Platform Committee.

Yet, without realizing the necessity of correcting these shortcomings, some key people around the Republican National Committee and on the periphery of the Administration have accused NCAAR of being anti-Nixon. Some of these are Black.

Although we initiated the Black Dinner for the Reelection of the President, even making the hotel reservations at the Washington Hilton, June 10th, all we got were brickbats. Our National Chairman along with our key members, worked with this affair. We cooperated by pushing at least 500 of our members to attend—only asking that those working with the Dinner support our Black Republican Awards Luncheon. We got no support. We hope this will set the matters straight.

Although the President has an excellent record on balance in aiding Blacks and other minorities, much has been done by NCAAR to let these facts come known. We distributed several thousand copies at our expense, on his achievements in this regard. However, we resent our asking for Party reforms to be taken as being against the President. We are against the slow pace the Party machinery is moving to really make for Black participation and growth as Republicans.

Here are some crisis situations confronting blacks in the Republican Party.

It may interest you to know that the National Council of Afro-Americans is beginning to evaluate the number of Blacks now being accredited to the 1972 Republican National Convention. To date the results are disappointing.

NCAAR is prepared to challenge these state delegates from areas where Blacks live in large numbers for fair and moral representation. We are prepared to go into the Federal Courts, if necessary.

A delegate to a National political convention is an important individual who helps formulate his Party's course for the next four years. Real Black Republicans are beginning to take a serious look into this Convention for a better count than 26 in 1968; plus only 56 alternates.

NCAAR is prepared to take whatever action necessary to increase the number of Blacks at the Republican Convention and their related visibility. Secondly, we pray there will be a Black Co-Chairman for this Convention.

We recommend such outstanding delegate-designates as Mayor Edward Bivens, Jr., of Inkster, Michigan; and Dr. Ethel Allen, Member, City Council, Philadelphia, Pennsylvania. There are of course, others. If there is the specter of "Me Tooism" in putting a Black woman in this spot—certainly, there are good and capable Black males.

Thirdly, we urge that Blacks be fully integrated on all committees of the Convention.

Although NCAAR has been fighting vigorously for full participation of Blacks in all Party activities—it took the Democratic Convention to show its appreciation of its Black constituency. This could have been resolved long before the Democrat farce in Black and Republican interests.

If Mr. Nixon is to receive 25% of the Black vote in 1972, certainly, the full program of NCAAR must be adopted totally. We fully support his reelection. Mr. Nixon has been a bold, imaginative and innovative President, both in domestic affairs and in international relations. No other President has dared to do so. None can certainly match his achievements. The Republican National Committee can be equally as forthright in dealing with Blacks.

We will have more to say before, during, and after the Convention—for the Republican Party belongs to Blacks as it does to any other citizens or groups who decide to work in and out of it to make it viable and effective.

My best to you always,

Cordially,

Curtis T. Perkins,
National Coordinator.

MORE WALLED PRISONS: THE WRONG MODEL

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. MIKVA. Mr. Speaker, I would like to commend the National Council on Crime and Delinquency for their recent report recommending a halt in construction of more penal institutions.

It is widely agreed that prisons corrupt rather than correct. It is time we stopped warehousing criminal offenders and started expanding the rehabilitative opportunities which have the potential for moving people away from a life of crime.

I insert in the Record an article from the Washington Post explaining the basis for NCCD's recommendation, and a column by Tom Wicker emphasizing that building more prisons means wasting taxpayers' money on a thoroughly discredited model of how to deal with crime and criminals.

The articles follow:

[From the New York Times, July 27, 1972]

The Wrong Model

(By Tom Wicker)

The Federal Bureau of Prisons is beginning to put into effect a ten-year plan for building more than sixty new correctional facilities that will cost taxpayers over $650 million at present estimates. This is well-intended, under President Nixon's mandate to make the Federal prison system a "model," but such a construction program seems to many critics the wrong way to proceed.

Norman Carlson, the director of the bureau, says that many of the new facilities are to be halfway houses and the like, instead of institutional prisons; and that the prisons to be built are to replace such outmoded faciilties as NcNeill Island in Puget Sound, which has been in use since 1865. "We are not going to build a lot of new Leavenworths and Atticas," Mr. Carlson insists.

But others in the corrections field argue that that is not the point. The best evidence, they say, is that the institutional prison, no matter how modern, provides the least effective kind of correctional system. Therefore, if the Federal Government wants to set up a model, it ought to be doing better things than building prisons, particularly when the trend in many states is toward closing them.

The Federal plan, for instance, calls for three new centers for youthful offenders on the West Coast; yet, in California alone, two relatively new state youth facilities have been recently emptied of inmates and two others were built and never have been used. California also is moving toward closing its medieval San Quentin prison.

This is not a radical "do-gooder" policy. Governor Ronald Reagan hardly qualifies as either of those; yet, during his administration, California has begun to subsidize the development of non-institutional correctional programs in local communities; about 80 per cent of its offenders are now in such programs, which made unnecessary the youth facilities already mentioned, as well as San Quentin.

In Rhode Island, for the last decade, a successful "deferred conviction" program has been keeping most felony offenders out of prisons, and on local probation. In Wisconsin, almost 80 per cent of offenders are in non-institutional correctional programs. New Mexico was able to drop plans for building a $20-million prison by instituting more effective probation and parole systems. Communities like Saginaw, Mich., Des Moines and Seattle, have had great success with non-institutional correctional programs.

When the state of Florida was forced to turn loose 1,252 prisoners in 1965, because they were found (as a result of the case of *Gideon* v. *Wainwright*) to have been unconstitutionally convicted, a study showed that the recidivism rate among them was only 13.6 per cent nearly thirty months later. Among another group of convicts who served their sentences and were normally released, the recidivism rate was 25.4 per cent, which led Florida's corrections chief, Louis L. Wainwright, to say: "This mass exodus from prison may prove that there are many inmates presently in prison who do not need to be there in order to protect society." Some authorities in the field estimate that no more than 15 per cent of today's prison population needs to be behind bars for reasons of public safety.

On the other hand, almost no one disputes the proposition that prisons tend to create crime, rather than "correcting" anybody. Mr. Nixon, in his prison reform directive to former Attorney General Mitchell—one of the best papers of the Nixon Administration—called the present American prison system "a convincing case of failure." From Attica to San Quentin, that can be amply documented.

The National Council on Crime and Delinquency is preparing to make public a plea for a total halt to the building of detention and penal institutions, urging that earmarked funds be allocated to expanded community correctional programs. At the moment, almost $2 billion in prison, jail and juvenile facility construction is projected throughout the country.

In these circumstances, the council also will recommend that the Federal Bureau of Prisons be converted into an agency that would provide technical assistance, program guidelines and research for state and local governments that develop community corrections programs instead of building new penal and detention institutions.

Mr. Carlson undoubtedly is correct that there will always be some offenders who have to be imprisoned for public safety; but these are the few rather than the many, and they scarcely justify the Federal Government embarking now on a vast program of prison construction. That seems exactly the wrong model to provide, at a time when Federal leadership and assistance might go far toward eliminating an American penal system that encourages rather than prevents crime.

[From the Washington Post, July 28, 1972]

Study Seeks Halt in Construction of Penal Institutions

(By Tim O'Brien)

A private organization that studies crime and delinquency in the United States called yesterday for major reforms in the nation's corrections system.

The National Council on Crime and Delinquency recommended a "total halt" to the construction of detention and penal institutions.

The council—whose members include criminologist-psychiatrist Karl Menninger, New York policy commissioner Patrick V. Murphy, and Duke University President Terry Stanford—also called for abolition of the Federal Bureau of Prisons and payment of at least "established minimum wages" for work performed by the nation's prisoners.

Recommending a halt to prison construction, the council said the country should stop wasting "massive sums on a system that has not worked in the past and is not likely to work in the future." The council urged, instead, that the nearly $2 billion now earmarked for jail construction be diverted to expanded community treatment programs.

Len Tropin, public education director for the council said "the trend now is toward community-oriented facilities and rehabilitation. That's the way the LEAA (Law Enforcement Assistance Administration) operates—pouring money into the states, cities and communities."

"Until all forms of community-based corrections are used to the optimum," the council said, "the size, location, or type of facility required for the few remaining offenders requiring institutional commitment cannot be accurately planned."

While recognizing that institutions are needed for dangerous criminals, the council reported that only 15 per cent of the people now incarcerated actually need maximum security. "On that basis," the council said, "we have vastly more institutional space than we need."

The council would also abolish the Federal Bureau of Prisons, replacing it with a "federal correction agency" that would provide program guidelines, technical assistance and leadership to state and local governments.

By turning over all federal penal institutions to the states, the federal government would be free to "monitor guide and offer strong leadership to the communities," Tropin said. "The idea is to get the federal government out of the imprisoning business and into the guidance and leadership business."

The council said the very existence of a Federal Bureau of Prisons "impedes a state's trend toward community correction."

Charging that the nation's prison labor system is counter-productive, the council recommended that inmates be salaried at established minimum wage rates. Presently, they said, the average prison laborer receives from 10 to 65 cents a day.

The council's statement also urged that prisoners be given jobs that offer adequate training that will prove applicable in the job market after their release. The council said much of the current prison labor is nothing but "busy work."

TELEPHONE PRIVACY—XXXIV

HON. LES ASPIN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. ASPIN. Mr. Speaker, I reintroduced the telephone privacy bill on May 10, 1972, with a total of 48 cosponsors.

This bill would give individuals the right to indicate to the telephone company if they do not wish to be commercially solicited over the telephone. Commercial firms wanting to solicit business over the phone would then be required to obtain from the phone company a list of customers who opted for the commercial prohibition. The FCC would also be given the option of requiring the phone company, instead of supplying a list, to put an asterisk by the name of those individuals in the phone book who have chosen to invoke the commercial solicitation ban.

Those not covered by the legislation would be charities and other nonprofit groups, political candidates or organizations, and opinion polltakers. Also not covered would be debt collection agencies or any other individual or companies with whom the individual has an existing contract or debt.

I have received an enormous amount of correspondence on this legislation from all over the country. Today, I am placing a 32d sampling of these letters into the Record, since they describe far more vividly than I possibly could, the need for this legislation.

These letters follow—the names have been omitted:

BENSENVILLE, ILL.,
July 27, 1972.

Representative LES ASPIN,
House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE ASPIN: I am most interested in having bill HR-14884 adopted to eliminate the constant nuisance calls perpetrated upon the public by the "telephone peddlers". The situation is becoming intolerable in that much too frequently I receive three calls a day trying to sell me property or home improvements. Our telephone was installed for our own personal use. I would have an unpublished listing except for the fact that frequently we have friends from out of town visiting and too often they have left our phone number at home which necessitated looking us up in the phone book. I do hope you will do all in your power to push this bill through.

I also hope in the very near future a bill will be passed to eliminate the tax on telephones which was instituted during World War II. A telephone is a necessary evil not a luxury.

Very truly yours,

________.

GLENVIEW, ILL.,
July 28, 1972.

Representative LES ASPIN,
House of Representatives Office Building,
Washington, D.C.

DEAR REPRESENTATIVE ASPIN: I am writing to support your bill HR-14884.

My telephone is no longer a convenience; it is a nuisance.

Selling by telephone has reached such proportions in this area, the Chicago North Suburban area, in my opinion, it is an *invasion of my privacy*. It is no longer the local merchant who calls, to check to see if he can deliver his goods. All day long it is an assortment of calls: aluminum siding salesmen; dry cleaners; rug companies; charity schemes which end up being newspaper subscriptions, any number of charities asking you to go door-to-door for donations, so many charities that you do not even recognize the name of the disease it is supposed to be for. And the most blatant intruder of all of the callers, is the land scheme promoter. They call all hours of the day, outlining trips to see lake property, with invitations for "free" dinners and a presentation of film promotion of land, or to promote free trips across country to see retirement property. They even call *long-distance*, from all over the country.

The type of call which distresses me most, now, is the land promoter who seems to hire housewives, calling from their own homes. The other evening at 9:30 p.m. I received the fourth such call of the day, a call from one of the recreational lake promoters, and the caller was a young woman, with a baby crying in the background. This type of call, where a promoter uses people calling from their own homes, with unlimited private telephone usage, and only pays them for referral names, *should be curbed immediately*.

Another facet of the problem is the inactivity of the FCC. I thought one of the primary purposes of the regulatory agency was to protect the rights of the individual. I understand that the individual has a right to business by telephone, but I believe it should be regulated, so that if I do not want to have the privacy of my home invaded. I would have some recourse.

Also, I was disappointed that the FCC did not intercede and fight for the right of the individual to receive a clear TV signal, in the case of the erection of the Sears, Roebuck and Co. office building.

I have had a long discussion with one of the supervisors of the local office of the telephone company, and she offered no satisfactory solution, short of having the telephone removed (which she did not suggest, but may have to be our ultimate solution). She told me that an unlisted number does not even deter the calls, significantly.

Also, I find that the non-competitive utility, the telephone company, even gives courses on how to use the telephone for sales work, and the local library carries a book on how to increase telephone sales!

If there is anything I can do to help promote your bill, HR-14884, please let me know.

Ma Bell and/or the sales agents need regulating.

Ma Bell is now a nuisance, not a convenience!

Sincerely,

________.

We people of Milwaukee, Wisconsin would like to add our names to people in favor of the bill pending in Congress HR-14884, under which we would not be bothered by telephone solicitors.

Mrs. Mary Haas, Mrs. Warren Geschke, Mrs. Dorothy McMillin, Wm. Betz, Pat Flood, Mrs. Chris Haase, Sharon Wiedenhoeft, G. McDowell, Lillian Warnke, Mrs. Chris Haase, and Betty Stenson.

DENVER, COLO.,
August 8, 1972.

Hon. LES ASPIN,
House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE ASPIN: Congressional Record, July 19, 1972, page 24534, within your Extension of Remarks "Telephone Privacy—XXV", quotes an anonymous letter from Chicago, Ill., as follows:

"Hon Les Aspin, House Office Building, Washington, D.C.

SIR: Add two votes in favor of your bill—H.R. 14884—to forbid telephone solicitation. I will boycott any S.O.B. who solicits business via telephone.

"Emphatically yours,

________."

That letter expresses my views precisely. More power to you and your bill.

Sincerely,

P.S.—No reply necessary.

DR. CARL KUPFER RECEIVES SPECIAL CITATION

HON. GILBERT GUDE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. GUDE. Mr. Speaker, it has been brought to my attention that Dr. Carl Kupfer, Director of the National Eye Institute, has received the special citation awarded by the Secretary of Health, Education, and Welfare, a prestigious departmental honor award which is presented for outstanding performance.

Secretary Elliot Richardson's special citation was awarded to Dr. Kupfer for creating, with limited resources, a unified research organization at the National Institutes of Health, dedicated to conducting and supporting research on the improved prevention, diagnosis, and treatment of blinding and disabling eye diseases.

Dr. James C. Tumblin, president of the American Optometric Association, pretty well summed up the high esteem in which Dr. Kupfer is held by professional organizations in the field of vision care, when he stated:

> The American Optometric Association is pleased to note Secretary Richardson's enthusiastic praise for the job Dr. Kupfer has done in organizing an outstanding research institute and assembling an exceptionally talented and dedicated staff in a relatively short period of time. His awareness of the need for a balanced program of intramural and extramural research in the areas of eye diseases and functional vision problems represents a major step toward overcoming many of the conditions which result in poor visual performance or blindness. We commend Dr. Kupfer for the outstanding work he has done, and offer our wholehearted support for the continued work of the National Eye Institute.

Dr. Kupfer, a graduate of Yale University and Johns Hopkins, is the first National Institutes of Health recipient of the Secretary's special citation since 1966. Prior to assuming the duties of Director of the National Eye Institute, he was assistant professor in ophthalmology at Harvard Medical School and later professor and chairman in ophthalmology at the University of Washington School of Medicine.

I know many of my colleagues here in the House share my interest in the progress of the National Eye Institute, which we helped to authorize through legislation in 1968. I am pleased that the Director of the National Eye Institute is a resident of my district, and I join Secretary Richardson and the eye care professions in offering Dr. Kupfer sincere congratulations on a job well done.

SENATE—*Thursday, August 17, 1972*

The Senate met at 9 a.m. and was called to order by Hon. ROBERT C. BYRD, a Senator from the State of West Virginia.

PRAYER

Lt. Col. John D. Needham, divisional commander, National Capital and Virginia Division, the Salvation Army, Washington, D.C., offered the following prayer:

God, we thank Thee for a moment when we can commune with Thee and gather spiritual strength. Our hearts are filled with gratitude as we count our blessings and remember Thy mercies.

Give us an understanding of Your purposes for us and all our fellow human beings. May we sharpen our awareness, cleanse our motives, and straighten out our values.

Help us to recognize that You are God and help us to develop the capacity to love, to care for each other, and for all the people of the world.

We seek Your divine guidance for the Nation and its leaders. In these days that try men's souls, give a sense of Your presence to those who deal with the affairs of state.

We pray for the Senators and their families and ask You to meet their needs.

Now, O Lord, let us be filled with Thy compassion so that all with whom we deal may feel the warm touch of understanding and concern.

Hear our prayer, through Jesus Christ our Lord. Amen.

APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The second assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., August 17, 1972.

To the Senate:

Being temporarily absent from the Senate on official duties, I appoint Hon. ROBERT C. BYRD, a Senator from the State of West Virginia, to perform the duties of the Chair during my absence.

JAMES O. EASTLAND,
President pro tempore.

Mr. ROBERT C. BYRD thereupon took the chair as Acting President pro tempore.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Wednesday, August 16, 1972, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Subcommittee on Labor of the Committee on Labor and Public Welfare, the Subcommittee on Refugees and Escapees of the Committee on the Judiciary, the Committee on the District of Columbia, the Committee on Government Operations, and the Committee on Public Works may be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider nominations on the Executive Calendar.

There being no objection, the Senate proceeded to the consideration of executive business.

The ACTING PRESIDENT pro tempore. The nominations on the Executive Calendar will be stated.

DEPARTMENT OF THE TREASURY

The second assistant legislative clerk read the nominations in the Department of the Treasury as follows:

Jack Franklin Bennett, of Connecticut, to be a Deputy Under Secretary of the Treasury.

Warren F. Brecht, of Connecticut, to be an Assistant Secretary of the Treasury.

Frederic W. Hickman, of Illinois, to be an Assistant Secretary of the Treasury.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the nominations be considered en bloc.

The ACTING PRESIDENT pro tempore. Without objection, the nominations are considered and confirmed en bloc.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

Tht ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to, and the Senate resumed the consideration of legislative business.

VIETNAM—THE SILENT HOMECOMING

Mr. MANSFIELD. Mr. President, the war in Indochina is still with us. Just the other day, the last combat unit was ordered withdrawn. Just the other day, a GI, from the State of Idaho was wounded, perhaps fatally.

This war has been a cancer on the body politic of this country. It has also been a source of sorrow—to put it mildly—to the American soul.

I ask unanimous consent that an article published in the New York Post entitled "The Silent Homecoming" written by Haynes Johnson be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SILENT HOMECOMING

It is perhaps fitting, if ironic, that on the day the war finally ended for the American foot soldier in Vietnam the Washington Post recorded the event casually in a two-paragraph item away back on page 20. The New York Times does not seem to have noted the occasion at all. (The New York Post gave the story top display on Page 1.)

In other American wars such news would have led to banner headlines all across the nation and proud speeches followed by the inevitable homecoming parades. Eventually statues of the heroes would be reposing in countless town squares.

No speeches are being made now about the great cause in Vietnam and, it seems certain, there will be no memorials extolling the valorous leaders of this war.

Treatment of the news that the lone remaining infantry unit there is going home and that the last combat patrol was held on Friday, Aug. 10, is fitting in another respect.

Most Americans have not wanted to be reminded of Vietnam for some time now. They have come to think of it as the French did before them. To the French, it was La Guerre Pourrie—the Rotten War. To Americans, it has been the most frustrating war and the most divisive.

Now we are ending our ground combat role much the way it began—quietly and almost out of the awareness of the public. We stumbled into Vietnam almost in the dark; we are backing out in similar fashion.

History will treat Vietnam differently. The longest, most unpopular war in American history is already burned deep into the American consciousness. It is a war that has lasted for 11 years, damaged political and military careers, led to the fall of a President, set in motion forces of bitterness and protest that have touched virtually every American institution, cost untold billions, taken the lives of 45,843 Americans and left another 303,296 wounded.

Some day an American Tolstoy may emerge who has the capacity to capture just what Vietnam has meant to America. Today we are left only with the raw statistics of the dead and the wounded and the missing.

Friday the Pentagon broke out its figures on the war by going back to 1961 when our military strength there numbered 3200. Eleven Americans had died in Vietnam that year and three had been wounded. There were no prisoners of war and none missing in action. Today 1121 Americans are listed as missing in action.

The levels of strength—and the casualties—rose slowly at first. We had 11,300 in Vietnam in 1962 and 16,300 in '63 and 23,300 in '64, the first of the Lyndon Johnson Presidential years. Then the great escalation began and a war that, like Korea, never was declared a war, became a historic conflict.

These figures speak for themselves: 1965, a force of 184,000 and 1369 deaths and 6114 wounded; 1966, a force of 385,300 with 5008 deaths and 30,093 wounded; 1967, a force of 485,600 and 9378 deaths and 62,024 wounded.

The crest came in 1968, a fateful year not only militarily but politically. The war took 14,592 lives that year. Another 92,820 Americans were wounded. The casualties reached a peak in the second week of May when 526 were killed.

In 1969, when Richard Nixon was inaugurated, 30,991 Americans had been killed in action in Vietnam and 195,601 had been wounded. In the years since, Vietnam has continued to be at the center of national political debates—and the casualties have continued until this day.

The war has led to innumerable books, reports and studies, including the celebrated Pentagon Papers. But nothing yet has portrayed fully the depth of the war's impact on the nation and its citizens. And no one has explained with complete satisfaction just how America became so hopelessly entangled in a rural land so far away.

Like a classic Grecian tragedy, there has always been an air of inevitability about America's involvement in Vietnam. No one, no matter how powerful, seemed able to stem the tide.

Arthur Schlesinger, the historian and adviser to John F. Kennedy, once recalled a conversation with Kennedy in the critical year of 1961. The President had just received a military proposal to send an American combat team of about 10,000 men to Vietnam.

"They want a force of American troops," Kennedy told Schlesinger. "They say it's necessary in order to restore confidence and maintain morale. But it will be just like Berlin. The troops will march in; the bands will play; the crowds will cheer; and in four days everyone will have forgotten. Then we will be told we have to send in more troops. It's like taking a drink. The effect wears off, and you have to take another."

But Kennedy, like those who succeeded him, never was able to resist the temptation to send more.

His brother Robert, a supreme fatalist, liked to recall another incident that showed how leaders and nations are often consumed by events. At the outbreak of the First World War, he remembered, the ex-Chancellor of Germany, Prince von Bulow, asked his successor, "how did it all happen"? And the reply instantly came back:

"Ah, if only we knew."

Now, for the American foot soldier, it is over, even if all the questions have not been answered.

EMISSARY OR NOT?

Mr. SCOTT. Mr. President, the mind boggles at what might have happened yesterday had the opposition candidate for the Presidency actually been President of the United States.

Let us review the proceedings.

His emissary returns from a visit with the North Vietnamese—a secret visit. Mr. Pierre Salinger was evidently acting as a sort of junior type Kissinger in this regard. He makes a secret visit with the North Vietnamese in Paris. His purpose, he reveals, is to say that his candidate would like to have peace, too. That, of course, is in the event our involvement in the war ends before election day and his candidate can assert, 'See, I was for peace also," thereby tailgating events.

But, Mr. President, when the candidate is asked directly whether Salinger went over there as his emissary and had these conversations, the candidate denies it flatly. Television shows him saying, "It is absolutely incorrect."

The next thing, on television, Salinger says, "No, it is correct. I went. He knew it. I went to deliver his views. I did suggest that we were for peace, too."

Then Salinger calls up the candidate and the candidate issues a revised statement saying, "Well, I did not actually send him but I knew he was going and I knew that was the kind of message he was going to deliver, and I am for peace, too."

Mr. President, if that candidate had been President, he could have shaken the country with that form of indecisiveness and that lack of credibility.

I think the American people will assess these performances and say, "George, come home. Come home to the United States Senate, George, where you cannot do as much damage."

Mr. MANSFIELD. Mr. President, the campaign seems to be getting underway a little early. It seems to be concentrating more on personalities than on issues.

I think what we should keep in mind that the facts which confront us from day to day are not a Ramsey Clark visit to North Vietnam or a statement allegedly made by Pierre Salinger, but the real issues are concentrated around the release of our prisoners of war and the recoverability, wherever possible of those missing in action.

The real issue is the continued bombing, on a scale heretofore unknown and now approaching its fourth month, of North Vietnam.

The real issue is not to rehash the war, but to end it.

The real fact is that this country is suffering casualties far in excess of what anyone anticipated when this misadventure began.

For example, the latest figures I have go through July 1, 1972. I usually get these statistics from the Department of Defense. They are public knowledge. However, I have not received any since that time. I will ask the Department to send me an up-to-date list.

But, a month and a half ago, 303,190 Americans had been wounded in Vietnam. 45,806 Americans had been killed in combat in Vietnam. 10,229 Americans died of other causes.

The total is, as of a month and a half ago: 303,190 wounded; 45,806 combat dead; 10,229 noncombat dead—for a total death list of 56,035 and a total casualty list of 359,225 Americans.

Thus, I would hope that we would forget this matter of personalities—who said what, or when—even if it was 4 years ago—during the administration of any President, and that we would face up to the realities of today and keep in mind that the important factors are the release of our prisoners of war and those recoverable missing in action, a stoppage at some time to this tremendous bombing which is taking place, and a further consideration of ways and means to bring about an end to this ghastly, this unholy war in which we are engaged and have been engaged in for far too long.

The ACTING PRESIDENT pro tempore. The minority leader is recognized.

Mr. SCOTT. Mr. President, all that the distinguished majority leader has said is true regarding the disaster of being involved in this terrible war. I think I ought to point out that about three-fourths of the casualties that occurred since this administration took over occurred in that first year, under a momentum created by the fact that we had over a half million troops there. The number of troops there are being brought down by the end of this month to 39,000. I saw a figure on the television last night that we will be down to somewhere between 20,000 and 25,000 before the end of the year. I believe that to be correct.

There are virtually very few draftees left over there. None are being sent over. In other words, practically everyone in Vietnam is there by his own choice, having freely decided to become part of the Armed Forces.

Of course, we want to end the war. That is why Mr. Kissinger has gone to Saigon. That is why we are trying in every way possible to end it. And it would be very desirable if we could have some constructive suggestions which we welcome from anyone. One of those constructive suggestions we have received in the past, I submit, came from Sargent Shriver who said in October of 1969, that the administration is doing everything possible to end the war.

At that time Sargent Shriver supported the President's policy. Only recently has he had second thoughts about it.

Mr. MANSFIELD. Mr. President, may I say that I give full credit to the President of the United States, Mr. Nixon, for reducing the number of military personnel in Vietnam from approximately 546,000 to around 41,000 today. It will be 39,000 or less by the first of September. And I agree with the distinguished Republican leader (Mr. SCOTT) that very likely there will be a further reduction announced at that time to about 20,000 or 25,000. All the combat soldiers have now been withdrawn and we have left only the supporting troops on the ground in Vietnam. And in my opinion Vietnam and all of Indochina is not and never was worth the blood of one American soldier.

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from Oklahoma (Mr. BELLMON) is recognized for not to exceed 15 minutes.

THE ENERGY SITUATION

Mr. BELLMON. Mr. President, another summer is upon us and with it we are again hearing reports of serious energy shortages which are working a hardship upon the citizens in many sections of the country. As a Member of the Senate, I feel that the Congress is not fully cognizant of the depth of the energy crisis which this Nation faces, and as a result we are tardy in taking steps to improve the situation. Our national economic strength has been built on the ability of machines to do work and machines require energy. Less than 1 percent of the energy expended in the United States comes from man's muscle power.

But during recent years, the United States seems intent on undermining its own position of world eminence by weakening our energy situation. While the countries of Western Europe, which presently import 90 percent of their oil from the Middle East and Africa, realize the importance of developing their own resources, policymakers in the United States appear oblivious to our decreasing energy production capabilities. Even worse, some U. S. citizens are actively advocating policies which would limit domestic production and thereby increase our dependence on foreign energy sources. This course is damaging to security and to our balance of payments.

Mr. President, in the August 14 issue of Industry Week there appears an article entitled "Will Industry Flicker as Energy Fades?" The article is written by Floyd G. Lawrence.

I ask unanimous consent that the full text of the article be printed in the RECORD at the conclusion of my remarks.

The ACTING PRESIDENT pro tempore. Without objection, it so ordered.

Mr. BELLMON. Mr. President, on the first page of this article the author quotes Secretary of Commerce Peter G. Peterson as saying that:

> "Imports of oil and gas alone in 1970 amounted to $2.7 billion"—a figure exceeding the U.S. balance of trade deficit in 1971. He warns that our projected annual deficit in oil and gas by 1985, "assuming we import fuels at the level projected by the Interior Dept., is $25 billion."

To put this in perspective, the author says, all U.S. imports of manufactured goods ran only slightly more than $30 billion in 1971. And the Secretary adds that from a security as well as an economic standpoint, meeting our energy needs through imports would be untenable.

Also the article points out that the energy crisis is much closer than many realize.

The author quotes Mr. Gunning, of the Chase National Bank, of New York, as saying that we are going from a situation where we had surplus gasoline to a situation where we do not have enough.

In addition the author points out that it is the natural gas shortage that is most immediately affecting industry. Managers around the country shuddered 2 years ago when, for example, gas deliveries in Cleveland were shut off to industrial consumers because the East Ohio Gas Co. found itself hard put to supply homeowners during a cold spell; some 35,000 workers were laid off temporarily.

The author goes on and says that few gas companies in the East or Midwest are accepting new industrial consumers. And several—including Washington Gas Light Co., which serves the Nation's capital—have been accepting no new customers, residential or industrial, since last November.

He further points out that the Nation's energy situation is a mess and that we are only today doing the planning that we should have done 10 years ago. He points out that worse still, some 61 Government agencies deal with energy matters, and frequently they work at cross purposes. The Government itself concedes the many inconsistencies in its policies.

Among some of these, and he quotes General Lincoln, are the following:

Although financing requirements for utilities and other energy development call for higher utility rates, such increases are discouraged by President Nixon's economic stabilization program.

The Nation relies increasingly on imports of petroleum, yet discourages development of its own petroleum resources. Examples: Environmental delays on construction of the trans-Alaskan crude oil pipeline and cancellation of leases in offshore Louisiana oil fields.

The United States has vast reserves of only one fuel—coal—yet it has placed environmental restrictions on its use, even though technology for its clean exploitation is still years away.

Because of the danger of polluting the ocean, Government is curbing offshore oil drilling, even though the alternative invites increased tanker traffic, which also poses pollution threats.

The Nation counts heavily on nuclear power—needed now. Yet it delays development of nuclear plants and boosts the capital required for them through environmental and siting restrictions.

At a time when the United States is running out of natural gas, Government allows a wellhead price of only one-fourth of the amount proposed by companies to pay for imported gas to meet demand.

The nations of Europe are looking for oil and gas in the North Sea and the Atlantic Ocean with American money which could be better spent, from the U.S. standpoint, on discovery, research, and development of domestic resources.

The States of Texas, Louisiana, California, and Oklahoma are becoming more and more aware of the limits of their oil and gas resource, as production nears 100 percent of capacity and neither oil nor gas is being located as rapidly as reserves are being used. The oil-producing States are beginning to question other States' policies of blocking resource studies, exploration, and development while utilizing the declining reserves of traditional energy producing areas.

In the future, as the energy situation becomes tighter, Oklahoma, another oil-producing State faced with the choice of selling energy needed at home to industries in the State or seeing it delivered to a State which has fought Atlantic OCS drilling, may decide to keep the wealth at home.

The unwise prohibitions on development of our national energy resources in the OCS—which now go by the misnomer, "environmental concern"—will one day be seen as "ecofolly." With hindsight, we will see both the economic and ecological folly of ultraconservative domestic resource policies dictated more by emotion than by reason.

However, this Nation's snail's pace in energy development cannot be attributed solely to those who advocate drastically limiting our resource use. Many research and development efforts which would increase our energy options have not been aggressively encouraged and are currently suffering from a lack of interest on the part of the public, the Congress, and the bureaucracy.

Before listing some of the shortcomings in developing policies and programs, let me make clear that I am not scoring legitimate conservation and antipollution measures.

I am not criticizing closer Federal supervision of OCS drilling.

I am not criticizing the conservation laws of other oil-producing States, which assure that wells are drilled and produced properly and thereby production over the long term is increased.

I am not criticizing those who rightfully complain that some ships are cleaning bilge tanks and dumping oil overboard. We have outlawed this practice in territorial waters, and action is needed to stop it in international waters. Apparently a good-neighbor environmental policy will not work.

But, I am critical of those who lack the foresight to realize that domestic as well as international competition for energy will be stiff as our needs for energy double in the next 15 years and worldwide demand doubles in the next 8 years.

I am critical of those who view all energy development as bad, without examining the dire straits society would find itself in if industry were denied the necessary power to run factories which provide jobs for our citizens, produce our goods, and provide essential services.

To date, the Government's record has been one of inaction, repeated and repetitious studies, and steadily declining success in finding or even trying solutions to meet our energy needs. Unfortunately, Mr. President, the record of Congress is no better. In fact, by reducing economic incentives and adding to administrative complexities, Congress has contributed to the problem.

If we continue to merely study these problems in the abstract rather than act decisively to correct them, we can expect to spend many hot summers and cold winters without electricity and other forms of energy as blackouts and brownouts multiply.

The first obvious failure to act on the energy front, is our failure, to date, to clear the way for construction of an Alaska pipeline.

At first, industry acted in a haphazard manner, and the Secretary of the Interior had difficulty getting adequate answers to legitimate questions. Then Interior studied the proposal, issued a draft environmental impact statement, held hearings, and finally after many months, issued the final environmental impact statement.

Concurrently, the Government has been sued, and those cases are still pending. One of them apparently was dismissed within the last 2 days, but before the pipeline permit is granted the whole subject may have to be brought before the Supreme Court. In other words, we have only seen the preliminary legal bouts. In the meantime, a reserve source of badly needed energy remains unavailable.

Three years after the beginning of construction, some oil from the pipeline will be available. About 5 years after construction commences, the pipeline will be operating at full capacity, bringing in 2 million barrels of oil per day. This sure source of oil could supply 12 percent of our needs in 1985. It is sheer folly to be debating this development when we know that without the Alyeska pipeline, this Nation will have to rely on insecure and increasingly high priced Middle East and North Africa oil for at least 35 percent of our needs in 1985?

We have no option. We must begin pipeline construction now.

The Outer Continental Shelf is a second source of domestic oil which, if developed, can help us maintain a healthy energy posture. The U.S. Geological Survey estimates that 50 percent of U.S. potential oil and gas resources await discovery on the OCS.

On June 4 of last year, President Nixon issued a clean energy message, in which he outlined specific programs which could assure clear energy for the short- and long-term future. Among the President's proposals was increased development of Federal lands, including the Outer Continental Shelf. On June 15 of that year, the Department of the Interior issued a 5-year plan for lease sales on the OCS. General sales in the Gulf of Mexico were to be held in December of 1971, and in May and November of each succeeding year through 1975. One sale in the Gulf of Alaska and one in the Atlantic were to be held, or comparable reserves from other offshore areas were to be released, prior to 1976.

How much of this leasing has been accomplished? Very little. A drainage sale scheduled for October 1971 was held, but relatively few tracts were involved.

The first general sale, scheduled for December 1971, was canceled following court action in which the Interior Department was accused of failing to comply with the National Environmental Protection Act. On June 20, 1972, the Department of the Interior filed another final environmental impact statement on the same 78 tracts. The actual sale will probably take place this September, some 9 months late. In the meantime critically needed new supplies of natural gas and crude oil remain undeveloped.

The Department of the Interior has just sent a draft environmental statement on the second sale to the Council on Environmental Quality. A hearing on the proposed leasing will take place in New Orleans, on August 22. If all goes smoothly, and past history indicates this cannot be depended upon, the sale of the 135 tracts, originally scheduled for May, will take place in December, some 6 months late. Again needed supplies are being kept from consumers.

At present, there is a court dispute as to who has jurisdiction over the Atlantic seabeds—the Federal Government or the States—and not enough exploration and research has been done in the waters of the Gulf of Alaska to consider that tentative leasing proposal a possibility.

In sum, the recent record for Outer Continental Shelf drilling is marked by procrastination and failure.

Mr. President, the situation might not be entirely bleak if only the failure to explore the OCS were counterbalanced by enthusiasm for exploratory drilling onshore. But this is not the case. Producers are not looking for domestic oil anymore because the profit margin has not justified tieing up needed capital.

Exploratory drilling in the United States hit a high point in 1955 and 1956. In 1955, 3,105 oil and gas producing wells were found out of a total of 14,937 wells drilled. The following year, 3,096 oil and gas producers were located when 16,173 wells were drilled. The most producers were found in 1955 and the largest number of exploratory wells were drilled in 1956. Since that time, both the number of successful oil and gas wells found and the number of exploratory wells drilled has been decreasing. In 1971 only 1,088 oil and gas wells were producers out of a total of 6,922 exploratory wells drilled. So, in the last 15 years, the successful new oil and gas wells found has dropped 185 percent and the exploratory drilling effort based on wells drilled has decreased 134 percent.

Another significant fact shows that reserves added each year since 1955 have remained fairly constant to the end of 1966 when they were at their highest point of 31,452,127,000 barrels. Since then, they have been dropping each year to the level of 28,462,957,000 barrels in 1970.

Coupled with the decline in reserves, the failure of refinery capacity to keep pace with demand is cause for concern. It is hard to imagine that the United States of America, which leads the world in petroleum technology, is now looking to others not only for crude oil, but also for petroleum products.

The U.S. petroleum refining industry is approaching a period of essentially zero growth in terms of crude capacity or total product output. From 1973 onward there are no known projects of any significance which will increase refining capacity, whereas in the past industry has added about 300,000 barrels per day of new capacity each year. Last year, imports of finished and unfinished products totaled about 2.2 million barrels a day. It would be physically impossible for U.S. refineries to produce these products in addition to their current output.

In contrast, there are impressive expansions and new refineries, either planned or under construction, in areas peripheral to the United States. These projects are to be found in eastern Canada, the Bahamas, the Caribbean, and Central America. The express purpose of these plants is to manufacture finished products for marketing in the United States.

The reasons for the stagnation in growth are currently being investigated by the National Petroleum Council. However, most parties are aware of some of the contributory factors to this situation. One is the resistance to construction of new plants by environmentalists. Other factors include uncertainty over U.S. oil import policies; a lack of deep water harbor facilities needed for supertanker operations; and tax incentives offered by some host countries and certain other economic advantages.

Oil is just one part of the energy picture. Its overriding importance stems from the fact that it is the fuel source which seems capable of meeting this Nation's increasing demands for clean energy in the near future, either by importing or developing our own still abundant resources. Certainly nuclear power and coal do not have the near-term potential and most desirable hydropower sites have been developed.

However, oil is not the only component in a healthy energy program. Development of other fuel sources is mandatory.

Until last week, when the Federal Power Commission announced it would give producers an optional procedure for permanently certificating new supplies of gas at prices in excess of area ceiling prices, I was completely discouraged by the natural gas situation in this country. Since 1954, the price of gas sold in interstate commerce has been regulated by the FPC, at prices below costs of production and well below true market value. Contracts have been signed recently that provided for 20 cents per million cubic feet. In comparison, gas sold intrastate goes for about 30 to 35 percent more. By keeping interstate prices unrealistically low, the FPC not only encouraged the use of gas for markets which could have been served better by other fuels, but it also discouraged producers from exploring for new sources of gas. The current Commission has recognized these past mistakes and has attempted to rectify the situation.

The recent FPC decision was precipitated by a gas shortage—a shortage in the midst of plenty. Today a number of gas companies throughout the United States have curtailed deliveries to customers, or are unable to offer service altogether. These companies are unable to obtain new supplies of gas to meet demands.

A more dramatic expression of the shortage occurred 2 years ago when a midwest company was forced to cut off delivery to firm industrial customers, and the industrials did not have the means to switch to alternate fuels. Plants were shut down and some 30,000 to 40,000 employees could not work. The problem was brought on by the cumulative effect of winter's below normal temperatures which depleted the underground storage reserve. This incident served as a warning of what might happen in other areas.

To meet increasing demand, gas companies are considering a number of alternatives, among these importing liquefied natural gas at prices substantially higher than domestic gas. These prices are estimated at $1 or more per million cubic feet for long-term, large-base load supplies and $1.70 to $1.80 per million cubic feet for short-term supplies. The situation is paradoxical. While prices of interstate gas have been kept low to benefit the consumer, the same consumer is now suffering from a lack of supply and is being asked to pay for extremely expensive liquefied gas imports. Mr. President, such a policy is totally irrational and it benefits no one.

What makes this situation even more absurd is the fact that we have abundant gas resources, but have failed to develop them. The Geological Survey estimates that 2,100 trillion cubic feet of natural gas are undiscovered but recoverable under current technological conditions. Unfortunately, companies have just not been looking for gas, and we have been using more than we have "replaced" by discovering new reserves. For example, in 1971, our net production was 22.1 trillion cubic feet, while our reserve additions were only 9.8 trillion cubic feet.

The August 3 FPC order on optional pricing holds hope for alleviating the gas shortage. Though the FPC will retain the power to trim the rate negotiated by gas producers and pipeline companies, the spirit of the decision seems to indicate new gas prices will be allowed to rise. There is no question this will create greater incentive for exploration and could save the consumer from nondelivery due to shortages of supply. Certainly this is a fate worse than paying a reasonable price. I hope the decision meets the court test which is bound to come. Congress should enact sanctity of contract legislation so that this decision will be a true inducement to more exploration.

With demands increasing so rapidly, no one or two sources of energy can be viewed as the answer to all needs. No fuel is alternate; all energy is needed.

At present, coal is our most abundant fuel resource. Unfortunately, it often creates environmental problems when it is mined and high-sulfur coal is troublesome when burned.

Here, our problem has been a lack of foresight. Some years ago, when nuclear power was deemed the wonder-fuel which would solve all energy problems, people began to discount coal. Instead of putting money into research and development of better mining techniques and ways of producing coal or turning coal into a clean fuel, our national effort was one-sided. Also, artificially low prices for natural gas demoralized the coal energy by drawing away customers coal had traditionally served.

Now a variety of programs for desulfurizing coal and for turning it into a gas have been introduced. The Office of Coal Research which was originally formed in 1960, has increased its activity several times over. But for several years, it was a shadow of an organization because few people showed an interest in coal. At present, OCR estimates that the first commercial plant to produce a high British thermal unit clean gas from coal may come on stream in 1980. Of course, this assumes that the Congress is willing to continue to fund this research.

Oil shale is another potential source of energy for the future. Since the 1920's, oil shale development has been a topic of discussion whenever the Nation feared an energy shortage. But that is about all it has been. We have made little progress in getting commercial production underway.

In his June 1971 message, the President proposed that development of energy resources on Federal lands, in particular lands with oil shale potential, be accelerated. That same month, a proposed prototype oil shale leasing program was announced by the Secretary of the Interior, and a preliminary draft Environmental Impact Statement was released. Sometime later, nominations for lands to be leased were received and, in April of this year, the Department tentatively selected six tracts—two each in Colorado, Utah, and Wyoming. A draft environmental impact statement for these tracts was to be issued by June 1, but has not been forthcoming.

Now many are waiting for the next step in this scenario. Leasing is scheduled for December 1972, but when will it really take place?

Let us hope this is not just another abortive attempt at oil shale development. The Nation needs that oil.

Energy problems are not limited to identifying and developing resources. Perhaps the most critical energy problem existing today is that being experienced by the U.S. electric power industry. Recurrent and spreading power shortages—blackouts or brownouts—have dramatically demonstrated the seriousness of the situation.

Industry has not been able to add new capacity to meet demands for electric power, which have been doubling every 10 years. This inability stems from a number of reasons, the most significant being:

First. Power projects have either been delayed or blocked on environmental grounds.

Second. It takes a number of years to plan and construct new major power facilities. During this time, the demand for electric power increases, especially during peak demand periods. The relationship between the amount of reserve capacity usually maintained by a utility and the rate at which its system load grows is such that delays in the completion of new generating units erode the utility's reserve margin and thereby weaken its supply capability and degrade the quality of service.

Third. The introduction of air pollution regulations has limited the use of fossil fuels. Low-sulfur fossil fuels are in short supply and their prices have risen considerably.

Fourth. The cost pressures stemming from inflation have had a significant impact on an industry which is the most capital intensive industry in the United States.

The most recent survey—July 6, 1972—released by the Office of Emergency Preparedness—OEP—for members of the Joint Board on Fuel Supply and Fuel Transport on the electric power situation for the remainder of this summer discloses there are several areas where reserve capacity for electric power is below the 15 to 20 percent considered the minimum safe level to avoid shortage problems during summer peak periods. These areas are in the southeast and west central regions and in New York City environs of the northeast region.

This is the dire message spelled out to those Americans who examine the Nation's energy situation. And the only conclusion which can be drawn is that continued energy inaction and indecision will lead to national economic chaos and serious personal inconveniences.

In the end, any discussion of energy comes down to a discussion of maintaining a growing, healthy economy which can serve the needs of the people.

Mr. President, unless basic decisions are soon made to actively promote domestic energy development, the United States is rapidly approaching the position where foreign nations which control our imported energy supplies can force decisions upon us which will wreck our country.

Without abundant, secure energy supplies, all the national aspirations which we presently hold, from cleaning up the environment to rebuilding inner cities and maintaining full employment, will be dictated not by ourselves, but by governments beyond the reach of Congress, the Supreme Court, or the executive branch.

Mr. President, unless Congress takes positive action soon to end the energy crunch, the citizens of this Nation and others who rely on our strength will pay dearly.

Exhibit 1

Will Industry Flicker as Energy Fades?

(Prepared by Floyd G. Lawrence and William H. Miller with David H. Larsen)

Energy rationing—just getting an allocation of any fuel at any price—could be the outlook industry faces in the next decade.

Incredible as that may seem, we have regulated ourselves into a dilemma: Increasingly, those fuels which are available cannot be used, and those fuels which can be used are not available.

The impact on our competitiveness in markets at home and abroad, on U.S. jobs, and on the pressure for U.S. industry to move overseas to survive, is only beginning to be felt. But it may dominate basic industry planning.

Natural gas and oil are the keys to the problem, Industry derives 78% of its primary energy from these fuels.

To satisfy that appetite, notes Secretary of Commerce Peter G. Peterson, "imports of oil and gas alone in 1970 amounted to $2.7 billion"—a figure exceeding the U.S. balance of trade deficit in 1971. He warns that our projected annual deficit in oil and gas by 1985, "assuming we import fuels at the level projected by the Interior Dept., is $25 billion."

To put this in perspective, *all* U.S. imports of manufactured goods ran only slightly more than $30 billion in 1971, Secretary Peterson points out, adding that from a security as well as an economic standpoint, meeting our energy needs through imports would be untenable.

"We could well go through a period during which energy won't be available rationing would be introduced, jobs would be lost, and production would be cut back," says Gerald D. Gunning, associate energy economist, Chase Manhattan Bank, New York. The only alternatives he sees are very dramatic measures to increase development of domestic oil and natural gas, and steps "to turn this whole energy situation around." And it will take quite some turning.

For decades the U.S. has ignored its utility bills. We have had a national energy policy: keep it cheap. We implemented that policy through regulatory distortion of free market relationships.

Energy *apparently* cheap and abundant was the result, and it played an important role in U.S. industrial growth. But we bought that cheap and abundant energy by borrowing against the future. Now our accounts are past due, and they will fall most heavily on industry.

In some cases supplies will be turned off. Prices will rise sharply. The reason is inexorably clear.

"Between now and 1985 the energy industries will have to invest more than $375 billion in new facilities to provide for our growing needs," estimates John G. McLean, chairman of the National Petroleum Council's Committee on U.S. Energy Outlook as well as president of Continental Oil Co., New York.

And that figure, he says, is exclusive of new petroleum marketing, gas distribution, and electric distribution facilities.

Prices must go up because the energy companies can neither generate the necessary funds internally at today's profit levels nor attract the funds from outside sources at current rates of return on investment, Mr. McLean explains.

All industry will directly feel the effect of higher energy costs. But that effect will be compounded in higher material costs as well. For the basic industries—primary metals; stone, clay and glass; petroleum and coal products; paper; and chemicals together with food—account for two-thirds of all industry energy needs.

Further adding to the cost will be not only higher prices for existing energy sources, but in many cases the costs of switching to more expensive forms of energy in the face of shortages.

Anaconda Co., New York, for example has been advised that there will be no natural gas available this winter to fuel copper smelting operations in the Southwest. Plans are underway to convert the operation to fuel oil—but at double the energy costs, says Howard L. Edwards, vice president and secretary.

Others in the nonferrous metals industry are going further and converting to electric smelters—at a still higher energy cost. Anaconda is considering the move, says Mr. Edwards, but observes that "you get a lot less energy from the primary fuel by converting it twice."

Although electricity is three times as costly as gas in heat treating applications, Thomas A. Blanchard, product manager, special furnace equipment, Midland-Ross Corp.'s Surface Combustion Div., Toledo, Ohio, reports that "furnaces going to Illinois and Indiana are electric rather than gas or oil today."

The steel industry also is moving from natural gas to oil or oil standby for soaking pits, annealing furnaces, and other applications, reports E. L. Andrews, vice president-materials for Allegheny Ludlum Industries Inc., Pittsburgh, and chairman of the American Iron & Steel Institute's Critical Materials Supply Committee.

Mr. Andrews points out that the dual burner provision add cost, as does the necessary storage capacity for the fuel oil. And not only is the cost of the fuel oil higher than that of natural gas, but "competition for the available oil has already pushed the price up 20 to 25%. Gas has been very important in annealing and processing in the steel industry," says Mr. Andrews, "but that day is gone."

Self-rationing?

Although natural gas today provides 46% of industry's primary energy, in the future "we believe residential needs for gas should come first," says Gabriel N. Tiberio, director Plant & Environmental Engineering Section of General Motors Corp.'s environmental activities staff. "Commercial needs like schools and hospitals should come next, and finally industry should be able to get its share for really high priority uses like heat treating in a protective gas atmosphere or in automatic soldering.

"Most natural gas applications of any nonessential kind in our plants will be replaced by electricity," says Mr. Tiberio, "and we must begin to consider the impact of that change back at the generating plant."

Petroleum, believes Mr. Tiberio, should be allocated in the future to transportation.

"Gasoline could be rationed as early as next year," observes Mr. Gunning at Chase Manhattan. He explains that "because natural gas is not available, many utilities and industrial customers are unable to get low-sulfur residual fuel oil and are turning to distillate. The yield on the refining pattern has been shifted to middle distillate to meet this demand. As a consequence, output of gasoline has been restricted.

"We're going from a situation where we had surplus gasoline to a situation where we don't have enough," says Mr. Gunning. "Unless we have a change in the import quotas allowing more imports of distillate oil this coming winter, we could have a situation where gasoline stocks drop to the point that rationing would be necessary."

"Because energy is a smaller cost component of manufacturing than of transportation, it may make sense for plants to pay more and conserve the oil for transportation use," Mr. Tiberio believes. "We are studying these various kinds of energy relationships in our plants and in our products today, and General Motors is considering creation of an energy planning group for that express purpose in the very near future."

Similarly concerned about the wise long-term use of energy resources is E. I. du Pont de Nemours & Co., for whom petroleum and natural gas are both energy sources and raw material. Just a few weeks ago, Du Pont established a Petrochemical & Energy Development Section to study changing supplies and costs in an effort to formulate a long-range plan.

Summarizing the situation for industry in the foreseeable future, Mr. Tiberio observes that "availability and dependability of energy seem likely to become more important than cost. The important thing will be: can we get it when we want it?"

ENERGY SHORTAGE CASTS LENGTHENING SHADOWS

Industry does seem destined to receive lower priority as energy resources tighten. The trend is already evident in the allocation of natural gas, where the energy crisis is most immediately apparent.

Gen. George A. Lincoln, director of the Office of Emergency Preparedness (OEP) and chairman of the federal government's Joint Board on Fuel Supply & Transport, explains that one of the board's prime objectives is to insure that "human users" of natural gas—homes, hospitals, schools, and essential government facilities—are not deprived in times of emergency. "There is a strong case to assure priority" to those users over industry, he has testified before a Senate committee.

Indeed, the Federal Power Commission (FPC), which regulates natural gas sold interstate, pointed out in May that it plans to "arrive at a method of cost classification, allocation, and rate design which will produce strong economic pressure toward a more efficient allocation of our fuel reserves. This will be directed particularly to conserving natural gas for residential, commercial, and other uses for which this clean fuel is greatly needed and to discouraging the use of gas for large volume industrial and boiler fuel purposes."

Regardless of priorities, industry and private consumers both face the same uncertain future. With less than 6% of the world's population, the U. S. now uses about one-third of its energy—and is increasing its energy consumption at a rate of more than 4% a year.

The Interior Dept. estimates a threefold increase in energy consumption between now and 2000—from 68,810 trillion Btu in 1970 to a whacking 191,556 trillion Btu in just three decades.

And as shortages begin to surface, industry presents a tempting target for curtailment. It swallows up 26.2% of the nation's primary energy (that obtained directly from fossil fuels), show 1970 statistics compiled by the National Petroleum Council (NPC), an advisory body studying the energy outlook for the Interior Dept.

When industry's consumption of primary energy is combined with the electrical power it buys, plus the fuel it burns to transport its products to market, its energy needs become even more imposing. A study by Stanford Research Institute for the Office of Science & Technology pegs industry's 1968 share of total energy consumption at 41.1%.

Bottom of the jar

The nation's energy bind comes from relying for slightly more than 95% of its energy needs on three basic fuels: petroleum (which accounted for 43% of total U.S. energy consumption in 1971); natural gas (33%); and coal (20%). The rest comes from hydroelectric and nuclear power.

"Oil, gas, and coal are the easiest forms of energy to utilize, and we've been using them up like the little boy who sticks his hand in the candy jar and thinks the bottom will never be reached," observes Hollis Dole, assistant secretary of interior for mineral resources.

Now, there's evidence the U.S. is reaching the bottom of the jar. Availability problems exist, or loom on the horizon, in all three of the basic fuels which have long been so plentiful, accessible, and inexpensive.

The crisis has surfaced first in natural gas which not only is cheap because of controversial FPC price regulation, but also is the most desirable fuel from an environmental standpoint. Tough new air pollution regulations have intensified the already brisk demand for it and helped push the rate of demand increase for natural gas in 1970 to 7.2%—higher than any other fuel.

The demand for natural gas has been so heavy, in fact, that the industry's Future Requirements Committee direly warns that gas companies will be able to supply only 86% of the nation's requirements by 1975. To make up the difference, says Gen. Lincoln, "it seems clear that imports of LNG [liquefied natural gas] or SNG [synthetic natural gas] feedstocks, or both, will be necessary to provide needed supplies of pipeline gas."

Nowhere is natural gas' unique role in the crossfire between environmental needs and energy demand better demonstrated than in New York City. In announcing the Environmental Protection Agency's new air pollution regulations, Administrator William D. Ruckelshaus indicated that to meet the standards, the city would have to boost its use of natural gas by 300%.

Yet, at the same time Mr. Ruckelshaus was making his announcement, the principal pipeline supplying natural gas to New York was reducing its deliveries by 7%.

Shrinkage supplies

While demand soars, natural gas proved reserves (those which are known to exist and which can be economically produced by using conventional methods) have been dropping every year since 1967. Gas sales contracts now in force account for 95% of the 259 trillion cu ft of proved reserves, leaving only 5% available for new customers.

Even more alarming, gas reserves in 1970 totaled only 14 times the nation's annual production of natural gas, a sharp decline just since 1964, when these reserves were 18 times annual production.

In the oil industry, the situation is even worse. Proved oil reserves were 12½ times annual production in 1957; today they're down to nine times annual production.

As a result of the supply pinch, the nation is forced to rely on imports for nearly 25% of its oil needs, and estimates are the figure will reach 50% by 1985. Even that projection anticipates that oil will be available from Alaska's North Slope, which remains highly questionable.

Beyond adversely affecting the U.S.'s already critical balance of payments, this strong reliance on foreign sources—particularly oil from the convulsive Persian Gulf countries—presents as uncertainty of supply that poses grave implications for national security. And as the State Dept. points out, it gives our country less flexibility in conducting its foreign affairs.

Reserves of coal, by contrast, are the nation's most abundant, and could last for centuries. However, environmental restrictions create problems today because most of the readily accessible coal near big Eastern markets has a high sulfur content.

"We have billions of dollars of investment in generating plants in the East that have not been amortized and must be kept going," points out Interior's Assistant Secretary Dole. "Either we're going to have to import low-sulfur coals or oil to utilize these plants, or devise a means for taking sulfur out."

Neither of those alternatives is attractive.

Out in the cold

But it's the natural gas shortage that is most immediately affecting industry. Managers around the country shuddered two years ago when, for example, gas deliveries in Cleveland were shut off to industrial customers because the East Ohio Gas Co. found itself hard put to supply homeowners during a cold spell; some 35,000 workers were laid off temporarily.

Even though last winter was comparatively mild, seven major pipelines across the country were forced to curtail service. Currently, 27 pipelines have filed curtailment plans with the FPC, reports Chairman John N. Nassikas.

Few gas companies in the East or Midwest are accepting new industrial customers. And several—including Washington Gas Light Co., which serves the nation's capital—have been accepting no new customers, residential or industrial, since last November.

Electrical power failures are causing uneasiness among executives, too. Demand for electricity has been averaging an annual growth of about 7%—and doubling every ten years. Of all electricity consumed in the U.S., 68% is for business purposes, and purchased electrical power represents more than a quarter of industry's overall energy needs.

Hot weather could bring problems yet this summer. Even with start-up of many of the 45 new generating plants scheduled to go into operation by September, capacity to meet peak loads will be in "critically tight supply" in parts of the Midwest and the Atlantic Seaboard, notes the OEP. It cites Chicago, Miami, and New York as "cities of special concern."

Despite planned new generating capacity, the electrical power situation seems acute enough that James R. Schlesinger, chairman of the Atomic Energy Commission (AEC), observes that he can "see the day when the country might have to ration electricity."

ENERGY POVERTY IN THE MIDST OF PLENTY

How could a nation so rich in natural resources and technology find itself running out of energy?

"Well-qualified people could have predicted this crisis ten years ago," observes John O. Logan, president, Universal Oil Products Co., Des Plaines, Ill. "Unfortunately, the situation sneaked up on industry. Almost every firm that uses fuel had a contract that appeared to provide enough for the future. There was no reason to question that source of supply."

One development that "sneaked up" was the snowballing increase in energy demand. "Just in the last three or four years, the use of energy in the U.S. has increased faster than the gross national product," notes an Interior Dept. report, citing rapid growth of air conditioning in homes and automobiles; greater use of home appliances; more cars; expanded use of energy-intensive processing of raw materials; and a "running out of opportunities" to apply known technology to increase efficiency in the use of energy.

Government energy planners were slow in spotting the spiraling demand. For example, in 1964 the FPC estimated that electricity consumption would rise about 6.5% annually—far under the 9.2% increase posted in 1970.

The nation's energy situation "is a mess," admitted Assistant Interior Secretary Dole in testimony before the Senate Interior and Insular Affairs Committee earlier this year. And, he concedes to Industry Week, we are "only today doing the planning that we should have done ten years ago."

Worse still, some 61 government agencies deal with energy matters. And frequently they work at crosspurposes.

Government itself concedes the many inconsistencies in its policies. OEP's Gen. Lincoln lists some:

Although financing requirements for utilities and other energy developments call for higher utility rates, such increases are discouraged by President Nixon's economic stabilization program.

The nation relies increasingly on imports of petroleum, yet discourages development of its own petroleum resources. Examples: environmental delays on construction of the transalaskan crude oil pipeline and cancellation of leases in offshore Louisiana oilfields.

The U.S. has vast reserves of only one fuel—coal—yet it has placed environmental restrictions on its use, even though technology for its clean exploitation is still years away.

Because of the danger of polluting the ocean, government is curbing offshore oil drilling, even though the alternative invites increased tanker traffic, which also poses pollution threats.

The nation counts heavily on nuclear power—needed now—to check the rising demand for fossil fuels. Yet it delays development of nuclear plants and boosts the capital required for them through environmental and siting restrictions.

At a time when the U.S. is running out of natural gas, government allows a wellhead price of only one-fourth of the amount proposed by companies to pay for imported gas to meet demand.

Deregulation the answer?

"Unhindered by such regulation, the current gas shortage would not have developed," says the American Gas Assn.'s immediate past chairman, G. J. Tankersley, president of East Ohio Gas Co. "Higher prices would have established themselves based on the premium value of natural gas, which would have provided the necessary incentive for production and may have reduced demand for this fuel."

The FPC agrees that wellhead prices—which average about 25 cents per thousand cubic feet—are too low under today's circumstances. It recently recommended increases ranging from 10 to 35% in some areas, but even those boosts are being held up by court appeals.

However, mere increases in wellhead prices aren't enough, believe many energy experts. John Winger, Chase Manhattan vice president and energy economist, charges that "the idea that the consumer was being protected by the regulation has proved false. Instead, by creating an energy shortage, the controls have done the consumer and the nation a great disservice.

"Therefore," he continues, "the controls should be removed—not merely modified, but removed completely and quickly."

The FPC doesn't agree that complete decontrol is the answer. Such a move would cause "chaos in the market," Thomas Joyce, chief of the FPC's Bureau of Natural Gas, contends.

"If a company has a package of gas, it will hold it until it can get the highest price for it," he tells Industry Week. "You'd see gas prices skyrocket. Now is not the time for complete deregulation for we still have a seller's market."

There's little doubt that FPC's controls have discouraged drilling. Exploratory wells drilled in 1971 hit a 24-year low and were less than half the number drilled in 1956. Investment in exploration has suffered a similar drop. Producers put $4.8 billion—65% of their wellhead receipts—into such activity in 1956; the dollar figure remained the same in 1970, even though demand for both oil and gas had more than doubled. But in 1970 the $4.8 billion investment figure represented only 38% of wellhead income.

Asks Frank N. Ikard, president of the American Petroleum Institute, Washington: "Why should investors put money into discovery wells where the chances of success are only 2 in 100—and where the product, even if brought to market, is price controlled in a way that inhibits a fair return?"

Environmental uncertainties, too, are having an effect on energy company investment. For instance, Thomas D. Barrow, director and senior vice president of Standard Oil Co. (New Jersey), and former president of its Humble Oil & Refining Co. subsidiary, Houston, points out that in 1968 Humble spent $45 million for rights to oil in California's Santa Barbara Channel. But drilling there has been blocked by environmentalists' court suits, and "so far we haven't gotten one penny out of our investment," he laments. Humble's investment in Alaska's North Slope oil fields is similarly uncertain because of environmental snags.

Needed: Big money

It's clear that to meet future demands, energy producers *must* commit massive new funds, not only for exploration and development, but for capital facilities as well.

While the NPC estimates that the U.S. energy industry will require capital expenditures of $375 billion between now and 1985, Kenneth E. Hill, executive vice president and director of Eastman Dillon, Union Securities & Co. Inc., New York, foresees an even higher figure of $475 billion.

Yet, despite the urgent need for capital, government has added to the poor investment problem.

Passage by Congress of the Tax Reform Act of 1969, which reduce the oil depletion allowance from 27½ to 22%, has "deprived the petroleum industry of several hundred million dollars of capital funds annually," says Chase Manhattan's Mr. Winger. That lost capital, he asserts, could have paid for discovery of 1 billion barrels of oil and 5 trillion cu ft of natural gas—enough to satisfy 10% of the nation's needs during the period the legislation has been in effect.

Energy executives bemoan, too, the increased interest of government in antitrust implications. The Federal Trade Commission has launched a new round of investigations into concentrations of power among energy firms, and several Congressional committees are making similiar studies.

Comments Mr. McLean of the National Petroleum Council: "To meet our future energy requirements, a massive industrial effort will be necessary. Many types and sizes of companies will be required, and industry should be given as much freedom as possible . . . to develop the particular corporate forms best suited to the job at hand."

Government also has contributed to the energy crisis by imposing environmental regulations that have caused technology to develop more slowly than expected. Dr. Richard Balzhiser, assistant director and energy chief of the President's Office of Science & Technology, suggests that the meeting of rising environmental demands has "strained the research and development capability of the nation" and diverted attention from other needed technological work that might otherwise have taken place.

AEC Chairman Schlesinger points out another aspect of the problem:

Most of the technology required to offset today's energy shortages has been the responsibility of industry, he says. An exception is nuclear energy which has been a government monopoly. As a result, Mr. Schlesinger asserts, the government has funded R&D money "in a lopsided manner," pouring most of it into nuclear research rather than into other energy sources. "We can see this in retrospect," he admits.

Adding to the technological lag has been the slower-than-expected development of the fast-breeder reactor, which converts atomic waste into usable fuel. This development has been counted on to provide a large share of the nation's energy needs during the transitional stage from our current reliance on fossil fuels to the end of the century when nuclear fusion presumably will be economically and technically feasible.

One reason for the delay, explains Resources for the Future Inc., a nonprofit Washington research organization, is the preoccupation of electric utilities and reactor manufacturers with getting light-water reactors on line in time to meet utility loads. Moreover, it points out, problems in licensing, construction, and the environment have all proved more difficult than envisioned.

WILL ENERGY DARKNESS LEAD TO DAWN?

The Nation's "best hope today" for meeting the growing energy demand is the breeder reactor, said President Nixon in his energy message to Congress last year. But breeder technology is only one of three top priorities identified by the President for joint industry-government R&D efforts.

The other two: coal gasification (which would convert coal into a clean gas which can be transported through pipelines) and stack gas cleaning technology (which would remove sulfur from coal smoke before it is emitted into the air).

The government's logic in pushing these three technologies is to move the nation away from reliance on oil and natural gas and on to more abundant coal and uranium.

The technical feasibility of the breeder has already been proved, but problems remain in its commercialization and in environmental effects. Both problems seem solvable, believes Dr. Balzhiser of the Office of Science & Technology, who expects the breeder to be economically attractive around the mid-1980s.

"The breeder involves a high initial capital cost," he points out, "but it brings fuel costs way down. It should be a significant help in keeping electrical energy prices low."

Next step in the commercialization of the breeder is construction of a demonstration plant. Fund raising for the project, which is estimated to cost $600 million, is going well among electric utility manufacturers, and government plans to contribute $130 million.

Joint industry-government research also is underway on coal gasification through funds from the Interior Dept. and the American Gas Assn. A technique for gasification is commercially available from Germany, but there's a question whether it will work with U.S. coals.

This, too, appears solvable, although Dr. Balzhiser doubts that coal gasification will become economically feasible before 1980. Most estimates indicate that pipeline quality gas from coal will cost from 80 cents to $1.20 per thousand cubic feet—considerably above today's wellhead price of 25 cents for natural gas. "It is more attractive to remove sulfur from coal before combustion rather than at the stack, where stack gas cleaning systems could cost 20 to 25% as much as the whole generating plant," maintains Dr. Balzhiser.

Stack gas desulfurization is a shorter-range goal than either the breeder or coal gasification.

Several processes are being tested and scientists believe that one or more should be available for general use by electric utilities by 1980. Irwin M. Stelzer, president of National Economic Research Associates Inc., estimates that costs will run between 1 and 2 mills per kilowatt-hour—perhaps 1 mill higher if the successful process involves a throw-away product that requires disposal.

Using the rule of thumb that 1 mill per kilowatt-hour is the equivalent of 10 cents per million Btu in fuel costs, the present differential between high- and low-sulfur fuel oil is about 25 cents per million Btu, asserts Mr. Stelzer. That means, he concludes, "that desulfurization costs in excess of 2.5 mills for a proved process would make that process uneconomic—unless the price differential changes."

The government also is eyeing development of oil shale, huge potential resources of which lie under federal lands in the Rocky Mountains region. These have never been tapped commercially, but they offer such promise as a source of low-sulfur oil that President Nixon has ordered preparation of an environmental impact statement as a prelude to federal leasing of the lands.

Further, the government is working with the electric utility industry on developing magnetohydrodynamic (MHD) power, which involves passing fuel through a magnetic field rather than turbines and rotating generators. The process could boost powerplant efficiency to 50 to 60%, besides cutting air and water pollution. Present efficiency in today's advanced powerplants is 40%.

A look at the future

All these developments, however, rely on existing fossil fuel sources. "These are finite, and too valuable for us to be burning for primary energy," observes Dr. Balzhiser. Ultimately, he says, the nation will have to switch to more advanced energy sources.

Of particular promise is nuclear fusion. This would use deuterium from the ocean, and offers "an infinite supply" of fuel if science can learn to control the nuclear reaction involved.

Promising, too, is geothermal energy—converting underground deposits of hot water or steam into energy. In the U.S., however, such deposits appear to be confined to the West. That makes still another form of geothermal energy—making use of hot rock, which is universally under the earth's surface—a more tempting research target.

Another long-range possibility is solar energy—heat from the sun which is converted into electrical energy by using solar cells. Presently, solar cells are too expensive for practical use.

Besides the Administration's technology push to ease the energy crisis, the problem is drawing heavy interest in both houses of Congress.

Despite all the attention within the Administration and on Capitol Hill, the nation has no official "energy policy." Many observers believe that, because of the number of agencies and economic sectors involved, formulating such a policy just isn't possible.

"What we really need, more than a pretty package labeled 'National Energy Policy,' is a reconciliation between environmental policy goals and the realities of the energy circumstances," says Bruce C. Netschert, vice president, National Economic Research Associates Inc.

President Nixon's energy message, however, was a step in the direction of a policy—particularly his proposal that all important federal energy resource development programs be consolidated under a new Dept. of Natural Resources. So far the proposal has made little headway in Congress.

Costs bound upward

Regardless of government actions, it is clear that industry must prepare itself for a future in which energy is going to be in shorter supply. And certainly more costly.

As Secretary Peterson recently told businessmen: "Few predictions I am likely to make will more likely turn out to be right than this one—namely, that the price of energy over the next decade will go up much faster than the cost of goods and services in general."

How much more costly will energy be?

Unfortunately, no one knows. Officials in the coal, oil, and natural gas industries protest there are too many "ifs" involved for them to project future costs of their products.

For the newer fuel sources, however, there is some indication. Besides the 80 cents to $1.20 price per thousand cubic feet estimated for gas from coal, shale oil is likely to cost from $4 to $4.50 a barrel, the Interior Dept. estimates. And a preview of LNG prices came last month when the FPC approved imports of the product from Algeria by El Paso Natural Gas Co., but ruled that El Paso had to charge the actual cost of the import, rather than combine it with the price of its other gas sources. Result: a price of more than $1.50 per thousand cubic feet.

Price increases may come even sooner than many managers expect. Former White House energy adviser S. David Freeman has said he expects the price of oil to rise at least 50 cents a barrel after the election. He looks for even steeper increases in natural gas and electrical energy.

What can managers do?

One thing managers can do now is conserve fuel—an idea the government is selling hard to industry. In a letter to 50,000 top executives this summer, Secretary Peterson contended that energy conservation could reduce demand by as much as 5%. And Gen. Lincoln thinks the practice is so vital that he suggests tax incentives to encourage it.

Managers can also speak out on energy. "Let's face it," says Universal Oil's Mr. Logan. "Perhaps we should take out ads in local papers. Perhaps firms that are heavy users of energy should consider mounting campaigns to let the public know how dangerous this situation is. They advertise for manpower and other valuable resources—and power definitely is a valuable resource."

But managers can, and should, do more. Rather than sit back and hope the crisis will somehow go away, they can insist through their elected officials that definitive estimates be made for future energy costs. None are currently available—which hampers company planning.

This is vital. Nearly every energy expert queried by Industry Week suggests that managers should be seriously studying their existing fuel supply situation, with an eye to possible alternatives.

Says OEP Director Lincoln: "When asked for advice on the future by industry, my office suggests provision for use of alternative fuels. We recognize the cost gets passed on to the consumer. But no one may foresee the future with certainty, and the costs of flexibility seem warranted by the bleak forecasts of energy supply over the next decade."

And even then, there seems no certainty that industry will not flicker as energy fades.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from Florida is recognized for not to exceed 15 minutes.

JANE FONDA, RAMSEY CLARK, AND THE WAR IN VIETNAM

Mr. CHILES. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The absence of a quorum has been suggested. The clerk will call the roll.

The second assistant legislative clerk proceed to call the roll.

Mr. CHILES. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. The Senator from Florida is recognized.

Mr. CHILES. Mr. President, in the course of events of 1970, as I campaigned for the U.S. Senate throughout Florida, it became apparent to me that the mood of the people of my State was one of weariness over the Vietnam war. Long since, a decision had been made that we were not going to try to win the war. I felt the loneliness of the mothers and fathers, the wives and families, for sons, brothers, and husbands they had sent to fight in a war they could not seek to win. I shared the despair of those who had lost loved ones. I experienced the distress of those who had men in prisoner-of-war camps or missing in action. I learned of the great concern of those who saw the financial drain the war was having on our country, and I saw the fear of many whose daily living was being affected so adversely by this economic disaster.

My conclusion did not come easy, because I had started the campaign as a hawk on the war, but it did come before the campaign was over. We simply had to get out of the war before it finished draining us of our human and economic resources and before it tore the people of this Nation so far apart that we might never reunite.

So I came to the Senate at the beginning of last year with this responsibility; and ever since, I have consistently supported moves to get this war over. I introduced legislation, I have spoken for other Senators' bills, I have voted time and again to get our troops out upon completing arrangements for release of our POW's and accounting for our men missing in action. I have been disappointed that more has not been accomplished, but I believe we have seen much progress made toward ending the war. And much of this progress, I think, is due to the continuing pressure on the administration coming from legislation passed by the Senate.

I am convinced that the administration does want to end the war. To that end, President Nixon has carried out his program of Vietnamization. This program has trained over a million South Vietnamese troops and placed in their hands the latest in weaponry and equipment. In the process, we have spent $130 billion, and we have been told that Vietnamization is successful and that we can turn the war over to South Vietnam.

In addition, there has been growing support for end-the-war legislation on the House side, as the war has continued and the public has become more and more disenchanted, more and more inclined to our withdrawing and leaving the Vietnamese to ultimately settle their differences. In my opinion this changing tide in Congress must be credited to the public, which has freely made its wishes and feelings known as it has learned more about how dearly this war is costing us.

So it is with all this in mind that I have viewed developments of recent days with growing concern and dismay. First we had the visit to Hanoi by Jane Fonda. She has let herself be used by North Vietnam. There are those who call her "traitor." I am more inclined to believe she is misinformed, misguided, and foolish. She claims merely to be antiwar and interested only in ending the war; yet she has severely damaged that possibility for those of us who have been working to find a responsible end to the war, for her actions have created a negative reaction among a public whose support we desperately need.

Then, on the heels of Miss Fonda's trip, we find former Attorney General Ramsey Clark journeying to Hanoi, reportedly representing an organization called International Commission for Inquiries Into the U.S. War Crimes In Indochina. In the course of his visit radio Hanoi attributed antibombing statements to Mr. Clark and in general Mr. Clark winds up coming across as denouncing the United States. The result: American public opinion again is affected negatively: Congress, which must have public support, is once again undercut in its efforts to find an end to the war.

The American people are not blind. They simply will not accept a one-sided viewpoint and presentation such as those offered by Jane Fonda and Ramsey Clark. They denounce in various terms the United States and its actions but seem to fully condone those of North Vietnam and the Vietcong.

They condemn our action against North Vietnam, yet ignore the fact that it was they who first breached the boundary and entered South Vietnam as aggressors.

Clark is quoted as referring to the "cruel and terrible slaughter in North Vietnam" by bombing, yet makes no mention whatsoever—now or anytime before—of the thousands of civilians herded together and killed at Hue by North Vietnamese soldiers.

In an Associated Press story of August 13 Clark is quoted:

> The fact is that there has been massive inhuman bombing on cities, villages, churches, schools, hospitals, dikes, sluices, canals and the wide water system that supports the culture and the life of this country.

If true, yes, it is horrible. But I do not recall Mr. Clark ever condemning the North Vietnam-Vietcong practice of annihilating civilian residents of villages from which their soldiers are being driven and firing on helpless, fleeing refugees, killing them like flies.

Mr. Clark was allowed to visit one POW camp, he says, where he could interview 10 prisoners produced by the Vietnamese. He tells us how well off and healthy were the men he saw, and by his words implies there is little need for concern about our POW's welfare. This is very strange to me. Why did not Mr. Clark insist on visiting the other POW camps? Why did he not ask for a complete list of POW's and a report on their condition? It is my understanding that the Hanoi government has signed the terms of the Geneva Convention, committing itself to identify and properly care for all POW's in a humanitarian fashion, to allow immediate release of the sick or wounded and to permit inspection of prisoners and camps by a neutral party. Yet, in spite of its signing, Hanoi has continuously refused to meet these terms. Pleas by this country, the International Red Cross and other neutral organizations have been ignored. In a Wednesday, August 16, editorial the Washington Post said of Ramsey Clark:

> He reported in his San Francisco news conference Monday the statements on POW release which Hanoi, knowing of his prominence, wanted him to put before the American people. The statements amounted to Hanoi's familiar public refrain and the fact that he was being used should surprise no one. Attempts to manipulate the other side's public opinion are a standard part of this war. . . .

The previous day, Joseph Kraft wrote:

> Mr. Clark allowed himself to be used by Hanoi radio in a way that others of us who have visited North Vietnam avoided. He is subject to legitimate criticism for poor judgment in this and other matters.

It is reported that Democratic Presidential nominee GEORGE McGOVERN suggested some time ago that Ramsey Clark or "someone along that line" should succeed J. Edgar Hoover as Director of the Federal Bureau of Investigation. This does not appear to me to be a commitment on the part of Senator McGOVERN to Mr. Clark. But I have to say at this time that should I ever be faced with the decision of confirming such a nomination, I would not do it; for Ramsey Clark does not display the objectivity, the sense of fair play, the persistence in pursuing factual evidence that is critical to the FBI job.

Mr. Clark has said our POW's would be released shortly after Senator McGOVERN's election as President, for this would signal that we would no longer support the Thieu regime in Saigon. He said he based this on assurances he received from an unnamed Hanoi newspaper editor and a lesser official of the government. Well, to me his sources are not exactly ironclad. I well recall my visit to Paris shortly after being elected to the Senate to get firsthand information on our POW's from North Vietnam and Vietcong. I met with high officials of those governments, including Madam Binh, and I begged for information. I specifically sought hope that several Florida MIA's were in their hands. I was rebuffed. I asked that letters I brought be allowed to get through. I received no encouragement whatsoever. Consequently, I find it difficult to accept assurances from a newspaper editor and a lesser official.

Though I question their judgment and regret their allowing themselves to be used; regardless of their motives, I do not offer these comments today merely to chastise Jane Fonda or Ramsey Clark. My disappointment and, yes, anger are more deepseated than that. I believe that their actions have created such an adverse public reaction that it makes it impossible for Congress to undertake successfully any measure seeking to legislate an end to the Vietnam war. In other words, Miss Fonda and Mr. Clark have effectively undercut Congress on the war.

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from California (Mr. TUNNEY) is recognized for not to exceed 15 minutes.

(The remarks of Mr. TUNNEY on the introduction of S. 3926, with respect to the National Senior Service Corps, are printed in the RECORD under Statements on Introduced Bills and Joint Resolutions.)

VIETNAM—RECENT DEVELOPMENTS

Mr. HARRY F. BYRD, JR. Mr. President, the able Senator from Florida (Mr. Chiles) a few moments ago made some remarks in regard to the visit of former Attorney General Ramsey Clark to North Vietnam, and made some reference to his subsequent statements upon his return.

I feel that the comment in the Senate today by the distinguished Senator from Florida is most appropriate, and I share his view in regard to this matter.

No one questions the right of an American citizen to speak on these grave national issues, or express any view that he so desires. That is not the question involved here.

The question is in regard to Mr. Ramsey Clark, who served in a high position in the American Government. He served as Attorney General of the United States at a time when hundreds of thousands of Americans were being sent to Vietnam to fight. He served as Attorney General of the United States, or Deputy Attorney General, at a time when most of the 50,000 men killed in Vietnam were being killed, at a time when most of the 300,000 men wounded in Vietnam were being wounded. Yet he said not a word in opposition to the Vietnam war or in opposition to what the administration he was serving was doing.

President Nixon, coming into office with 550,000 men being in Vietnam, has brought practically all of those men home. More than 90 percent have been brought back since President Nixon has been in office. Yet this former high official of our Government has just made a trip to North Vietnam, has consulted with the enemy there, has made speeches and radio talks saying how terrible the Americans are. I saw on television last night his appearance before a committee of the Senate, displaying what he said was an American bomb being used against the North Vietnamese, and saying how terrible that was. Yet he did not condemn North Vietnam for its invasion of South Vietnam and its attack on American troops.

It seems to me that for those like Mr. Clark, who served in an administration which began the heavy use of ground troops in Vietnam; for a person like Mr. Clark, who served the administration in a high position as Attorney General and not once uttered a statement in opposition to what was being done—it is most unbecoming for him now, at a time when the most delicate negotiations are going on between the United States and other governments in an attempt to end this war, to be going over to North Vietnam and coming back spouting the propaganda of a government at whose hands the United States has suffered 350,000 casualties.

Unlike Mr. Clark, I have asserted from the beginning—from the beginning—that the sending of ground troops to Vietnam was a grave error of judgment. I have been consistent in my view. But so long as we have Americans in Vietnam, so long as we are involved in a fight there, so long as our troops are there, so long as our Commander in Chief is making every effort to protect those men and to bring them home, I am going to support the American servicemen and I am going to support the Commander in Chief in his endeavors to disengage from the struggle.

I submit that one does not support him by going to Hanoi and seeing what Hanoi wants one to see and bringing back evidence submitted by Hanoi to attempt to propagandize the American people.

I think it is a sad day, Mr. President, when a former high official of our government takes such action at this very serious time in the negotiations to bring this long, costly, difficult struggle to a conclusion.

As the Senator from Florida pointed out, I do not believe that these activities of Mr. Clark and Miss Jane Fonda are hurting the Commander in Chief, President Nixon. As a matter of fact, I think they tend to rally the American people behind the Commander in Chief.

Mr. President, I have an article from the Washington Evening Star of Wednesday, August 16. It is the fourth in a series of five articles by Samuel Lubell, a public opinion researcher whose methods of surveying key districts in carefully selected areas have yielded remarkably accurate predictions.

Over the years, I have found Samuel Lubell to be a conscientious researcher. Whatever little political instinct the Senator from Virginia may have certainly coincides with what Mr. Lubell has found to be the sentiment of the American people today.

I am impressed with one aspect of Mr. Lubell's findings which ties in somewhat with this discussion of Mr. Ramsey Clark. Mr. Lubell, in his careful analysis of voter sentiment, says:

> President Nixon's mining of Haiphong Harbor in May gained him the sweeping voter support he needed to exercise a free hand in Indochina until after the election.

Last May, President Nixon took a step which should have been taken 5 or 6 years ago. Had it been taken 5 or 6 years ago, or 4 years ago, the war, in my judgment, would have been over. If the previous President had shut off the supplies by mining the harbor of Haiphong, the war would have been over long ago. President Nixon had the courage to take that step last May, and the American people have rallied behind him for taking such a step.

The American people, Mr. President, are very sensible, intelligent, solid people. They know that President Nixon was faced with a very difficult situation not of his own making.

They know that when he came into office, 550,000 American troops were there by another President. And what has President Nixon done with regard to Vietnam? He has brought back more than 90 percent of those troops. Yet, there is a certain element in this Nation which insists upon condemning him for doing the very thing they say they want done—namely, to bring back the American troops and disengage from Vietnam.

Mr. President, because of its general interest and because it represents a great deal of hard work in a careful survey of the attitudes of the American people on a number of subjects, I ask unanimous consent to have printed in the Record Samuel Lubell's article published in the Washington Evening Star of Wednesday, August 16, captioned "Voters Sense Choice a Basic One."

There being no objection, the article was ordered to be printed in the Record, as follows:

What the Public Is Saying: Voters Sense Choice a Basic One

(By Samuel Lubell)

While interviewing across the country this year, I often felt that I was being forced to become a new kind of war correspondent, trying to make sense of an election that has become a gigantic psychological war for the nation's voters.

Repeatedly, I scribbled into my notebook this message: "Write what psych-war really means, not as seen by politicians in Washington, but which manipulations actually change votes."

My over-all conclusion may startle those political experts and commentators who believe that elections are settled by inspiring speeches, great debates or image-making tricks.

Neither words nor theatricals are too important. What does have a decisive impact is the power to commit the country's future.

These commitments take varied forms. Sometimes the fish hook of commitment becomes lodged in a nation's throat, voter opinion will thrash about furiously, like a powerful, but helpless sailfish.

VIETNAM FISH HOOK

This, of course, is the story of the Vietnam war. By sending bombers over North Vietnam in 1965, Lyndon Johnson committed the United States to a vast escalation of a war that has thrashed on for more than seven years, even though most Ameircans say, "It was a mistake to ever get in it."

President Nixon's mining of Haiphong Harbor in May gained him the sweeping voter support he needed to exercise a free hand in Indochina until after the election, my interviews indicate.

Millions of Americans are still fighting to dislodge the Vietnam fish hook from their craws. But many of the new Nixon supporters, while talking of "getting out," are really searching for some way of staying in Indochina indefinitely, if it can be done without losing American lives.

Some justifications offered for keeping an American base in Indochina are amusing. A stationery store owner in New York City explained, "Look how close Vietnam is to Hawaii." Asked how close Vietnam was, he conceded, "I've never looked at the map."

RATIFY OR REJECT

To retain the presidency, Nixon has taken a succession of actions which have already restructured economic and political power in the country. Any campaign the Republicans wage will be like the tip of an iceberg compared to the largest aspect which represents the future of America, both at home and abroad.

The voters sense this fact, that they really are being asked to ratify or reject these changes which, I believe, explains the special intensity of voter feeling that now prevails.

Political writers like to say that "the American people vote against, not for, candidates." In this year's election, Americans are voting against other Americans.

What are they fighting about? Jobs, for one thing—who is to make them and who is to get them? How are taxes to be paid—or, more accurately, to be evaded?

Here my interviews indicate two commitments are shaping the battle that divides the voters:

First, the priorities of Nixon's uneven economic recovery which strengthened the job-making powers of both business and the military-industrial complex.

Second, the acceptance by both political parties of continued inflation on some scale for years to come.

SCRAMBLE FOR HIMSELF

How does one report the political effects of a general expectation that one's earnings and savings will continue to lose real value by several percentage points each year?

Sometimes I have pictured continued inflation as a siege or blockade, sometimes as having lost air control over one's own country, exposing the people to constant bombardment from every side, unable to tell whether the bombs come from friends or enemies.

Whichever it is, siege or fragmentation bombs, the effect is much the same: To drive everyone to scramble for himself, avoiding hurt as best as he can while trying to push off the cost onto someone else.

Even enthusiastic supporters of the war don't seem to think they should pay their share of its cost.

This past year has brought an impressive surge in the anxieties being voiced about retirement plans. No one's home seems to have enough shelter against the rain of bombs from the inflationary skies.

The wife of a 43-year-old machinist at the Rock Island, Ill., arsenal complained, "We get $300 a month on retirement, but by that time $300 won't be worth anything."

On a nearby street a fireman employed by the city of Rock Island protested, "The teachers have a better plan than the firefighters. We get no cost-of-living increases in our retirement."

TENSIONS ARE TIGHTENING

This has become a nearly universal complaint, of working for different departments complaining that other city workers have better benefits. Factory workers point to the preferences government workers enjoy and vice-versa.

My interviews suggest a great desire in the country for equality in pension and hospitalization.

In Bancroft, Iowa, a post office clerk complained, "They reduced the retirement age to cut down on their employes. But then you find your pension is reduced. They want me to get out, but I have a 15-year-old son to put through college."

How these economic tensions are tightening can be seen in the responses to the question: "What government spending would you want to increase?"

Before the North Vietnamese offensive, the general run of replies was to urge reductions in spending on space, military and defense. Wallace supporters recorded a different pattern, preferring to slash welfare and foreign aid first.

My last interviews reveal a marked surge in demands to cut off welfare: Pressures to lower defense spending have dropped since the mining of Hanoi's harbors, and the strategic arms limitations agreement was reached. Pro-Nixon voters, in fact, now oppose any defense cuts by 2 to 1; the McGovern voters interviewed so far divide evenly.

Nixon's higher military commitments, along with continued inflation, tighten the noose on meeting budgeted costs without tax increases.

This also means that the public's tax-cutting emotions are being forced into a narrow pass, with insurmountable hills on each side, and which brings them out with one visible target against which to expend their wrath—the cost of welfare.

For many people, "welfare" is another side of the antibusing issue.

McGovern's $1,000 income distribution talk is being criticized as "a giveaway to people who don't work."

A hostile reaction could also be expected to the welfare program that Nixon has proposed, with its provision for a minimum family income. If Congress were to pass the President's plan, it could cost him votes.

Mr. HARRY F. BYRD, JR. Mr. President, I yield back the remainder of my time, and I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. TALMADGE). Without objection, it is so ordered.

TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. TALMADGE. Under the previous order, there will now be a period for the transaction of routine morning business, for not to exceed 15 minutes, with statements therein limited to 3 minutes.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE FEDERAL PURCHASE OF THE KLAMATH INDIAN FOREST

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate turn to the consideration of Calendar No. 893 (S. 3594).

The PRESIDING OFFICER. The clerk will report the bill.

The assistant legislative clerk read as follows:

> Calendar No. 893 (S. 3594), a bill providing for Federal purchase of the remaining Klamath Indian Forest.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana?

There being no objection, the Senate proceeded to consider the bill.

Mr. HATFIELD. Mr. President, I will not comment at any length about this bill. My colleagues are aware of my concerns I have expressed about why I believe this beautiful 135,000-acre forest should be added to our national forest, so it can be managed under the multiple-use sustained yield policies of the Forest Service.

I ask unanimous consent that my statement at the hearing we held in the Senate Interior Committee on this bill appear at this point in the Record, followed by an excerpt from the Interior Committee report on the bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Statement by Senator Hatfield

As a prelude to my expression of strong support for passage of S. 3594, I would like to point out a little background surrounding the current controversy. The Klamath Termination Act (68 Stat. 718; 25 USC 564) which was passed in 1954 provided for termination of the Klamath Indian Reservation. Amendments to this act further provided certain procedures to be followed. The original disposition resulted in the sale of certain Indian lands to the Secretary of Agriculture, the land becoming the Winema National Forest. Included in that sale were 525,680 acres purchased at a cost of $68,716,691.

The remaining Klamath Indians have decided to terminate the current trusteeship, and the Trustee is required to offer the land to the Secretary of Agriculture. A year is provided in which the Secretary can accept or reject the offer. After this time, the Trustee must offer the land for sale to others at this same price.

On July 2, 1971, the Secretary of Agriculture received the Trustee's offer for his purchase of the remaining Klamath Indian Forest lands. The land total is approximately 135,000 acres, and the purchase price is $51,954,709. Included in this acreage is approximately 888.641 million bd./ft. of marketable timber.

With this background in mind, I want to state my support for this bill in the strongest terms. At the same time, however, I want to express my displeasure at the need for this hearing, the need for S. 3594, and the need for the companion bill in the House of Representatives. This bill merely mandates authority already resting in the Secretary of Agriculture. The Secretary of Agriculture should have purchased these forestlands under his existing authority, and there would have been no need for the current controversy.

A strong case can be made for purchase of the Klamath Indian Forest, and to allow its operation under Forest Service multiple-use guidelines. Our hearing today will offer many sound reasons in support of this, but I would like to touch briefly on a few of them.

1. Purchase by the Federal government would mean a sustained yield of timber, forage, wildlife, water, and other outdoor recreation opportunities. A proper blend of these activities would assure continued enjoyment by future generations of Oregonians.

2. A stable base of raw material would assure long-range economic stability for the timber-based industry in the area.

3. Operation under the Forest Service program of sustained yield timber production would help the country meet its long-range timber needs. Managed as a part of the National Forest, the land would produce an average of 20 to 25 million bd./ft. of sawtimber each year. Estimates are that this timber would generate an estimated $1 million to the Treasury from such timber sales.

4. Long range sustained yield offers a better economic potential for utilization of local Klamath Indians as a part of the stable labor force. More rapid liquidation of the timber would result in greater temporary, migrant labor utilization, and would be a short-term boom. Currently, 40% of the area's employed Indians work in the forest products industry.

These are a few of the benefits to the public that I believe would flow from Federal purchase of the land. I think everyone in this room is aware of what very easily could be the fate of this land if the Secretary does not exercise his option to purchase this beautiful stand of timber. From everything I have been told about the fate of this area, it would be logged more rapidly by private owners than it would be by the Forest Service under its sustained yield program. Private owners will have to pay enough for the land that they will feel forced to get their money out more rapidly, and good, long-range timber management plans will go by the board.

In conclusion, I believe strongly that the Secretary of Agriculture should purchase this valuable land. I would prefer that this had been done under his existing authority, but because of his attitude, more precisely the attitude of the Office of Management and Budget, we have to pursue this legislative solution.

Providing for Federal Purchase of the Remaining Klamath Indian Forest

PURPOSE

S. 3594, introduced by Senator Hatfield with Senator Packwood as cosponsor, would authorize the Secretary of Agriculture to purchase the Klamath Indian Forest lands for $51,954,709, prior to June 30, 1972. Under the provisions of the Klamath Termination Act, as amended, the U.S. National Bank of Oregon, trustee for the tribe, made an offer to the Secretary of Agriculture on July 2, 1971, to purchase the remaining lands for $51,954,709. The Secretary of Agriculture has until July 1, 1972, to either accept or reject the offer. If the offer is not accepted, an offer will be made to private interests.

Fears have been expressed that private firms will buy up this extremely scenic forest and through high-intensity logging and home-site development, instead of multiple-use and sustained-yield management, destroy its great resource value. Some of the forest lies along picturesque rivers and has been described by observers as unusually beautiful. Purchase by the Federal Government would guarantee not only that these lands continue to produce forest products and provide jobs on a sustained-yield basis for future generations, but also that recreational and other mutiple-use values will be adequately protected. Managed as part of the Winema National Forest, the land would be able to meet its full productive potential for satisfying the Nation's long-term timber needs, as well as providing many other public uses of this great resource.

DESCRIPTION

The Klamath Indian Forest is located in Klamath County, Oreg., and is surrounded by Winema National Forest lands. The tract approximates 135,000 acres, of which 133,300 acres consist of timbered land, 1,100 acres of grassland, and 600 acres of other types of land. There are approximately 900 million board feet of merchantable sawtimber on the tract, primarily of ponderosa pine. The tract can produce about 4,000 animal unit months of forage for range cattle and sheep. It contains 9½ miles of frontage on the Williamson River and provides a summer range for three major herds of mule deer.

RECOMMENDATION

The Senate Committee on Interior and Insular Affairs unanimously reports favorably on S. 3594 and recommends early enactment.

DEPARTMENTAL REPORTS

The Department of Interior and the Department of Agriculture reports are set forth in full, as follows:

U.S. DEARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., June 15, 1972.

Hon. HENRY M. JACKSON,
Chairman, Committee on Interior and Insular Affairs, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: This is in response to your request for the views of this Department on S. 3594, a bill providing for Federal purchase of the remaining Klamath Indian Forest.

We defer to the views of the Department of Agriculture as to whether this bill should be enacted.

S. 3594 directs the Secretary of Agriculture to enter into a contract, prior to June 30, 1972, to purchase Klamath Indian Forest lands that were retained by the tribe and that were offered for sale pursuant to subsection 28(e) of the Klamath Termination Act of August 13, 1954, as amended (25 U.S.C. 564 W–1). The purchase price, which is set at $51,954,709, could be paid in installments, with interest on unmatured installments at a rate that does not exceed the cost to the United States of borrowing money under similar circumstances, as determined by the Secretary of the Treasury.

The Klamath Termination Act of 1954 ended Federal supervision over the trust and restricted property of the Klamath Tribe of Indians and its members, and terminated Federal services furnished such Indians because of their status as Indian. It provided for sale of some of the timber resources and disposition of the forest land retained by the tribe, including a requirement of first offer to the Secretary of Agriculture if the land was offered for sale to other than tribal members.

We understand that the Klamath Indian Forest lands have been offered for sale by the trustee for the Indians, with the Secretary of Agriculture having the first right of refusal. We have no direct interest in the matter, however, as neither the land nor its owners are under the jurisdiction of this Department. Accordingly, we defer to the views of the Department of Agriculture on this bill.

The Office of Management and Budget has advised that there is no objection to the presentation of this report from the standpoint of the administration's program.

Sincerely yours,

HARRISON LOESCH,
Assisant Secretary of the Interior.

DEPARTMENT OF AGRICULTURE,
OFFICE OF THE SECRETARY,
Washington, D.C., June 16, 1972.

Hon. HENRY M. JACKSON,
Chairman, Committee on Interior and Insular Affairs, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: As you requested, here is our report on S. 3594, a bill providing for Federal purchase of the remaining Klamath Indian Forest.

S. 3594 would direct the Secretary of Agriculture to enter into a contract, prior to June 30, 1972, to purchase for $51,954,709 the Klamath Indian Forest lands retained by the tribe and offered for sale pursuant to section 28(e) of the Klamath Indian Termination Act of August 13, 1954, as amended (25 U.S.C. 564 W–1).

The Klamath Termination Act provided for termination of the Klamath Indian Reservation. The act further provides, in part, for disposal procedures, partition, disposal, and trust arrangement for the remaining Indians. The original disposal action resulted in the sale to the Secretary of Agriculture of tribal lands which became the Winema National Forest. This original sale included 525,680 acres which were purchased for $68,716,691 in 1959.

An offer to sell the remaining lands for $51,954,709 was made to the Secretary of Agriculture on July 2, 1971, by the U.S. National Bank of Oregon, trustee for the tribe, under the provisions of the Klamath Termination Act, as amended. The act provides that after offering the lands to members of the tribe, the trust must next offer the lands to the Secretary of Agriculture who is given 12 months to either accept or reject the offer. If not accepted, the offer is then made to private interests. The Secretary's 12-month option ends July 1, 1972.

The Klamath Indian Forest is located in Klamath County, Oreg., and is surrounded by Winema National Forest lands. The tract is composed of 133,300 acres of timbered land, 1,100 acres of grassland, and 600 acres of other types of land. There are approximately 900 million board feet of merchantable sawtimber on the tract, made up primarily of ponderosa pine. It can produce about 4,000 animal unit months of forage for range cattle and sheep. The tract contains 9½ miles of frontage on the Williamson River and is summer range for three major herds of mule deer.

Based on extensive evaluation of the Klamath Indian Forest proposal and in view of the present fiscal situation, we do not favor acceptance of the current offer and recommend that S. 3594 not be enacted.

We believe that there are alternative means available for dealing with the environmental concerns for the land other than by Federal purchase. The State of Oregon and its citizenry are active, interested, and concerned with the conservation and have an active authority to provide land use controls for environmental protection of the land.

The Federal Government already owns 32.2 million acres in the State of Oregon (52.2 percent of the State), including 15.5 million acres of land administered by the Forest Service and 15.7 million acres of land administered by the Bureau of Land Management of the Department of the Interior. There appears to be no compelling national interest in adding another 135,000 acres to Federal ownership in Oregon.

We also believe that the purchase price proposed by the bill exceeds the price that could be justified under a system of multiple-use sustained-yield management of the property as is required by law for national forest management. The price offered by the trustees is based on immediate liquidation of all the harvestable timber. Whereas, on a sustained-yield basis, the timber could be harvested over a long period of time and future incomes accordingly would have to be discounted to arrive at the property's worth for sustained-yield management.

The Office of Management and Budget advises that there is no objection to the presentation of this report from the standpoint of the administration's program.

Sincerely,

T. K. COWDEN,
Assistant Secretary.

Mr. HATFIELD. Mr. President, my first amendment to S. 3594 is very simple and is of a technical nature. The bill would require purchase by the Secretary of Agriculture of the Klamath Indian Forest. The language in the bill mentions the purchase price precisely: $51,954,709.

My amendment adds the words "subject to adjustment for growth and cutting" to the purchase price. Because this is a growing forest—and a beautiful one at that—this language should be in the bill. It would cover situations where there had been a cutting contract let for a portion of the land, as would be normal under a sustained-yield management. It also would cover the natural growth over the course if the time since the trustee of the land made the offer to the Secretary of Agriculture.

The PRESIDING OFFICER. The clerk will report the amendment.

The assistant legislative clerk read as follows:

> On page 1, line 5, insert the following: After the amount $51,954,709 insert the following ", subject to adjustment for growth and cutting.".

Mr. HATFIELD. Mr. President, I move the adoption of the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. HATFIELD. Mr. President, my second amendment extends the time during which the Secretary of Agriculture may contract for the purchase of the Klamath Indian Forest. Language similar to this was included in the Senate-passed version of H.R. 56.

This amendment makes it clear that such extension of time would apply only with the initial offer to the Secretary of Agriculture in June 1971.

I ask unanimous consent that a section of the Senate Interior Committee report on H.R. 56 commenting on this extension appear at this point in the RECORD.

There being no objection, the section of the report was ordered to be printed in the RECORD, as follows:

TITLE IV

Title IV amends the Klamath Indian Termination Act of August 13, 1954 as amended (25 U.S.C. 56 w-1). Under existing law, a twleve-month period is provided for first offer of sale to the Secretary of Agriculture. This period expires June 30, 1972. Following expiration of this period, an offer of sale could be made to a private buyer.

Title IV extends from twelve months ending June 30, 1972, to twenty-four months ending June 30, 1973, the time during which the Secretary of Agriculture is provided the first offer of sale. Because of severe time limitations, the Committee believes such an extension is needed to allow final Congressional action and contract approval.

The PRESIDING OFFICER. The clerk will report the amendment.

The assistant legislative clerk read as follows:

On page 1, line - insert the following: At the end of the bill insert a new section as follows:

Sec. — with respect to the offer made on June 29, 1971 and effective with the making of such offer, Section 28(e) of the Klamath Indian Termination Act of 1954, as amended (25 U.S.C. 564w-1), is amended by striking "twelve months" and inserting in lieu thereof "twenty-four months".

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Oregon.

The amendment was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill (S. 3594) was ordered to be engrossed for a third reading, was read the third time, and passed as follows:

S. 3594

An act providing for Federal purchase of the remaining Klamath Indian Forest

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of Agriculture is directed to enter into a contract, prior to June 30, 1972, to purchase at a price of $51,954,709, subject to adjustment for growth and cutting, Klamath Indian Forest lands that were retained by the tribe and that were offered for sale pursuant to subsection 28(e) of the Klamath Indian Termination Act of August 13, 1954, as amended (25 U.S.C. 564w-1). The contract may provide for payment of the purchase price in installments, with interest on unmatured installments at a rate that does not exceed the cost to the United States of borrowing money under similar circumstances, as determined by the Secretary of the Treasury.

SEC. 2. With respect to the offer made on June 29, 1971, and effective with the making of such offer, section 28(e) of the Klamath Indian Termination Act of 1954, as amended (25 U.S.C. 564w-1), is amended by striking "twelve months" and inserting in lieu thereof "twenty-four months".

Mr. HATFIELD. Mr. President, I ask unanimous consent that the Secretary of the Senate be permitted to make technical corrections in the engrossment of the bill (S. 3594).

The PRESIDING OFFICER. Without objection, it is so ordered.

NATIONAL SCHOOL LUNCH ACT

Mr. MANSFIELD. Mr. President, a situation has developed relative to the legislation passed last night covering the school lunch program.

I ask unanimous consent that H.R. 14896, the national school lunch bill, passed by the Senate last night, be amended on page 16, where the amendment by the Senator from New Jersey (Mr. CASE) was inserted, to include at the beginning of that language the following sentence: "Sec. 7. After the first sentence of section 10 of the Child Nutrition Act of 1966 (42 U.S.C. 1779) add the following new sentence:" and that the bill as thus amended be passed.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Secretary of the Senate be authorized to make certain clerical and technical corrections in the engrossment of the amendments.

The PRESIDING OFFICER. Without objection, it is so ordered.

ESTABLISHMENT OF THE JOHN D. ROCKEFELLER, JR., MEMORIAL PARKWAY

Mr. MANSFIELD. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on S. 3159.

THE PRESIDING OFFICER (Mr. TALMADGE) laid before the Senate the amendment of the House of Representatives to the bill (S. 3159) to authorize the Secretary of the Interior to establish the John D. Rockefeller, Jr., Memorial Parkway, and for other purposes which was to strike out all after the enacting clause, and insert:

(a) That for the purpose of commemorating the many significant contributions to the cause of conservation in the United States, which have been made by John D. Rockefeller, Junior, and to provide both a symbolic and desirable physical connection between the world's first national park, Yellowstone, and the Grand Teton National Park, which was made possible through the efforts and generosity of this distinguished citizen, the Secretary of the Interior (hereinafter referred to as the Secretary) is authorized to establish the John D. Rockefeller, Junior, Memorial Parkway (hereinafter referred to as the "Parkway") to consist of those lands and interests in lands, in Teton County, Wyoming, as generally depicted on a drawing entitled "Boundary Map, John D. Rockefeller, Junior, Memorial Parkway, Wyoming", numbered PKY-JDRM-20,000, and dated August 1971, a copy of which shall be on file and available for inspection in the Office of the National Park Service, Department of the Interior. The Secretary shall establish the parkway by publication of a notice to that effect in the Federal Register, at such times as he deems advisable. The Secretary may make minor revisions in the boundary of the parkway from time to time, with the concurrence of the Secretary of Agriculture where national forest lands are involved, by publication of a revised drawing or other boundary description in the Federal Register.

(b) The Secretary shall also take such action as he may deem necessary and appropriate to designate and identify as "Rockefeller Parkway" the existing and future connecting roadways within the parkway, and between West Thumb in Yellowstone National Park, and the south entrance of Grand Teton National Park: *Provided,* That any sections of the parkway located within Yellowstone National Park or Grand Teton National Park shall be administered and managed in the same manner and in accordance with the same regulations and policies as the other portions of such parks.

SEC. 2. Within the boundaries of the parkway, the Secretary may acquire lands and interests in lands by donation, purchase, exchange, or transfer from another Federal agency. Lands and interests in lands owned by the State of Wyoming or a political subdivision thereof may be acquired only by donation. Lands under the jurisdiction of another Federal agency, shall, upon request of the Secretary, be transferred without consideration to the jurisdiction of the Secretary for the purposes of the parkway.

SEC. 3. (a) The Secretary shall administer the parkway as a unit of the national park system in accordance with the authority contained in the Act of August 25, 1916 (39 Stat. 535; 16 U.S.C. 1, 2-4), as amended and supplemented.

(b) The Secretary shall permit hunting and fishing within the area described by section 1(a) of this Act in accordance with applicable laws of the United States and the State of Wyoming, except that the Secretary may designate zones where, and periods when, no hunting or fishing shall be permitted for reasons of public safety, administration, or public use and enjoyment. Except in emergencies, any regulations of the Secretary pursuant to this section shall be put into effect only after consultation with the appropriate State fish and game department.

(c) The lands within the parkway, subject to valid existing rights, are hereby withdrawn from location, entry and patent under the United States mining laws.

SEC. 4. For the purposes of this Act, there are authorized to be appropriated not more than $25,000 for the acquisition of lands and interests in lands and not more than $3,092,000 for development.

Mr. MANSFIELD. Mr. President, I move that the Senate concur in the amendment of the House.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Montana.

The motion was agreed to.

ORDER OF BUSINESS

The PRESIDING OFFICER. The Senator from New York is recognized.

(The remarks of Mr. JAVITS on the introduction of S. 3927, with respect to a Federal Full Employment Board, are printed in the RECORD under Statements on Introduced Bills and Joint Resolutions.)

ORDER OF BUSINESS

The PRESIDING OFFICER. Is there further morning business?

Mr. MANSFIELD. Mr. President, how

much time remains on the morning business under the agreement?

The PRESIDING OFFICER. All time has expired.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the time be extended for not to exceed 5 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The ACTING PRESIDENT pro tempore (Mr. ROBERT C. BYRD) laid before the Senate the following letters, which were referred as indicated:

REPORT OF THE NATIONAL RAILROAD PASSENGER CORPORATION

A letter from the vice president of the National Railroad Passenger Corporation submitting, pursuant to law, its report for the month of July 1972 (with accompanying report); to the Committee on Commerce.

POSITIONS ESTABLISHED BY THE NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

A letter from the Administrator of the National Aeronautics and Space Administration submitting, pursuant to law, its report on the positions established as of June 30, 1972; to the Committee on Post Office and Civil Service.

CANCELLATION OF APPROVAL OF CERTAIN PROSPECTUSES

A letter from the Acting Administrator of General Services submitting a list of buildings transferred to the U.S. Postal Service on July 1, 1971, and requesting approval of prospectuses thereon be canceled (with accompanying papers); to the Committee on Public Works.

REPORT ON RAILROAD-HIGHWAY GRADE CROSSING SAFETY

A letter from the Secretary of Transportation submitting, pursuant to law, the second part of a two-part report on railroad-highway grade crossing safety in accordance with the requirements of the Highway Safety Act (with accompanying report); to the Commitee on Public Works.

AMERICAN REVOLUTION BICENTENNIAL COMMISSION

U.S. SENATE,
Washington, D.C., Aug. 17, 1972.

Hon. SPIRO T. AGNEW,
Vice President of the United States,
U.S. Senate,
Washington, D.C.

MY DEAR MR. VICE PRESIDENT: I do hereby submit my resignation as a Senate designee to the American Revolution Bicentennial Commission.

With sentiments of esteem and affection to you personally, I am,

Respectfully yours,
JOHN O. PASTORE.

PETITIONS

Petitions were laid before the Senate and referred as indicated:

By the ACTING PRESIDENT pro tempore (Mr. ROBERT C. BYRD):

A resolution of the city council of the city of Rock Island, Ill., recording its opposition to the Department of the Treasury regulation making State or local government bonds taxable; to the Committee on Finance.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. HART, from the Committee on Commerce, without amendment:

H.R. 10310. A bill to establish the Seal Beach National Wildlife Refuge (Rept. No. 92–1075).

By Mr. EASTLAND, from the Committee on the Judiciary, without amendment:

H.R. 3413. An act for the relief of Dr. David G. Simons, lieutenant colonel, U.S. Air Force (retired) (Rept. No. 92–1077);

H.R. 4485. An act for the relief of Estelle M. Fass (Rept. No. 92–1078); and

H.R. 8549. An act to amend title 10, United States Code, to broaden the authority of the Secretaries of the military departments to settle certain admiralty claims administratively, and for other purposes (Rept. No. 92–1079).

By Mr. KENNEDY, from the Committee on the Judiciary, without amendment:

S. 3671. A bill to amend the Administrative Conference Act (Rept. No. 92–1076).

By Mr. WILLIAMS, from the Committee on Labor and Public Welfare, with amendments:

S.J. Res. 202. Joint resolution to express the sense of Congress that a White House Conference on the Handicapped be called by the President of the United States (Rept. No. 92–1080).

MAJORITY AND MINORITY WHIPS OF THE SENATE (S. DOC. NO. 92–86)

Mr. MANSFIELD. Mr. President, on behalf of the distinguished minority leader (Mr. SCOTT) and myself, I ask unanimous consent to have printed as a Senate document "Majority and Minority Whips of the Senate," a history of the development of the party whip system in the Senate, compiled by Walter J. Oleszek, Ph. D., analyst, American National Government, Congressional Research Service.

This work was undertaken at the request of the joint leadership, the Senator from Pennsylvania (Mr. SCOTT) and the Senator from Montana now speaking.

The PRESIDING OFFICER (Mr. GRAVEL). Without objection, it is so ordered.

EXECUTIVE REPORTS OF COMMITTEES

As in executive session, the following favorable reports of nominations were submitted:

By Mr. EAGLETON, from the Committee on the District of Columbia:

H. Carl Moultrie, of the District of Columbia, to be an associate judge, Superior Court of the District of Columbia; and

Stanley S. Harris, of Maryland, to be associate judge of the District of Columbia Court of Appeals.

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. TUNNEY (for himself, Mr. GRAVEL, Mr. HUMPHREY, Mr. MOSS, and Mr. RANDOLPH):

S. 3926. A bill to provide new programs for the aging through the establishment of the National Senior Service Corps, and for other purposes. Referred to the Committee on Labor and Public Welfare.

By Mr. JAVITS (for himself, Mr. MONDALE, Mr. BROOKE, Mr. CASE, Mr. PELL, Mr. HUMPHREY, Mr. HARRIS, Mr. HUGHES, Mr. HART, Mr. HARTKE, Mr. MATHIAS, Mr. MUSKIE, Mr. RANDOLPH, Mr. MOSS, and Mr. WILLIAMS):

S. 3927. A bill to provide for the implementation of a full employment policy through the establishment of a Federal Full Employment Board and the provision of increased assistance for job development in the public and nonprofit private sectors, and related training and assistance. Referred to the Committee on Labor and Public Welfare.

By Mr. FONG:

S. 3928. A bill to provide assistance for relief, rehabilitation, and reconstruction in the Philippines related to the recent floods. Referred to the Committee on Foreign Relations.

By Mr. BUCKLEY:

S. 3929. A bill to prevent the use of heroin for any drug maintenance program. Referred to the Committee on the Judiciary.

By Mr. JORDAN of North Carolina:

S. 3930. A bill to provide for the conveyance of certain mineral rights in and under lands in Onslow County, N.C. Referred to the Committee on Interior and Insular Affairs.

By Mr. TUNNEY (for himself and Mr. CRANSTON):

S. 3931. A bill to establish the Lake Berryessa National Recreation Area in the State of California, and for other purposes. Referred to the Committee on Interior and Insular Affairs.

By Mr. MONDALE:

S. 3932. A bill to protect nondisclosure of information and sources of information coming into the possession of the news media. Referred to the Committee on the Judiciary.

By Mr. McINTYRE:

S. 3933. A bill entitled the Hide Regulation Certificate Act of 1972. Referred to the Committee on Finance.

By Mr. MILLER (for himself and Mr. HUGHES):

S. 3934. A bill to authorize the Secretary of Transportation to release restrictions on the use of certain property conveyed to the city of Algona, Iowa, for airport purposes. Referred to the Committee on Commerce.

By Mr. JAVITS:

S. 3935. A bill to amend the Public Health Service Act to provide for restrictions on funds for experimental use. Referred to the Committee on Labor and Public Welfare.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. TUNNEY (for himself, Mr. GRAVEL, Mr. HUMPHREY, Mr. MOSS, and Mr. RANDOLPH):

S. 3926. A bill to provide new programs for the aging through the establishment of the National Senior Service Corps, and for other purposes. Referred to the Committee on Labor and Public Welfare.

NATIONAL SENIOR SERVICE CORPS ACT

Mr. TUNNEY. Mr. President, today I am introducing the National Senior Service Corps Act of 1972, to create a new Federal volunteer program through which persons of all ages can serve to satisfy some of the most basic and pressing needs of our Nation's senior citizens. I am pleased to be joined in introducing this bill by Senators GRAVEL, HUMPHREY, MOSS, and RANDOLPH.

This act first and foremost establishes a National Senior Service Corps, a corps open to volunteers of all ages administered by a new associate director of Action and designed to enable volunteers to work in the following areas:

First, in the creation, development, and operation of neighborhood centers, where persons of all ages can work together to assist our Nation's older citizens in meeting their nutritional, recreational, social, intellectual, and legal needs.

Second, in the creation, development, and operation of day care centers, where our Nation's senior citizens can assist citizens of other ages in meeting their day care needs.

Third, in the creation, development, and operation of neighborhood medical centers, where persons of all ages can work together to assist our Nation's older citizens in meeting their health and medical needs.

Fourth, to assist senior citizens to leave their residences and participate in the activities of their communities, through improving their access to transportation facilities and also to the social and economic resources of their communities.

Fifth, to develop opportunities whereby any senior citizen can participate in his or her community, affording him or her better opportunities to become integrated into his or her community and involved in the activities of citizens of all ages.

Sixth, to assist, through proper counseling and other aids, senior citizens to obtain proper and adequate housing.

Seventh, to provide assistance, such as homemaker and home health aid, to senior citizens within their own residences in an effort to make their lives more comfortable and to reinforce their dignity as human beings.

Mr. President, the purpose of this act, the purpose of creating such a National Senior Service Corps, is to improve the lives and conditions of older Americans and to combat the loneliness and increasing separation from the rest of society which so often characterizes their lives. We will remind older Americans that they are still needed and that we value their participation in and contribution to society.

The needs of senior citizens have been well documented. We all know that they are urgent and that they encompass a broad variety of concerns. We can respond to many of them through this program, for their needs are human needs. They are urgent concerns which require personal consideration. They are not the type of issues which are usually met effectively by a government. They require sensitivity and compassion. They require individual concern.

The Senior Service Corps can be an important instrument in expressing that concern. It can serve as an invaluable vehicle to help our senior citizens feel needed and involved, to restore dignity and respect to their lives.

Delegates to the 1971 White House Conference on Aging stressed the view that senior citizens must have the benefit of specialized programs and services designed for their own distinctive needs in such areas as transportation, housing, home health care, nutrition, and recreational activities. They also recommended that this Nation develop a way to bridge the generation gap which is created almost inevitably between those who work and those in retirement.

Articles, reports, and other publications remind us of what we should already know: That the elderly in this country are too often left alone to care for themselves and get along as best they can, without any real place to turn for help when troubles occur.

Mr. President, these problems must be addressed. They must be resolved. They must be confronted constructively and directly. They must be overcome—and soon. The Senior Service Corps will help dramatically to redress them, in a progressive and human way.

The Senior Service Corps will enable the younger, the middle aged, and the older citizens of America to offer their services to help older Americans to live a fuller life. It will help senior citizens to feel integrated with society by providing them with effective opportunities to interact with people of all ages.

It will be especially important to confront through the Senior Service Corps the problems of seniors in all income categories. The loneliness and separation which occurs with advancing age cannot be limited to any particular class of older persons. Accordingly, the Senior Service Corps will be designed to help all of our Nation's older citizens, those who are poor as well as those who are not.

Even though 25 percent of our senior citizens fall into the poverty category, the basic needs of most older Americans know no economic boundaries. It is evident that the emphasis on some of the most important volunteer programs established under the Senior Service Corps Act will be directed toward the elderly poor. The poor will have more pressing needs. But we should not define the parameters of the act by the economic level of the persons affected by it.

It will also be important to provide special incentives which will enable older Americans to help other older Americans. Accordingly, the National Senior Service Corps Act provides special and auxiliary volunteer opportunities which are designed especially to encourage and facilitate the cooperation of older volunteers in the Corps.

In fact, I believe that many of the volunteers who will work in this program—though by no means all—will come from the ranks of the young. They will have the time, energy, and spirit to commit themselves for a period of time on a full-time basis to the goals of the program. They will be willing and able to dedicate a part of their lives to make the lives of older persons fuller and richer. I believe very deeply that this opportunity should be afforded to younger Americans, who will learn and grow from the human interaction and the personal commitment which will result from participation in the National Senior Corps. I believe that we should provide the leader of tomorrow the opportunity to serve yesterday's leader today.

In order to streamline and ease the administrative problems which legislation such as this might entail. The act provides that all of the programs which are currently administered by ACTION and which deal with the elderly—foster grandparents; RSVP, retired senior volunteer program; SCORE, Service Corps of Retired Executives and ACE, Active Corps of Executives—all of those programs, shall be administered directly by a new associate director of ACTION for senior citizens. That new position will enable ACTION to provide a higher priority to the elderly, devote more of its attention and care to older Americans, and administer more effectively the new National Senior Service Corps.

I urge your support, then, in establishing the National Senior Service Corps. Through it, individuals of all ages will be better able to contribute to the welfare of America by making this Nation a better place in which to grow old. For through the Senior Service Corps, we can better show our older neighbors that we are aware of their unique needs and contributions and that we are dedicated to making their lives more enjoyable.

Since the Corps would be a volunteer program, a program of human service where the basic commodity involved is time, its cost would prove minimal in relationship to the benefits which it would provide. I believe that the Corps would improve not only the morale of those senior citizens who often feel that they are neglected and forgotten but also of those individuals who would serve as volunteers and who would thereby gain a new outlook on life through their experience in serving the elderly.

I would hope that this act will be enacted promptly. The urgency of the situation will only increase with the passage of time.

By the year 2000, I am told, the number of senior citizens in America will have increased by almost 50 percent—from 20,000,000 to nearly 30,000,000. Their needs will increase commensurately.

It is imperative, therefore, Mr. President, that we establish now a framework to deal with these needs, and that we reestablish for older Americans, in a world of increasing anonymity, the pathway to human warmth and understanding. It is long past time to remind our senior citizens of their unique spirit and importance to the rest of this land. America should gratefully say to her senior citizens:

"Thank you for your help and work in making this land what it is. Stay with it and with us, in a partnership of young and old where increasing age serves not as a barrier but as a reminder that with age comes experience and wisdom."

We need our senior citizens. We need their participation in society. We need their continued involvement and their human insights. Let us show them that need.

I believe, Mr. President, that the National Senior Service Corps Act and the National Senior Service Corps which it will establish, will vastly improve the lives and conditions of America's senior citizens.

Mr. President, I ask unanimous con-

sent that the text of my bill be printed at this point in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 3926

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "National Senior Service Corps Act".

STATEMENT OF PURPOSE

SEC. 2. In order to improve the lives and conditions of our Nation's citizens who are 62 years of age or older and to combat the loneliness and increasing separation from the rest of society which characterizes the lives of many of our Nation's senior citizens, it is the purpose of this Act, through the establishment of a National Senior Service Corps, to provide a program of full-time volunteer service together with a program of special and part-time community service.

ESTABLISHMENT OF THE NATIONAL SENIOR SERVICE CORPS

SEC. 3. (a) In order to carry out the purpose of this Act, there is hereby established within ACTION the National Senior Service Corps. The Corps shall be administered by an Associate Director for Senior Citizens of ACTION who shall be apopinted by the President by and wtih the advice and consent of the Senate. The associate director shall carry out his functions under the supervision and direction of the director of ACTION.

PROGRAM AUTHORIZED

SEC. 4. (a) The Director is authorized to—

(1) recruit, select, and train persons to serve in full-time volunteer programs, including—

(A) the establishment, development, and operation of neighborhood centers, where people of all ages can work together to assist our Nation's senior citizens in meeting nutritional, recreational, social, intellectual, and legal needs;

(B) the establishment, development, and operation of Day Care Centers, where our Nation's senior citizens can assist in the care of the children served;

(C) the establishment, development, and operation of Neighborhood Medical Centers, where persons of all ages can work together to assist our Nation's older citizens in meeting their health and medical needs;

(D) participation by senior citizens in appropriate activities in their communities, especially improved access to transportation facilities;

(E) developing greater opportunities whereby senior citizens can participate in community affairs;

(F) counseling and other activities designed to assist senior citizens to obtain proper and adequate housing; and

(G) providing assistance within the residence of those senior citizens who desire home-maker and home-health services.

(2) assign such volunteers to work in any program described in paragraph (1), upon the request of any Federal, State or local public agency or private non-profit organization;

(3) provide, either directly or by way of contract, grant or other arrangement, for appropriate training for such volunteers under this Act, both prior to and during service in the Corps, which he determines will contribute to carrying out the purposes of this Act; and

(4) make grants to any public agency or non-profit organization to whom volunteers will be assigned under this Act to pay not to exceed 50 percent of the cost of carrying out the programs in which such volunteers will be serving.

(b) The number of persons selected by the Director for service in the Corps shall be determined by the President after consultation with the Secretary of Health, Education, and Welfare.

(c) Grants under paragraph (4) of subsection (a) of this section shall be made on such terms and conditions as the Director deems necessary to protect the interests of the United States, including adequate fund accounting and reporting provisions.

NATIONAL SENIOR SERVICE CORPS VOLUNTEERS

SEC. 5. (a) The Director may enroll in the National Senior Service Corps residents of the United States who make a personal commitment on a full-time basis to improve the lives and conditions of our Nation's senior citizens. The Director is authorized to make whatever arrangements he deems practicable to assure that the commitment required by this subsection includes an agreement by the volunteers while in the service of the National Senior Service Corps to be available for service without regard to regular working hours (except for authorized periods of leave).

(b) The terms and conditions of enrollment (training, compensation, benefits, leave, termination, and all other terms and conditions of the service as volunteers) shall be in accordance with the provisions of this Act and such regulations as the Director may prescribe. In selecting volunteers under this Act, no political test shall be required or taken into consideration, nor shall there be any discrimination against any person on account of race, creed, color, sex, or national origin.

(c) Volunteers under this Act shall be enrolled for a one-year period of service excluding the time devoted to training. The Director may enroll volunteers for periods of service less than one year where he determines to do so would promote the purposes of this Act.

SUPPORT OF FULL-TIME VOLUNTEERS

SEC. 6. (a) The Director may provide a stipend to volunteers under section 5 of this Act while they are in training and on assignment, but the stipend shall not exceed $75 per month. The Director may provide a stipend not to exceed $100 per month in the case of volunteers who, in accordance with standards prescribed by him, have been designated to fill positions of responsibility by reason of their experience or special skills. The Director may also provide volunteers such travel (including travel to and from the place of training) and living allowances, such housing, supplies, equipment, subsistence, clothing, health and dental care, and such other support as he may deem necessary or appropriate for their needs.

(b) Stipends shall be payable only upon completion of a term of service; except that in extraordinary circumstances the Director may from time to time advance accrued stipend, or any portion thereof, to or on behalf of a volunteer. In the event of the death of a volunteer during service, the amount of any unpaid stipend shall be paid in accordance with the provisions of section 5582 of title 5, United States Code.

AUXILIARY AND SPECIAL VOLUNTEER PROGRAMS

SEC. 7. (a) (1) The Director is authorized to develop programs designed to expand opportunities for persons to participate in volunteer activities in their homes and nearby communities on a part time basis or for shorter periods of service then are required under section 5. Such programs shall be designed to contribute to the improvement of economic and social conditions of senior citizens. Pursuant to appropriate agreements or arrangements the Director may provide financial, technical, or other assistance needed to carry on projects that are undertaken in connection with programs under this paragraph. The projects may include, without limitation, activities designed (A) to encourage persons with needed managerial, professional, or technical skills to contribute those skills to programs for the development or betterment of urban and rural neighborhoods or areas having especially large concentrations or proportions of the elderly, with particular emphasis upon helping residents of those neighborhoods or areas to develop the competence necessary to integrate the older citizens with the rest of their communities; and (B) to assist existing national and local agencies which rely upon or need volunteers to obtain volunteer services more readily, or to provide specialized short-term training, with particular emphasis on agencies serving the most seriously disadvantaged of the elderly.

(2) The Director may provide a stipend to volunteers under this subsection but the stipend shall not exceed $75 per month. The Director shall take such action as he determines necessary to assure that stipends paid under this paragraph are paid in monthly or other short-term installments. The Director may also provide such other support and allowances as he determines pursuant to regulations and required because of special circumstances affecting the project assisted under this section.

(3) The services of any person, if otherwise allowable as a non-Federal contribution toward the cost of any program or project assisted under this or any other Federal Act, shall not be disallowed merely by reason of actions of the Director under this section in providing for or assisting in the recruitment, referral, or preservice training of such person.

(b) The Director is authorized to conduct, or provide by grant or contract for, special volunteer programs designed to stimulate and initiate improved methods of providing volunteer services and to encourage wider volunteer participation, in furtherance of the purposes of this title.

DEMONSTRATION PROJECTS FOR SENIOR CITIZENS

SEC. 8. The Director is authorized to conduct directly or by way of grant, contract, or other arrangement not to exceed eight demonstration projects in communities where there are high concentrations of senior citizens living under difficult economic and social conditions, in order to expand or improve existing programs or to develop new and especially promising solutions to the particular needs of senior citizens particularly innovative uses for the volunteers of the National Senior Service Corps. At least two of the demonstration projects authorized under this section shall be carried out in counties with a population in excess of 3,000,000 inhabitants.

SPECIAL LIMITATIONS

SEC. 9. (a) The Director shall prescribe regulations to assure that service under this Act is limited to activities which will not result in the displacement of employed workers or impair existing contracts for service.

(b) All support, including transportation provided to volunteers under this Act, shall be furnished at the lowest possible cost consistent with the effective operations of volunteer programs.

(c) No agency or organization to which volunteers are assigned hereunder, or which operates or supervises any volunteer program hereunder, shall request or receive any compensation for services of volunteers supervised by such agency or organization.

(d) No funds authorized to be appropriated herein shall be directly or indirectly utilized to finance labor or anti-labor organization or related activity.

(e) Persons serving as volunteers under this title shall provide such information concerning their qualifications, including their integrity and their ability to perform their assigned tasks, as the Director shall prescribe and shall be subject to such procedures, for selection and approval as the Director may require. The Director may fix such special procedures for the selection and approval of low-income residents of the area to be served by a program who wish to become volunteers as he determines will contribute to carrying out the purposes of this Act.

ADMINISTRATIVE PROVISIONS

SEC. 10. (a) In carrying out the provisions of this Act, the Director shall take such action as may be necessary to encourage the fullest participation of senior citizens as volunteers. In addition, the Director is authorized to take such action as he deems necessary to encourage the development of a variety of volunteer services to senior citizens whose income is below the poverty line established pursuant to the Economic Opportunity Act of 1964 designed to assure that such senior citizens are served in proportion and according to their needs.

(b) The Director shall carry out the provisions of this Act through the Associate Director for Senior Citizens.

(c) In order to carry out the provisions of this Act the Director is authorized to—

(1) enter into and perform such contracts, leases, cooperative agreements with and make payments (in advance, by transfer, or otherwise) to any public agency or any private person or organization;

(2) prescribe such rules and regulations as he deems necessary;

(3) accept in the name of the Corps and employ in furtherance of the purposes of this Act (A) voluntary services, notwithstanding the provisions of section 3679(b) of the Revised Statutes, as amended (31 U.S.C. 665(b)), and (B) any money or property (real, personal or mixed, tangible or intangible) received by gift, devise, bequest, or otherwise;

(4) appoint and fix the compensation of such personnel as he deems necessary;

(5) procure temporary and intermittent services to the same extent as is authorized by section 3109 of title 5 of the United States Code, but at a rate not to exceed $100 per day for individuals;

(6) appoint such advisory committees as he may determine to be desirable to contribute to the purpose of this Act;

(7) use the services, personnel, facilities, and information of Federal executive agencies and those of State and local public agencies and private research agencies, with the consent of such agencies, with or without reimbursement therefor; and

(8) submit an annual report to the President and to the Congress on the administration of this Act.

(d) Upon request made by the Director, each Federal department and agency is authorized and directed to make its services, personnel, facilities, and information (including suggestions, estimates and statistics) available to the greatest practicable extent to the Corps in the performance of its functions.

(e) Each member of a committee appointed pursuant to paragraph (6) of subsection (c) of this section shall receive $125 a day (including travel time) for each day he is engaged in the actual performance of his duties as a member of a committee. Each such member shall also be reimbursed for travel, subsistence and necessary expenses incurred in the performance of his duties.

(f) The Director is authorized and directed to carry out—

(1) the Retirement Senior Volunteer Program authorized by part A of title VI of the Older Americans Act of 1965;

(2) the Foster Grandparent Program authorized by part B of such Act;

(3) the Senior Corps of Retired Executives (SCORE) authorized by section 8 (b) of the Small Business Act, and

(4) the Active Corps of Executives (ACE), authorized by section 8(b) of such Act, through the associate director.

COORDINATION WITH OTHER PROGRAMS

SECTION. 11. The Director is authorized to take such action as may be necessary to coordinate each program authorized under this Act with other programs authorized under this Act, particularly in the same community, with programs assisted under the Older Americans Act of 1965, with community action programs authorized under title II of the Economic Opportunity Act of 1964 and with other similar and related Federal, State and local programs. Actions under this section may include, to the extent feasible, promoting service by volunteers or former volunteers in the full-time programs authorized under part A in providing necessary support to programs under part B, and actions to encourage persons serving as part-time or short-term volunteers to make commitments under part A as regular or associate full-time volunteers. The Director shall consult with the heads of other Federal, State, local, and public agencies responsible for programs related to the needs of senior citizens with a view to encouraging greater use of volunteer services in those programs under their jurisdiction and adequate procedures for the recruitment, referral, or necessary preservice orientation or training of part-time volunteers serving pursuant to this part.

APPLICATIONS OF OTHER PROVISIONS OF FEDERAL LAW

SEC. 12. (a) Except as provided in section 8332 of title 5, United States Code, and subsections (b) and (c) of this section, volunteers under this Act shall not be deemed Federal employees and shall not be subject to the provisions of laws relating to Federal employment.

(b) Individuals who receive a stipend under this Act, with respect to such services or training, shall—

(1) be deemed, for the purposes of subchapter III of chapter 73 of title 5 of the United States Code, persons employed in the executive branch of the Federal Government, and

(2) be deemed Federal employees to the same extent as volunteers under the Peace Corps Act, except that for purposes of the computation described in section 5(d) of such Act the monthly pay of a volunteer shall be deemed to be that received under the entrance salary for GS-7 under section 5332 of title 5, United States Code.

(c) Any period of service of a volunteer under this Act shall be credited in connection with subsequent employment in the same manner as a like period of civilian employment by the United States Government—

(1) for the purposes of section 852(a)(1) of the Foreign Service Act of 1946, as amended (22 U.S.C. 1092(a)(1)), and every other Act establishing a retirement system for civilian employees of any United States Government agency; and

(2) except as otherwise determined by the President, for the purposes of determining seniority, reduction in force, layoff rights, leave entitlement, and other rights and privileges based upon length of service under the laws administered by the Civil Service Commission, the Foreign Service Act of 1946, and every other Act establishing or governing terms and conditions of service of civilian employees of the United States Government: *Provided*, That service of a volunteer shall not be credited toward completion of any probationary or trial period or completion of any service requirement for career appointment.

AMENDMENT TO TITLE 5, UNITED STATES CODE

SEC. 13. Section 5316 of title 5, United States Code, is amended by adding at the end thereof the following new paragraph:

"(132) Associate Director for Senior Citizens, ACTION."

AUDIT AND REVIEW

SEC. 14. The Director and the Comptroller General of the United States, or any of their duly authorized representatives, shall have access for the purpose of audit and examination, to any books, documents, papers, and records of any agency, to whom volunteers are assigned under this Act or to whom a grant is made under this Act, that are pertinent to such assignments or grants.

DEFINITIONS

SEC. 15. (a) As used in this Act, the term—

(1) "Corps" means the National Senior Service Corps;

(2) "Director" means the Director of ACTION;

(3) "associate director" means the Associate Director of ACTION for Senior Citizens;

(4) "State" includes each of the several States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Trust Territory of the Pacific Islands: and

(5) "senior citizens" means any individual who is 62 years of age or older and who resides in any State.

AUTHORIZATION OF APPROPRIATIONS

SEC. 16. There are authorized to be appropriated not to exceed $—— for the fiscal year ending June 30, 1973, and for each of the 3 succeeding fiscal years as may be necessary to carry out the provisions of this Act.

By Mr. JAVITS (for himself, Mr. MONDALE, Mr. BROOKE, Mr. CASE, Mr. PELL, Mr. HUMPHREY, Mr. HARRIS, Mr. HUGHES, Mr. HART, Mr. HARTKE, Mr. MATHIAS, Mr. MUSKIE, Mr. RANDOLPH, Mr. MOSS, and Mr. WILLIAMS):

S. 3927. A bill to provide for the implementation of a full employment policy through the establishment of a Federal Full Employment Board and the provision of increased assistance for job development in the public and nonprofit private sectors, and related training and assistance. Referred to the Committee on Labor and Public Welfare.

FULL EMPLOYMENT AND JOB DEVELOPMENT ACT OF 1972

Mr. JAVITS. Mr. President, I introduce for myself and Senator MONDALE, the Full Employment and Job Development Act of 1972. We are joined by the following cosponsors: BROOKE, CASE, HARRIS, HART, HARTKE, HUGHES, HUMPHREY, MATHIAS, MOSS, MUSKIE, PELL, RANDOLPH, and WILLIAMS, the chairman of the Committee on Labor and Public Welfare.

The bill consists of two major elements, designed to implement the national objective of full employment.

First, it would establish a Federal Full Employment Board as an independent agency in the executive branch of the Federal Government.

Second, it would establish a full employment assistance fund to be used at the discretion of the Board by the Secretary of Labor for the provision of financial assistance for job development and related training in public service fields.

Mr. President, the Employment Act of 1946 identified "maximum employment" as a national goal.

But, if we put aside rhetoric and take stock of the actual situation, it is quite clear that the promise of full employment so implicit in the very fabric of our society, has been honored more in breach than in observance by this, as by all past administrations since 1946.

We do not have a positive goal; we have a negative one. Instead of asking "Have we achieved full employment?" we usually ask "Is the economy growing fast enough?"

We have in no sense a comprehensive program to reach full employment. We have manpower training and on-the-job training, economic development efforts and "full employment" budgets, and limited public service employment programs.

But we have no way to coordinate or to get an overview of these uncoordinated initiatives and to insure the maximum utilization of resources and to chart a course toward full employment.

And worse still, we have no precise measurement of what is full employment; instead we apply a negative standard. We do not ask "Have we reached full employment?" We ask instead "Is unemployment at an 'unacceptable' or 'intolerable level?" Thus, even in our criteria we subordinate automatically employment objectives to other objectives.

We overlook the fact that at any given time since the Full Employment Act was enacted in 1946 the unemployment situation has been intolerable for at least 2 million persons.

It is clearly unacceptable now at 5.5 percent with almost 5 million unemployed in July, including all socioeconomic segments of the population from the chronically poor to more recently displaced aerospace engineers and technicians.

It is clearly intolerable when particular towns and cities and areas within cities have levels substantially above the national norm. For example, the most recent statistics in my own State show a rate of 7.7 percent in Buffalo and 9.3 percent in the Utica-Rome area.

Mr. President, how costly is our failure to reach full employment in terms of loss of productivity, added welfare, correctional costs, and increased unemployment compensation?

How ironic these facts are in a society that gives such importance to work as a part of life.

How tragic it is for millions of citizens who suffer loss of dignity as well as loss of earnings for our failure to match opportunity for work with the tenets of our free society.

Mr. President, I urge that we take action now which will provide a framework for a true "full employment" program in the near and longer term future. Should we not try to fix the roof now while the rain leaks through so heavily? If we wait for a drier spell, then I am concerned that once again we will muddle along full of rhetoric but lacking in any clear policy or procedure.

As I indicated, the bill would seek that objective in two basic ways.

THE FEDERAL FULL EMPLOYMENT BOARD

The bill would establish a Federal Full Employment Board as an independent agency in the executive branch.

The Board would consist of five full-time members appointed by the President, subject to Senate confirmation including one representative of labor, one representative of management, one distinguished economist, one manpower expert, and one member from the general public.

Among the principal responsibilities of the Board are the following:

First, the Board would recommend to the President and to the Congress each year a program to achieve full employment, and alternate means of achieving that objective, in terms of monetary, fiscal, wage and price, manpower, and other relevant policies; it would do so principally in an annual full employment report submitted to the Congress and the President for their consideration.

In this way, the Board would serve as an advocate for full employment within the Federal structure.

We have no agency at the present time which may serve adequately and forcefully in that capacity. The Council of Economic Advisers established under the 1946 act has been given a broader, and wholly advisory function; its responsibility is to oversee the general economy; it should not and cannot be an advocate for full employment alone and it has not been. Neither can the National Commission on Productivity serve that function, as it too, has a related but different focus.

The Department of Labor, while generally entrusted with the goal of full employment has no charter to make recommendations with respect to the many programs outside of its jurisdiction which have substantial effects on full employment; for example, monetary, fiscal, wage and price, budgetary, and other policies generally.

This is not intended as a criticism of the Department of Labor, but, as in most areas, it is always helpful to give an independent body the authority to "look over the shoulder" and make recommendations as to changes in the national interest.

Today the Government has a whole range of powerful tools available to it to help control the economy and insure that employment goals are reached. Budgetary policy, tax policy, procurement policy, the timing and location of public works, control of interest rates, foreign trade and investment policy, and wage and price controls as well as manpower training programs, are all powerful levers on employment levels.

It is about time that we started pulling those levers in a planned way so as to achieve and maintain full employment as well as price stability.

Second, the Board would undertake manpower planning and long-range and short-term surveys to estimate employment and manpower needs in terms of demand and supply, by sector, by geographic area, by industry, and occupation, including anticipated changes in short-term and long-term technology. In that connection, the Board would be empowered to review decisions made by public and private employers, including projections of manpower needs by job category.

We are all too sadly familiar with the effect that cutbacks in defense and aerospace industries have had on our scientific manpower. I do not think it is being a "Monday morning quarterback" to say that we could easily have anticipated, as early as 1966 and 1967, that something like this was going to happen and should have done some planning at that time as to how to take up the slack.

Third, the Board would review the implementation of existing manpower training and employment programs and related services, such as those under the Manpower Development and Training Act of 1962, the Economic Opportunity Act of 1964, and the Social Security and Emergency Employment Act of 1971, and make recommendations to the President and to the Congress.

Mr. President, this is essentially an evaluative and overview function brought to bear on manpower programs.

There is nothing more disturbing than our lack of knowledge with respect to the extent to which our manpower programs are working toward the goal of full employment.

We do not even know, for example, the extent to which manpower training results in jobs, although we spend more than $2 billion annually on such programs.

We do not know the extent to which unemployment could be reduced by establishing better job vacancy reporting and outreach procedures.

We do know that a major effort is required to fit the skills of the work force into existing job slots.

THE FULL EMPLOYMENT ASSISTANCE FUND

Mr. President, a principal function of the Board will be to make recommendations with respect to amounts to be appropriated for use under a full employment assistance fund and to direct its use in terms of public and nonprofit sectors, various geographical areas, and significant segments of the labor force.

The fund, which would be created under section 7 of the act, would be used for grants to public and private nonprofit organizations for job development in public service fields.

For the fund, the bill authorizes the appropriation of $1 billion in fiscal 1973 and "such sums" for fiscal 1974; it is expected that in considering this legislation, the Congress will wish to review these authorizations in terms of the unemployment situation and any plans with respect to the extension of the Emergency Employment Act of 1971 which expires June 30, 1973.

It may be noted, however, that even if the jobs that could be created annually with $1 billion—approximately 140,000—were added to the 238,000 jobs contemplated for fiscal 1973 under the Emergency Employment Act of 1971, the aggregate 378,000 jobs could still reach less than 10 percent of persons now unemployed and create less than 10 percent of the 5 million jobs which studies indicate should be created to meet real public service needs.

Mr. President, two aspects of the Board's "activist" relationship to the fund deserve special emphasis:

First, by permitting the Board to "direct" the general use of the fund as well as recommend as to appropriate appropriation levels, we will insure that public service funds are utilized in the most resourceful way, after consideration of the other means of attaining full employment.

As coauthor of the Emergency Employment Act of 1971, and a sponsor of the very earliest public service employment legislation, I firmly believe that a public service employment program permanent in nature—although transitional as to the individual—is essential.

But we cannot afford to stop here, view public service as a cure-all and merely "throw" more money out there for use by the States and the cities for job creation per se, without a more specific sense of purpose.

We need, on the basis of our experience with the Emergency Employment Act, and other programs, to make our approach to public service employment more sophisticated.

And the way to do that is to place additional resources for job creation in the hands of the Federal Full Employment Board so that it will use funds more economically.

This is not the old doctrine of the Federal Government as the "employer of last resort."

This is a rejection of the growing concept of public service employment as "employment of first resort."

Public service employment is a tool, but not the only one; and I consider it wise to let the Board determine first the best ways to develop more jobs in the private sector through other means and then decide where and to what extent to apply money for public service employment.

We do not know whether a certain age group, or a particular geographical area's full employment goal may be met by a differing government procurement policy or a particular budgetary approach, as distinct from public service employment.

In this connection, I would note further that, as in the case of the Emergency Employment Act, the public service employment "slot" to be created under the bill would be essentially transitional in nature, thus leading to "regular" employment in the public or private sector. This feature ensures additional economy in the use of funds.

Second, although it will direct that funds be applied to various segments and areas, the Board will not administer the program.

Under the bill, the Secretary of Labor will be responsible for administration.

This element will ensure that while general decisions with respect to the use of additional public service employment funds will be centralized in the Board, administration will be decentralized and funds will be run through the anticipated new manpower training delivery system conducted by State and local prime sponsors.

To serve further this objective, an Intergovernmental Advisory Council, consisting of State and local prime sponsors of manpower training and employment councils, would be established under the act to work with the Board.

It is my hope that the committee will consider soon both S. 1243, the administration's manpower revenue-sharing proposal and my own alternative bill, S. 3421, the Community Manpower and Employment Act for the decentralization of programs, as well as the bill I introduce today.

Mr. President, in conclusion I urge that we elevate full employment as a goal and that we raise our decisions with respect to public service employment to a high level, not view it merely as a source of revenues for the States—although revenues are sorely needed.

I do not claim that we should shrug our shoulders at inflation or abandon our vigilance over the way the taxpayer's dollars are spent.

However, I do suggest that the time has come for us to raise the issue of full employment to at least as a high priority.

We have the resources to put everybody to work in this country and we all know there is no shortage of work to be done. Such a policy is not only morally compelled, but also will prove to be economically sound for the Nation.

We can do so with necessary planning and, if need be, accept even some measure of control, in order to reach and maintain full employment. I know that "planning" and "controls" are not pleasing words to many Americans. However, I think we should accept the fact that the role of government is so substantial and so important in today's economy that to a significant extent we have now a managed economy and that the real question is whether we are going to manage it intelligently and with forethought, or just let the Government chips fall where they may.

We need very much an institution to serve as an advocate and an activist to advance us toward one of the most central goals of the Nation, indeed the backbone of our very spirit as a Nation—full employment.

Mr. President, I wish to acknowledge the assistance of Mr. Jule Sugarman, administrator, human resources administration, city of New York, who first suggested the concept of an independent "Job Creation Commission" in testimony before the House Select Subcommittee on Labor, February 9, 1972, and who, along with Mr. Elwood Taub, executive director, New York City Manpower Area Planning Council, has contributed to the development of this proposal.

Mr. President, I ask unanimous consent that a section-by-section analysis and a copy of the bill be printed at this point in the Record.

There being no objection, the analysis and bill were ordered to be printed in the Record, as follows:

SECTION-BY-SECTION ANALYSIS OF FULL EMPLOYMENT AND JOB DEVELOPMENT ACT OF 1972

Sec. 2. *Congressional Statement of Policy and Findings*. This section states that in order to attain the national objective of full employment it is necessary to assure an opportunity for a job to each American, that the United States has the capacity to do so and that the Federal Government lacks any comprehensive means to reach that objective.

The purpose of the Act is to provide for the implementation of a full employment policy through the establishment of a "Federal Full Employment Board" and the provision of assistance for job development in the public and non-profit private sectors and related training and assistance.

Sec. 3. *Federal Full Employment Board*. This section establishes as an independent agency in the executive branch a "Federal Full Employment Board", to consist of five members appointed by the President by and with the advice and consent of the Senate as follows: one representative of labor, one of management, one distinguished economist, one distinguished manpower expert; and one member of the general public. Not more than three members may be of the same political party. Members shall serve full time.

Sec. 4. *Functions of the Board*. This Section authorizes and directs the Board to (i) recommend to the President and to the Congress a program to achieve full employment; (ii) undertake manpower planning and long-range and short-term surveys in terms of demand, supply and by sector; (iii) review decisions made by public and private employers affecting full employment; (iv) develop guidelines and standards for use of public funds in job development programs; (v) review the implementation of manpower training and employment programs in terms of the extent to which they contribute to full employment; (vi) direct the Secretary of Labor to obligate funds made available under the Full Employment Assistance Fund established under Section 7; (vii) hold nationwide and regional conferences; (viii) analyze the extent to which the Federal budget may assist in reaching full employment; (ix) evaluate programs and (x) carry out such other functions as the President may direct.

In carrying out these functions, the Board shall use the services and facilities of the other agencies (to the extent directed by the President), supply technical assistance, establish regional offices, make grants and enter into contracts, accept gifts, consult with the Council of Economic Advisors and with the National Commission on Productivity and with representatives of industry, labor and other groups.

Sec. 5. *Authorization of Appropriations*. This section authorizes $3 million for fiscal year 1973 and for each fiscal year thereafter, for the activities of the Board (other than under Section 7).

Sec. 6. *Reports*. This section provides for an annual "Full Employment Report" setting forth the Board's recommendations with respect to implementation of a full employment policy for each fiscal year and for succeeding fiscal years. The report is to be referred to appropriate committees in each House.

Sec. 7. *Full Employment Assistance Fund*. This section establishes a fund and authorizes therefor $1 billion for fiscal 1973 (the start-up year), and such funds as necessary for each year thereafter. The Secretary of Labor is to provide assistance from the fund pursuant to specific directions of the Board, to public agencies and non-profit private organizations (including prime sponsors of manpower training and employment programs) for public service job development programs and related training and assistance.

Sec. 8. *Applications*. This section provides that assistance is to be provided under Section 7 only by application submitted to the Secretary and approved by him. Each application must set forth a program to provide employment and related training and assistance for unemployed persons, to enable them to obtain employment not supported under the Act and meet other special requirements.

Sec. 9. *Related Training*. This section authorizes the Secretary of Labor to use such sums as may be necessary from those appropriated under Section 7 of the Act, for training and other services related to employment.

Sec. 10. *Special Responsibilities of the Secretary*. This section contains conditions designed to ensure that jobs are transitional, that is, will lead to public or private employment opportunities not supported under the Act.

Sec. 11. *Full Employment Intergovernmental Advisory Council.* This section establishes a Council consisting of state and local prime sponsors responsible for conducting manpower training and employment programs, to advise the Board on intergovernmental aspects of attaining full employment.

Sec. 12. *Special Provisions.* This section contains important requirements as to reporting, discrimination, political activities, and wages, and other benefits. It provides that all persons employed under programs shall be paid wages which shall be equal to whichever is the highest of the federal minimum wage, the state or local minimum wage, or the prevailing rates of pay.

Sec. 13. *Definitions.* This section defines Board, Secretary, State public service job development program, and Unemployed person.

Sec. 14. *Effective date.* This section provides that the Act shall take effect upon enactment.

S. 3927

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SEC. 1. That this Act may be cited as the "Full Employment and Job Development Act of 1972".

CONGRESSIONAL STATEMENT OF POLICY AND FINDINGS

SEC. 2. Congress hereby finds and declares that—

(a) (1) To attain the objective of full employment it is necessary to assure an opportunity for a gainful, productive job to every American who seeks work and to furnish the employment opportunity, training, and related assistance needed by any person to qualify for employment consistent with his or her highest potential and capability.

(2) The United States has the capacity to provide every American who is available for work the full opportunity, within the framework of a free society, to prepare for and to obtain employment at the highest level of productivity, responsibility, and remuneration consistent with his or her abilities.

(3) While full employment is a national objective, the Federal Government lacks any comprehensive means of reaching that objective with the results of individual hardship, unacceptable levels of unemployment, an erosion of the American spirit of work, and increasing welfare dependency.

(4) While it is desirable to decentralize the manpower services "delivery system" to provide substantial flexible funds for manpower training and employment programs at the State and local level, it is also appropriate to insure that decisions with respect to the utilization of additional Federal resources for job development in the public or nonprofit private sectors and related training and services be made taking into account the factors in the economy and policy determinants which affect employment, with reference to local effects, so as to insure the best possible use of available primary and supplemental resources.

(b) It is the purpose of this Act to provide for the implementation of a full employment policy through the establishment of a Federal Full Employment Board and the provision of assistance for job development in the public and non-profit private sectors, and related training and assistance.

FEDERAL FULL EMPLOYMENT BOARD

SEC. 3. (a) There is hereby established as an independent agency in the executive branch a Federal Full Employment Board, to consist of five members appointed by the President by and with the advice and consent of the Senate as follows:

One member shall be representative of labor.

One member shall be representative of management.

One member shall be a distinguished economist.

One member shall be a distinguished manpower expert.

One member shall be a member of the general public.

Not more than three members shall be members of the same political party. Each member shall serve full time. The President shall designate one member to serve as Chairman.

(b) Each member shall hold office for a term of three years, except that any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of the term and the terms of office of the members first taking office after the enactment date shall expire, as designated by the President, one at the end of one year, two at the end of two years, and two at the end of three years.

(c) The Board shall meet at the call of the Chairman or at the call of the President and in no event less than four times each year. A quorum shall consist of three members.

(d) Members of the Board shall receive compensation at the rate prescribed for level IV of the Executive Schedule by section 5315 of title 5 of the United States Code.

(e) The President is authorized to appoint, by and with the advice and consent of the Senate, an Executive Director of the Board. The Executive Director shall be the principal executive officer of the Board and shall receive compensation at the rate prescribed for level V of the Executive Schedule by section 5316 of title 5 of the United States Code.

(f) The Executive Director of the Board with the approval of the majority of the Board is authorized to employ, and fix the compensation of, such specialists and other experts as may be necessary for carrying out the Board's functions under this Act, without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, and without regard to the provisions of chapter 51 and subchapter III of chapter 53 of such title relating to classification and General Schedule pay rates, and is authorized, subject to such provisions, to employ such other officers and employees as may be necessary for carrying out its functions under this Act and fix their compensation in accordance with the provisions of such chapter 51 and subchapter III of chapter 53.

FUNCTIONS OF BOARD

SEC. 4. (a) The Federal Full Employment Board is authorized and directed to—

(1) recommend to the President and to the Congress a program to achieve full employment and alternative means of attaining that objective, in terms of monetary, fiscal, income, manpower, training, and other relevant policies;

(2) undertake manpower planning and long-range and short-term surveys to estimate employment and manpower needs in terms of demand and supply, by sector (public and private), by geographical area, by industry, and by occupation, including anticipated changes in short-term and long-term technology;

(3) review decisions made by public and private employers affecting full employment and establish appropriate procedures for the receipt of information from such employers necessary to carry out the purposes of this Act, including projections of manpower needs by job category;

(4) develop guidelines and standards for use of public funds in job development programs in the public and private sectors;

(5) review the implementation of manpower training and employment programs and related services and other programs affecting employment including but not limited to the Manpower Development and Training Act of 1962, Title I of the Economic Opportunity Act of 1964, the Emergency Employment Act of 1971, in terms of the extent to which the programs authorized by such Acts serve to meet the objectives of this Act, and make recommendations to the President and to the Congress as the Board deems advisable for in respect to such programs and the funding and conduct thereof.

(6) recommend to the President and to the Congress amounts to be appropriated for use under the Full Employment Assistance Fund established under section 7 of this Act and direct the Secretary of Labor to obligate such funds, from time to time among the public and nonprofit private sectors, various geographical areas, and significant segments of the labor force and potential labor force in each case as the Board deems necessary to accomplish the purpose established under section 2 of this Act;

(7) hold on a regular basis nationwide and regional conferences designed to encourage the support of management and labor in meeting the objectives of this Act;

(8) analyze the extent to which the Federal budget may assist in reaching full employment, including the effect of procurement policies and make recommendations to the President and the Congress with respect to changes necessary to achieve full employment;

(9) evaluate programs conducted under section 7 of this Act; and

(10) perform such other functions as the President may direct.

(b) In exercising its duties and functions under this Act, the Board is authorized to—

(1) use the services, facilities, and information (including statistical information) of other Government agencies in order that duplication of effort and expense may be avoided;

(2) supply technical and administrative assistance to labor and management and similar groups;

(3) establish regional and such other local offices as it deems necessary;

(4) make grants to or enter into with contracts with any public or private agency or organization;

(5) accept gifts or bequests, either for carrying out specific programs which it deems desirable or for its general activities;

(6) consult and coordinate with the Council on Economic Advisers to the President and with the National Commission on Productivity;

(7) consult with such representatives of industry, labor, anti-poverty, State and local governments, and other groups, organizations, and individuals as it deems advisable to insure the participation of such interested parties; and

(8) make recommendations for the elimination of delays in respect to the dissemination of information concerning job vacancies.

AUTHORIZATION OF APPROPRIATIONS

SEC. 5. There are hereby authorized to be appropriated the sum of $3,000,000 for each fiscal year beginning with the fiscal year ending June 30, 1973, for the activities of the Board other than activities conducted under section 7.

REPORTS

SEC. 6. (a) The Board shall transmit to the Congress not later than sixty days after the beginning of each regular session of the Congress (commencing with the calendar year 1973) a report, to be known as the "Full Employment Report" setting forth its activities during the previous calendar year and its recommendations with respect to the implementation of a full employment policy for the following fiscal year and, to the extent necessary in terms of the objectives of this Act with respect to each of the four succeeding fiscal years. The Board may make such other reports to the President and to the Congress from time to time as it deems appropriate or as are requested by the President.

(b) The Full Employment Report, and all supplementary reports transmitted under subsection (a) of this section, shall, when transmitted to Congress, be referred to the Committee on Labor and Public Welfare of the Senate and the Committee on Education and Labor of the House of Representatives, which committees shall hold at least annually hearings on the report and such supplementary reports. Nothing in this subsection shall be construed to prohibit the consideration of the report by any other committee of the Senate or the House of Representatives, including any joint committee of the Congress, with respect to any matter within the jurisdiction of any such committee.

FULL EMPLOYMENT ASSISTANCE FUND

SEC. 7. (a) There is hereby established a special fund to be known as the Full Employment Assistance Fund (hereinafter referred to as the "fund"). There are hereby authorized to be appropriated for such fund $1,000,000,000 for the fiscal year ending June 30, 1973, and such sums as may be necessary for each succeeding fiscal year. The Secretary is authorized to utilize sums deposited in the fund to provide assistance under this section.

(b) Pursuant to specific directions of the Board in accordance with paragraph (6) of subsection (a) of Section 4, the Secretary may provide financial assistance, in accordance with the provisions of this Act, directly to public agencies and nonprofit private organizations, including prime sponsors of manpower training and employment programs, in order to meet the objectives of this Act, for public service job development programs, and related training and assistance.

(c) As soon as practicable after funds are obligated, the Board shall publish in the Federal Register information in respect to the benefits to various segments of the population of unemployed and to geographical areas from allocation under this section.

APPLICATIONS

SEC. 8. (a) Financial assistance under section 7 of this Act may be provided by the Secretary for any fiscal year only pursuant to an application which is submitted to the Secretary by a public agency or non-profit private organization and which is approved by the Secretary in accordance with the provisions of this Act. Any such application shall set forth a public service job development program to provide employment and related training and assistance for unemployed persons.

(b) An application for financial assistance for a job development program under section 7 of this Act shall include provisions setting forth—

(1) assurances that the activities and services for which assistance is sought under this Act will be administered by or under the supervision of the applicant, identifying any employer, agency, or institution designated to carry out such activities or services under such supervision;

(2) a description of the area to be served by such programs, and a description of the population to be served, including data indicating the number of participants and their income and employment status;

(3) assurances that special consideration will be given to the filling of jobs which provide sufficient prospects for advancement or suitable continued employment by providing complementary training and manpower services designed to (A) promote the advancement of participants to employment or training opportunities suitable to the individuals involved, whether in the public or private sector of the economy, (B) provide participants with skills for which there is an anticipated high demand, or (C) provide participants with self-development skills, but nothing contained in this paragraph shall be construed to preclude persons or programs for whom the foregoing goals are not feasible or appropriate;

(4) a description of the methods to be used to recruit, select, and orient participants, including specific eligibility criteria, and programs to prepare the participants for their job responsibilities;

(5) a description of jobs to be filled, a listing of the major kinds of work to be performed and skills to be acquired, and the approximate duration for which participants would be assigned to such jobs;

(6) the wages or salaries to be paid persons employed in jobs under this Act and a comparison with the wages paid for similar occupations by the same employer;

(7) wherever appropriate, the education, training, and supportive services (including counseling and health care services) which complement the work performed;

(8) the planning for and training of supervisory personnel in working with participants;

(9) a description of career opportunities and job advancement potentialities for participants;

(10) assurance of compliance with procedures established pursuant to subjection (a) of section 10;

(11) assurances that agencies, institutions, and organizations to whom financial assistance will be made available under this Act will undertake analysis of job descriptions and a reevaluation of skill requirements at all levels of employment, including civil service requirements and practices relating thereto, in accordance with regulations promulgated by the Board; and

(12) assurances that all persons employed under any such program, other than necessary technical, supervisory, and administrative personnel, will be selected from among unemployed persons;

RELATED TRAINING

SEC. 9. For the purpose of providing training and related services for persons employed in programs assisted under this Act, the Secretary is authorized to utilize, in addition to any funds otherwise available under federally supported manpower programs, such sums as may be necessary from funds made available under Section 7 of this Act.

SPECIAL RESPONSIBILITIES OF THE SECRETARY

SEC. 10. (a) The Secretary, in consultation with the Board, shall establish procedures for periodic reviews by an appropriate agency of the status of each person employed in a program under this Act to assure that—

(1) in the event that any person employed in a job under this Act and the reviewing agency find that such job will not provide sufficient prospects for advancement or suitable continued employment, maximum efforts shall be made to locate employment or training opportunities providing such prospects, and such person shall be offered appropriate assistance in securing placement in the opportunity which he chooses after appropriate counseling; and

(2) as financial assistance will otherwise no longer be available under this Act, maximum efforts shall be made to locate employment or training opportunities not supported under this Act for each person employed in a job under this Act, and such person shall be offered appropriate assistance in securing placement in the opportunity which he chooses after appropriate counseling.

(b) The Board and the Secretary shall review the implementation of the procedures established under subsection (a) of this section six months after funds are first obligated under this Act and at six-month intervals thereafter.

(c) From funds appropriated pursuant to section 7, the Board may reserve such amount, not to exceed 2 per centum, as it deems necessary to provide for a continuing evaluation of programs assisted under this Act and their impact on related programs.

FULL EMPLOYMENT INTERGOVERNMENTAL ADVISORY COUNCIL

SEC. 11. The President shall establish an Intergovernmental Full Employment Advisory Council, which shall meet at least twice a year to advise the Board with regard to matters related to achieving the objective of full employment. In selecting members of the Council, the President shall assure an equitable balance in political and geographical affiliation of its members and shall insure inclusion of State and local prime sponsors and other public and private agencies and organizations responsible for conducting manpower training and employment programs. The President shall designate a Chairman of the Council. Members of the Council shall receive no compensation and members shall not be Federal employees for any purpose except that they shall be allowed travel expenses and per diem in lieu of subsistence as authorized by section 5703 of title 5, United States Code, for persons in the Government service employed intermittently and receiving compensation on a per diem, when actually employed basis.

SPECIAL PROVISIONS

SEC. 12. (a) (1) Any amounts received under chapters 11, 13, 31, 34, or 35 of title 38, United States Code, by any veteran, as defined by section 101 of title 38, United States Code, who served on active duty for a period of more than one hundred and eighty days or was discharged or released from active duty for a service-connected disability or any eligible person as defined in section 1701 of such title, if otherwise eligible to participate in programs under this title, shall not be considered for purposes of determining the needs of qualifications of participants in programs under this Act.

(2) The Secretary shall not provide financial assistance for any program under this Act unless he determines, in accordance with regulations which he shall prescribe, that periodic reports will be submitted to him and to the Board containing data designed to enable him, the Board and the Congress to measure the relative and, where programs can be compared, appropriately, comparative effectiveness of the programs authorized under this Act. Such data shall include information on—

(A) enrollee characteristics, including age, sex, race, health, education level, and previous wage and employment experience;

(B) duration in employment and related training situations, including information on the duration of employment of program participants for at least one year following the termination of participation in federally assisted programs and comparable information on other employees or trainees of participating employers; and

(C) total dollar cost per participant, including breakdown between salary or stipend, training and supportive services, and administrative costs.

The Secretary shall compile such information on a State, regional, and national basis.

(3) The Secretary shall not provide financial assistance for any program under this Act unless the grant, contract, or agreement with respect thereto specifically provides that no person with responsibilities in the operation of such program will discriminate with respect to any program participant or any applicant for participation in such program because of race, creed, color, national origin, sex, political affiliation, or beliefs.

(4) The Secretary shall not provide financial assistance for any program under this Act which involves political activities; and neither the program, the funds provided therefor, or personnel employed therein shall be, in any way or to any extent, engaged in the conduct of political activities of contravention of chapter 15 of title 5, United States Code.

(5) The Secretary shall not provide financial assistance for any program under this Act unless he determines in accordance with guidelines established by him that participants in the program will not be employed on the construction, operation, or maintenance of so much of any facility as is used or to be used for sectarian instruction or as a place for religious worship.

(6) All laborers and mechanics employed by contractors or subcontractors in any construction, alteration, or repair, including painting and decorating of projects, buildings, and works which are federally assisted under this Act, shall be paid wages at rates not less than those prevailing on similar construction in the locality as determined by the Secretary of Labor in accordance with the Davis-Bacon Act, as amended (40 U.S.C. 276a—276a-5). The Secretary of Labor shall have, with respect to such labor standards, the authority and functions set forth in Reorganization Plan Numbered 14 of 1950 (15 F.R. 3176; 64 Stat. 1267) and section 2 of the Act of June 1, 1934, as amended (48 Stat. 948, as amended; 40 U.S.C. 276(c)).

(b) The Secretary shall not provide financial assistance for any job development program under this Act unless he determines, in accordance with such regulations as he shall prescribe, that—

(1) the program will result in an increase in employment opportunities over those which would otherwise be available and will not result in the displacement of currently employed workers (including partial displacement such as a reduction in the hours of nonovertime work or wages or employment benefits), and will not impair existing contracts for services or result in the substitution of Federal for other funds in connection with work that would otherwise be performed;

(2) all persons employed in a job under this Act will be assured of workman's compensation, retirement, health insurance, unemployment insurance, and other benefits at the same levels and to the same extent as other employees of the employer and to working conditions and promotional opportunities neither more nor less favorable than such other employees enjoy; and

(3) the provision of section 2(a)(3) of Public Law 89-286 shall apply to such agreements.

(c) Where a labor organization represents employees who are engaged in similar work in the same labor market area to that proposed to be performed under any program for which an application is being developed for submission under this Act, such organization shall be notified and afforded a reasonable period of time in which to make comments to the Secretary.

(d) The Secretary shall prescribe regulations to assure that programs under this Act have adequate internal administrative controls, accounting requirements, personnel standards, evaluation procedures, and other policies as may be necessary to promote the effective use of funds.

(e) The Secretary shall, where appropriate, provide for the payment of weekly allowances to individuals receiving services under this Act. Such allowances shall be at a rate prescribed by the Secretary which, when added to amounts received by the trainee in the form of public assistance or unemployment compensation payments, shall approximate the minimum wage for a workweek for forty hours under section 6(a)(1) of the Fair Labor Standards Act of 1938 or, if higher, under the applicable State minimum wage law, or, where the trainee is being trained for particular employment, at a rate equal to 80 per centum of the weekly wage for such employment, whichever is greater. In prescribing allowances, the Secretary may allow additional sums for special circumstances such as exceptional expenses incurred by trainees, including but not limited to meal and travel allowances, or he may reduce such allowances by an amount reflecting the fair value of meals, lodging, or other necessaries furnished to the trainee. The Secretary shall take such action as may be necessary to insure that such persons receive no allowances without good cause with respect to periods during which they are failing to participate in such programs, training, or instruction as prescribed herein. Notwithstanding the preceding provisions of this subsection, the Secretary may, in accordance with such regulations as he shall prescribe, make such adjustments which take into account the amount of time per week spent by the individual participating in such programs and adjustments to reflect the special economic circumstances which exist in the area in which the program is to be conducted. Allowances shall not be paid for any course of training having a duration in excess of one hundred and four weeks.

(f) All persons employed under programs assisted under this Act shall be paid wages which shall be equal to whichever is the highest of (A) the minimum wage which would be applicable to the employment under the Fair Labor Standards Act of 1938, if section 6(a)(1) of such Act applied to the participant and if he were not exempt under section 13 thereof, (B) the State or local minimum wage for the most nearly comparable covered employment, or (C) the prevailing rates of pay in the same labor market area for persons employed in similar occupations.

DEFINITIONS

SEC. 13. As used in this Act, the term—

(1) "Board" means the Federal Full Employment Board established under section 3;

(2) "Secretary" means the Secretary of Labor;

(3) "State" means the several States and the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Trust Territory of the Pacific Islands;

(4) "Unemployed persons" means—

(A) persons who are without jobs and who want and are available for work; and

(B) adults who or whose families receive money payments pursuant to a State plan approved under title I, IV, X, or XVI of the Social Security Act or food stamps or surplus commodities under the Agriculture Act of 1949 or the Food Stamp Act of 1964 (1) who are determined by the Secretary of Labor, in consultation with the Secretary of Health, Education, and Welfare, to be available for work, and (2) who are either (i) persons without jobs, or (ii) persons working in jobs providing insufficient income to enable such persons and their families to be self-supporting without welfare assistance;

and the determination of whether persons are without jobs shall be made in accordance with the criteria used by the Bureau of Labor Statistics of the Department of Labor in defining persons as unemployed;

(5) "public service job development program" shall include programs providing employment in the public or nonprofit private sectors in such fields as environmental quality, health care, education, public safety, crime prevention and control, prison rehabilitation, transportation, recreation, maintenance of parks, streets, and other public facilities, solid waste removal, pollution control, housing and neighborhood improvements, rural development, conservation, beautification, disaster relief and other fields of human betterment and community improvement; and

(6) "nonprofit" as applied to any foundation, corporation, or association means a foundation, corporation, or association, no part of the net earnings of which inures, or may lawfully inure to the benefit of any private shareholder or individual.

EFFECTIVE DATE

SEC. 14. Except as otherwise provided, this Act shall take effect upon enactment. Rules, regulations, guidelines, and other published interpretations or orders may be issued by the Secretary at any time after the date of its enactment.

Mr. MONDALE. Mr. President, I am very pleased to join with Senator JAVITS in introducing the Full Employment and Job Development Act of 1972. There is no problem facing this country more important than the problem of jobs. The existence of unemployment when there are so many hands willing to work and so much useful work to do is a constant reminder to all of us of the long way we have to go to fulfill the American dream. High unemployment has been a fact of life in America for too long.

The Employment Act of 1946 passed the Congress more than 26 years ago, setting "maximum employment" as a goal for America. That act was a major step ahead, because it committed the U.S. Government in a far-reaching way to policies that have made another depression—like that of the 1930's—impossible. But looking back over the years we can see how often American workingmen and women have seen the objectives of the Employment Act watered down and unfulfilled.

For millions and millions of our working people—about 5 million in the last 2 years—"maximum employment" has not meant a job. For them 1972 is a year of depression not prosperity. A year of failure and futility, not of promise.

The shortcomings of the Employment Act of 1946 are to be read in the unemployment statistics over the years. One reason for this repetition of failure is that until now the fiscal and monetary resources and the enormous economic power of the U.S. Government have not been brought to bear sufficiently on the crucial human problem of unemployment.

Other less important objectives have distracted attention from the primary goal of a job for every American. There has not been the farsighted planning for full employment which was promised in the 1946 act.

The bill we are introducing today aims to meet once and for all the 25-year-old commitment to a job for those who ask only for a fair chance to work and to progress in America.

The Full Employment Board which our bill will create will focus fully on the employment problem and its recommendations will concern the use of monetary, fiscal, income, manpower, and other related government policies to achieve this key objective. The five member Board, which will be broadly representative, will set employment goals and relate policies specifically to their effects on employment. This concentration on the problem of jobs is long overdue.

Mr. President, the fact is that we have failed to get unemployment below 4 percent for more than 2½ years and the administration has not given us a target date for achieving this or any other reasonable level of employment.

They predict that unemployment will decline to "the neighborhood of 5 percent" by the end of this year, but this is completely unsatisfactory.

The Full Employment Board, which our proposal will create, will devote its full attention to the employment problem. Either through such a new agency, or by other means we must assure that the President and the Congress get the recommendations and the information which they need to do a better job of creating jobs.

The report which our proposal requires will help draw attention to various aspects of the problem. Hearings in the Labor Committees will similarly act as a powerful stimulus to creative thinking and action in the employment area.

Some people may argue that a full employment bill is not necessary. And that the Council of Economic Advisers already does the work which needs to be done in this area.

My answer to that is that the President's most recent economic report—the report prepared by the Council of Economic Advisers—devoted only about 15 pages to unemployment in a report 175 pages long.

Moreover, that report had a disquieting tendency to justify high levels of unemployment rather than to propose solutions.

There were suggestions that because teenagers and women are a slightly larger percentage of the work force now than in the past, higher unemployment figures were somehow less serious. The report obscured the fact that unemployment among married men which is now 2.9 percent, is almost double what it was in 1969. By doing this, it disguised the fact that married men with families—and often with union seniority—have suffered a worse decline than anyone else—including women and teenagers—in their job prospects.

Another argument which was mentioned but hardly explored was that high unemployment is needed to keep wages from rising at an inflationary pace. Yet the data for 1970 and 1971 shows how empty this reasoning is. During these 2 years of the most rapid inflation in recent times, real wages were actually below 1969 levels.

Mr. President, I disagree with these excuses for unemployment, but I think it is particularly serious that they are put forward with so little analysis to back them up. Our proposal will help to cure this neglect.

Another important feature of our bill is a $1 billion authorization for direct employment programs. I have already introduced an Emergency Employment Act to create 500,000 jobs in badly needed public service areas.

I am also a cosponsor of the job service employment bill sponsored by the Senator from California (Mr. CRANSTON) which approaches the employment problem from a slightly different aspect. I hope that the Labor Committee in considering this section of our new bill will combine the best features of these three proposals.

Mr. President, the knowledge that there are almost 5 million Americans who are still without work—several million more who are forced to take part-time and unsatisfactory jobs—and millions more who are so discouraged by the job market that they do not even bother to look for work—makes it imperative that we move beyond the Employment Act of 1946 to the Full Employment Act of 1972. In 26 years we have not found a solution to unemployment. We have not fulfilled the obligation of the 1946 act, and we need a new focus and a new approach. I believe that this legislation is such an approach.

By Mr. FONG:

S. 3928. A bill to provide assistance for relief, rehabilitation, and reconstruction in the Philippines related to the recent floods. Referred to the Committee on Foreign Relations.

Mr. FONG. Mr. President, the past ten years may well be recorded in history as "the decade of disasters"—natural disasters that have taken a tragic and incalculable toll of human lives and have brought immeasurable suffering to millions more.

I speak of such calamities as drought and famine that have stricken countless persons in Ethiopia, in India, in Korea, and in Somalia.

I speak of cyclones that have left hundreds of thousands dead and millions homeless in Bangladesh, formerly East Pakistan.

I recall to you the earthquakes in Peru, in Turkey, in Iran, and in Chile that have brought pain, misery, and too often death to millions of men, women, and children.

And now comes the Phillippines about which I speak to you today. This trusted ally in the Pacific, with which we have had such long, historic, and friendly ties, has just suffered perhaps the most destructive calamity ever to befall it. For more than 30 days torrential rains fell on the major island of Luzon. In some areas 180 inches of rain—a normal year's downfall—fell in 1 month. Flooding covered the country's richest agricultural area, from Manila in the south to the Lingayen Gulf in the north, a distance of over 100 miles in which 6 million people make their lives. For over a week, major centers of population, including the capital city, were submerged under water in depths up to 12 feet.

It is difficult to describe the magnitude of this disaster. For over a month, the rains fell and the waters rose, turning streams to lakes and engulfing fields and roads and homes. As water levels climbed inexorably to heights of 10 or 15 feet or more in hundreds of villages, miles of dikes built by patient labor across the years were swept away, disrupting irrigation systems and destroying homes, crops, and livestock of hundreds of thousands of Fillipino farmers. Over 500 deaths have been recorded to date—a miraculously low level for a disaster of this proportion. Only the courageous and unstinting efforts of the Philippine people, supported primarily by American military and civilian personnel and resources, have thus far prevented tragedy of even greater dimensions.

Nature's timing was grim indeed, and heightened by a bitter irony. The rains have devastated the very area which had helped to spawn the Green Revolution, the development of "miracle grain" rice, by means of which numerous food-deficit countries of the world are making significant strides toward self-sufficiency.

And so, as with the dikes that were swept away, as with the roads and the irrigation systems, and the houses and all else that lay drowned under the floodwaters—the costly rebuilding of the "green revolution" must now be started anew.

The Philippine Government has responded quickly to the disaster situation and mobilized its limited resources to meet the extraordinary demands. Foreign observers in Manila continually commented on the excellent job President Marcos and the Philippine people have done supplying relief to their fellow countrymen. The effort of the Philippine people has, by all accounts, been one of an unprecedented outpouring of help and assistance. From the islands to the south has come rice for replanting the destroyed crops. Manila has supplied food for immediate relief, as well as clothes and money. Every major private organization in the Philippines has contributed to this effort, and the business community has responded in a magnificent way to get help to the flood victims in central Luzon.

The Philippines, already forced during 1972 to import 500,000 tons of rice as a result of crop failures caused by typhoons and blight, must now add at least 300,000 more tons of rice to their import requirement over the next several months. The irrigation system, destroyed or badly clogged with silt and debris, will require a major rehabilitation effort to allow even a partial crop to be planted and grown between now and the end of the year.

The reconstruction effort required to restore the damaged economy of the Philippines to a semblance of what it was before the flood, will be a massive, indeed an overwhelming task, requiring extensive help from the other nations and peoples of the world.

Under the personal direction of President Marcos, a Philippine Task Force has developed preliminary estimates of the damage based on assessments to date. Even now, the floodtide has not completely subsided. It will be several days more before it will have done so and a more detailed assessment can be made. Estimates for reconstruction of roads, bridges, irrigation system, flood control, schools, communications, and other public facilities amount to more than $200 million.

As Americans, we can all take pride in the efforts of our Government to bring quick relief to the victims of one of the most appalling disasters ever to strike the Philippines. Abiding by our tradition, we are responding with compassion and with generosity to the call of a stanch ally and respected friend. We are reacting also to the silent cries of a courageous people, now shocked and numbed by a catastrophe that has steadily grown more terrifying.

Within our available resources, U.S. relief assistance has taken many forms—rescue operations by our servicemen stationed at air and naval bases in the Pacific, distribution of emergency supplies of food and water, inoculation of hundreds of thousands of men, women, and children against the ever-present perils of contagion and disease.

On August 7, President Nixon named Maurice Williams, Deputy Administrator of the Agency for International Development, to serve as disaster relief coordinator. One of Mr. Williams' first actions has aimed at overcoming the effect of the loss of the rice crop by diverting shipments to the Philippines of food originally intended for countries whose need is less pressing.

Moreover, efforts are underway to provide up to $24 million in additional agricultural surplus commodities under Public Law 480 to help the stricken Philippines in this emergency period. In addition, foreign assistance contingency funds amounting to $6 million have been made available to help the Filipinos with the necessary clean-up work as the floodwaters recede.

Our relief assistance up to now has covered a period when lifesaving and lifegiving measures were the prime, if not the sole, consideration. In these days and weeks of crisis, our humanitarian efforts have been in the nature of a first-aid operation. Indeed, stopgap feeding remains the order of the day until such time as new crops can be produced and until new dikes can be constructed and irrigation works repaired.

And so, the Philippines, in a literal sense barely able to lift its head above water, faces a period of reconstruction that is staggering in its dimensions. In addition to the dikes and the irrigation works, there are roads to be repaired and schools to be rebuilt. Countless homes need to be put together. And, attention must be given to early repair of the nation's flood control system because, tragically, the rainy season has not yet ended.

The Philippines, with characteristic courage and self-sacrifice, is prepared to mobilize its resources to the limit of its capacity in the job of reconstruction that lies ahead. Other nations will be sure to help, as they did during the initial crisis period. The United States, with its strong traditional and historic ties to that gallant country of the Philippines must do its share.

I calculate that our share should be $50 million—or about 25 percent of the estimated contribution of all the assisting nations. Measured in human terms, our contribution will help a people who have suffered, who only seek merciful relief and a chance to rebuild their lives, their homes, and their land.

I therefore earnestly propose and put before the Senate legislation which will provide the Philippine people $50 million to help the reconstruction of their country—our friend and ally.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD at this point.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 3928

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That part I of the Foreign Assistance Act of 1961 is amended by adding at the end thereof the following new chapter:

"Chapter 10—PHILIPPINE RELIEF

PHILIPPINE RELIEF

"SEC. 495. There are authorized to be appropriated to the President $50,000,000 to provide assistance, on terms and conditions he considers appropriate, to the Government of the Philippines for relief, rehabilitation, and reconstruction in the Philippines related to the flooding occurring in the Philippines during 1972. Appropriations made under this section are authorized to remain available until expended."

By Mr. BUCKLEY:

S. 3929. A bill to prevent the use of heroin for any drug maintenance program. Referred to the Committee on the Judiciary.

Mr. BUCKLEY. Mr. President, in recent years a number of possible ways of treating drug addiction have been proposed—especially heroin addiction. In any situation where there is no commonly agreed upon solution, a great number of proposals are advanced which are ill-considered, and if adopted would make the problem worse. A most persistent, but unwise proposal has been heroin maintenance. The proposals for heroin maintenance generally envision the establishment of clinics providing heroin addicts with free or low-cost heroin injections several times daily as an alternative to the criminal procurement of the drug.

Heroin maintenance has no place whatever in our effort to confine and roll back the curse of addiction. Under such a program, the addict still lives for his "high," and we find the Government in the astonishing position of subsidizing his habit—a habit which in all probability will continue to grow.

Thus we would have the appalling prospect of thousands of persons being totally dependent on the Government for their several-times daily doses of the heroin which would be hastening their physical, psychological, and spiritual destruction. Furthermore, heroin maintenance would place no check on the compulsion which so many addicts feel to bring others into the ranks of the addicted.

A heroin maintenance program would be inconsistent with existing U.S. programs to seek the international abolition of opium cultivation. Establishing a legitimate market for heroin production in the United States could gravely inhibit current efforts to stop the production of opium in such nations as Turkey.

The sanctioning of heroin usage by the Government could contribute to the lessening of social constraints against the use of existing addictive drugs because of the legitimization of heroin addiction under controlled circumstances. This is obviously of no value when all public policy efforts are designed to discourage drug abuse.

There is no single approach which will meet the needs of every addict in an effort to treat addiction. Quality therapy of the Hilltop and Phoenix House variety certainly holds out the best hope at this time, but too many addicts will not submit themselves to its disciplines. To the extent that heroin maintenance clinics were available, pressure on addicts to seek bona fide treatment would be reduced because of the offer of free and continuous heroin to the addict population.

Heroin maintenance would not solve any of the problems it is designed to solve. It would be likely to have a significant impact on the crime problem usually associated with addicts, even on a heroin maintenance program would be unable to hold a regular job because of the debilitating impact of addiction. Crime would remain a way of life for the addict if he is to survive. Heroin maintenance would not reduce the incidence of addiction. The much-discussed British system of heroin is being phased out in Britain in favor of methadone maintenance, because of the failure of the heroin maintenance program to reduce the incidence of addiction.

We must continue to improve the quality and variety of our approaches to addiction; we must continue our research and experimentation; we must continue our efforts to educate the nonaddicted; but we must not allow ourselves to be seduced by the concept of heroin maintenance which would only add another dangerous dimension to the already critical problem of drug addiction.

For these reasons, Mr. President, I am introducing legislation today to amend the Controlled Substances Act to prohibit the use of heroin maintenance in any drug maintenance program. A companion bill is being introduced today in the House by Congressmen PEYSER, RANGEL and BIAGGI of New York and KEATING of Ohio.

I send my bill to the desk and ask that it be appropriately referred. I also ask unanimous consent that the bill be printed in its entirety at the conclusion of my remarks.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 3929

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the section 303(f) of the Controlled Substances Act (21 U.S.C. 823(f)) is amended by inserting at the end thereof the following new sentence: "No practitioners may be registered under this Act to dispense or otherwise utilize heroin in any drug maintenance program."

By Mr. TUNNEY (for himself and Mr. CRANSTON):

S. 3931. A bill to establish the Lake Berryessa National Recreation Area in the State of California, and for other purposes. Referred to the Committee on Interior and Insular Affairs.

LAKE BERRYESSA NATIONAL RECREATION AREA ACT

Mr. TUNNEY. Mr. President, I am introducing today legislation to establish a National Recreation Area at Lake Berryessa, in Napa County, Calif. This bill is of particular concern and importance to citizens of northern California, and I am pleased to have my California colleague, Senator ALAN CRANSTON, join me in sponsoring the legislation.

Lake Berryessa is a large and beautiful body of water which was created when the U.S. Bureau of Reclamation built Monticello Dam. The lake is situated in a delightful area of wooded hills and canyons, and enjoys a temperate year-round climate. It lies within easy driving distance of the San Francisco Bay Area and Sacramento-Stockton Metropolitan Area. This federally owned lake, the second largest body of water in California, thus presents unequaled recreational opportunities for the people of northern California's major cities. Yet even though this Federal lake has been in existence since the mid-1950's, its full recreational potential has never been developed. In a time of increasing public demands for quality recreation, I think it imperative that Congress investigate this unfulfilled potential and attempt to remedy the problem.

BACKGROUND

Lake Berryessa was formed with the construction of Monticello Dam, part of the Solano Reclamation project. It was designed as a flood control and irrigation project, not for recreational purposes. At normal water level, the main body of water is approximately 10 miles long and 3 miles wide; at this level, the shoreline length is about 170 miles.

However, because of the anticipated seasonal fluctuations of the lake level, it was not believed that the lake would become a major recreation area, and no recreational facilities were provided.

Nevertheless, as the waters began to form behind the partially completed dam, the area began to receive heavy public use. During this period, there were no sanitary or garbage disposal facilities at the lake, and the only access to the lake was by narrow roads which were inadequate for the traffic. Both the National Park Service and the California State Division of Beaches and Parks made studies in the Berryessa area, but neither agency seemed interested in supervising recreational development at the lake. Finally, after abdication or refusal of responsibility by nearly everyone else, a solution was reached. In the spring of 1958, the County of Napa offered to assume responsibility for provision and management of recreational facilities at Berryessa. The management agreement between the county and the Bureau of Reclamation was finally signed on July 31, 1958.

Unfortunately, no funds were provided by the Federal Government for even minimum basic public use facilities, roads, or parking areas of any kind. Therefore, the county contracted with seven private concessioners who agreed to develop the lake for recreational day use with their own funds, at no cost to the Napa taxpayers.

THE PROBLEM

It was here that the plans for recreational development began to fall apart. The concessioners were clear in their intentions to make a fair profit; however, the legal requirements spelled out in the concession agreements were thought to be sufficiently strong to guarantee protection of the public interest.

Instead, Mr. President, we find that Lake Berryessa today provides an example of inexcusable mismanagement by the concessioners. The County of Napa and the Bureau, for their part, must also share much of the blame for their apparent disregard of the control requirements, and even acquiescence in the illegal incursions.

Almost beyond cavil, the concessioners have violated the obligations spelled out in the management agreement and the contracts. Instead of picnic tables, campsites, public beaches, public restrooms, and so forth, the visitor finds gates, fences, private trailers and prefabricated homes, private security police, and so on. In short, the lake has become a private residential area complete with sleazy developments, instead of a public recreational center as intended by the original public-use plan prepared by the National Park Service. Two thousand mobile homes have been moved onto the Federal land and, despite clear language in the management agreement to the contrary, some of these "mobile" homes have not been moved for as long as 10 years. Many of these "trailers" have been placed on cement foundations, their wheels removed, and siding and porches added. The trailer parks, which are a more stable and lucrative financial investment than day-use facilities, have become the rule rather than the exception at Berryessa. Unsurprisingly, in the process of establishing this semipermanent residential community on Federal land, the concessioners have substantially barred large portions of the public from large portions of the lake.

When I visited Lake Berryessa on February 1 of this year, I was astonished to see "Private Property, No Trespassing" signs forbidding entrance to what is clearly Federal property. There is an element of psychology at work in this respect: Mr. John Q. Public, driving past the private resorts at Berryessa simply does not get the impression that this is a public lake, built with public funds and dedicated to public use. Free beach and swimming areas, such as they are, are poorly marked, ill-kept, and policed with also Teutonic zeal by the private security forces hired by the concessioners. The casual, short term visitor is by all accounts poorly accommodated from the time he parks his car until he leaves. Facilities at some of the resorts are so crowded and congested that slum conditions exist, while there is a complete paucity of facilities at other "free" areas along the shoreline. I saw open, unfenced sewage treatment ponds in some areas where the public use plan called for public beaches and picnic areas to be. In short, Mr. President, everything at Berryessa seems calculated to discourage the day use visitor whom the concessioners were originally contracted to serve.

THE FEDERAL RESPONSE TO THE PROBLEM

All this led me a year ago to write Secretary of the Interior Rogers C. B. Morton, requesting an explanation and inviting his comments on an appropriate remedy to the Berryessa problem. Bureau of Reclamation and Interior Department spokesmen admitted frankly that the Berryessa situation embarrassed them. They all realized, to a man, that something had gone very wrong with the original agreements, and that some changes had to come. In June of 1970, an "Environmental early morning memorandum" was filed with the Department of the Interior by a staff member of the Bureau of Sport Fisheries and Wildlife, noting that—

> Recreation developments appear to be geared to benefit a very few with apparent disregard for the needs of the general public.

Unfortunately little further action was taken as a result. By late 1970, conditions at the lake had reached such a state that the Bureau of Reclamation at last put a moratorium on all further development activities by the concessioners until the management agreement could be reevaluated. The National Park Service was asked to study the Berryessa area and draft a new plan for recreational development, one which would guarantee public access to this $50 million resource. Meanwhile, however, business continued as usual.

By this time, Berryessa was coming under closer and more searching scrutiny from outside the Department of the Interior than ever before.

Conditions at the lake were brought to my attention in early 1971, whereupon my staff in Washington and San Francisco began an intensive investigation that lasted nearly 6 months before my first letter to Secretary Morton.

In that letter I questioned what appeared to be a shocking misuse of public lands under the jurisdiction of the Bureau of Reclamation at Berryessa.

The General Accounting Office, in its survey of Bureau of Reclamation projects, studied the Berryessa situation in May of 1971.

This study contended that—

> Public recreational facilities at the lake had not been adequately developed, and that . . . contrary to the requirements of the Public Use Plan . . . access to and use of Lake Berryessa by the general public was restricted severely by private developments.

Investigators for Ralph Nader's "Power and Land in California" project investigated Berryessa and used it as a case study in the mismanagement of public land.

The report described the "public loss of the lake's assets, in addition to extensive private exploitation and environmental degradation."

Mr. President, I have conferred extensively with representatives of the Bureau of Reclamation and the National Parks Service, as well as citizens groups and conservation organizations interested in the fate of Lake Berryessa. I visited the lake personally on February 1, to inspect conditions firsthand and to talk with local officials, concessioners and local residents. All of this investigation has led me to the inescapable conclusion that the current management formula at Berryessa is unacceptable, and that responsibility for developing the recreational facilities at the lake should be vested in the National Park Service. This is precisely what the bill which I am introducing today will do.

ANALYSIS OF RECREATION AREA BILL

Section 1 of the bill establishes the Lake Berryessa National Recreation Area, to consist of lands and interests in lands within the area as generally depicted on the map referred to in the section. The map is now being prepared by the Park Service. The section also provides that the Secretary of the Interior may revise the boundaries from time to time by publication of a map or other boundary description in the Federal Register, but the total area may not exceed 33,000 acres.

Section 2 provides that within these boundaries, the Secretary may acquire lands and interests in lands by donation, purchase with donated or appropriated funds, or exchange. Lands owned by the State of California or any political subdivision or under the jurisdiction of another Federal agency may, with the concurrence of the State or agency involved be transferred to the Secretary for the purposes of the recreation area. It is also provided that when a tract of land is only partly within the boundaries, the Secretary may acquire the entire tract to minimize the payment of severance costs, and to utilize the land outside the boundaries for exchange purposes. Lands not used for exchange would be disposed of in accordance with applicable Federal law.

Section 2(b) of the bill provides that when any improved property, as defined in section 2(c), is acquired, the owner thereof may retain a right of use and occupancy for noncommercial residential purposes for a term either ending at the death of the owner or his spouse, or not more than 25 years after the date of such acquisition. Fishing and trapping within the recreation area shall be permitted in accordance with applicable State and Federal laws, except that the Secretary may designate times when, and zones where no fishing will be permitted for reasons of safety, fish or wildlife management, or administration.

Section 4(a) provides for management of the recreation area in accordance with the act of August 25, 1916 (39 Stat. 525; 16 U.S.C. 1, 2–4) as amended and supplemented. However, section 4(b) continues the authority of the Secretary to operate the Monticello Dam in accordance with the purposes for which it was authorized.

Section 5 of the bill provides for the establishment of a seven-member Lake Berryessa National Recreation Area Advisory Commission.

The last section authorizes the appropriation of such sums as may be necessary to carry out the purposes of the act.

I have introduced this legislation in the hopes that it will widen the recreational facilities available to the people of northern California. In a day when the pressures of urban life are increasing public demands for such recreation, the Government can do no less.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD at this point.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 3931

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in order to provide for public outdoor recreation use and enjoyment of Lake Berryessa and land adjacent thereto, and to provide for protection of the scenic and natural values contributing to public enjoyment of the area, there is hereby established the Lake Berryessa National Recreation Area (hereinafter referred to as the "Recreation Area") consisting of lands and interest in lands within the gap as generally depicted on the drawing entitled "Boundary Map, Lake Berryessa National Recreation Area," numbered WR–LABE–20,000, and dated January 1972, which shall be on file and available for public inspection in the offices of the National Park Service, Department of the Interior. The Secretary of the Interior (hereinafter referred to as the "Secretary") may from time to time revise the boundaries of the Recreation Area by publication of the map or other boundary description in the Federal Register, but the total acreage of the Recreation Area may not exceed 33,000 acres.

SEC. 2. (a) The Secretary may acquire lands, waters, or interests therein within the boundaries of the Recreation Area by donation, purchase with donated or appropriated funds, or exchange. When any tract of land is only partly within such boundaries, the Secretary may acquire all or any portion of the land outside of such boundaries in order to minimize the payment of severance costs. Land so acquired outside of the boundaries may be exchanged by the Secretary for non-Federal lands within the boundaries, and any land so acquired and not utilized for exchange shall be reported to the General Services Administration for disposal under the Federal Property and Administrative Services Act of 1949 (63 Stat. 377), as amended. Any Federal property located within the boundaries of the Recreation Area may be transferred without consideration to the administrative jurisdiction of the Secretary for the purposes of the Recreation Area. Lands within the boundaries of the Recreation Area owned by the State of California, or any political subdivision thereof, may be acquired only with the consent of the owner.

(b) With respect to improved residential property acquired for the purposes of this Act, which is beneficially owned by a natural person and which the Secretary determines can be continued in that use for a limited period of time without undue interference with the administration, development, or public use of the recreation area the owner thereof may on the date of its acquisition by the Secretary retain a right to use and occupancy of the property for noncommercial residential purposes for a term, as the owner may elect, ending either (1) at the death of the owner or his spouse, whichever occurs later, or (2) not more than twenty-five years from the date of acquisition. Any right so retained may during its existence be transferred or assigned. The Secretary shall pay to the owner the fair market value of the property on the date of such acquisition, less the fair market value on such date of the right retained by the owner.

(c) As used in this Act, "improved residential property" means a single-family year-round dwelling, the construction of which began before January 1, 1972, and which serves as the owner's permanent place of abode at the time of its acquisition by the United States, together with not more than three acres of land on which the dwelling and appurtenant buildings are located, that the Secretary finds is reasonably necessary for the owner's continued use and occupancy of the dwelling: *Provided*, That the Secretary may exclude from improved residential property any waters and adjoining land that the Secretary deems is necessary for public access to such waters.

(d) The Secretary may terminate a right of use and occupancy retained pursuant to this section upon his determination that such a right is being exercised in a manner not consistent with the purposes of this Act, and upon tender to the holder of the right an amount equal to the fair market value of that portion of the right which remains unexpired on the date of termination.

SEC. 3. The Secretary shall permit fishing, and trapping on lands and waters within the Recreation Area in accordance with applicable Federal and State laws: *Provided*, That he designate zones where, and establish periods when, no fishing, or trapping will be permitted for reasons of public safety, administration, fish or wildlife management, resource conservation and protection, or public use and enjoyment. Except in emergencies, any regulations issued by the Secretary pursuant to this section shall be put into effect only after consultation with the appropriate State agency responsible for hunting, fishing, and trapping activities.

SEC. 4. (a) Except as otherwise provided in this Act, the Secretary shall administer the Recreation Area in accordance with the provisions of the Act of August 25, 1916 (39 Stat. 535; 16 U.S.C. 1, 2–4), as amended and supplemented.

(b) Nothing contained in this Act shall affect or interfere with the authority of the Secretary to operate the Monticello Dam (Solano Project) in accordance with and for the purposes for which authorized.

SEC. 5. (a) There is hereby established a Lake Berryessa National Recreation Area Advisory Commission (hereinafter referred to as the "Commission"). The Commission shall terminate ten years after the date of enactment of this Act.

(b) The Commission shall be composed of seven members, each appointed for a term of two years by the Secretary, to be composed of such persons as the Secretary shall determine would best represent the concern and interest of local citizens and citizens from within the major regional areas of use.

(c) The Secretary shall designate one member to be Chairman. Any vacancy in the Commission shall be filled in the same manner in which the original appointment was made.

(d) A member of the Commission shall serve without compensation as such. The Secretary is authorized to pay the expenses reasonably incurred by the Commission in carrying out its responsibilities under this Act upon the presentation of vouchers signed by the Chairman.

(e) The Secretary shall provide such staff assistance as is necessary to the Commission in the performance of its duties.

(f) The Commission shall meet at least twice annually at times and places designated by the Chairman. The Commission also shall meet as necessary at the call of the Chairman upon proper cause and due notice given.

(g) The members of the Commission shall have particular experience or expertise in government, conservation, land use planning and acquisition, natural and environment sciences, or economics.

(h) Notwithstanding the provisions of subsection (b) of this section, the Secretary shall make the initial appointments as follows: three commissioners shall be appointed for terms of one year, and four commissioners shall be appointed for terms of two years.

(i) The duties of the Commission shall consist of:

(1) advising the Secretary on proposed land uses, priority of such uses, and development plans within the Recreation Area consistent with the recreational and open space aspects of the region;

(2) advising the Secretary on any activities conducted by the Secretary or proposed to be conducted by the Secretary or through others which would have or are likely to have a material influence on park environment;

(3 advising the board of supervisors of NAPA County and the city council of any city contiguous or adjacent to the area as to any proposed land use, land development, or zoning outside the park which would have or are likely to have a material influence on the Recreation Area environment;

(4) holding hearings on National Park Service proposals for acquisition of land and development and use plans for the area and submitting its findings and recommendations to the Secretary, with special priority given to lands specified in the "National Park Service Plan for Recreation Development, Lake Berryessa, California."

(5) any other duties prescribed by the Secretary related to the development, use, and management of the area and its resources and the environmental impact of the park on the surrounding communities and the environmental impact of adjacent commercial activity on the park.

SEC. 6. There are hereby authorized to be appropriated such funds, as are necessary to accomplish the purposes of this Act.

By Mr. MONDALE:

S. 3932. A bill to protect nondisclosure of information and sources of information coming into the possession of the news media. Referred to the Committee on the Judiciary.

Mr. MONDALE. Mr. President, on June 29, I was privileged to cosponsor a bill introduced by the Senator from Wisconsin (Mr. NELSON) designed to insure that hundreds of publications of news and opinion were not forced out of business by unwarranted postal rate increases. On that occasion I remarked:

> Just when a vigorous press is most urgently required, a multitude of pressures threatens to still the voices which have for centuries been the primary bridge between the American people.
>
> Almost two hundred years ago, Thomas Jefferson stated that he cared not who made a country's laws, so long as he could write its newspapers. Today, the function of disseminating ideas is entrusted to all our communications media. If we fail to enact legislation to help save these publications, an important part of our freedom will slowly and silently drift away, robbing our entire nation of its precious legacy.

The urgency of those remarks was underscored in a most distressing way on the very day on which they were made. For on June 29 another major threat to the freedom of the press was unfolding. On that day, in the case of Branzburg against Hayes, the U.S. Supreme Court in a 5-to-4 decision determined that the first amendment does not afford newsmen the privilege of refusing to answer a grand jury's questions even though these answers may require the disclosure of confidential information and sources.

In the name of balancing governmental interests against the rights of the public to know, the Court in reality made it ever more difficult for the working press to bring news to the public which is unconventional in source and potentially disturbing in content.

In his dissent, Mr. Justice Stewart ably set out the essentials of the newsgathering business and the harm which the absence of a newsman's privilege not to testify would do to that process:

> A corollary of the right to publish must be the right to gather news. . . . The right to gather news implies, in turn, a right to a confidential relationship between a reporter and his source. This proposition follows as a matter of simple logic once three factual predicates are recognized: (1) newsmen require informants to gather news; (2) confidentiality—the promise or understanding that names or certain aspects of communications will be kept off-the-record—is essential to the creation and maintenance of a news-gathering relationship with informants; and (3) the existence of an unbridled subpoena power—the absence of a constitutional right protecting, in any way, a confidential relationship from compulsory process—will either deter sources from divulging information or deter reporters from gathering and publishing information.

The majority opinion in Branzburg against Hayes comes perilously close to imposing this major obstruction in the gathering and reporting of news.

If the free press becomes less free, if reporters become less able to report, the entire Nation will suffer. If reporters know—as they now know—that they may be forced to testify at secret grand jury proceedings and reveal confidential information or sources of information, they will be more reticent in the gathering and publishing of the news. As Mr. Justice Stewart stated:

> The full flow of information to the public protected by the free press guarantee would be severely curtailed if no protection whatever were afforded to the process by which news is assembled and disseminated.

This fear expressed by Mr. Justice Stewart is by no means unique. It is of vital, immediate concern to the working newsmen for whom the ability to cultivate sources whose identity they promise not to disclose constitutes a major portion of the important news stories reaching the public.

Jon Lowell, a reporter for Newsweek, submitted an affidavit in the ninth circuit case of United States against Caldwell—one of the cases which the June 29 Supreme Court ruling overturned—which vividly demonstrates just how basic the need is for an effective newsman's privilege:

> Particularly disturbing to me has been a marked increase recently, in the reticence of my confidential sources in government itself. These sources, some of whom have in the past been instrumental in exposing instances of governmental abuse or corruption, now tell me that, because of the increasingly widespread use of subpoenas to obtain names and other confidential information from reporters, they are fearful of reprisals and loss of jobs if they are identified by their superiors as sources of information for newsmen.

If these sources were reluctant to give information before the June 29 Supreme Court ruling, imagine the difficulty which newsmen will encounter now.

The recognition that reporters should have the benefit of a substantial privilege not to reveal sources of information has already been recognized, in varying degrees, in 18 States. And it is now more important than ever that Federal protection be given, so that Federal grand juries and other investigative bodies will not, at their discretion and without any effective checks, be able to cut off the free flow of news to our Nation's people. For now, reporters know that they have very little protection against a grand jury which may merely be engaging in a "fishing expedition"—as grand juries sometimes do—but which now may have contempt powers broad enough to send reporters to prison even when there has been no substantial showing that the reporter knew of any violation of law which had been committed by the source which gave him confidential information.

The majority opinion of the Court seeks to give comfort to those who fear the effects of this ruling, by stating that—

> Reliance by the press on confidential informants does not mean that all such sources will in fact dry up because of the later possible appearance of the newsman before a grand jury. The reporter may never be called and if he objects to testifying, the prosecution may not insist.

If ever there were cold comfort, this is it. "The reporter may never be called"—but what if he is? "The prosecution may not insist"—but what if it does?

To meet the threat of the reporter who is called, to answer the prosecutor who does insist, I am today introducing the Free Flow of Information Act of 1972.

There is no doubt, of course, that we have the power to pass such a statute. The Supreme Court, in Branzburg against Hayes, specifically stated that—

> At the federal level, Congress has freedom to determine whether a statutory newsman's privilege is necessary and desirable and to fashion standards and rules as narrow or broad as deemed necessary to address the evil discerned.

There have been, over the years, a variety of measures introduced to meet the problem of insuring a free flow of information. One such approach, the Newsmen's Privilege Act of 1971—S. 1311—introduced by the Senator from Kansas (Mr. PEARSON), has received support for the conditional type of privilege which it advocates. Another approach, exemplified by a bill introduced on June 30 by the Senator from California (Mr. CRANSTON) —S. 3786—would grant a complete and unconditional privilege.

In my view, while both approaches have merit, neither fully recognizes both the new forces at work since the Supreme Court decision of June 29 and the balance of interests between the Government and the public which must be preserved.

What is needed since the Branzburg decision is a statute which will allow the legitimate interests of the Government in obtaining certain types of information of national importance to be recognized, while at the same time affording broad protection for newsmen in pursuing sources of news.

The problem of compelling newsmen to testify at proceedings such as grand jurys, which are conducted in secrecy, has particular urgency. As Judge Merrill of the ninth circuit noted in his thoughtful decision in United States against Caldwell:

> The relationship between journalists and news sources depends upon a trust and confidence that is constantly subject to reexamination and that depends in turn on actual knowledge of how news and information imparted have been handled and on continuing reassurance that the handling has been discreet. This reassurance disappears when the reporter is called to testify behind closed doors. The secrecy that surrounds Grand Jury testimony necessarily introduces uncertainty in the minds of those who fear a betrayal of their confidence.

Yet, in the wake of Branzburg against Hayes, sources will have absolutely no confidence that the information they impart to newsmen will not be revealed behind closed doors, under threat of imprisonment for contempt.

The Free Flow of Information Act of 1972 owes much of its genesis to a unique and unprecedented collaborative effort on the part of the Nation's news media. On July 31, 1972, the Joint Media Committee—JMC—announced language on which they had agreed and which they wished incorporated into legislation to counteract the harmful effects of the June 29 Supreme Court decision. The Joint Media Committee, composed of the American Society of Newspaper Editors, the Associated Press Managing Editors Association, the National Press Photographers Association, the Radio-Television News Directors Association, and Sigma Delta Chi—the professional journalistic society—stated that legislation was vitally needed to insure a continued and uninterrupted flow of news to the American people.

The legislation which I am introducing today—while modifying some of the language adopted by the joint media committee—is substantially in agreement with the JMC proposal.

The bill would provide that no person employed by the various branches of the news media shall be required by any Federal judicial or investigative body to disclose either information or the source of information coming into his possession during the course of gathering news for publication or broadcast.

This protection would not apply to the source of allegedly defamatory information in any case where the defendant, in a civil action for defamation, asserts a defense based on the source of such information.

If a person seeks information protected by the act, he must apply to the U.S. district court in the proper district for an order divesting the protection. The protection shall be divested by the court only if, after hearing the parties, the court determines by clear and convincing evidence that the person seeking the information has first, shown there is probable cause to believe that the person from whom the information is sought has information which is clearly relevant to a specific probable violation of law, second, demonstrated that the information sought cannot be obtained by alternative means less destructive of first amendment rights and third, demonstrated a compelling and overriding national interest in the information.

This statute would allocate the heavy burden of proof to the Government or any other person seeking the privileged information, along the lines suggested by Mr. Justice Stewart in his dissent in Branzburg against Hayes. This burden of proof will inhere before a newsman is forced to go behind closed doors and testify to matters which he deems worthy of protection.

The bill will also extend not only to confidential information, but to all information given to newsmen which does not meet the evidentiary test of the statute. This is to protect those sources which may not initially be given in confidence, but which may at some later date—when the source is no longer available—become sensitive and which may substantially affect the ability of newsmen to gain information from other similar sources should a newsman be forced to testify.

The protection which this bill would offer is not a blanket privilege. It does not give the news media an unhindered, absolute right to protect sources who are involved in criminal acts. It does, however, insure that all Americans will continue to receive the vital information needed to preserve our Nation's most precious liberties. It places a heavy burden on the Government to establish its case, in line with long-standing precedents of the Supreme Court on cases involving first amendment rights.

Mr. Justice Stewart, in his dissent in Branzburg against Hayes, recognized the importance of preserving the flow of news to all citizens:

> Enlightened choice by an informed citizenry is the basic ideal upon which an open society is premised, and a free press is thus indispensable to a free society. Not only does the press enhance personal self-fulfillment by providing the people with the widest possible range of fact and opinion, but it also is an incontestable pre-condition of self-government.
>
> As private and public aggregations of power burgeon in size and the pressures for conformity necessarily mount, there is obviously a continuing need for an independent press to disseminate a robust variety of information and opinion through reportage, investigation and criticism, if we are to preserve our constitutional tradition of maximizing freedom of choice by encouraging diversity of expression.

These values have been threatened. The Free Flow of Information Act of 1972 is an effective way to insure that these values are not destroyed, but are restored to their rightful and necessary position in preserving Americans' right to know.

Mr. President, I ask unanimous consent to have the bill I am introducing printed at the conclusion of my remarks.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 3932

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Free Flow of Information Act."

SECTION 1. Except as provided in sections 2 and 3, no person employed by or otherwise associated with any newspaper, periodical, press association, newspaper syndicate, wire service, or radio or television station, or who is independently engaged in gathering information intended for publication or broadcast, shall be required by any court, grand jury, agency, department, or commission of the United States or by either House of or any committee of Congress to disclose any information or the source of any information coming into his possession in the course of gathering or obtaining news for publication or to be published in a newspaper, magazine, or for broadcast by a radio or television transmission station or network.

SEC. 2. The protection set forth in section 1 shall not apply to the source of any allegedly defamatory information in any case where the defendant, in a civil action for defamation, asserts a defense based on the source of such information.

SEC. 3. In any case where a person seeks information or the source of any information protected by section 1, such person may apply to the United States District Court for an order divesting such protection. Such application shall be made to the District Court in the district wherein the hearings, action, or other proceeding in which the information is sought is pending. The application shall be granted only if the court, after hearing the parties, determines that the person seeking the information, by clear and convincing evidence, has—

(a) shown that there is probable cause to believe that the person from whom the information is sought has information which is clearly relevant to a specific probable violation of law;

(b) demonstrated that the information sought cannot be obtained by alternative means less destructive of First Amendment rights; and

(c) demonstrated a compelling and overriding national interest in the information.

By Mr. McINTYRE:

S. 3933. A bill entitled the "Hide Regulation Certificate Act of 1972." Referred to the Committee on Finance.

THE HIDE REGULATION CERTIFICATE ACT OF 1972

Mr. McINTYRE. Mr. President, the plight of American tanners and shoe manufacturers in this country has reached the crisis stage. As recent news reports have indicated since the establishment of wage controls last August 15, the price of domestic cattle hides has inceased by approximately 140 percent.

Cattle hides, the prices of which are regulated by the Price Commission, are traded on world markets. Last year, a substantial drop in the supply of Argentine hides for the world market resulted in a growing demand by foreign buyers for U.S. cattle hides. The increased demand has pushed prices up to the point where domestic users of hides and hide products—tanners, shoe manufacturers, luggage and handbag manufacturers, and saddlers—can no longer continue to afford the costs of their basic raw materials.

After months of considering this problem, the Secretary of Commerce, Mr. Peterson, announced on July 15, 1972, that the supply and price situation of hides demanded action. Secretary Peterson announced that because of the havoc that price and supply shifts can have on the American shoe and tanning industries that he was limiting exports for the remainder of 1972 at the level of 1971.

Mr. President, I ask unanimous consent to have printed Secretary Peterson's statement in the RECORD at this point.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SECRETARY OF COMMERCE PETER G. PETERSON, ANNOUNCING EXPORTS CONTROLS ON CATTLE HIDES, JULY 15, 1972

I have called this press conference this afternoon to announce the action I have decided to take on the serious problem of cattle hides.

During the period 1953 through 1970, and even well into 1971, composite cattle-hide prices had ranged around 14 cents per pound. Late last year, however, cattle hide prices began to rise, reaching a range of 27 to 29 cents during May and June this year, and then 29.75 cents this last week, more than double the historic average, and historic high. This price rise has been a substantial factor in recent increases in the Industrial Component of the Wholesale Price Index.

We have received complaints from industry sources not only about the prices but also about the deepening shortage of cattle hides. Domestic users claimed that these market imbalances resulted from the fact that foreign hide buyers were increasing their demand for U.S. hide production, thereby driving prices up and draining hide supplies away.

All these complaints have been of deep concern to the Department. Higher prices and shorter supplies result in higher leather prices and higher prices for leather products, principally leather shoes. Not to make light of a serious matter, these higher prices come out of the American consumer's hide. Also, these price and supply shifts can wreak havoc with the American shoe and tanning industries as hide and leather purchasers become increasingly less able to buy, and paying increasingly high and uncertain prices.

In April of this year, we summarized the evidence we had and reviewed it in an intensive public meeting with representatives of all segments of the industry—cattle producers, packers, farmers, shoe and leather manufacturers, labor unions, and exporters.

As a result of this meeting and followup discussions with these various segments of the industry, no consensus emerged as to the causes of the price rise and the outlook for the future. Basic data, for example, on domestic inventories were not available and, indeed, even the general state of those inventories was in dispute—whether up or down—normal or abnormal.

Thus, I decided that I could not rationally and responsibly exercise my statutory responsibility until we got the facts on some fundamental questions: What is the level of domestic inventories? What is the likely domestic demand? What is the outlook on foreign supplies of hides—given current embargoes from principal suppliers like Argentina? What is the likely export demand for U.S. hides?

With these the relevant questions, a rational and responsible decision depended upon getting answers. Thus, immediately after analysis of existing data and meetings with the various segments of the industry, we launched the most comprehensive kind of intensive survey of supply and demand outlook for hides—both domestic and international. Under the Secretary's statutory authority, we got the facts from packers, farmers, exporters, and shoe manufacturers on their inventories and their expectations of short-term demand. We got the latest estimates we could get of cattle slaughter and hide production. I sent General Counsel Letson to Argentina and Brazil—two major hide exporting countries who had embargoed hide exports—to determine the likely outlook.

We shall review with you today what these surveys and field investigations reveal. In essence, the major factors underlying the sharp price increases are an increasing demand for hides for current use in the United States, seriously depleted domestic hide and leather inventories, and an abnormal foreign demand here. In part because over 20 percent of total world hide exports have been cut off by the embargoes of former export nations. Although domestic supplies of hides are projected to increase, this increase to date has been small and the supplies are simply not rising fast enough to cover burgeoning demands by domestic and foreign buyers for U.S. hides.

Having the facts, I essentially had three options.

One, to do nothing. I have decided against this option for two reasons. To take no action would be tantamount to permitting a situation to continue of very high domestic prices that increase inflationary pressures at a time when this Administration is deeply committed to reducing them. Our main concern must be shoe prices for the American consumer and there was no relief in sight.

It would be tantamount to allowing American jobs and industries to suffer when statutory responsibility and authority exist. It would be tantamount to permitting such a situation to continue when our studies showed that, over the short term at least, no grounds for realistic optimism that the situation would improve.

A word about my statutory responsibility under the Export Administration Act to impose controls on exports of cattlehides. The statutory language calls for exercise of that responsibility only where necessary "to protect the domestic economy from the excessive drain of scarce materials and to reduce the serious inflationary impact of abnormal foreign demand." Price inflation alone does not justify controls. The statutory standards require that I take into account domestic supply shortages and abnormal foreign demand as well as serious price inflation. Having received all of the facts which I have already recited, I determined that the statute had been satisfied and that I must take action.

Having made that determination, I had two further options. The first was to impose conventional export controls as was done in 1966. I decided against this course. The control program instituted in 1966 was both chaotic and unfair, and seriously damaged important export markets. Export quotas were set for below historic averages and the previous year exports, and exporters were given licenses to ship hides to foreign buyers. In effect a domestic glut and a two price system quickly developed, and the benefits of the higher foreign prices accrued to the exporters or foreign buyers in the form of higher profits . . . all at the expense of American cattle producers and consumers.

With this 1966 experience in mind, I have selected another option. First, rather than cutting back exports in a sudden and traumatic way, thereby disrupting seriously both important and continuing export markets and operations of foreign producers, I am setting export levels at last year's levels which are very high by any standard. Second, rather than traditional export controls which permit windfall profits and benefits to go either to exporters or to foreign producers, I have decided on an "export ticket" system.

Under the regulations, export tickets will be issued equal to last year's high export levels. The effect of this approach will be to reserve for hard pressed domestic buyers and industries the additional cattlehides which we anticipate will be available in the coming weeks and months. These tickets will enable people to obtain licenses for exporting hides. The tickets will be distributed to cattle hide producers, according to their percentages of total hide production. These export tickets will be sold and will have value as long as the current conditions of excess export demand in relation to domestic supply exist.

In this way, market forces responsive to export demand will be allowed to operate.

We will ask the Internal Revenue Service to closely audit the hide producers to assure that they in turn pass along the revenues from these tickets either to cattlemen or to consumers in the form of lower meat prices.

I realize that today's action may not please everyone. As one who favors free and open markets, I, myself, regret the necessity of the controls and stress their temporary nature. It was a difficult and disagreeable decision for me, but, from the point of view of both the producer and the consumer, the alternatives, given current market conditions, were worse.

I believe this action fulfills my responsibility under the Congressional mandate. I believe this action benefits the American consumer by reducing inflationary pressures on shoes, and at the same time giving American cattlemen the opportunity to get a fair and increasing share of the revenues from export hide sales. I believe this action benefits the American workers and the American industries by preserving the stability of these jobs and businesses. I believe this action provides for our overseas trading partners a generous and stable supply of American hides and preserves these important markets for U.S. hides. I believe this action prevents windfall profits for anybody.

In the months to come, we will monitor closely changes in inventories of hides, prices of hides and prices of hide export tickets. The controls will be lifted as soon as market conditions warrant.

FACT SHEET

1. *Hide prices at all time highs.* Hide prices are at record highs with the composite price running in the 27¢–29¢ range for the past two months. Yesterday prices per pound reached an all time high of 29.75 cents—more than double the historic average of 14¢ per pound.

2. *Increases projected in domestic demand for cattlehides.* Commerce Department survey projects demand for additional 638,000 hides for current use for the period March through December 1972 over comparable period for 1971.

3. *Domestic shoe production up.* Domestic shoe production for the last five months of 1972 projected to increase 7.3 per cent over comparable period for 1971.

4. *Hide exports increasing in recent years.* Since 1967, hide exports have increased from 11,900,000 to 16,000,000 in 1971. In the same period, exports as a per cent of domestic hide production climbed from 33.2 per cent to 42.6 per cent.

5. *Increase in exports predicted in absence of controls.* Commerce survey projects increase in export of cattle hides of 576,000 hides for the period March through December 1972 over comparable period in 1971.

6. *Foreign hide exports embargoed.* Argentina's and Brazil's exports accounted for 26.2 per cent of total world exports in 1969, 20.7 per cent in 1970, and an estimated 10.2 per

cent in 1971—but these sources have been terminated.

7. *Hide and leather inventories down.* Between March 1971 and March 1972, domestic cattlehide and leather inventories have decreased 1,002,000 hide equivalents.

8. *Hide production expected to increase for remainder of 1972.* Cattle slaughter projected by Department of Agriculture to yield 695,000 additional hides during March through December 1972 over comparable period in 1971. In 1973, cattle slaughter in the U.S. is expected to go up about 1,300,000 over 1972.

9. *Hide demand expected to exceed supply absent controls.* In spite of projected production increases, projected demand for hides for the period March-December 1972 could be expected to exceed supply by 1,521,000.

10. *Consequences of failure to take action.* Given the facts—that cattlehide prices have climbed to record highs, that domestic demand for cattlehides is projected to increase, that cattlehide and leather inventories are at very low levels, that hide exports have increased over the past few years and are projected to increase to record levels in the remainder of this year, and that domestic hide supplies are not increasing fast enough to meet these demands—the statutory criteria for short supply export controls have been met. Failure to act would not only be a breach of statutory responsibility, it would also result in continued and increased inflationary pressures.

11. *Conventional export controls rejected.* Under the 1966 export control program for cattlehides, there were several unfortunate results. Export quotas were announced that were far below previous years' levels: 1,800,000 hides below the comparable seven-month period for 1965. A two price system developed in world markets and the benefits of the higher foreign prices accrued to foreigners and exporters. In addition, the reduced export quotas greatly distorted foreign markets.

12. *Advantages of "export ticket" system.* Actions announced today have several advantages. Quotas for the remainder of 1972 are set at—not below—1971 levels for comparable period; and 1971 levels were at record highs. Thus, there will be minimal disruption of foreign markets. In addition, export ticket system will assure that benefits of higher foreign hide prices will accrue to benefit of American consumers and cattle producers—not to foreign purchasers and exporters.

Mr. McINTYRE. Mr. President, no sooner, however, had the Secretary of Commerce acted than a number of Senators from cattle-producing States sought to overturn his decision. An amendment was offered and accepted on the Senate floor to the Export Administration Act that would, in effect, nullify Secretary Peterson's action in limiting exports. This amendment repeals any rule, regulation, proclamation, or order issued after July 1, 1972.

Last Tuesday the Senate approved the Equal Export Opportunity Act conference report which contained this provision. In view of the tremendous adverse impact this action will have on the domestic shoe manufacturing and tanning industries, I am introducing today the Hide Regulation Certificate Act of 1972.

The bill has as its sole purpose the stabilization of prices in the single most inflationary component of the wholesale price index, cattle hides. A companion bill has been introduced in the House by Representative WILBUR MILLS.

The proposed bill seeks to maintain a reasonable degree of stability by regulating effective foreign demand for hides through regulation of export sales. Export sale levels would be set according to a formula relating the level of exports to domestic price levels. Exports above the permitted level would be subject to regulatory taxes.

This bill will amend the Internal Revenue Code to require that in any quarter of the calendar year that hide exports exceed a percentage of domestically produced cattle hides exporters will be required to purchase a certificate costing $1 per pound before hides can be exported. This bill would operate in the following manner:

First. In any quarter of the calendar year that hide exports exceed 33⅓ percent of those produced in the United States, the exporters will need an export certificate.

Second. However, if the price of hides in the quarter is between 25 to 35 percent higher than the average price on August 13, 1971, the number that can be exported in the next quarter without certificates shall be raised to 40 percent of all hides produced in the United States in that quarter.

Third. If the price is reduced in any quarter to a level which is no more than 25 percent greater than the average price on August 13, 1971, the number of hides that can be exported without certificates in the next quarter shall be raised to 55 percent of all hides produced in the United States during that quarter.

Fourth. The Secretary of Commerce shall establish before each quarter an estimate of hide production and average price in the United States for the next quarter. He would also establish the number of hides that can be exported without certificates for each quarter.

In my opinion, this bill represents a reasonable approach to the problem of balancing the legitimate needs of hide producers and consumers. It is consistent with the economic stabilization program and is necessary to hold down the retail prices of leather products and to maintain employment in the leather industries. It should be clear that this bill does at no time prohibit cattle hide exports. It simply establishes a formula whereby when either price increases or supply reaches a certain level then the exporter will be required to purchase an export certificate.

Mr. President, I ask unanimous consent that the bill be printed in the RECORD at this point.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 3933

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Hide Export Regulation Certificate Act of 1972".

SEC. 2. (a) Chapter 39 of the Internal Revenue Code of 1954 (relating to regulatory taxes) is amended by adding at the end thereof the following new subchapter:

"SUBCHAPTER F—HIDES

"Sec. 4887. Definitions.
"Sec. 4888. Export regulation.
"Sec. 4889. Estimates of production and prices to be published by the Secretary of Commerce.
"Sec. 4890. Export regulation certificates.

"SEC. 4887. DEFINITIONS

"(a) For purposes of this subchapter, the word 'hides' means raw or untanned hides or skins of the bovine species.

"(b) For purposes of this subchapter, the term 'average price of hides' refers to an average to be computed by the Secretary of Commerce of prices received for domestic sales of the principal grades or selections of packer hides.

"SEC. 4888. EXPORT REGULATION

"(a) Hides produced in the United States which are exported during any calendar quarter which exceed in number 33⅓ percent of all hides produced in the United States during that calendar quarter shall be accompanied by a certificate covering each export shipment as provided in section 4890.

"(b) Notwithstanding the provisions of subsection (a), if the average price of hides in a calendar quarter is reduced to a level which is more than 25 percent greater, but no more than 35 percent greater, than the average price of hides on August 13, 1971, the number of hides which may be exported without certificates in the following quarter shall be raised to 40 percent of all hides produced in the United States in that quarter; and if the average price of hides in a calendar quarter is reduced to a level which is no more than 25 percent greater than the average price of hides on August 13, 1971, the number of hides which may be exported without certificates in the following quarter shall be raised to 55 percent of all hides produced in the United States in that quarter.

"SEC. 4889. ESTIMATES OF PRODUCTION AND PRICES TO BE PUBLISHED BY THE SECRETARY OF COMMERCE.

"The Secretary of Commerce shall cause to be published in the Federal Register within 10 days before the start of each calendar quarter—

"(1) An estimate of United States production of hides during the forthcoming quarter;

"(2) An estimate of the average price of hides during the current quarter; and

"(3) A computation of the appropriate number of hides which may be exported without certificates in the following quarter as provided in section 4888.

"SEC. 4890. EXPORT REGULATION CERTIFICATES.

"(a) CHARGE FOR CERTIFICATES.—The certificates required by section 4888 shall be issued by the Secretary of the Treasury upon payment of a fee of $1 per pound of hides covered.

"(b) PURCHASE.—The certificates described in subsection (a) shall be purchased by the exporter."

(b) The table of subchapters for such chapter 39 is amended by adding at the end thereof the following:

"SUBCHAPTER F. Hides.".

SEC. 3. This Act shall be effective on the date of its enactment and shall apply to the regulation of hide exports beginning in the first full calendar quarter after such date of enactment.

By Mr. MILLER (for himself and Mr. HUGHES):

S. 3934. A bill to authorize the Secretary of Transportation to release restrictions on the use of certain property conveyed to the city of Algona, Iowa, for airport purposes. Referred to the Committee on Commerce.

Mr. MILLER. Mr. President, I introduce, on behalf of myself and my colleague from Iowa (Mr. HUGHES), a bill to authorize the Secretary of Transportation to release restrictions on the use of certain property conveyed by the United States to the city of Algona, Iowa, for airport purposes.

On March 20, 1947, the United States conveyed certain property to the city of Algona to be used for the purposes of airport development. This transfer was pursuant to section 16 of the Federal Airport Act. This property has been used for airport purposes, but local Algona officials feel that the operating efficiency of the airport can be increased by use of a small portion of this property for industrial development. All conveyances made pursuant to the Federal Airport Act contain a reversionary clause which provides that in the event the property conveyed is not developed, or ceases to be used, for airport purposes, it automatically reverts to the United States.

The purpose of the bill I am introducing today is to authorize the Secretary of Transportation to grant a release from this reversionary clause so that the city may use a portion of the property for industrial development. The bill contains a safeguard against abuse in that the Secretary's authority is made subject to the provisions of section 4 of the act of October 1, 1949 (50 App. U.S.C. 1622c).

This section, in effect, requires that before property is released for nonairport purposes it must be determined that the property is no longer necessary to accomplish the purpose for which it was originally transferred and is not necessary to protect or advance U.S. civil aviation. It further provides that the Secretary may impose such conditions on the conveyance as he deems necessary so as to insure that any proceeds arising from nonairport use of the property will be used for the development and maintenance of the airport.

Similar legislation was approved by the Congress in connection with airport property in Clarinda, Iowa, in 1966—Public Law 89-649, approved October 13, 1966.

By Mr. JAVITS:

S. 3935. A bill to amend the Public Health Service Act to provide for restrictions on funds for experimental use. Referred to the Committee on Labor and Public Welfare.

PROTECTION OF HUMAN SUBJECTS

Mr. JAVITS. Mr. President, the recent tragic newspaper accounts about human being in syphilis research projects and other reported experiments involving human subjects—cited in a Library of Congress, Congressional Research Service, August 4, 1972, report—demonstrates the need for the bill I introduce today. While it is true that much of the research involving human subjects at risk—exclusive of human subject research and experimentation undertaken pursuant to the informed patient consent amendment to the Food, Drug, and Cosmetics Act which I authored—is done under the auspices of HEW research guidelines assuring ethical guidance, I believe Congress has a responsibility to assure meaningful legal controls of federally supported research activities involving human subjects.

The bill I introduce today to safeguard the rights and welfare of human subjects involved in federally funded research activities is patterned upon NIH research guidelines which seek to accomplish that desirable objective.

I believe it would be most constructive if the Department of Health, Education, and Welfare were to name a panel of leaders selected from the fields of medicine, law, theology, biological science, physical science, social science philosophy, humanities, health administration, government, and public affairs, to provide an in-depth study and evaluation of the ethical, social, and legal implications of the tragic Tuskegee syphilis experiment—including why only black human subjects were selected to participate in the project—and also, to determine the adequacy of the present NIH guidelines. If we are to safeguard the rights and welfare of human subjects, I believe perhaps more should be done. If such a distinguished panel were named to conduct a prompt and thorough in-depth study, I also believe it would be appropriate to delay action on this bill until we have the benefit of such a study.

Although medical experimentation on human beings is as old as recorded history—the ancient Persians experimented on condemned criminals—the anticipated and necessary increase in human subject research in an effort to conquer cancer and cure and prevent heart disease—with the desire to apply new knowledge quickly and broadly to the Nation's health problems—make it prudent for the Congress to act now to provide additional statutory protection for the rights of individuals who participate in scientific research.

HUMAN EXPERIMENTATION—A DOUBLE EDGED SWORD

Excessive rigidity in the regulation of human subject experimentation because of some improprieties in ethical self regulation would, I believe, be to the disadvantage of the individual and society. While civilized society cannot tolerate callous disregard of human rights for any purpose—Nazi Germany's atrocities in the name of clinical science being the most horrendous example—mankind would be badly served if we write rigid laws to govern research practices and scientific investigation. Research, development and the reduction to practice of new ideas are not carried out in a practical, ethical, or legal vacuum and the public interest would not be served by an inflexible approach. The bill therefore outlines flexible operating procedures which can be adapted to a variety of federally funded grant and contract mechanisms.

The rights and welfare of human subjects must be adequately protected in all federally funded research activities and the bill provides that:

FUNDING RESTRICTION

First. Without an appropriate organizational committee's review and approval of the protection of the human subject's rights and welfare—which shall include adequate informed consent—Federal funds in any activity involving a human subject at risk in research, development or demonstration programs is prohibited.

DEFINITION OF ORGANIZATIONAL COMMITTEE

Second. Any entity engaged in such federally funded activities is required to establish an organizational committee to be composed of sufficient members with varying backgrounds of competence to assure complete and adequate initial approval and even to protect the human subject's rights and welfare, and that no committee member shall be involved in either the initial approval or continuing review of an activity in which he has a professional responsibility, except to provide information requested by the committee.

INFORMED CONSENT

Third. Informed consent is defined to mean the consent of a person so situated as to be able to exercise free power of choice without the intervention of any element of force, fraud, deceit, duress, or other form of constraint or coercion, and certain elements for informed consent are required in all but exceptional cases.

They are fair explanation of the procedures to be followed including an identification of any which are experimental; a description of any attendant discomforts and risks reasonably to be expected; a description of any benefits reasonably to be expected; disclosure of any appropriate alternative procedures that might be advantageous for the subject; an offer to answer any inquiries concerning the procedures; and an instruction that the subject is free to withdraw his consent and to discontinue his participation in the project or activity at any time.

EXCEPTIONAL CASES

Fourth. The exceptional cases where informed consent is not required are limited to instances where it is not feasible—for example, the person is in a coma and his representative is unavailable—or professional judgment determines in the best interest of a particular subject under care that it would be contrary to that subject's welfare to obtain his consent as the communication of information to obtain consent would seriously affect the subject's disease status and the physician has exercised a professional judgment that under the particular circumstances of this subject's case, the subject's best interests would suffer if consent were sought.

In addition, the agreement entered into by the subject shall include no exculpatory language through which the subject is made to waive, or to appear to waive, any of his legal rights, or to release the institution or its agents from liability for negligence. Use of exculpatory clauses was considered contrary to public policy in *Tunkl* v. *Regents of University of California* (60 Cal. 2d, 32 Cal. Rptr. 33, 383 P. 2d 441 (1963), Annot., 6 A.L.R. 3d 693 (1966).

AT RISK

Fifth. At risk is defined to mean possible physical, psychological, sociological or other harm to which an individual may be exposed as a consequence of any activity which goes beyond the application of those established and accepted methods necessary to meet the individual's needs.

If doubt exists whether the procedures to be employed are established and accepted, I believe the activity should be subject to review and approval by the committee.

OTHER PROVISIONS

Sixth. Federal program staff are authored oversight of the procedures required by the bill and discretionary authority is granted to the Secretary of the Department of Health, Education, and Welfare—in cooperation with other Federal departments and agencies—to identify those Federal programs which may involve human subjects at risk; determine the form the required assurances shall take; set guidelines for the establishment or operation of organizational committees; and establish such additional regulations as the implementation of this bill may require.

Mr. President, several years ago the Library of Congress Congressional Research Service prepared a most comprehensive and definitive study on the subject entitled "Medical Experimentation on Human Beings." I ask unanimous consent that that study and their recent communications, which have been most helpful in reviewing the current state of the human subject experimentation issue, be included in the Record at the conclusion of my remarks, together with "The Institutional Guide to DHEW Policy on Protection of Human Subjects," and the full text of the bill.

There being no objection, the bill and material were ordered to be printed in the Record, as follows:

S. 3935

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That part A of title III of the Public Health Service Act is amended by inserting at the end thereof the following new section:

"PROTECTION OF HUMAN SUBJECTS

"Sec. 310C. (a) Nothwithstanding any other provision of law, unless enacted after the enactment of this Act expressly in limitation of the provisions of this section, funds appropriated for any fiscal year to carry out any Federal program shall not be made available to any organization unless such organization has given acceptable assurance that none of these funds will be used in support of an activity involving human subjects at risk in programs of research, development, or demonstration in the absence of initial and continuing review and approval by an appropriate organizational committee. This review shall determine that the rights and welfare of the subjects involved are adequately protected, that the risks to an individual are outweighed by the potential benefits to him or by the importance of the knowledge to be gained, and that informed consent is to be obtained by methods that are adequate.

"(b) The organizational committee must be composed of sufficient members with such varying backgrounds of competence as to assure complete and adequate review. No member of such committee shall be involved in either the initial or continuing review of an activity in which he has a conflicting interest, except to provide information requested by the committee.

"(c) For the purposes of this section only, the term 'informed consent' shall mean the consent of a person, or his legal representative, so situated as to be able to exercise free power of choice without the intervention of any element of force, fraud, deceit, duress, or other form of constraint or coercion. The information to be given to the subject shall include the following basic elements in all but exceptional cases:

"(1) a fair explanation of the procedures to be followed, including an identification of any which are experimental;

"(2) a description of any attendant discomforts and risks reasonably to be expected;

"(3) a description of any benefits reasonably to be expected;

"(4) a disclosure of any appropriate alternative procedures that might be advantageous for the subject;

"(5) an offer to answer any inquiries concerning the procedures; and

"(6) an instruction that the subject is free to withdraw his consent and to discontinue participation in the project or activity at any time.

In addition, the agreement, written or oral, entered into by the human subject or from the human subject's legal representative, shall include no exculpatory language through which the subject is made to waive, or to appear to waive, any of his legal rights, or to release the institution or its agents from liability for negligence. Any organization which initiates, directs, or engages in programs of research, development, or demonstration which require informed consent shall keep a permanent record of such consent and the information provided the subject and develop appropriate documentation and reporting procedures as an essential administrative function.

"(d) For the purposes of this section only the term 'organization' means any Federal, State, municipal or other Government agency, or any corporation, institution, agency, or other legally accountable person.

"(e) The term 'human subject at risk' means an individual who may be exposed to the possibility of harm—physical, psychological, sociological, or other—as a consequence of any activity which goes beyond the application of those established and accepted methods necessary to meet the individual's needs.

"(f) Nothing in this section shall prevent Federal program staff from establishing and maintaining internal review procedures to identify risks to subjects in Federal programs, and from making independent determinations that the rights and welfare of the subjects involved are adequately protected, that the risks to an individual are balanced by the potential benefits to him or by the importance of the knowledge to be gained, and that informed consent is to be obtained by methods that are adequate and appropriate.

"(g) 'Exceptional cases', as used in paragraph (c) of this section, which exceptions are to be strictly applied, are cases where it is not feasible to obtain the subject's consent or the consent of his representative, or where, as a matter of professional judgment exercised in the best interest of a particular subject under care, it would be contrary to that subject's welfare to obtain his consent as the communication of information to obtain consent would seriously affect the subject's disease status and the physician has exercised a professional judgment that under the particular circumstances of this subject's case, the subject's best interests would suffer if consent were sought.

"(h) The Secretary of Health, Education and Welfare shall from time to time, and in cooperation with other Departments and Agencies of the Federal Government, identify those Federal programs which may involve human subjects at risk, determine the form the assurances required by this section shall take, set guidelines for the establishment of operation of organizational committees and establish such additional regulation as the implementation of this section may require.

[Public Health Service, National Institutes of Health]

The Institutional Guide to DHEW Policy on Protection of Human Subjects

FOREWORD

The Department's basic policy, quoted in the first few paragraphs of this Guide, is simple in concept. However, simplicity in conception is not always easily translated into simplicity in application. Many of the basic terms of the policy, such as subject, risk, and informed consent, are differently understood in the several professions that participate in the varied grant and contract programs supported by the Department. This Guide provides working definitions of the policy's more critical terms, and outlines flexible operating procedures which can be adapted to a variety of grant and contract mechanisms.

A flexible policy is essential. Research, development, and the reduction to practice of new ideas are not carried out in a practical, ethical, or legal vacuum. The public interest obviously would not be served by an inflexible approach to what can or should be done. Ultimately, the decisions required by this policy must depend upon the common sense and sound professional judgment of reasonable men. The Department's policy and the Guide are intended to provide room for the exercise of this judgment.

In its present form, the Guide reflects several years' experience with an earlier Public Health Service policy. It incorporates many comments and suggestions by representatives of grantee and contractor institutions, and by consultants and staff of the operating agencies of the Department. Future experience in the application of the policy in the fields of health, education, and welfare will simultaneously raise questions and suggest changes. Correspondence should be addressed to the Chief, Institutional Relations Section, Division of Research Grants, National Institutes of Health, Bethesda, Md. 20014.—D. T. Chalkley, Ph. D., Chief, Institutional Relations Section, Division of Research Grants, NIH, DHEW.

POLICY

Safeguarding the rights and welfare of human subjects involved in activities supported by grants or contracts from the Department of Health, Education, and Welfare is the responsibility of the institution which receives or is accountable to the DHEW for the funds awarded for the support of the activity.

In order to provide for the adequate discharge of this institutional responsibility, it is the policy of the Department that no grant or contract for an activity involving human subjects shall be made unless the application for such support has been reviewed and approved by an appropriate institutional committee.

This review shall determine that the rights and welfare of the subjects involved are adequately protected, that the risks to an individual are outweighed by the potential benefits to him or by the importance of the knowledge to be gained, and that informed consent is to be obtained by methods that are adequate and appropriate.

In addition the committee must establish a basis for continuing review of the activity in keeping with these determinations.

The institution must submit to the DHEW, for its review, approval, and official acceptance, an assurance of its compliance with this policy. The institution must also provide with each proposal involving human subjects a certification that it has been or will be reviewed in accordance with the institution's assurance.

No grant or contract involving human subjects at risk will be made to an individual unless he is affiliated with or sponsored by an institution which can and does assume responsibility for the protection of the subjects involved.

Since the welfare of subjects is a matter of concern to the Department of Health, Education, and Welfare as well as to the institution, no grant or contract involving human subjects shall be made unless the proposal for such support has been reviewed and approved by an appropriate professional committee within the responsible component of the Department. As a result of this review, the committee may recommend to the operating agency, and the operating agency may require, the imposition of specific grant or contract terms providing for the protection of human subjects, including requirements for informed consent.

APPLICABILITY

A. General.—This policy applies to all grants and contracts which support activities in which subjects may be at risk.

B. Subject.—This term describes any individual who may be at risk as a consequence of participation as a subject in research, development, demonstration, or other activities supported by DHEW funds.

This may include patients; outpatients; donors of organs, tissues, and services; informants; and normal volunteers, including students who are placed at risk during training in medical, psychological, sociological, educational, and other types of activities supported by DHEW.

Of particular concern are those subjects in groups with limited civil freedom. These include prisoners, residents or clients of institutions for the mentally ill and mentally retarded, and persons subject to military discipline.

The unborn and the dead should be considered subjects to the extent that they have rights which can be exercised by their next of kin or legally authorized representatives.

C. At Risk.—An individual is considered to be "at risk" if he may be exposed to the possibility of harm—physical, psychological, sociological, or other—as a consequence of any activity which goes beyond the application of those established and accepted methods necessary to meet his needs. The determination of when an individual is at risk is a matter of the application of common sense and sound professional judgment to the circumstances of the activity in question. Responsibility for this determination resides at all levels of institutional and departmental review. Definitive determination will be made by the operating agency.

D. Types of Risks and Applicability of the Policy.—1. Certain risk are inherent in life itself, at the time and in the places where life runs its course. This policy is not concerned with the ordinary risks of public or private living, or those risks associated with admission to a school or hospital. It is not concerned with the risks inherent in professional practice as long as these do not exceed the bounds of established and accepted procedures, including innovative practices applied in the interest of the individual patient, student or client.

Risk and the applicability of this policy are most obvious in medical and behavioral science research projects involving procedures that may induce a potentially harmful altered physical state or condition. Surgical and biopsy procedures; the removal of organs or tissues for study, reference, transplantation, or banking; the administration of drugs or radiation; the use of indwelling catheters or electrodes; the requirement of strenuous physical exertion; subjection to deceit, public embarrassment, and humiliation are all examples of procedures which require thorough scrutiny by both the Department of Health, Education, and Welfare and institutional committees. In general those projects which involve risk of physical or psychological injury require prior written consent.

2. There is a wide range of medical, social, and behavioral projects and activities in which no immediate physical risk to the subject is involved; e.g., those utilizing personality inventories, interviews, questionnaires, or the use of observation, photographs, taped records, or stored data. However, some of these procedures may involve varying degrees of discomfort, harassment, invasion of privacy, or may constitute a threat to the subject's dignity through the imposition of demeaning or dehumanizing conditions.

3. There are also medical and biomedical projects concerned solely with organs, tissues, body fluids, and other materials obtained in the course of the routine performance of medical services such as diagnosis, treatment and care, or at autopsy. The use of these materials obviously involves no element of physical risk to the subject. However, their use for many research, training, and service purposes may present psychological, sociological, or legal risks to the subject or his authorized representatives. In these instances, application of the policy requires review to determine that the circumstances under which the materials were procured were appropriate and that adequate and appropriate consent was, or can be, obtained for the use of these materials for project purposes.

4. Similarly, some studies depend upon stored data or information which was often obtained for quite different purposes. Here, the reviews should also determine whether the use of these materials is within the scope of the original consent, or whether consent can be obtained.

E. Established and Accepted Methods.—Some methods become established through rigorous standardization procedures prescribed, as in the case of drugs or biologicals, by law or, as in the case of many educational tests, through the aegis of professional societies or nonprofit agencies. Acceptance is a matter of professional response, and determination as to when a method passes from the experimental stage and becomes "established and accepted" is a matter of judgment.

In determining what constitutes an established and accepted method, consideration should be given to both national and local standards of practice. A management procedure may become temporarily established in the routine of a local institution but still fail to win acceptance at the national level. A psychological inventory may be accepted nationally, but still contain questions which are disturbing or offensive to a local population. Surgical procedures which are established and accepted in one part of the country may be considered experimental in another, not due to inherent deficiencies, but because of the lack of proper facilities and trained personnel. Diagnostic procedures which are routine in the United States may pose serious hazards to an undernourished, heavily infected, overseas population.

If doubt exists as to whether the procedures to be employed are established and accepted, the activity should be subject to review and approval by the institutional committee.

F. Necessity to Meet Needs.—Even if considered established and accepted, the method may place the subject at risk if it is being employed for purposes other than to meet the needs of the subject. Determination by an attending professional that a particular treatment, test, regimen, or curriculum is appropriate for a particular subject to meet his needs limits the attendant risks to those inherent in the delivery of services, or in training.

On the other hand, arbitrary, random, or other assignment of subjects to differing treatment or study groups in the interests of a DHEW supported activity, rather than in the strict interests of the subject, introduces the possibility of exposing him to additional risk. Even comparisons of two or more established and accepted methods may potentially involve exposure of at least some of the subjects to additional risks. Any alteration of the choice, scope, or timing of an otherwise established and accepted method, primarily in the interests of a DHEW activity, also raises the issue of additional risk.

If doubt exists as to whether the procedures are intended solely to meet the needs of the subject, the activity should be subject to review and approval by the institutional committee.

INSTITUTIONAL REVIEW

A. Initial Review of Projects.—I. Review must be carried out by an appropriate institutional committee. The committee may be an existing one, such as a board of trustees, medical staff committee, utilization committee, or research committee, or it may be specially constituted for the purpose of this review. Institutions may utilize subcommittees to represent major administrative or subordinate components in those instances where establishment of a single committee is impracticable or inadvisable. The institution may utilize staff, consultants, or both.

The committee must be composed of sufficient members with varying backgrounds to assure complete and adequate review of projects and activities commonly conducted by the institution. The committee's membership, maturity, experience, and expertise should be such as to justify respect for its advice and counsel. No member of an institutional committee shall be involved in either the initial or continuing review of an activity in which he has a professional responsibility, except to provide information requested by the committee. In addition to possessing the professional competence to review specific activities, the committee should be able to determine acceptability of the proposal in terms of institutional commitments and regulations, applicable law, standards of professional conduct and practice, and community attitudes.[1] The committee may therefore need to include persons whose primary concerns lie in these areas rather than in the conduct of research, development, and service programs of the types supported by the DHEW.

If an institution is so small that it cannot appoint a suitable committee from its own staff, it should appoint members from outside the institution.

Committee members shall be identified by name, occupation or position, and by other pertinent indications of experience and competence in areas pertinent to the areas of review such as earned degrees, board certifications, licensures, memberships, etc.

Temporary replacement of a committee member by an alternate of comparable experience and competence is permitted in the event a member is momentarily unable to fulfill committee responsibility. The DHEW should be notified of any permanent replacement or additions.

2. The institution should adopt a statement of principles that will assist it in the discharge of its responsibilities for protecting the rights and welfare of subjects. This may be an appropriate existing code or declaration or one formulated by the institution itself.[2] It is to be understood that no such principles supersede DHEW policy or applicable law.

3. Review begins with the identification of those projects or activities which involve subjects who may be at risk. In institutions with large grant and contract programs, administrative staff may be delegated the responsibility of separating those projects which do not involve human subjects in any degree: i.e., animal and nonhuman ma-

---

Footnotes at end of article.

terials studies. However, determinations as to whether any project or activity involves human subjects at risk is a professional responsibility to be discharged through review by the committee, or by subcommittees.

If review determines that the procedures to be applied are to be limited to those considered by the committee to be established, accepted, and necessary to the needs of the subject, review need go no further; and the application should be certified as approved by the committee. Such projects involve human subjects, but these subjects are not considered to be at risk.

If review determines that the procedures to be applied will place the subject at risk, review should be expanded to include the issues of the protection of the subject's rights and welfare, of the relative weight of risks and benefits, and of the provision of adequate and appropriate consent procedures.

Where required by workload considerations or by geographic separation of operating units, subcommittees or mail review may be utilized to provide preliminary review of applications.

Final review of projects involving subjects at risk should be carried out by a quorum of the committee.[3] Such review should determine, through review of reports by subcommittees, or through its own examination of applications or of protocols, or through interviews with those individuals who will have professional responsibility for the proposal, project or activity, or through other acceptable producers that the requirements of the institutional assurance and of DHEW policy have been met, specifically that:

a. The rights and welfare of the subjects are adequately protected.

Institutional committees should carefully examine applications, protocols, or descriptions of work to arrive at an independent determination of possible risks. The committee must be alert to the possibility that investigators, program directors, or contractors may, quite unintentionally, introduce unnecessary or unacceptable hazards, or fail to provide adequate safeguards. This possibility is particularly true if the project crosses disciplinary lines, involves new and untried procedures, or involves established and accepted procedures which are new to the personnel applying them. Committees must also assure themselves that proper precautions will be taken to deal with emergencies that may develop even in the course of seemingly routine activities.

When appropriate, provision should be made for safeguarding information that could be traced to, or identified with, subjects. The committee may require the project or activity director to take steps to insure the confidentiality and security of data, particularly if it may not always remain under his direct control.

Safeguards include, initially, the careful design of questionnaires, inventories, interview schedules, and other data gathering instruments and procedures to limit the personal information to be acquired to that absolutely essential to the project or activity. Additional safeguards include the encoding or enciphering of names, addresses, serial numbers, and of data transferred to tapes, discs, and printouts. Secure, locked spaces and cabinets may be necessary for handling and storing documents and files. Codes and ciphers should always be kept in secure places, distinctly separate from encoded and enciphered data. The shipment, delivery, and transfer of all data, printouts, and files between offices and institutions may require careful controls. Computer to computer transmission of data may be restricted or forbidden.

Provision should also be made for the destruction of all edited, obsolete or depleted data on punched cards, tapes, discs, and other records. The committee may also determine a future date for destruction of all stored primary data pertaining to a project or activity.

Particularly relevant to the decision of the committees are those rights of the subject that are defined by law. The committee should familiarize itself through consultation with legal counsel with these statutes and common law precedents which may bear on its decisions. The provisions of this policy may not be construed in any manner or sense that would abrogate, supersede, or moderate more restrictive applicable law or precedential legal decisions.

Laws may define what constitutes consent and who may give consent, prescribe or proscribe the performance of certain medical and surgical procedures, protect confidential communications, define negligence, define invasion of privacy, require disclosure of records pursuant to legal process, and limit charitable and governmental immunity (see, e.g., the University of Pittsburgh Law Manual).

b. The risks to an individual are outweighed by the potential benefits to him or by the importance of the knowledge to be gained.

The committee should carefully weigh the known or foreseeable risks to be encountered by subjects, the probable benefits that may accrue to them, and the probable benefits to humanity that may result from the subject's participation in the project or activity. If it seems probable that participation will confer substantial benefits on the subjects, the committee may be justified in permitting them to accept commensurate or lesser risks. If the potential benefits are insubstantial, or are outweighed by risks, the committee may be justified in permitting the subjects to accept these risks in the interests of humanity. The committee should consider the possibility that subjects, or those authorized to represent subjects, may be motivated to accept risks for unsuitable or inadequate reasons. In such instances the consent procedures adopted should incorporate adequate safeguards.

Compensation to volunteers should never be such as to constitute an undue inducement.

No subject can be expected to understand the issues of risks and benefits as fully as the committee. Its agreement that consent can reasonably be sought for subject participation in a project or activity is of paramount practical importance.

"The informed consent of the subject, while often a legal necessity is a goal toward which we must strive, but hardly ever achieve except in the simplest cases."—(Henry K. Beecher, M.D.)

c. The informed consent of subjects will be obtained by methods that are adequate and appropriate.

Note.—In the United States, adherence to the regulations of the Food and Drug Administration (21 CFR 130) governing consent in projects involving investigational new drugs (IND) is required by law.

Informed consent is the agreement obtained from a subject, or from his authorized representative, to the subject's participation in an activity.

The basic elements of informed consent are:

1. A fair explanation of the procedures to be followed, including an identification of those which are experimental;

2. A description of the attendant discomforts and risks;

3. A description of the benefits to be expected;

4. A disclosure of appropriate alternative procedures that would be advantageous for the subject;

5. An offer to answer any inquiries concerning the procedures;

6. An instruction that the subject is free to withdraw his consent and to discontinue participation in the project or activity at any time.

In addition, the agreement, written or oral, entered into by the subject, should include no exculpatory language through which the subject is made to waive, or to appear to waive, any of his legal rights, or to release the institution or its agents from liability for negligence.[4]

Informed consent must be documented (see Documentation, p. 15–16).

Consent should be obtained, whenever practicable, from the subjects themselves. When the subject group will include individuals who are not legally or physically capable of giving informed consent, because of age, mental incapacity, or inability to communicate, the review committee should consider the validity of consent by next of kin, legal guardians, or by other qualified third parties representative of the subjects' interests. In such instances, careful consideration should be given by the committee not only to whether these third parties can be presumed to have the necessary depth of interest and concern with the subjects' rights and welfare, but also to whether these third parties will be legally authorized to expose the subjects to the risks involved.

The review committee will determine if the consent required, whether to be secured before the fact, in writing or orally, or after the fact following debriefing, or whether implicit in voluntary participation in an adequately advertised activity, is appropriate in the light of the risks to the subject, and the circumstances of the project.

The review committee will also determine if the information to be given to the subject, or to qualified third parties, in writing or orally, is a fair explanation of the project or activity, of its possible benefits, and of its attendant hazards.

Where an activity involves therapy, diagnosis, or management, and a professional/patient relationship exists, it is necessary "to recognize that each patient's mental and emotional condition is important . . . and that in discussing the element of risk, a certain amount of discretion must be employed consistent with full disclosure of fact necessary to any informed consent."[5]

Where an activity does not involve therapy, diagnosis, or management, and a professional/subject rather than a professional/patient relationship exists, "the subject is entitled to a full and frank disclosure of all the facts, probabilities, and opinions which a reasonable man might be expected to consider before giving his consent."[6]

When debriefing procedures are considered as a necessary part of the plan, the committee should ascertain that these will be complete and prompt.

B. Continuing Review.—This is an essential part of the review process. While procedures for continuing review of ongoing projects and activities should be based in principle on the initial review criteria, they should also be adapted to the size and administrative structure of the institution. Institutions which are small and compact and in which the committee members are in day-to-day contact with professional staff may be able to function effectively with some informality. Institutions which have placed responsibility for review in boards of trustees, utilization committees, and similar groups that meet on frequent schedules may find it possible to have projects re-reviewed during these meetings.

In larger institutions with more complex administrative structures and specially appointed committees, these committees may adopt a variety of continuing review mechanisms. They may involve systematic review of projects at fixed intervals, or at intervals set by the committee commensurate with the project's risk. Thus, a project involving an untried procedure may initially require reconsideration as each subject completes his

---

Footnotes at end of article.

involvement. A highly routine project may need no more than annual review. Routine diagnostic service procedures, such as biopsy and autopsy, which contribute to research and demonstration activities generally require no more than annual review. Spot checks may be used to supplement scheduled reviews.

Actual review may involve interviews with the reponsible staff, or review of written reports and supporting documents and forms. In any event, such review must be completed at least annually to permit certifications of review on noncompeting continuation applications.

C. Communication of the Committee's Action, Advice, and Counsel.—If the committee's overall recommendation is favorable, it may simultaneously prescribe restrictions or conditions under which the activity may be conducted, define substantial changes in the research plans which should be brought to its attention, and determine the nature and frequency of interim review procedures to insure continued acceptable conduct of the research.

Favorable recommendations by an institutional committee are, of course, always subject to further appropriate review and rejection by institution officials.

Unfavorable recommendations, restrictions, or conditions cannot be removed except by the committee or by the action of another appropriate review group described in the assurance filed with the Department of Health, Education, and Welfare.

Staff with supervisory responsibility for investigators and program directors whose projects or activities have been disapproved or restricted, and institutional administrative and financial officers should be informed of the committee's recommendations. Responsible professional staff should be informed of the reasons for any adverse actions taken by the institutional committee.

The committee should be prepared at all times to provide advice and counsel to staff developing new projects or activities or contemplating revision of ongoing projects or disapproved proposals.

D. Maintenance of an Active and Effective Committee.—Institutions should establish policy determining overall committee composition, including provisions for rotation of memberships and appointment of chairmen. Channels of responsibility should be established for implementation of committee recommendations as they may affect the actions of responsible professional staff, grants and contracts officers, business officers, and other responsible staff. Provisions should be made for remedial action in the event of disregard of committee recommendations.

ASSURANCES

A. Negotiation of Assurances.—An institution applying to the DHEW for a grant or contract involving human subjects must provide written assurance that it will abide by DHEW policy. The assurance shall embody a statement of compliance with DHEW requirements for initial and continuing committee review of the supported activities; a set of implementing guidelines, including identification of the committee, and a description of its review procedures or, in the case of special assurances concerned with single projects or activities, a report of initial findings and proposed continuing review procedures. Institutions that have not previously filed assurances should request instructions for the preparation of an assurance from the Division of Research Grants, National Institutes of Health.

Negotiation of assurances is the responsibility of the DRG, NIH. Negotiation will be initiated on receipt of a copy of a grant application, a contract proposal, or other documentation identifying the project and the offeror or sponsoring institution.

Assurances will not be accepted from institutions or institutional components which do not have control over the expenditure of DHEW grant or contract funds unless they are an active part of a cooperative project or activity.

An assurance will be accepted only after review and approval by the DRG, NIH.

B. Types of Assurance.—Assurances may be one of two types:

1. General assurance.—A general assurance describes the review and implementation procedures applicable to all DHEW-supported activities within an institution, regardless of the number, location, or types of its components (see attachment A). General assurances will be required from institutions having a significant number of concurrent DHEW projects or activities involving human subjects.

2. Special assurance.—A special assurance will, as a rule, describe those review and implementation procedures applicable to a single project or activity (see attachment B). Special assurances may also be approved in modified forms to meet unusual requirements either of the operating agency or of the institution receiving a grant or contract. Special assurances are not to be solicited from institutions which have accepted general assurances on file.

C. Minimum Requirements for General Assurances.—1. Statement of compliance.—A formal statement of compliance with DHEW policy must be executed by an appropriate institutional official.

2. Implementing guidelines.—The institution must include as part of its assurance implementing guidelines that specifically provide for:

a. The statement of principles that will assist the institution in the discharge of its responsibilities for protecting the rights and welfare of subjects. This may be an appropriate existing code or declaration or one formulated by the institution itself.

b. A committee or committee structure which will conduct initial and continuing reviews. Committee members shall be identified by name, occupation or position, and by other pertinent indications of experience and competence in areas pertinent to the areas of review such as earned degrees, board certifications, licensures, memberships, etc.

c. The procedures which the institution will follow in carrying out its initial and continuing review of proposals and activities to insure that:

(1) The rights and welfare of subjects are adequately protected;

(2) The risks to subjects are outweighed by potential benefits;

(3) The informed consent of subjects will be obtained by methods that are adequate and appropriate.

d. The procedures which the committee will follow to provide advice and counsel to project and program directors with regard to the committee's actions as well as the requirement for reporting to the committee any emergent problems or proposed procedural changes.

e. The procedures which the institution will follow to maintain an active and effective committee and to implement its recommendations.

D. Minimum Requirements for Special Assurance.—An acceptable special assurance covering a single activity consists of a properly completed statement of compliance, similar to that illustrated by attachment B. This assurance shall identify the specific grant or contract involved by its number, if known; by its full title; and by the name of the project or program director, principal investigator, fellow, or other person immediately responsible for the conduct of the activity. The assurance shall be signed by a committee of not fewer than three members and executed by an appropriate institutional official. The committee shall describe in general terms those risks to the subject that it recognizes as inherent in the activity. Consent procedures to be used are to be described. Any consent statement to be signed, heard, or read by the subject or responsible third parties should be attached. The assurance should outline the circumstances under which the director or investigator will be required to inform the committee of proposed changes in the activity, or of emergent problems involving human subjects. The assurance should also indicate whether the director or investigator will be required to submit written reports, appear for interview, or be visited by the committee or committees to provide for continuing review. It should also indicate the intervals at which such reviews will take place.

TIMING AND CERTIFICATION OF INSTITUTIONAL REVIEW

A. General Assurances.—1. Timely review.—All proposals involving human subjects submitted by institutions with accepted general assurances should, whenever possible, be given institutional review and approval prior to submission to the DHEW. The proposal or application should be appropriately marked in the spaces provided on forms, or the following statement should be typed on the lower or right hand margin of the page bearing the name of the institutional official authorized to sign or execute applications or proposals for the institution:

"Human Subjects—Review and Approved on ——(date)——."

(This date should be no more than 90 days prior to the submission date, and must not be more than 12 months prior to the proposed starting date.)

2. Pending review.—If it will be necessary to delay the review, the proposal is to be appropriately marked in the spaces provided on forms, or the following statement is to be typed in the lower or right hand margin of the page bearing the name of the institutional official authorized to sign or execute applications or proposals for the institution:

"Human Subjects—Review Pending on——(date)——."

(This date should be at least one month earlier than the proposed starting date of the project to avoid possible conflict with the award date.)

3. Completion of pending review.—Review should be initiated as soon as possible after the submission of the proposal so that final action can be completed prior to the pending review date. If this final action is disapproval, or is approval contingent on substantive changes in the proposal, the operating agency is to be notified promptly by telegram; an immediate confirmatory letter; and, where appropriate, by withdrawal of the application from further consideration by the agency.

4. Institutional review of proposals lacking definite plans or specifications for the involvement of human subjects.—Certain types of proposals are submitted with the knowledge that human subjects are to be involved within the project period, but definite plans for this involvement cannot properly be included in the proposal. These include (1) certain training grants where trainee projects remain to be selected, and (2) research, pilot, or developmental studies in which involvement depends upon such things as the completion of instruments, or of prior animal studies, or upon the purification of compounds.

Such proposals should be reviewed and certified in the same manner as more complete proposals. The initial certification indicates institutional approval of the applications as submitted, and commits the institution to later review of the plans when completed. Such later review should be completed prior to the beginning of the budget period during which actual involvement of human subjects is to begin.

5. Institutional review of proposals not submitted with the intent of involving human subjects.—If a proposal, at the time it is

submitted to the DHEW, does not anticipate involving or intend to involve human subjects, no certification should be submitted. In those instances, however, where funds are awarded in response to the proposal and it later becomes appropriate to use all or parts of these funds for activities which will involve human subjects, such use must be reviewed and approved in accordance with the institutional assurance prior to the use of subjects:

a. Where support is provided by project grants or contracts, review and approval of such changes must be certified to the awarding agency or contracting agency, together with a description of the proposed change in the project plan or contract workscope. Subjects should not be used prior to receipt of approval from agency staff or from the project officer concerned.

b. Where support is provided by a mandatory grant or institutional grant, in which cases the institution determines within broad guidelines the project or activities supported, including the use of human subjects (i.e., general research support grants, clinical research center projects), review must be carried out in accordance with the institutional assurance. Certification for individual projects need not be forwarded to the awarding agency.

Whenever the committee is uncertain as to whether a change should or should not be reported, the question should be referred to the operating agency concerned.

All certifications are subject to verification by DHEW representatives authorized to examine institutional and committee records.

B. Special Assurances.—When a special assurance is submitted, it provides certification for the initial grant or contract period concerned. No additional documentation is required. If the terms of the grant or contract provide for additional years of support, with annual obligation or funds, the noncompeting renewal application or proposal shall be certified in the manner described in the preceding section.

COOPERATIVE ACTIVITIES

Cooperative activities are those which involve other than the grantee or prime contractor (such as a contractor under a grantee or a subcontractor under a prime contractor). In such instances the grantee or prime contractor may obtain access to all or some of the human subjects involved through the cooperating institution. Regardless of the distances involved and the nature of the cooperative arrangement, the basic DHEW policy applies and the grantee or prime contractor remains responsible for safeguarding the rights and welfare of the subjects. The manner in which this responsibility can be discharged depends on whether the grantee or contractor holds an institutional general assurance or an institutional special assurance.

A. Institutions with General Assurances.—1. Initial and continuing institutional review may be carried out by one or a combination of procedures:

—By the grantee's or contractor's committee;

—By the committee reviews conducted of both institutions; or

—Through cooperation of appropriate individuals or committees representing the cooperating institution.

The procedures to be followed must be made a matter of record in the institutional files for the grant or contract before funds are released by the grantee or contractor for the cooperative project. There are three relationships that may govern in reference to the cooperating institution:

a. Cooperating institutions with accepted general assurances. When the cooperating institution has on file with the DHEW an accepted general assurance, the grantee or contractor may request the cooperator to conduct its own independent review and to report to the grantee's or contractor's committee the cooperating committe's recommendations on those aspects of the activity that concern individuals for whom the cooperating institution has responsibility in accordance with its own assurance. The grantee or contractor may, at its discretion, concur with or further restrict the recommendations of the cooperating institution. It is the responsibility of the grantee or contractor to maintain communication with the cooperating institutional committees. The cooperating institution should promptly notify the grantee or contracting institution whenever the cooperating institution finds the conduct of the project or activity within its purview unsatisfactory.

b. Cooperating institution with no accepted general assurance. When the cooperating institution does not have an accepted assurance on file with the DHEW, the awarding agency concerned may request the DRG, NIH, to negotiate an assurance.

c. Interinstitutional joint reviews.—The grantee or contracting institution may wish to develop an agreement with cooperating institutions to provide for a review committee with representatives from cooperating institutions. Representatives of cooperating institutions may be appointed as ad hoc members of the grantee or contracting institution's existing review committee or, if cooperation is on a frequent or continuing basis as between a medical school and a group of affiliated hospitals, appointments may be made permanent. Under some circumstances component subcommittees may be established within cooperating institutions. All such cooperative arrangements must be accepted by the Department as part of a general assurance, or as an amendment to a general assurance, or in unusual situations as determined by the DRG, NIH, as a special assurance.

B. Institutions with Special Assurances.—While responsibility for initial and continuing review necessarily lies with the contractor, the DHEW will also require acceptable assurances from those cooperating institutions having immediate responsibility for subjects.

If the cooperating institution has on file with the DHEW an accepted general assurance, the contractor shall request the cooperator to conduct its own independent review of those aspects of the project or activity which will involve human subjects for which it has immediate responsibility. Such a request shall be in writing and should provide for direct notification of the contractor's committee in the event that the cooperator's committee finds the conduct of the activity unsatisfactory.

If the cooperating institution does not have an accepted general assurance on file with the DHEW, the operating agency concerned must request the DRG, NIH, to negotiate an assurance.

INSTITUTIONAL ADMINISTRATION OF ASSURANCES

A. Institutional Responsibility.—The grantee or contracting institution's administration is accountable to the Department for effectively carrying out the provisions of the institutional assurance for the protection of human subjects as accepted and recognized by the Department. Revisions in the institutional assurance, including the implementing procedures, are to be reported to the Department prior to the date such revisions become effective. Revision without prior notification may result in withdrawal of departmental recognition of the institution's assurance.

B. *Executive Functions*.—Specific executive functions to be conducted by the institutional administration include institutional policy formulation, development, promulgation, and continuing indoctrination of personnel. Appropriate administrative assistance and support must be provided for the committee's functions. Implementation of the committee's recommendations through appropriate administrative action and followup is a condition of acceptance of an assurance. Committee approvals and recommendations are, of course, subject to review and to disapproval or further restriction by institutional officials. Committee disapprovals, restrictions, or conditions cannot be rescinded or removed except by action of the committee or another appropriate review group as described and accepted in the assurance filed with the Department.

C. *Assurance Implementation*.—Under no circumstances shall proposed activity plans, not approved by the committee, be implemented with Department funds. The principal investigator, program or project director, or other responsible staff must be notified as promptly as possible of committee actions, including any restrictive recommendations made by the institutional committee or the administration. They must also be informed and reminded of their continuing responsibility to bring to the attention of the committee any proposed significant changes in project or activity plans or any emergent problems that will affect human subjects. Where continuing review of projects involves the channels of administrative authority in the institution, notification of committee actions should be sent through these channels. Establishment of mechanisms for consultation and appeal by investigators and subjects may be an important condition of acceptance of an assurance by the Department.

D. *Documentation*.—1. *General*.—Development of appropriate documentation and reporting procedures is an essential administrative function. The files must include copies of all documents presented or required for initial and continuing review by the institutional review committee and transmittals on actions, instructions, and conditions resulting from review committee deliberations addressed to the activity director are to be made part of the official institutional files for the supported activity. Committee meeting minutes including records of discussions of substantive issues and their resolution are to be retained by the institution and be made available upon request to representatives of the DHEW.

2. Informed consent.—An institution proposing to place any individual at risk is obligated to obtain and document his informed consent; the terms "at risk" and "informed consent" will apply as defined previously.

The actual procedure in obtaining informed consent and the basis for committee determinations that the procedures are adequate and appropriate are to be fully documented. The documentation will follow one of the following three forms:

a. Provision of a written consent document embodying all of the basic elements of informed consent. This form is to be signed by the subject or his authorized representative. A sample of the form as approved by the committee is to be retained in its records. Completed forms are to be handled in accordance with institutional practice.

b. Provision of a "short" form written consent document indicating that the basic elements of informed consent have been presented orally to the subject. Written summaries of what is to be said to the patient are to be approved by the committee. The "short" form is to be signed by the subject or his authorized representative and an auditor-witness to the oral presentation and to the subject's or his authorized representative's signature. A copy of the approved summary, annotated to show any addition, is to be signed by the persons obtaining the consent on behalf of the institution and by the auditor-witness. Sample copies of the consent form and of the summaries as approved by the committee are to be retained in its records. Completed forms are to be handled in accordance with institutional practice.

c. Modification of either of the above two primary procedures. All such modifications must be approved by the committee on the minutes signed by the committee chairman. Granting of permission to use modified procedures imposes additional responsibility upon the review committee and the institution to establish that the risk to any subject is minimum, that use of either of the primary procedures for obtaining informed consent would surely invalidate objectives of considerable immediate importance, and that any reasonable alternative means for attaining these objectives would be less advantageous to the subject.

The committee's reasons for permitting modification or elimination of any of the six basic elements of informed consent, or for altering requirements for a subject's signature, or for signature of an auditor-witness, or for substitution (i.e., debriefing), or other modification of full, complete, written prior consent, must be individually and specifically documented in the minutes and in reports of committee actions to the institutional files. Approval of any such modifications should be regularly reconsidered as a function of continuing review and as required for annual review, with documentation of reaffirmation, revision, or discontinuation as appropriate.

3. Reporting to DHEW.—No routine reports to DHEW are required. Significant changes in policy, procedure, or committee structure shall, however, be promptly reported to the DRG, NIH, for review and acceptance. Review of these changes or of institutional and other records of performance under the terms and conditions of DHEW policy, may require renegotiation of the assurance or such other action as may be appropriate.

ENFORCEMENT

The DRG, NIH, will follow up reports by reviewers, evaluators, consultants, and staff of the DHEW indicating concern for the welfare of subjects involved in approved and funded grants or contracts, and of subjects potentially involved in activities approved but not funded, and in disapproved proposals. On the basis of these reports and of other sources of information, the DRG, NIH, may, in collaboration with the operating agency concerned, correspond with or visit institutions to discuss correction of any apparent deficiencies in its implementation of the procedures described in its institutional assurance.

If, in the judgment of the Secretary, an institution has failed in a material manner to comply with the terms of this policy with respect to a particular DHEW grant or contract, he may require that it be terminated in the manner provided for in applicable grant or procurement regulations. The institution shall be promptly notified of such finding and of the reason therefor.

If, in the judgment of the Secretary, an institution fails to discharge its responsibilities for the protection of the rights and welfare of the individuals in its care, whether or not DHEW funds are involved, he may question whether the institution and the individuals concerned should remain eligible to receive future DHEW funds for activities involving human subjects. The institution and individuals concerned shall be promptly notified of this finding and of the reasons therefor.

DEPARTMENTAL REVIEW OF ASSURANCES

All assurances submitted for approval are to be forwarded to the DRG, NIH, for review and acceptance on behalf of the Department. Review will be principally concerned with the adequacy of the proposed committee in the light of the probable scope of the applicant institution's activities, and with the appropriateness of the proposed initial and continuing review in the light of the probable risks to be encountered, the types of subject populations involved, and the size and complexity of the institution's administration. Institutions submitting inadequate assurances will be informed of deficiencies. The appropriate operating agency will be kept informed, on request, of the status and acceptance of an assurance.

ATTACHMENT A

Example of a statement of compliance—Part one of a general institutional assurance

The (name of institution) will comply with the policy for the protection of human subjects participating in activities supported directly or indirectly by grants or contracts from the Department of Health, Education, and Welfare. In fulfillment of its assurance:

This institution will establish and maintain a committee competent to review projects and activities that involve human subjects. The committee will be assigned responsibility to determine for each activity as planned and conducted that:

The rights and welfare of subjects are adequately protected.

The risks to subjects are outweighed by potential benefits.

The informed consent of subjects will be obtained by methods that are adequate and appropriate.

This institution will provide for committee reviews to be conducted with objectivity and in a manner to ensure the exercise of independent judgment of the members. Members will be excluded from reviews of projects or activities in which they have an active role or a conflict of interests.

This institution will encourage continuing constructive communication between the committee and the project directors as a means of safeguarding the rights and welfare of subjects.

This institution will provide for the facilities and professional attention required for subjects who may suffer physical, psychological, or other injury as a result of participation in an activity.

This institution will maintain appropriate and informative records of committee reviews of applications and active projects, of documentation of informed consent, and of other documentation that may pertain to the selection, participation, and protection of subjects and to reviews of circumstances that adversely affect the rights or welfare of individual subjects.

This institution will periodically reassure itself through appropriate administrative overview that the practices and procedures designed for the protection of the rights and welfare of subjects are being effectively applied and are consistent with its assurance as accepted by the Department of Health, Education, and Welfare.

Official signing for the Institution:
Signature.
Title.
Date.

Enclosure: Implementing Guidelines, Part Two of a General Institutional Assurance.

ATTACHMENT B

Example of a statement of compliance special institutional assurance in connection with single projects involving human subjects

(0) The (name of institution) will comply with the policy for the protection of human subjects participating in projects or activities supported by grants and contracts made by the Department of Health, Education, and Welfare. This policy requires a review independent of the investigator or director to safeguard the rights and welfare of those subjects. An initial review of the application for a grant or contract identified as —— submitted by this institution on behalf of —— indicates that:

(1) In the opinion of this committee the risks to the rights and welfare of the subject in this project or activity are:

The committee states that adequate safeguards against these risks have been provided.

(2) In the opinion of the committee the potential benefits of this activity to the subjects outweigh any probable risks. This opinion is justified by the following reasons:

(3) In the opinion of the committee the following informed consent procedures will be adequate and appropriate. Documentation is attached.

(4) The committee agrees to arrange for a continuing exchange of information and advice between itself and the investigator or director, particularly to deal with proposed changes in project or activity design, or with emergent problems which may alter the investigational situation with regard to the criteria cited above. This exchange will be implemented through:

This institution will provide whatever professional attention or facilities are required to safeguard the rights and welfare of human subjects.

(5) The signatures, names, and occupations or titles of the members of the committee are listed below.

Signature, Name, Occupation or Title.
Date of Committee Approval.

(6) Official signing for Institution.
Date.

ATTACHMENT B

Instructions

An acceptable special institutional assurance consists of a properly completed formal statement of compliance with Department of Health, Education, and Welfare policy (see attachment B), signed by a committee of not less than three members and by an official authorized to sign for the institution. The explanatory paragraphs which follow refer to the corresponding section of the attachment.

(0) This should identify the application for a grant, contract, or award by its identifying number, where known, or by its full title. The name should be that of the investigator, program director, fellow, or other individual immediately responsible for the conduct of the work.

(1) The committee should identify in general terms those risks that it recognizes as probable occurrences; i.e., "Aggravation of anxiety status through contact with interviewers," "Preservation of confidentiality of data," "Renal injury subsequent to multiple biopsy," "Possibility of side reactions to drugs," "Possible local hematosis and nerve injury associated with venipuncture."

(2) The committee should identify the benefits to the subject or the mankind in general that will accrue through the subject's participation in the project. This should be followed by a brief discussion, weighing the risks against the benefits.

(3) Consent procedures should be described and the minimum statement to be used should be attached. "Students responding to the attached advertisement will be interviewed." "The project outline will be submitted to the executive council of the PTA." "Individual teachers will be asked to allow an observer in the rooms chosen." "Superintendents of several State mental hospitals will be approached. The attached statement to the next of kin or guardian will be signed by the principal investigator and the superintendent." "The following special consent form will be signed by each subject and his or her spouse or next of kin before acceptance of the subject." "No prior consent will be sought. The following debriefing schedule will be followed within 30 minutes after completion of the test."

(4) This should indicate whether the investigator or director will be required to submit written reports, or to appear for interviews, or will be visited by the committee or committee representatives, and at approximately what intervals these steps will be carried out.

(5) No further explanation is necessary. (The committee must be composed of sufficient members with varying backgrounds to assure complete and adequate review of the project. The committee may be an existing one, or one especially appointed for the purpose. The institution may utilize staff, consultants, or both. The membership should possess not only broad competence to comprehend the nature of the project, but also other competences necessary in the judgments as to acceptability of the project or activity in terms of institutional regulations, relevant law, standards of professional practice, and community acceptance. The committee's maturity and experience should be such as to justify respect for its advice and counsel.)

(No individual involved in the conduct of the project shall participate in its review, except to provide information to the committee.)

(Committee members should be identified in the assurance by name, positions, earned degrees, board certifications, licensures, memberships, and other indications of experience, competence, and interest.)

The completed assurance should be attached to the application, or returned directly to the office requesting its submission.

ATTACHMENT 3

Codes or statements of principles which are concerned with the protection of human subjects in research, investigation, and care have been issued by:

Subject: Additional information on matters relating to experimentation on human beings.

EXAMPLES OF QUESTIONABLE EXPERIMENTS INVOLVING HUMAN SUBJECTS

1. In 1964 live cancer cells were injected into hospitalized patients under circumstances in which the nature of their consent to the proceedings was exceedingly ambiguous. There followed many months of investigation and temporary dismissal of the scientists involved. (see SP 151, April 24, 1968)

2. In an article in the *New England Journal of Medicine*, June 16, 1966, (pages 1354–60, Dr. Henry Beacher points out that of 50 examples of research involving human beings, in only two of these was the question of patient consent even mentioned. He cites three studies where an effective treatment was withheld from the patients. Other experiments which Dr. Beecher critized in the article are as follows:

(a). One experiment to check the effectiveness of a treatment for acne caused liver damage in some of the patients.

(b). In another experiment high risk cardiac arrhythmias were induced in experimental subjects by toxic doses of carbon dioxide.

(c). Risky maneuvers were carried out on 50 older patients, most of whom were undergoing gall bladder surgery with associated heart disease. Some ECG changes were noted and in a similar study the changes observed were alarming.

(d). In one study of 30 adult patients with atrial fibrillation and stenosis of heart valves, an old and well established physiological law was thrown into the correctional procedures by means of a gauge sutured directly on to the heart and with a direct puncture into the heart itself.

(e). Another physiological study was conducted on 22 subjects undergoing chest surgery. Both sides of the heart were catheterized, one in the usual manner and the other by an experimental method. Extrasystoles were deliberately induced by tapping the exposed heart.

(f). Forty-three subjects, some of whom were seriously ill were subjected to transcutaneous injection of the spleen and catheterization of the hepatic vein. No mention is made of what information was divulged to the subjects. The purpose of the manipulations was to develop a "technic"; not to devise relevant improved methods of therapy. Fourteen of the subjects were normal.

(g). In 9 patients with chronic alcoholism and cirrhosis of the liver a mixture of certain nitrogenous substances was administered. Even after the first signs of undesirable effects were noted, 3 patients received a second and third course of the mixture. It was concluded finally that the administration of the substances to patients with cirrhosis may be hazardous.

(h). The effects of ingested ammonia on liver disease was investigated in 11 normal subjects, 6 with acute viral hepatitis, 26 with cirrhosis, and 8 other miscellaneous patients. The hepatic and renal veins of all subjects were cannulated. Tremor and mental confusion developed in several of the patients, lasting for 3 days in one case.

(i). In another experiment infectious hepatitis was artificially induced in mentally defective children. The form of hepatitis induced was mild and was already endemic in the institution. Nevertheless, a resolution adopted by the World Medical Association explicitly states that under no circumstances is a doctor permitted to do anything which would weaken the physical or mental resistance of a human being except from strictly therapeutic or preventive indications imposed in the interest of the patient.

(j). A cancer was transplanted from a daughter to her volunteering and informed mother. The experimental idea was to learn something about cancer immunity and the production of tumor antibodies. The daughter's condition was known to be "terminal" and so was the mother's a little over a year after the transplantation.

(k). In an unspecified number of subjects, some with heart disease and some normal, a special needle was inserted into one of the chambers of the heart during bronchoscopy. This was a new technic of no possible benefit to normal subjects. The "technic" could have been evaluated on the patients for whom it was intended to benefit.

The mere listing of these experiments selected by Dr. Beecher does not establish a consensus that they were unethical, nor does their inclusion here mean that I personally regard any one or all of them as unethical.

3. In his book on *Human Guinea Pigs* (1967) M. H. Pappworth describes human experiments of a questionable nature (in his opinion), many of which were conducted in American Institutions. A quick survey indicates that there were 10 "Guinea Pig" experiments performed on children, 7 on pregnant women, 7 on mental defectives or the mentally ill, 6 on prison inmates, 10 on the dying and the old, 7 on patients with heart disease, several radiation experiments, a few on experimenters themselves, and of course, many on patients used for controls in other experiments. The literature which Mr. Pappworth searched appears to have been largely in British and American medical journals covering a period from approximately 1948 to 1966.

There appears to be no way of obtaining in a short period of time, at least, the nature and number of experiments conducted on military personnel. According to information made available to me, Dr. Henry Beecher is believed to be in possession of a statement from a medical officer stationed at the Warren Air Force Base around 1964–65 during an experiment concerning streptococcus and rheumatic fever. According to Dr. Beecher, "the medical officer who was present and who was dealt with harshly because he refused to participate in this study which he considered unethical, the subjects were not informed, did not consent, and did not even know they were the subjects in an experiment." The officer stated in writing to Dr. Beecher "that when he was at the Air Force Base, there were more than 75 men on the wards with rheumatic fever who had had penicillin treatment withheld—not the 25 admitted by the authors". The Air Force position on this experiment is not available to me.

NAMES OF EXPERTS ON LEGAL AND ETHICAL CONCEPTS FOR HUMAN RESEARCH

There have been several symposia and conferences on the problems of conducting experiments on human beings. One of the more recent of such discussions was sponsored by the New York Academy of Sciences on January 21, 1970. The names and affiliations of the participants are as follows:

Irving Ladimer, S.J.D. Department of Community Medicine, Mt. Sinai Hospital, New York, N.Y. (Also United Health Foundations, Inc., New York, N.Y.).

Ronald W. McNeur, Ph.D. Committee on Health and Human Values, United Ministries in Higher Education, Philadelphia, Pa.

George James, M.D., MPH. Mt. Sinai Medical Center and Medical School, New York, N.Y.

Bernard D. Hirsh, LL.B. (and General counsel, AMA) American Medical Association, Chicago, Ill.

Thomas J. O'Donnell, S.J. The Jesuit Residence, Hot Springs, N.C. (Present address: Catholic Student Center, North Carolina State University, Raleigh, N.C.).

Robert M. Kark, M.D. Renal and Nutrition Section, Presbyterian-St. Luke's Hospital, Chicago, Ill.

Charles V. Lowe, M.D., National Institute of Child Health and Human Development, National Institutes of Health, Bethesda, Md.

Leo Alexander, M.D. Tufts University Medical School, Boston, Mass. (Also former Consultant to Secretary of War and the U.S. Chief Counsel for War Crimes).

George V. Mann, Sc.D., M.D. Nutrition Division, Vanderbilt University School of Medicine, Nashville, Tennessee.

Wayland J. Hayes, Jr., M.D., Ph.D. Department of Biochemistry, Division of Toxicology, Vanderbilt University School of Medicine, Nashville, Tenn.

Delford L. Stickel, M.D. Department of Surgery, Duke University Medical Center and Durham Veterans Administration Hospital, Durham, N.C.

Frank J. Ayd, Jr., M.D. The Medical-Moral Newsletter, Baltimore, Md.

Chauncey D. Leake, University of California, San Francisco, Calif.

Margaret Mead, Ph.D. Department of Ethnology, American Museum of Natural History, New York, N.Y.

Stuart E. Golann, Ph.D. American Psychological Association, Washington, D.C.

Renee C. Fox, Ph.D. Harvard University, Cambridge, Mass.

Herbert S. Carlin, M.S. and Ronald T. Turnbull, M.S. Hospital Pharmacy Service, University of Illinois Medical Center, Chicago, Ill.

Robert J. Savard, Ph.D. National Institute of Mental Health, Bethesda, Md.

Rosemary Ellis, R.N., Ph.D. Case Western Reserve University, Cleveland, Ohio.

Richard R. Willey, Ph.D. Division of Social Perspectives in Medicine, University of Arizona College of Medicine, Tucson, Arizona.

John D. Arnold, M.D., Daniel C. Martin, M.D. and Sarah E. Boyer, B.S., R.N. (research on prisoners). University of Missouri Medical Center at Kansas City and Harry S. Truman Medical Research Laboratory, Kansas City, Mo.

Hans Zeisel, University of Chicago Law School, Chicago, Ill.

Laurence W. Shaw, A.M. and Thomas C. Chalmers, M.D., Veterans Administration, Washington, D.C.

Kenneth G. Kohlstaedt, M.D. Medical Research, Eli Lilly and Company, Indianapolis, Ind.

Louis Lasagna, M.D., Johns Hopkins University School of Medicine, Baltimore, Md.

Bernard Barber, Ph.D. Barnard College, Columbia University, New York, N.Y.

William J. Curran, LL.M., S.M. Hyg. Schools of Medicine and Public Health, Harvard University, Boston, Mass.

Herbert L. Ley, Jr., M.D. Food and Drug Administration, Washington, D.C.

Eugene A. Confrey, Ph.D., Division of Research Grants, National Institutes of Health, Bethesda, Md.

Frank P. Grad, LL.B. Columbia Law School, New York, N.Y.

Alfred M. Sadler, Jr., M.D. and Blair L. Sadler, LL.B. National Institutes of Health, Bethesda, Md.

Norman Cousins, *Saturday Review*, New York, N.Y. (Now at *The World*, United Nations Plaza, New York, N.Y.)

Roy E. Ritts, Jr., M.D. Section of Microbiology, Mayo Clinic, Rochester, Minn.

All of the above named individuals gave papers at this conference or moderated one of the panel discussions. The purpose of the list of names of experts is to provide credentials and affiliation. The attached xeroxed "contents" of the conference provides the titles of their papers, which may provide some guidance to the committee in contacting these individuals.

Please let us know if we may be of further assistance.

Subj: Articles on medical experimentation on human beings.

As indicated during our recent telephone discussion on human experimentation; I have not prepared a study on this subject since SPI 151, April 24, 1968. However, in accordance with your request of July 28, 1972 I am providing herewith the following articles and other materials on the general questions of ethics and guidelines for experimentation on human beings:

"The Institutional Guide to DHEW Policy on Protection of Human Subjects", PHS/NIH, 1971.

"The Cabinet of Dr. DOD" by Paul Jacobs. *The New York Review*, March 9, 1972, pp. 32–

Chalmers C. Thomas, *et al*, "Controlled Studies in Clinical Cancer Research", *NEJM* July 13, 1972, pp. 75–78.

"Moral Issues Relating to the Use of Humans and Animals in Research", A Medical Affairs Forum, Sept., 1967.

"Medical Research and the Golden Rule", by Michael E. DeBakey, *JAMA*, Feb. 19, 1968, pp. 132–134.

"Experiments on Man", *British Medical Journal*, Oct. 14, 1967, pp. 105–6.

"Experiments on Man", *British Medical Journal*, June 10, 1967, p. 689.

"Ethics and Experiments", *The Lancet*, April 18, 1970, pp. 367–368.

"Experimentation on Children", *JAMA*, Jan. 12, 1970, p. 301.

"Ethics and Experimentation", *The Lancet*, May 16, 1970, pp. 1050–1.

Please let us know if we may be of further assistance.

The Library of Congress,
Washington, D.C., March 2, 1967.

Hon. Jacob K. Javits,
U.S. Senate,
Washington, D.C.

Dear Senator Javits: The Legislative Reference Service is pleased to transmit a report entitled "Medical Experimentation on Human Beings." The report was prepared in response to your request for a study of the extent of medical experimentation on human beings in the United States, with special emphasis on the question of the consent of the patient being given and on controls imposed upon such experimentation by law, by regulation, and by practice. The scope of the report is based upon a draft study submitted to you and the staff of the Committee on Labor and Public Welfare on September 8, 1966. Since that date the dimensions of the report have grown in proportion to the number of new developments and the extensive private and public discussion of those developments. Many of the references cited follow from the beginning of the calendar year and include significant publications as late as February 20, 1967. Although the report attempts a summary and reaches some conclusions, the author and the Legislative Reference Service regard these as a stimulus for further study which the Congress and the American medical community may elect to give the subject.

Dr. Freeman H. Quimby in the Science Policy Research Division conducted the full study and wrote the reports. Miss Sylvia Kesinger, also in this division, established initial inquiries and provided suggestions and assistance on special portions of the manuscript. Mr. Hugh Keenan, Legislative Attorney, in the American Law Division, searched the statutes of the States, conducted the survey of the States with respect to agencies and regulations, and wrote that part of the report having to do with controls imposed upon human experimentation by State laws and administrative rules.

Sincerely,

Lester S. Jayson,
Director.

MEDICAL EXPERIMENTATION ON HUMAN BEINGS, MARCH 1967

(By Freeman H. Quimby, Specialist, Life Sciences, Science Policy Research Division; With the Assistance of Hugh C. Keenan, Legislative Attorney, American Law Division)

PART 1. INTRODUCTION

A. HISTORICAL SKETCH

Experimentation on humans by humans is as old as recorded history. Curious and helpless before the unfriendly forces of nature, man sought then, as he does today, to understand his place in the world of living things and to relieve pain, illness, and fear. To this end the ancient Persians and Ptolemies experimented and condemned criminals. Much later, about 150 A.D., Galen went about these matters well enough to be considered the founder of experimental physiology. The Dark and Middle Ages intervened, so that it was not until 400 years ago that the human body was first dissected.[1] This was done by Vesalius who did so on two illegal counts—there was a proscription against dissection, and surreptitiously taking bodies from the gallows at night was, of course, "stealing". Many years later Harvey conducted measurements on living animals and man and thereby demonstrated the circulation of blood. Between 1750 and 1800, further human experimentation demonstrated the value of vaccination against smallpox and the use of citric fruits in the treatment of scurvy, and by the end of the century venereal disease was proved to be a transmissable condition. Over a period of five years (1829 to 1833), William Beaumont, a Surgeon in the United States Army, conducted experiments on the stomach of Alexis St. Martin, which had been by an accidentally discharged shotgun.[2] The opened up to living physiological observation ground was thus prepared for the two great experimentalists, Claude Bernard in physiology and Louis Pasteur in chemistry and microbiology, who convinced the world of the value of biomedical experimentation.

Many scientists experimented on themselves, on their own kin, as well as on others. In 1935, Dr. Gerhard Domazk, produced the sulfa drug "Prontosil" (sulfanilamide). Domazk's experimentation was confined to mice until his own daughter contracted blood poisoning. It was believed she would die. The father decided to risk a large dose of his own drug, and she recovered completely. Although Domazk's subsequent claims for the effectiveness of "Prontosil" were based only on the admissable statistical evidence in mice,[3] his earlier success in experimenting on his daughter influenced a subsequent decision to treat other humans with the drug. In 1936, a serious outbreak of childbed fever had occurred in Queen Charlotte's Hospital in London. Thirty-eight mothers were in critical condition. "Prontosil" was administered to the entire group, and only three out of the thirty-eight died.[4] This evidence was sufficient to establish sulfanilamide as a useful drug in the treatment of infections.

About 25 years ago Ancel Keys and others conducted experiments on conscientious objectors, from whom they withheld some quantities of food calories in studies of semistarvation.[5] These were controlled experiments which, together with general observations made during regional famines, constitute the basic data for evaluating minimum dietary levels for those underfed populations in the world today.

The publication in 1865 of Claude Bernard's *Introduction to the Study of Experimental Medicine,* formulated and promulgated ethical principles and justification for human experimentation. The safeguards and admonitions therein were widely accepted and practiced for many years. However, "this ethical equanimity of the medical profession was shattered by the reports from Nazi Germany of atrocities in the name of clinical science."[6] The examples of human experiments mentioned earlier in the historical sketch were presumably conducted on willing subjects; those conducted in Nazi Germany were by and large on unwilling subjects.

Because biological and clinical investigations by this time had gathered considerable momentum in some other parts of Europe and in the United States, it was clear that much was at stake and that re-definition of ethical, moral and legal requirements for clinical experimentation was imperative. The first result was the Nuremberg Code, the 10 points of which were developed at the Nuremberg Military Tribunal. The first three rules are as follows:

"Nuremberg Rule 1: The voluntary consent of the human subject is absolutely essential.

"Nuremberg Rule 2: The experiment should be such as to yield fruitful results for the good of society, unprocurable by other methods of study, and not random and unnecessary experiments in nature.

"Nuremberg Rule 3: The experiment should be so designed and based on results of animal experimentation and a knowledge of the natural history of the disease or other problems under study that the anticipated results will justify the performance of the experiment."[7]

These and other rules and declarations have been adopted by appropriate organizations in recent years. But there remains the problem of whether or not they are being observed in practice and whether or not further detailed refinement, interpretation, and clarification may not do more harm than good.

B. Current concern over human experimentation

The continuing concern over the actual practices, attitudes and philosophies being applied today in the legal and ethical aspects of clinical investigation involves three developments during the last few years:

First, expenditures for medical research are at an all time high with the Federal government leading the way. In 1940, total expenditures from all sources for medical research in the United States was $87,000,000.[8] Twenty years later, 1967, this figure increased so that it is now over twenty times larger, or an amount gradually approaching $2 billion a year. This has resulted in an expansion of clinical centers all over the country and an increase in the need for more patients and healthy volunteers.[9]

There is also a growing need for larger numbers of human subjects *per clinical trial* so that the efficacy, side effects, and precautions for the increasing volume of new drugs and biologicals can be established with statistical rigor before approval for general use by practicing physicians.

Further, there can be no direct extrapolation of results from animal experimentation to clinical trials in human subjects,[10] or at least there is a severe limitation on such extrapolation in drugs designed for treatment of conditions and symptoms which are more or less uniquely human.

The second recent development is the growing desire to apply all new knowledge quickly and broadly to the health problems of the nation. On June 27, 1966, President Johnson made the following remarks at a meeting with the directors of the National Institutes of Health.

I am keenly interested to learn not only what knowledge this [$800 million a year by NIH on biomedical research] buys but what are the payoffs in terms of healthy lives for our citizens . . . We must make sure that no life giving discovery is locked up in the laboratory.[11]

In December 1964, the President's Commission on Heart Diseases, Cancer, and Stroke submitted its Report to the President.[12] Later, testifying before the Senate Subcommittee chaired by Mr. Lister Hill, members of the Commission urged instead of the $50 million approach asked by the Administration bill, an initial outlay of more than $350 million for the first year to be expanded to an accumulative total of $3 billion for the five year plan for a network of medical complexes.[13] The legislation—the Heart Disease, Cancer, and Stroke Amendments of 1965—was signed into law by the President in October of 1965, and is aimed primarily at *"speeding the transfer of modern research results into practice throughout the country."*[14] The speed, although less than that recommended by the Commission, nevertheless places an additional outlay into the health enterprise in the amount of $340 million from October 1965 to July 1968.[15]

It should be made clear that neither the President, the Commission, the Appropriations Subcommittee, nor the Congress suggested by any of the foregoing statements or acts that there be a cutting of ethical corners. This issue was surely not even raised. The point is that the gigantic increase in funds for clinical centers and health research will result in still more experiments on patients and subjects, with a concomitant responsibility that it be done with the full protection of individual rights and safety.

Dr. Henry K. Beecher of the Harvard University Medical School provides a description and summary of the situation as follows:

Since World War II the annual expenditure for research (in large part in man) in the Massachusetts General Hospital has increased a remarkable 17-fold. At the National Institutes of Health, the increase has been a gigantic 624-fold.* This "national" rate of increase is over 36 times that of the Massachusetts General Hospital. These data, rough as they are, illustrate vast opportunities and concomitantly expanded responsibilities.

Taking into account the sound and increasing emphasis of recent years that experimentation in man must precede general application of new procedures in therapy, plus the great sums of money available, there is reason to fear that these requirements and these resources may be greater than the supply of responsible investigations. All this heightens the problems under discussion.

Medical schools and university hospitals are increasingly dominated by investigators. Every young man knows that he will never be promoted to a tenure post, to a professorship in a major medical school, unless he has proved himself as an investigator. If the ready availability of money for conducting research is added to this fact, one can see how great the pressures are on ambitious young physicians.

Implementation of the recommendations of the President's Commission on Heart Disease, Cancer and Stroke means that further astronomical sums of money will become available for research in man.[16]

The third development is the recent "controversy" concerning the consent of subjects in human experimentation. Although the publicity on this matter has occurred largely within the past three years, neither the problems nor the arguments are new. Without a doubt, the beginning was in 1962 with the debate over the "Kefauver-Harris Amendments" to the Food, Drug and Cosmetic Act. Although there was little argument at that time over the section dealing with "consent", there eventually followed difficulties in interpreting this in experimental practice and presumably some overuse of the judgment exemption clause in the "consent" provision of the legislation.

The medical community was reminded of the problems and issues in human experi-

---

Footnotes at end of article.

mentation sometime earlier in 1959.[17] Also as evidence of its prior recognition of the problems in human experimentation, the U.S. Public Health Service, in January 1960, awarded a $97,000 grant to the Boston University Law-Medicine Research Institute "to conduct a study of actual practices in clinical investigations in the United States in regard to these legal, moral and ethical issues. Special studies were conducted in regard to drug trials, the use of children in medical research, the use of prisoners in medical research, and the legal issue of 'informed consent' of research subjects and patients of all types." [18] The three year study was conducted by "lawyers, physicians, other clinical investigators, and social scientists. It is the first research project ever conducted in the United States in this highly significant area." [19] The latest policies of the Surgeon General notably include many of the recommendations in the report from the Boston study.

The subject of human experimentation again became newsworthy in February of 1964 when it was "disclosed that, as a part of a research project, live cancer cells were being injected into hospitalized patients under circumstances in which the nature of their consent to the proceedings was exceedingly ambiguous." [20] There soon followed the inevitable sensational headlines, such as "Nazi tactics." These later disappeared, except for an article on this specific case published in the Fall of 1965 in a national women's magazine entitled "How Doctors Use Patients as Guinea Pigs."

One of several articles in The Wall Street Journal [21] quoted Dr. Henry Beecher of the Harvard Medical School as asserting, "What seems to be breaches of ethical conduct [in failing to get informed consent] are by no means, but are almost, one fears, universal". The article states that Dr. Beecher "cited 18 cases in which he sharply questioned whether doctors properly had obtained consent from patients taking part in experiments". (Dr. Beecher later increased the number of cases from 18 to 22, the latter number being selected from a large group of 50 "for reasons of space".[22]) Dr. Beecher "focused much of his criticism on the use of 'captive' subjects," particularly "of the military".[23]

These assertions were attacked by Dr. Thomas Chalmers of Tufts Medical School who called them "a gross and irresponsible exaggeration" and stated that "the overwhelming majority of investigators carry out their studies ethically." [24] "At least one major research institution, the Cleveland Clinic, reduced substantially its studies involving human subjects because of the present legal and ethical questions. 'We don't want to be the test case,' explains Dr. Irvine Page, Director." [25]

The medical profession was stirred again in January 1966 when the Regents of the University of the State of New York, acting under their responsibility for licensing the medical profession, found two individuals involved in the live cancer cell experiments, Drs. Chester Southam and Emmanuel Mander, guilty of "unprofessional conduct, fraud and deceit in the practice of medicine." [26] In the same month, the fires were further fanned by Dr. Beecher in an editorial in the Journal of the American Medical Association. The editorial asked the question, "whoever gave the investigator the God-like right of choosing martyrs?" [27]

On January 6, 1967, an article by Dr. Wolf Wolfensberger in Science pointed out that there is a growing concern among intelligent laymen about the conduct of research and "that no one discipline has been singled out by public criticism. Thus medical researchers were most affected by the New York regents' decision; social scientists, by the Camelot affair; and behavioral scientists, by the 'antitest' movement." [28] The author of this January 6 article also conducted a nationwide survey of limitations and obstacles for research on the mentally retarded. He reported that "when 'experiment' was mentioned in connection with a handicapped individual, responses . . . were not only strong and emotional but at times absolutely irrational." Two weeks later, January 16, 1967, The New York Times reported that State Senator Seymour R. Thaler "charged on the floor of the Senate last week that retarded children were being injected with live hepatitis virus, that the deformed limbs of children in Harlem Hospital had been amputated to demonstrate surgical techniques instead of therapy and that poor patients were being used as 'guinea pigs' without their consent. Hospital officials immediately denied the charges and attacked Senator Thaler as irresponsible." [29]

The eminent neurosugeon, Dr. Irving S. Cooper, according to the January 1967 number of *The Mayo Alumnus*,[30] believes that the questions concerning research on patients are now being debated within the forum in which they rightly belong, the medical profession itself.

To bring discussion of the issues in public media up to date, we quote the entire article by Nobel Laureat, Dr. Joshua Lederberg, which appeared in *The Washington Post* on April 23, 1967: [31]

Modern, scientific medicine rests in controlled observations of human beings. Every person whose health and life has been improved by medical care is indebted to a previous patient who undertook some risk in an experiment for the benefit of his fellows.

Clinical experimentation poses some of the most poignant dilemmas of the scientist's responsibility to society, but the responsibility is shared by everyone who benefits from modern drugs and advanced surgery.

Intemperate attacks have lately been leveled against clinical research, since we do not yet have workable norms. Nevertheless, for every patient who may have been abused by some insufficiently regulated clinical trial, a thousand patients suffer by being untreated or maltreated with scientifically unsound or less than ideal drugs and procedures.

In a society dedicated to personal liberties, no one should be subjected to arbitrary risks against his will. Hence, every responsible physician and clinical investigator would support the principle of knowing consent as the basis for recruiting subjects into research studies which involve significant new risks.

The criterion of "informed consent" is, however, still controversial. It's application to situations involving trivial risks may frustrate the experimental design for a trivial advantage of personal security. Equally important, informed consent requires an understanding of experimental medical science that goes far beyond the training of most laymen, and sometimes of the invetigators.

Will it be necessary for every patient to have the advice of counsel before a physician uses any technique unknown to Hippocrates? Some criticisms of sophisticated medicine could be answered only by such an absurdity.

The ethical issue rests in part on the vagueness of the patient's moral responsibility for participating in medical progress, in contrast to the reality of his motives and legal rights to protect his body.

How much information must a person have before he could "prudently" risk his life? To take an unhappy example, it is plain that astronauts have volunteered to undertake one of the most hazardous of occupations, but did their informed consent reach to the perception that trial runs on the ground might be more hazardous than spaceflight?

Yet far more detailed criteria or informed consent are being proposed for medical research, with grave penalties for physicians and institutions who would substitute their own moral judgments for legally airtight forms.

Risk is part of life, but the purpose of medicine is to mitigate hazards. No subject should be asked to make any sacrifice that could be avoided, and especially so if the essential aims of clinical investigations can still be achieved. The very expression "risk" brings to mind "insurance," and there is an important step that we could take to rationalize the participation of human subjects.

Besides giving their knowing consent, they should be insured against the potential hazards, the cost of premiums being accepted as a plausible charge to the research projects. A subject who has possibly suffered damages in an experiment should not have to sue for redress on a claim of culpable negligence or fraudulent misinformation, no more than should an industrial employee in a potentially hazardous occupation.

The registration of subjects for appropriate levels of insurance would become a self-enforcing system of control, particularly if the patient were required to endorse the registration. It would then be a cause of action if a patient were enticed into an experiment without being insured at a level appropriate to his risks.

The cumulative costs of the premiums would discourage the overexposure of patients to risks beyond the significance of the expected results. Above all, the insurance concept would provide a basis of evaluating the rights of the patient-subject, for which informed consent might be an ideal but practically unworkable alternative.

Research-risk insurance might be attacked as adding to the costs of research. However, these costs are already paid, in the currency of the risks taken by the subjects, and this is an unfair burden that should be accepted by the whole community.

PART II. EXTENT OF MEDICAL EXPERIMENTATION ON HUMAN BEINGS

A. DEFINITIONS OR CATEGORIES OF PATIENTS AND SUBJECTS IN NIH PROJECTS (1961)

Any appraisal of the extent of human experimentation should, wherever possible, define the various types of research in which the patients and subjects participate. Clarification along such lines may avoid much misunderstanding. For example, an interprofessional group which studied 1437 clinical projects supported by NIH during 1961, found it "useful to classify clinical research according to the balance of research and therapy in the relationship between the subjects and the clinical investigator." [1] The defined classes of research (type of subjects) and the known *number of projects* in each class are shown below, as derived by the 1961 survey:

Class of Research:	**Number of Projects Utilizing Humans* [2]
Very sick patients; all therapies tried, very poor prognosis	506
Patients receiving one of several treatments, none of which is the clear choice for the condition	1141
Patients used as controls for other patients being studied for specific response in reference to their disease	329
Patients who participate in the clinical field trials of new vaccines	128
Healthy volunteers who do not stand to gain any direct therapeutic or preventative benefit	427

* The number of projects in each class are not mutually exclusive

B. NIH INVOLVEMENT IN CLINICAL INVESTIGATION (1966)

Since the National Institutes of Health are leading sponsors of research which often involves the use of human beings in experiments, the Director of the NIH was requested to supply new information on the *number* of human subjects involved in clinical investigations sponsored by NIH, both intramural and extramural. The assembled data submitted in August 1966, not only provide an order of magnitude estimate of the number of human subjects used in clinical investigations, but also display different ways of classifying such subjects. The varied categories very likely developed from the approach Dr. Shannon and his staff utilized in order to supply the data in a reasonably short period of time. The information supplied by NIH [3] is presented in the tabulation below:

	***No. Human Subjects*
1. Research beds provided by grants to clinical research centers	1,600
2. In- and out-patients involved in studies in which some manipulation of a therapeutic nature might occur, such as:	*95,000
a. Vaccine development program of the National Institute of Allergy and Infectious Disease	*(50,000)
b. Cancer chemotherapy and various studies supported by the Heart and Arthritis Institutes	*(45,000)
3. Nonmanipulative observational studies, such as: epidemiological studies, and the collaborative perinatal research program of the National Institute of Neurological Diseases and Blindness	133,000
a. Demonstration projects of the National Institute of Mental Health	(18,000)
4. Capacity of the Clinical Center at NIH, Bethesda	515
Approximate total	230,000

* Figure composed of totals drawn from protocols which required "x" number of patients during the experiment. With these exceptions the figures report a single point in time rather than the duration of a total study wherein different patients might be involved or a single individual would be in and out of the study at different times.

**Behaviorally oriented clinical investigations are not included.

C. NIH RESEARCH AND TRAINING GRANT PROJECTS INVOLVING HUMANS IN A CLINICAL AND NON-CLINICAL CONTEXT (1965 DATA)

The National Institutes of Health also provided an estimated tabulation of grants and grantee institutions using descriptor terms, *clinical studies* and *human:*

Research grants:	*No. of Grants*
Clinical studies	2,325
Psychological testing, Sociological questionnaires, Other "human" survey research	1,415
Clinical research centers (all types)	130
Total	3,870
Training grants—clinical medicine and dentistry only:	
Training grants	1,876
Fellowships	346
Traineeships	135
Research Career Awards	354
Total	2,711

Grantee institutions:	*No. of Grantee Institutions*
Institutions involved in clinical activities	600
"Affiliates" (mostly hospitals)	200
Total	800

D. NUMBER OF SUBJECTS INVOLVED IN SOME FAMILIAR DRUGS AND VACCINES

What may be somewhat surprising figures are those available on the number of human subjects involved in the use and development of certain well-known drugs and vaccines. "For example, we know that a total of 2.5 million tablets of thalidomide were distributed to 1,270 physicians in the United States and that 20,771 patients received the drug. A total of 624 of those patients were pregnant women, and as a result of these "studies," 16 deformed infants were produced. We also know that the National Cancer Institute had 110 drugs in their clinical trials in the United States during 1962 and that these trials involved 7,700 study patients in 150 hospitals. As for clinical research in the field of new vaccines, we know that the licensing requirements for the oral polio vaccine required 100,000 conversions of susceptible human subjects for each of the three types of the vaccine and since there were two or more vaccines being field tested, there must have been a minimum of 500,000 persons receiving the vaccine. During the earlier trials of the Salk vaccine, many thousands of children participated in the nation-wide double-blind studies which used sterile water as a placebo.[4]

E. ESTIMATE OF EXTENT OF HUMAN EXPERIMENTATION FROM NUMBER OF NEW DRUGS TESTED BY INDUSTRY (1958–1959)

Data available from industrial drug activities of a few years ago (1958–1959) provide the first figures, regarded as useful to this study, concerning the number of drugs actually tested by human experimentation. The figures below show the disease category at which new drugs were aimed and the number of drugs clinically tested in humans for each disease category:

	Number of new drugs		Number tested clinically in humans	
Medical categories	1958	1959	1958	1959
Allergy and infectious	50,300	28,200	695	841
Arthritis and metabolic	6,300	6,000	405	217
Cancer	28,000	36,000	60	59
Heart	8,200	7,300	187	164
Mental health, neurological, blindness	12,100	7,800	313	321
Miscellaneous	9,700	14,300	240	334
	114,600	99,600	1,900	1,936

According to these figures, only 2% of the new drugs under investigation in a given year are being tested clinically in human subjects, and yet even this small percentage puts nearly 2,000 drugs into clinical tests with many subjects participating per drug.[5]

F. NUMBER OF PERSONS SUBJECT TO CLINICAL TRIALS WITH DRUGS IN 1966 (AS ESTIMATED BY FDA)

If we understand information supplied by the Food and Drug Administration correctly, there has been only a small increase in the number of investigational new drugs from 1959 to 1966. The figures on which this statement is based are: 1,936 drugs tested clinically in 1959 (D. above), and 2,050 investigational new drug exemptions under review during 1966 by the FDA (below). Since these numbers may not be directly comparable and since other information of import is contained therein, the relevant portion of a "DHEW" memorandum is reproduced here:

"There are approximately 2,050 investigational new drug exemptions currently under review in the Food and Drug Administration. Some of these have no patients currently under study and some have as many as 5,000 to 10,000 patients. As you can see, at any one given time we are aware of several hundred thousand investigations within thousands of clinical trials. This does not include epidemiologic surveys in which we are cur-

---

Footnotes at end of article.

rently engaged and which I do not believe fall within the scope of your question. Nor does it include the clinical trials in support of efficacy data which currently may be undertaken by several manufacturers and for which there is no legal authority for reporting. Similarly, we have no legal authority for the clearance of investigational reports for persons who may be testing devices."[6]

G. IMPLICATIONS OF INCREASED COST OF DRUG DEVELOPMENT TO THE EXTENT OF HUMAN EXPERIMENTATION

Although the cost of manufacturing, testing, and marketing of new drugs by industry accrues from many activities in drug development, it is possible that much of the increase over the past fifteen years can be attributed to the growing requirements in "pre-market" testing on human subjects. The requirements both with respect to protection of the subjects and the increased number of subjects support the contention by the pharmaceutical industry that the marketing of safe, modern and effective drugs is becoming more and more expensive. The following table is believed to be pertinent to this section of the report:

"Total Cost Incurred by the Pharmaceutical Industry for Research and Development in the 'Human Ethical Drug' Field."

Annual costs

Year:	*Million*
1951	$60
1956	110
1961[7]	227
1966[8]	400

H. EXTENT OF MEDICAL EXPERIMENTATION ON HUMAN BEINGS IN THE VETERANS' ADMINISTRATION (VA)

Originally, research was not provided for in the VA charter, however, today complete medical care and medical research is included and supported. Its widespread and cooperative hospital system has the largest and most diversified volume of clinical material under the auspices of a single agency. As of August 1966, the officially authorized bed capacity was 125,000. Of the total of 165 VA hospitals, 150 are conducting some type of research, and 90 hospitals are participating in various cooperative studies. The clinical investigative program is completely intramural and is guided by a staff of over 3,000 physicians and PhD's. Some 6,600 projects were reported by the Veterans' Administration in its 1965 report to the 89th Congress,[9] and more recently in capsule form to President Johnson. Most of the VA research is described as "applied" and covers the spectrum of disease mechanisms, prevention, detection, and treatment. It is believed that perhaps 60 to 70 percent of the total 6,600 projects consists of investigations on humans.

According to the November 28, 1966 issue of *Washington Report on the Medical Sciences* "the Food and Drug Administration would like to set up therapeutic trial centers at several VA hospitals. The idea is that FDA . . . physicians would use VA patients for testing drugs. FDA is already talking to . . . the Hines VA hospital in Chicago . . ." and the VA hospital in the Bronx.[10] Should such cooperative plans develop between the FDA and VA and also between the FDA and university-affiliated hospitals, a new level of scrutiny of human experimentation might result as well as the expediting of clinical trials on promising new therapeutic agents.

I. EXTENT OF HUMAN EXPERIMENTATION AS IMPLIED BY THE NUMBER OF PROFESSIONAL PERSONNEL ENGAGED IN MEDICAL RESEARCH IN THE UNITED STATES

If the number of fully trained researchers is indicative of the extent of experiments conducted on patients and normal subjects, then it should be useful to inspect both the absolute numbers of professional personnel and their rate of growth. An NIH report prepared in 1962 indicates the measure of change that has occurred and is now occurring along these lines:

Comparisons between 1954 and 1960 show that: (1) an increasing number of scientists are now engaged full time in research, and (2) those engaged part time in research now devote a greater share of their total intellectual effort to this activity. The number of part-time researchers has increased from nearly 8,000 (7,940) to approximately 20,000 (20,300). Not only has the number of part-time researchers increased, but these scientists are devoting a greater proportion of their time to research. Between 1954 and 1960 the full-time equivalence of part-time researchers mounted 188%, as compared with 155% for part-time researchers."[11]

The number of professional personnel engaged in medical research in the United States may be summarized as follows:[12]

Number of personnel

Year:	
1960	*39, 700
1954	19, 200
1958	34, 600
1970	77, 000

*About 65% of this number had doctoral degrees, of which 11,400 were M.D's. 70% of the doctorals were Ph.D.'s.

J. HUMAN EXPERIMENTATION ON MILITARY PERSONNEL

There is very little information available on the number and types of military persons who serve as subjects in research. Intuitively appraised, however, the number of topics and of human subjects must be large. This is especially true when figures are accrued over the past several years. The very existence of broad areas of specialty such as "submarine and diving medicine" and "aerospace medicine" attest to the operational environments wherein the armed forces are virtually forced to experiment. The three services have a long history of significant contributions to both military and civilian medicine which surely required hundreds if not thousands of experiments on sailors, soldiers, airmen, and marines. Earlier human experimentation on "tolerance for extreme heat" (Air Force), "nutrition and resistance to climatic stress" (Quartermaster Food and Container Institute for the Armed Forces), "studies of oxygen toxicity" (U.S. Navy), "A study of combat stress in Korea" (Navy and Army) are examples of the many types of human experiments designed to define the environmental limits of effective performance for the fighting man.

In a sense, tropical medicine is also a "military specialty" as it was in the South Pacific during World War II and as it continues to be in Southeast Asia today. The viral, bacterial, and parasitic disease of a new military environment like Vietnam are as unique as are the agents and tactics of the enemy; and new drugs and vaccines are brought to trial quickly on military personnel out of military necessity. We believe this is true because genuine need would dictate it. One need is for a new antimalarial drug, and the Army has already set up at least a hundred beds for clinical trials of drugs which show promise against a new strain of malaria in Vietnam.

Blood saves hundreds of lives among combat casualties and would save more if better preserved and if free of the hepatitis virus. New methods of preservation and sterilization of blood must be developed and approved for use. The final test is the human being, and very often the American soldier. Military personnel, of course, operate under special administrative regulations as well as under specific guidelines for both clinical and non-clinical experiments (see Part III). As for written informed and voluntary consent, even *The New England Journal of Medicine*, which has been most insistent and convincing about this issue, admits that "special consideration should be given to situations in which there may be limitations of a truly voluntary decision, as with . . . military personnel. . ."[13] Nevertheless, some military medical officials have invoked many of the newer precautions. One result—a vulnerable project on vaccine trials involving some 1500 military personnel has been held up pending further review.[14]

K. SUMMARY

In this section of the study, an attempt is made to arrive at the extent of human experimentation by both direct and indirect methods. The approaches employed include:

1. A 1961 survey of patient categories in NIH-supported projects.
2. The number of patients involved in NIH clinical investigations during 1966.
3. The number of research and training grants projects involving humans in a clinical and non-clinical context.
4. The number of subjects employed in the trials of some familiar drugs and vaccines.
5. The number of drugs tested on human subjects by the Pharmaceutical industry during 1958 and 1959.
6. FDA estimates of the number of persons subject to clinical trials with drugs during 1966.
7. The cost of drug development as it relates to human experimentation.
8. The estimated number of projects involving human experimentation in the Veterans' Administration.
9. The number of professional personnel engaged in medical research in the U.S.
10. A discussion of experimentation on military personnel.

These various approaches to a data base are on the whole allowed to speak for themselves. The collective message is suggestive of a very large volume of human research subjects. The next section of the study provides examples of conditions and provisions of subject consent under which this type of research was and is now conducted in the United States.

PART III. CONTROLS IMPOSED UPON HUMAN EXPERIMENTATION WHICH SPECIFY CONSENT OF PATIENT

Most of the organizations in the United States which are heavily involved in clinical research or what may be called human experimentation, seem aware of the responsibility at stake and therefore require the informed consent of patients and normal volunteers. Signed and witnessed forms or statements characterize the consent procedures in many laboratories and hospitals. There are also other principles and practices designed to protect the subject. Some examples of past and present attention to this aspect of the problem follow:

A. FDA's *Investigational Drug Circular No. 2.*[1]—outlines the FDA consent requirements as of 1964 and points out that the "concept" of patient consent has been a part of the code of ethics of the AMA for many years. The subject's consent for participation in new drug experiments is required by Federal Law.[2] The provision states in part that "experts using such drugs for investigational purposes certify to such manufacturer or sponsor that they will inform any human beings to whom such drugs, or controls used in connection therewith, are being administered, or their representatives, that such drugs are being used for investigational purposes, and will obtain the consent of such human beings or their representatives, except where they deem it not feasible or, in their professional judgment, contrary to the best interests of such human beings."

FDA regulations are discussed further under Part IV "Controls Imposed upon Human Experimentation by Law, Regulation, and Practice," but the law on which they are based is mentioned above because:

(1) Their statutory base as approved by Congress in 1962 does not require *written consent.*

(2) Some of the other regulations to be cited required written consent nearly a decade ago, particularly those of the Armed Services.

(3) The newer regulations are the result of efforts to bring procedures on experimental drugs into conformance with the specific requirements of statute.

B. "The Use of Volunteers in Aerospace Research." *Air Force Regulation No. 169–8* [3]—requires voluntary informed consent. Consent must be freely given and the subject signs a witnessed consent form.

C. "Conduct of Hazardous Human Experiments," *U.S. Air Force (ARDC) Letter,* dated September 12, 1958 [4]—is regarded as a good guideline for its time. It is significant because it deals with the conduct of human experiments other than those involved in flight test and those of a purely clinical nature.

D. "Use of Volunteers as Subjects of Research," *Army Regulation No. 70–25,* 1962 [5]—states that volunteers used as subjects of research in the U.S. Army must give consent freely and in writing.

E. "Clinical Use of Investigational Drugs," *Army Regulation No. 40–7,* 1964 [6]—contains a section requiring that the principal investigator make certain that all subjects are fully informed and their written consent be obtained. When an investigational new drug is not to the expected benefit to the persons to whom administered, final approval for the use of volunteers must be obtained through the Surgeon General, the Chief of Research and Development, of the Secretary of the Army, depending on the nature of the biological or chemical substance involved.

F. "Use of Human Volunteers in Medical Research," *Principles, Policies and Rules of the Office of the Surgeon General, U.S.N.,* March 12, 1954.[7] This document issued thirteen years ago served as a non-mandatory guide for planning and conducting contract research. It stated that "voluntary consent of the human subject is essential," and required that consent be freely given in writing in the presence of at least one witness.

G. "Investigational Drugs," *Bureau of Medicine and Surgery, Instruction 6710.49,* February 1964 [8]—provides guideline instructions on investigational drugs, to bring the Navy's practice into conformance with the consent of patient provisions of the Food, Drug, and Cosmetic Act (see III A).

H. "Experimentation on Personnel," *Manual of the Medical Department, U.S. Navy* [9]—forbids experimentation of a medical nature on persons in the Naval Establishment, except those experimental designs receiving prior approval of the Secretary of the Navy. Participation by personnel (military or civilian) shall be on a voluntary basis only, and volunteers will not be required to execute release from future liability for negligence attributable to the Navy.

I. "Statement on Interpretation of Regulations Governing the Use of Volunteers," *Armed Forces Epidemiological Board,* February 26, 1963. The Statement is as follows:

"Certain principles must be followed in determining the use of human beings as experimental subjects. The first of these is assurance of the voluntary nature of the process and the second is assurance that adequate safeguards have been set up to protect the person who volunteers. The third principle is that legitimate and necessary medical research must not be held back by over-legalistic interpretations of the regulations governing the use of volunteers as experimental subjects.

"The nature of the experiment must determine whether it is necessary to obtain the prior consent of the volunteer in writing, appropriately witnessed, as stipulated in the regulations (AR 70–25, 26 March 1962). For example, in dealing with experiments involving the induction of clinical disease with infectious agents, whether the disease caused is of trivial or more severe nature, the requirement is clear cut: it is essential that the written consent of the volunteer be obtained after appropriate information has been provided to him on the nature of the experiment and the hazards involved.

"The situation with respect to the development and evaluation of vaccines is different as illustrated by the following examples:

"(1) If the experiment is for the purpose of determining the immunological response of a man to a variation in an approved immunization procedure, prior consent in writing will not be a requirement. As an illustration: The strain formulation of influenza vaccine is subject to change from time to time. Because it is essential to determine the response of men in the military services to the viral strains included, it will not be necessary to obtain the written consent of each individual before testing a new formulation of an approved inactivated vaccine.

"(2) In considering the investigational use of a *new* vaccine, whether live attenuated or inactivated with which there has been significant experience among civilian populations, it is considered unnecessary that prior written consent of the test subjects be obtained. In these circumstances approval by the Surgeon General will constitute adequate safeguard for military personnel. In taking this action the comparative risk from the use of an effective vaccine would be weighed against the importance and risk of the disease to be countered." [10]

J. "Investigational Use of Drugs by the Department of Defense," *DOD Instruction Number 5030.39,* May 12, 1964.[11]

The purpose of this instruction is to specify how the detailed drug regulations of the Secretary of the Department of Health, Education and Welfare as published in the Federal Register on January 8, 1963,[12] will be applied to the investigational use of drugs by the Department of Defense. The provisions of the instruction apply to all DOD components and their contractors. The sections on "Responsibilities" and "Reports" state:

III. RESPONSIBILITIES

A. The Department of Defense assumes full responsibility for the protection of humans involved in research under its sponsorship whether this involves investigational drugs or *other hazards.*

B. Each Military Department will establish within the office of its Surgeon General a formal Review Board of professional personnel to consider each research proposal from within that Military Department or from its contractors or grantees which may involve the use of human subjects in the clinical investigation of new drugs. Before a clinical test with an investigational drug may be performed under the sponsorship of a Military Department—

1. the plan of the test and other pertinent details must be submitted to the appropriate Review Board.
2. the Board must indicate its approval, and
3. the approval must be confirmed by the respective Surgeon General.

IV. REPORTS

A. Clinical investigations that are classified for reasons of national security will not require the filing of a formal "Claim for Exemption" to the Department of Health, Education, and Welfare. Approval of the test by the appropriate Review Board and Surgeon General will automatically exempt the drug being employed from the application of the new drug section of the Food, Drug, and Cosmetic Act during the investigational study. The Military Departments will report to the Food and Drug Administration (copies to OSD unnecessary) findings associated with such studies which FDA should be aware of in order to make a sound evaluation of non-classified studies proposed on the same or similar drugs. Additionally, the Military Departments will discuss their classified investigations of drugs periodically with FDA personnel who have proper security clearance.

B. In the case of non-classified security research programs sponsored by the Department of Defense and conducted within its research facilities or for the Department upon contract, copies of the request for approval submitted to the appropriate Review Board, the Review Board's evaluation and approval, and notice of approval by the appropriate Surgeon General will be filed with the FDA as the claim for exemption for the investigational drug.

C. When the Department of Defense performs clinical tests upon new drugs being sponsored by the pharmaceutical industry, the ordinary claim for exemption (Form 1571 of the Investigational Drug Regulations) will be filed with the FDA.

An enclosure to this instruction indicates that DOD and DHEW formalized an agreement on IV A, IV B, and IV C (above) on Feb. 18, 1964.[13]

K. "Study of the Use of Investigational Drugs," *Veterans' Administration Circular 10–64–136,* July 6, 1964 [14] —was distributed to

---

Footnotes at end of article.

all relevant V.A. Medical Offices, hospital directors, and managers of regional and outpatient clinics. The circular established the use of a new form, *V.A. Form 10–1086,*[15] wherein consent from the patient in the investigation or use of new drugs was secured by his signature or that of his next of kin.

L. *The Committee on Research and Education for the V.A. Hospital in Kerrville, Texas,* May 16, 1966 [16] —recommended the application of A.M.A. requirements for experimentation on humans:

1. The voluntary consent of the person on whom the observations are to be made;
2. The previous testing of potentially hazardous procedures on animals;
3. The performance of the tests and observations on the patient under proper medical protection and management.

The Committee also approved modification of consent form, V.A. Form 10–1086, to include investigations other than drugs. On the form, "appropriate phrase for project," may be substituted for "name of drug."

M. *Echelons of Review for Experimentation on Humans in the V.A.*

The question of consent of patients being given for human experimentation in the V.A. involves, in addition, various echelons of review of the experiment itself. Although some emphasis on the ethics and merits of the total investigative picture is typical of clinical research in the United States, the activities of the Veterans Administration along these lines are believed to be representative.

Dr. Benjamin B. Wells, Deputy Medical Director for Research and Education states that the "Central Office does not officially approve research projects but approval or rejection of a research project is the responsibility of the Hospital Director. The local Research and Education Committee evaluates and either rejects or recommends approval. Recommendation of approval is forwarded through the Chief of Staff to the Hospital Director for rejection or approval. This procedure applies both to research projects not involving studies on human beings and projects involving studies on human beings".[17] The nature of these various considerations, especially as they relate to consent of patient, can be seen in the following examples from minutes of the V.A.'s *Research and Education Committees:*

V.A. Hospital—West Haven, Conn.[18]—Approved: Treatment of various types of infections with injections of a synthetic antibiotic to determine the effectiveness and safety of the drug when administered by injection. "Signed consent will be obtained from each patient studied."

V.A. Hospital—West Haven, Conn.[19]—Approved: Experiment with weight reducing drug as compared with a placebo, to be conducted on 36 patients each weighing in excess of 250 lbs. The study will be carried out over an 8-month period. "Written consent will be obtained from all subjects."

V.A. Hospital—Baltimore, Md.[20]—Approved: Use of patients for a project requiring the adminstration of 300 microcuries of radioiodinated albumin into arms and legs of patients without vascular disease. Committee approved "provided those requested to volunteer were less than 40 years old and signed an authorization on the procedure which largely presented the nature of the procedure and its complications."

V.A. Hospital—Ann Arbor, Mich.[21]—Tabled: Long-term trial of various drugs in the treatment of coronary artery disease. "Project was reviewed in detail with regard to protection of patients' rights and safety." It was "noted that any drug trial conducted in this Hospital must have a note in the Clinical Records stating that the patient has been informed of the experimental drug, or must include a satisfactory reason why such a statement is not present." This proposal was risky and the Committee tabled the matter until further information about university participation was available.

N. *Research Patients at the NIH Clinical Center, Bethesda.*—A statement by Dr. Topping is frequently quoted as representative of the center's emphasis on the rights and welfare of the patient:

"An over-riding principle governing our clinical studies is that the welfare of individual human beings takes precedence over every other consideration. Medical procedures or therapy substantially different from accepted general medical practices are often an essential component of clinical medical research. This offers the only means of acquiring certain information necessary to solve the problems of the diseases and disorders that afflict man.

"Ethical and scientific considerations dictate, however, that these investigations must be undertaken only after mature thought, under rigorously defined and controlled conditions, and under circumstances that will minimize the dangers of predictable or unpredictable hazards. The basic principle on which all such investigations must rest is that human beings have inalienable rights that supersede all other considerations that may be raised in the name either of science or of the general public welfare.

"The responsibility of the physician for the physical and mental well being of persons in his care and for observance of the ethics of his profession cannot be over-ridden by any element of study or research that is interjected into the relationship between the physician or surgeon and persons in his care." [22]

O. *The Normal Volunteer Program of the NIH Clinical Center.*—Public Health Service Publication No. 866 (Revised 1963) of the above title describe the need, use, and means of obtaining normal volunteers at NIH since the system was initiated in 1953. The entire pamphlet is recommended to the reader; however, we shall reproduce here only selected paragraphs in order to provide some enlightenment on this very important and delicate activity: [23]

"The mission of the National Institutes of Health is to assist in promoting the health of the Nation through research designed to extend knowledge and understanding of the causes, prevention, and treatment of disease. To gain a more thorough understanding of the ills that befall mankind, knowledge of what is normal and healthy often is an important prerequisite."

FROM LABORATORY TO MAN

"At some stage in all medical research, progress depends upon gaining knowledge from man himself. Clinical proof cannot be obtained in the research laboratory. The ultimate answers must be found at the bedside. Because of this, the Congress appropriated funds to develop and operate a clinical research center in close connection with the basic research activities of NIH."

SELECTION OF VOLUNTEERS

"Such individuals are carefully selected and are accepted only when referred by a reputable community agency willing to sponsor them . . . The sponsoring agency enters into a contract with individuals for this service. So far, some 1,650 Volunteers have served as study subjects in Bethesda. The studies in which they participate cover a wide range of medical research projects, and are very carefully planned and scrutinized so that there is little possibility of harm. Not only is participation purely voluntary—the individual volunteer's informed consent must be obtained prior to each separate study."

INFORMED CONSENT

"The principal investigator personally provides the assigned Volunteer, in lay language and at the level of his comprehension, with information about the proposed research project. He outlines its purpose, methods, demands, inconveniences and discomforts to enable the Volunteer to make a mature judgment as to his willingness and ability to participate. When he is fully cognizant of all that is entailed, the Volunteer gives his signed consent to take part in it."

P. *Dr. James Shannon's Memorandum of July 1, 1966,* "Group Consideration and Consent in Clinical Research at the National Institutes of Health." [24]

This memorandum from the Director of NIH to all institute, scientific and clinical directors, and including physicians participating in patient care, states that NIH recognizes informed consent of the patient or normal volunteer as one of the main principles guiding clinical research. It allows that "the form of obtaining and recording . . . informed consent may vary among the several Institutes and in dealing with patients as opposed to normal volunteers, but that the substance of informed consent . . . is not to be altered materially by any such differences in procedure."

The memorandum identifies two categories of research in patients, one which is essentially diagnostically or therapeutically oriented and the other not so oriented. This latter category, called "investigative" is "research not motivated wholly toward the patient and . . . the patient serves essentially as a volunteer."

Section IV of the memorandum states that each patient and volunteer shall be given an oral explanation "in terms suited to his comprehension" and particularly of any hazards, and that this information should be given to the patient on a continuing basis. Also, a summary record of this information and of its communication to the patient will be kept.

COMMENT

In this memorandum nothing is said or recorded about the *normal volunteer* once he has been told what the study is all about. As the statement is written, only the *patient* is informed on a continuing basis and only on patients are there records of information and communication. Similarly, in a following paragraph there is a specific Consent form (NIH–658–1)[25] which must be signed by the normal volunteer and the principal investigators, but none for the patient. Patient consent [26] is required, specific and written, either by the patient or next of kin. For those procedures not covered by the NIH approved list of procedures,[27] the principal investigator obtains and records the "agreement . . . based upon informed consent," but he does not sign it as he does for normal volunteers.[28] The terms "patient" and "normal volunteer" may be used interchangeably in this memorandum.

In the third paragraph [29] the responsibility for determining whether or not consent is *required* rests squarely on the principal investigator.

There may be good reasons for the above variations on the informed consent theme, based on the profession's experience with the problem. However, with respect to the responsive investigator, it seems undesirable that a single man should be exposed to such potential legal or professional risk. It is true that patient utilization in experimentation at NIH is preceded by group consideration and must be approved by Chiefs and Directors, nevertheless, the responsible investigator appears to be in the more vulnerable spot. This situation is typical of other clinical centers and research hospitals throughout the United States.

Along this line, in its report to Parliament 1962–63, Britain's Medical Research Council recommended that "controlled clinical trials should be planned and *supervised* by a group of investigators and never by a single physician." [30]

Q. *The Surgeon General's Memorandum of July 1, 1966,* "Revised procedure on clinical

---

Footnotes at end of article.

research and investigation involving humans."[31]

This well publicized memorandum (not to be confused with Dr. Shannon's memorandum of the same date to Officials at Bethesda), attached a revision of Policy and Procedure Order 129 (PPO No. 129) notifying heads of institutions receiving Public Health Service grants that the revised policy applied to all grants and awards.

PPO No. 129 assigns responsibility to the institution receiving the grant and requires the grantees to obtain and keep documentary evidence of informed consent and group reviews in decisions on the use of human subjects. No award or grant of any type involving human subjects (after November 1966) will be accepted for review unless the Public Health Service has approved an institution-wide assurance. This assurance must convey, among other things, that group reviews and decisions of that institution will be carried out in reference to the appropriateness of the methods used to obtain informed consent. Records of group reviews and decisions on the use of human subjects and of informed consent must be developed and kept by the institution, in order that acceptable assurance be recognized and established.

On December 12, 1966, the Surgeon General prepared another memorandum to heads of institutions receiving PHS grants, attaching a report on "clarification of procedure on clinical research and investigation involving human subjects." The report expands the application of *PPO No. 129* to include investigations in the behavioral and social sciences. Emphasis is placed on the age or competence of the subject to make an adequate judgment on his own behalf. "These are only some examples of issues which may arise . . . for this reason it is essential that the grantee institution be responsible for the clarification and resolution of all ethical and pertinent issues. The appropriate mechanism for this purpose is the utilization of groups of associates, established at the institution to provide competent, independent review."[32] Along the latter line, *PPO No. 129* had suggested that "there are advantages to both the PHS and the grantee in having the review conducted *prior to* application for PHS support."

Thus the new guidance and direction now goes beyond the Institutes and Clinical Center at Bethesda to embrace the entire extramural clinical research program of the Public Health Service, including institutions and projects which it supports in foreign countries. In the United States, this probably includes most of the hospitals and clinics affiliated with university medical schools.

A recent article in *Science* suggests that these regulations which permit "institutes to give a single comprehensive assurance that all research would be screened" has been well received by the universities. Nevertheless, the author of the article "suspects that the dust has yet to rise on many campuses and that it will take a good many years before a workable solution is found for the many difficult and moral problems that have now been proposed." The author notes that "the regulation covers psychological and social as well as biomedical research . . . though the PHS has had a favorable initial resonse from medical deans, I am prepared to bet that it has not heard the last from university faculty—or presidents."[33]

The Public Health Service continues to seek guidance on the issues which pervade the pursuit of clinical investigations. It was announced several months ago that PHS "awarded a $100,000 grant to the American Academy of Arts and Sciences in Boston to support inquiry into the "moral and ethical" basis for research involving human subjects. This study will involve a series of conference discussions—in which lawyers and sociologists, as well as physicians, and scientists, will participate–based on a prepared analysis of various aspects of the problem."[34] A report of the discussion will be published in the late 1967 or early 1968.[35]

SUMMARY

In this part of the study a variety of circulars, regulations, policies, procedure orders, instructions, statements, recommendations, and memoranda are identified and briefly quoted or paraphrased with respect to the question of the consent of patients. Some of these documents were issued several years ago and may have been superseded by newer versions. With one or two exceptions these "controls" are arranged chronologically as issued by the responsible agency.

The documents cited are those of the Armed Services, the Veterans Administration, and the Department of Health, Education and Welfare. Regulations of other agencies were reviewed, but none were found which dealt explicitly with the consent of subjects in medical experimentation.

It may be concluded that controls specifying the consent of human beings in clinical research have been in effect in one form or another over the past many years. It may also be concluded that all agencies, and especially the Public Health Service, and the Food and Drug Administration, are implementing a series of evolutionary steps to protect both the subjects and the performers of investigations in the achievement of the health goals of the nation.

It is too early to determine whether or not these agencies reacted too quickly to the recent "danger"; whether they over-reacted; or whether the reaction itself does not imply a greater degree of unethical practice than do the actual facts.

PART IV. CONTROLS IMPOSED UPON HUMAN EXPERIMENTATION BY LAW, BY REGULATION, AND BY PRACTICE

A. INTRODUCTION

"There is very little 'law' on . . . the proper use of human subjects in medical research . . . in American Jurisprudence, largely because there have been so few legal cases in our courts involving research. Ethical principles have not been developed especially applicable to research subjects. Physicians have relied on ethical requirements in regard to clinical patients to supply the guidelines for involvement of research subjects.[1]

B. FEDERAL LAWS

On October 10, 1962 the President of the United States signed an act amending the Food, Drug, and Cosmetic Act which completely changed the legal status of human experimentation in the United States. Intended "to assure the safety, effectiveness, and reliability of drugs," the act (Kefauver-Harris Amendments) ushered in a number of new regulations and controls, especially concerning procedures and practices having to do with investigational drugs. The result is the only Federal law which explicitly imposes controls upon human experimentation and which requires patient consent. The statute on this point reads:

"(i) Exemptions of drugs for research; discretionary and mandatory conditions; direct reports to Secretary.

"The Secretary shall promulgate regulations for exempting from the operation of the foregoing subsections of this section drugs intended solely for investigational use by experts qualified by scientific training and experience to investigate the safety and effectiveness of drugs. Such regulations may, within the discretion of the Secretary, among other conditions relating to the protection of the public health, provide for conditioning such exemption upon—

"(1) the submission to the Secretary, before any clinical testing of a new drug is undertaken, of reports, by the manufacturer or the sponsor of the investigation of such drug, of preclinical taste (including tests on animals) of such drug adequate to justify the proposed clinical testing;

(2) the manufacturer or the sponsor of the investigation of a new drug proposed to be distributed to investigators for clinical testing obtaining a signed agreement from each of such investigators that patients to whom the drug is administered will be under his personal supervision, or under the supervision of investigators responsible to him, and that he will not supply such drug to any other investigator, or to clinics, for administration to human beings; and

(3) the establishment and maintenance of such records, and the making of such reports to the Secretary, by the manufacturer or the sponsor of the investigation of such drug, of data (including but not limited to analytical reports by investigators) obtained as the result of such investigational use of such drug, as the Secretary finds will enable him to evaluate the safety and effectiveness of such drug in the event of the filing of an applicant pursuant to subsection (b) of this section.

Such regulations shall provide that *such exemption shall be conditioned upon the manufacturer, or the sponsor of the investigation, requiring that experts using such drugs for investigational purposes certify to such manufacturer or sponsor that they will inform any human beings to whom such drugs, or any controls used in connection therewith, are being administered, or their representatives, that such drugs are being used for investigational purposes and will obtain the consent of such human beings or their representatives, except where they deem it not feasible or, in their professional judgment, contrary to the best interests of such human beings.*[*] Nothing in this subsection shall be construed to require any clinical investigator to submit directly to the Secretary reports on the investigational use of drugs."[2]

Under the Act, the term "new drug" means:

(1) Any drug the composition of which is such that such drug is not generally recognized, among experts qualified by scientific training and experience to evaluate the safety and effectiveness of drugs, as safe and effective for use under the conditions prescribed, recommended, or suggested in the labeling thereof, except that such a drug not so recognized shall not be deemed to be a "new drug" if at any time prior to the enactment of this Act it was subject to the Food and Drugs Act of June 30, 1906, as amended, and if at such time its labeling contained the same representations concerning the conditions of its use; or

(2) Any drug the composition of which is such that such drug, as result of investigations to determine its safety and effectiveness for use under such conditions, has become so recognized, but which has not, otherwise than in such investigations, been used to a material extent or for a material time under such conditions.

According to this definition a "new drug" is not necessarily an entirely new entity, but may be (1) an old drug proposed for a new use; (2) a combination of two or more old drugs; (3) a combination of drugs in new proportions; (4) a new dosage form or method of administration of an old drug; or (5) it may be a new drug, because it contains a new component such as an excipient, carrier, coating or menstruum."[3]

C. FEDERAL REGULATIONS

The Code of Federal Regulations under Title 21 requires that the sponsor not commercially distribute nor test-market an investigational drug until a new drug application is approved pursuant to section 505(b) of the act. The sponsor shall obtain from each investigator involved in clinical pharmacology a signed statement in the form of FD1572 and from each investigator involved in clinical trials a signed statement in the form of FD1573. The two forms vary in detail except for the part on informed consent of subjects wherein the language of the statute is repeated vergatum as follows:[4]

FD1572

g. The investigator certifies that he will inform any patients or any persons used as controls, or their representatives, that drugs are being used for investigational purposes, and will obtain the consent of the subjects, or their representatives, except where this is not feasible or, in the investigator's professional judgment, is contrary to the best interests of the subjects.

Very truly yours,

______ ______,
______ ______,
______ ______,

FD1573

g. The investigator certifies that he will inform any subjects, including subjects used as controls, or their representatives, that drugs are being used for investigational purposes, and will obtain the consent of the subjects, or their representatives, except where this is not feasible or, in the investigator's professional judgment, is contrary to the best interests of the subjects.

Very truly yours,

______ ______,
______ ______.

On June 7, 1966 "Procedural and interpretative" regulations were published in the Federal Register to provide for situations in which an exemption for an investigational new drug be immediately terminated:[5]

"If at any time, the Commissioner concludes that continuation of a new drug investigation presents an imminent hazard to the public health, he shall terminate the exemption forthwith, notify the sponsor of the termination, and inform the sponsor that the exemption is subject to reinstatement on the basis of additional submissions which eliminate such hazard(s). The sponsor shall recall the unused supplies of the drug."

D. FDA'S STATEMENT OF POLICY OF AUGUST 24, 1966

A statement of policy concerning consent for use of investigational new drugs on humans was approved by Commissioner James Goddard of FDA and published in the *Federal Register* on August 24, 1966. The new statement attempted to expand, clarify and define the language of the 1962 amendments concerning consent and related matters as follows:

§ 130.37 Consent for use of investigational new drugs on humans; statement of policy.

(a) Section 505(i) of the act provides that regulations on use of investigational new drugs on human beings shall impose the condition that investigators "obtain the consent of such human beings or their representatives, except where they deem it not feasible or, in their professional judgment, contrary to the best interests of such human beings."

(b) This means that the consent of such human beings (or the consent of their representatives) to whom investigational drugs are administered primarily for the accumulation of scientific knowledge, for such purposes as studying drug behavior, body processes, or the course of a disease, must be obtained in all cases and, in all but exceptional cases, the consent of patients under treatment with investigational drugs must be obtained.

(c) "Under treatment" applies when the administration of the investigational drug for either diagnostic or therapeutic purposes constitutes responsible medical judgment, taking into account the availability of other remedies or drugs and the individual circumstances pertaining to the person to whom the investigational drug is to be administered.

(d) "Exceptional cases," as used in paragraph (b) of this section, which exceptions are to be strictly applied, are cases where it is not feasible to obtain the patient's consent or the consent of his representative, or where, as a matter of professional judgment exercised in the best interest of a particular patient under the investigator's care, it would be contrary to that patient's welfare to obtain his consent.

(e) "Patient" means a person under treatment.

(f) "Not feasible" is limited to cases where the investigator is not capable of obtaining consent because of inability to communicate with the patient or his representative; for example, where the patient is in a coma or is otherwise incapable of giving informed consent, his representative cannot be reached, and it is imperative to administer the drug without delay.

(g) "Contrary to the best interests of such human beings" applies when the communication of information to obtain consent would seriously affect the patient's disease status and the physician has exercised a professional judgment that under the particular circumstances of this patient's case the patient's best interests would suffer if consent were sought.

(h) "Consent" or "informed consent" means that the person involved has legal capacity to give consent, is so situated as to be able to exercise free power of choice, and is provided with a fair explanation of all material information concerning the administration of the investigational drug, or his possible use as a control, as to enable him to make an understanding decision as to his willingness to receive said investigational drug. This latter element requires that before the acceptance of an affirmative decision by such person the investigator should make known to him the nature, duration, and purpose of the administration of said investigational drug; the method and means by which it is to be administered; all inconveniences and hazards reasonably to be expected, including the fact, where applicable, that the person may be used as a control; the existence of alternative forms of therapy, if any; and the effects upon his health or person that may possibly come from the administration of the investigational drug. Said patient's consent shall be obtained in writing by the investigator.[6]

The reader should note that for the first time, regulations and policies pursuant to the Food, Drug and Cosmetic Act, require that consent be given *in writing*. This feature of the "new rules" produced a flurry of opposition, questions and uneasy feelings:

The Pharmaceutical Manufacturers Association's letter of October 11, 1966, argued with FDA's definition of "informed consent" as an apparent attempt at "codification of the mass of civil case law governing such consent as it applies to the administration of established drugs." The letter declared that it is impossible to reflect the status of law in that area, and "the requirements of what constitutes informed consent with regard to old well-known drugs cannot be applied to the administration of investigational new drugs. In the latter category, much of the information required to be imparted by the statement is not known. . . . In our opin-

---

Footnotes at end of article.

ion and in the opinion of many physicians and scientists [the written consent regulation] imposes conditions upon the investigator with which he is physically unable to comply." For example, "It requires a subject or patient to make medical decisions which he lacks the capacity to make. . . . It prevents the conducting of meaningful double-blind studies . . ." [and others].[7]

Among P.M.A.'s list of questions are: "Why must the investigator himself necessarily be the person to render a fair explanation of all material information? . . . What effect do the provisions of the policy statement have on studies in foreign countries? . . . Under the regulation, how will an investigator be able to treat a terminal cancer patient with an investigational new drug without informing such patient of his condition."[8]

The American Medical Association, in a letter sent to Dr. Goddard on September 28, 1966 by Dr. F. J. L. Blasingame (Executive Vice President), also expressed displeasure with the FDA policy statement. Selected quotations from the letter are: ". . . It is impossible for the commissioner to codify realistically, in the form of a policy statement, the legal requirements for valid consent under the myriad varying circumstances which exist . . . in our opinion . . . the policy statement exceeds the authority delegated to the commissioner, contains ambiguities which would result in confusion concerning the legal responsibilities of physicians in the investigational use of new drugs, and is an unwarranted interference with the practice of medicine."[9]

In the meantime, Dr. Goddard is "disappointed at the deportment of the medical community on this issue . . ."[10] and FDA lawyer Alvin Gottlieb states that "the patient-consent provision adds nothing to existing case law respecting the legal obligations of clinicians to obtain consent from their patients or test subjects . . . [FDA's standards] are essentially the same as presently required by the case law to preclude tort liability on the part of physicians."[11]

Although assured by an editorial in *The New England Journal of Medicine* that opposition "appears to have subsided [and that] sober appraisal seems to have resulted in general acquiescence if not enthusiastic endorsement,"[12] the FDA took all protests into consideration in a new revision of its patient-consent policy. The proposed policy was published in *The Federal Register* on March 11, 1967[13] and indicated that refinements were still in order by providing for written comments to be submitted within 30 days of the publication date. Substantial changes, however, are not anticipated in the new policy which appropriately ties its provisions to the Declaration of Helsinki as adopted by the World Medical Association and with the "Ethical guidelines for clinical investigation" as adopted by the American Medical Association. As now modified, there is some relaxation in the regulation governing patient consent, in that oral consent may be employed in the extensive final stage of clinical drug testing provided the investigator records that fact in the medical record of the person receiving the drug. Written consent is still required for the earlier and higher risk phases of investigational drug research.

It is apparent that FDA and PHS have sought studiously to construct adequate as well as acceptable "rules" since in their final form they "will govern patient consent in all investigational-drug trials in the U.S. [and] in case of conflict, [they] will supersede policies of other government agencies and private institutions."[14]

Approximately two years after the patient consent provision of the Kefauver-Harris Amendments became law, Senator Jacob Javits, the author of the consent provision in those amendments, "inquired as to whether doctors were observing the provision" and whether or not it would be feasible to make a general inquiry into the matter.[15] A follow-up report was prepared and submitted in response to this question. However, with written or oral consent soon to become a matter of record by Federal regulation, it should be possible in the future to determine with a considerable degree of confidence the extent to which ethical and legal rules are being practiced by clinical investigators and physicians who are engaged in drug testing.

E. STATE LAWS

Following a thorough search of the statutes of the States by the American Law Division of the Legislative Reference Service, Library of Congress, only three of the 50 States have enacted laws directly relevant to the question of medical experimentation on human beings. These are:

California [16]

McKinney's Annotated Codes, Penal Code, section 2690 empowers the Director of Corrections to authorize the temporary removal under custody of any prisoner "for purposes of cooperating voluntarily in medical research which cannot be performed at the prison or institution." This first appeared in 1961.

Oklahoma [17]

Statutes annotated, Title 63, sections 47.1 to 47.4 confer upon the Medical Research Commission (created by section 47.1) "jurisdiction of the supervision and control of all medical research projects and programs which may be instigated or proposed for the testing or experiment of any medical preparation or medical treatment wherein the facilities or prisoners of any penal institution or inmates of any other institution in the State of Oklahoma are involved . . ." No such program shall hereafter be conducted unless approved by the Commission. Nothing is said about how the prisoners are to participate in these programs and experiments, whether voluntarily or otherwise.

Virginia [18]

Title 53, section 57.1, Code of Virginia: "The Director of the Department of Welfare and Institutions may permit, under regulations prescribed by the State Board [Board of Welfare and Institutions], such prisoner or prisoners as may volunteer to undergo experimental treatment or tests in State or Federal medical research programs." (1962)

F. STATE REGULATIONS ON MEDICAL EXPERIMENTATION ON LIVING HUMANS

On August 16, 1966, a survey of the States was initiated in order to ascertain fully the extent of State administrative rule practice with regard to human experimentation. The following inquiry was addressed to the Attorney General of the States:

DEAR SIR: The Legislative Reference Service of the Library of Congress, which is a research unit for the United States Congress, has been asked to prepare research material dealing with the matter of medical experimentation on human beings as provided for in Federal and State laws, regulations, and systems of practice. While we have in our collections the laws and regulations of the United States and the statutes of the States, we are lacking in complete coverage of some State regulatory agencies and bodies. Therefore, we should appreciate it if you could provide us with the regulations, rulings, and other promulgations of any agency, commission, board, and similar body having jurisdiction in the matter of medical experimentation on human beings, with particular emphasis on the question of the consent of the subject. If your State legislature enacted pertinent legislation this year on this subject, we should also appreciate receiving copies of such laws.

While replies were not received from all of the States, the survey was considered complete for all practical purposes as of October 25, 1966.

The results of the inquiries are presented below:

(1) *States having administrative rules or regulations:*

(*a*) *Mississippi*

The Universty of Mississippi Medical Center (per letter from the Chairman of the Committee on Human Investigation) states that a Commmittee on Human Investigation has been appointed by the Director of the University Medical Center, Jackson, Mississippi. This Committee has met a number of times, "but we do not have, as of this date [August 23, 1966], any decisions which have the force of ruling and approval of the executive faculty." NIH grants are reviewed here for their "moral propriety."

(*b*) *New Jersey*

The New Jersey State Department of Health added in 1966 Regulation No. 18, to Chapter II of the State Sanitary Code (Reportable Diseases) which forbids the inoculation of humans with living microbiological agents, other than those agents approved by the Division of Biological Standards of the National Institutes of Health, unless prior permission is granted by the Department of Health after examination of the proposed action.

(*c*) *Texas*

The Board of Regents of the University of Texas, Medical Branch, Galveston, Texas, issued on May 23, 1966 a "Policy Statement Relating to Research Investigation Involving Human Beings." The University of Texas Southwestern Medical School, Dallas, Texas, through the office of the Dean, has issued a memorandum to all members of the faculty on the subject of research and investigation involving humans, dated April 26, 1966.

(*d*) *Vermont*

The University of Vermont, College of Medicine, Burlington, Vermont, issued on August 29, 1966 a statement entitled "Policy Governing the Use of Experimental Subjects (including medical students) in the College of Medicine." On March 31, 1966, Howard M. Smith, Associate for Institutional Programs at the University, issued a "Memorandum on Research and Investigation involving Human Beings as Subjects" to conform with U.S. Public Health Service policy on grants.

(*e*) *West Virginia*

The State Commissioner of Institutions states that at present he is working with the medical school to utilize prisoners on an experimental basis in saline solution tests, but this arrangement is only in the planning stage and no actual work has been done at this time. This information is as of September 23, 1966.

(2) *States which state that they have no administrative rules, regulations, etc.:*

Alabama, Arkansas, California, Connecticut, Delaware, Florida, Georgia, Hawaii, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Maryland, Montana, Nebraska, Nevada, New Hampshire, New Mexico, North Carolina, North Dakota, Ohio, Oregon, Pennsylvania*, Rhode Island, South Carolina, South Dakota, Tennessee, Utah, Virginia, Washington (State), Wisconsin, Wyoming.

(3) *The State of New York,* which did not respond to our inquiry, may have been

---

Footnotes at end of article.

*The Attorney General of Pennsylvania states that the Secretary of Health of the Commonwealth "has recently appointed a Committee on Clinical Research Involving Human Beings for the purpose of review and evaluation of the protocol for each research project involving humans that is conducted in institutions administered by the Department of Health or employing funds of that Department."

stimulated by it or more probably by the events set out below which we have entitled "A Case of Charge and Denial:"

A CASE OF CHARGE AND DENIAL [19]

Alcoholics admitted to Bellevue Hospital were subjected to needle biopsies of the liver for 'research' purposes, and the biopsies caused the death of five out of 1,000 such patients.

Liver biopsies at Bellevue are 'in no sense a research procedure, they're an essential part of good medical care,' said Dr. Lewis Thomas, dean of the New York University School of Medicine. Dr. Thomas, former chief of N.Y.U. medical services at the hospital, said pathology records 'for the last five years showed not one death caused by liver biopsy.'

Dr. Henry F. Ryan, chairman of the committee and a surgical pathology resident at Bellevue, challenged Senator Thaler to 'produce some case numbers . . . anything . . . on those liver biopsies.' He said that Bellevue pathology records showed no liver biopsy deaths for the past 'five or even seven years' in spite of the fact that the procedure is done on the average of once a day.

The liver biopsy issue came up again a short while later in a talk by Commissioner Terenzio to a Bellevue auxiliary group.

Biopsies had been done on alcoholic derelicts without their permission, he said, but the procedure was primarily for diagnosis, not research.

He also was quoted as saying there were instances in which more than one biopsy had been made on a patient 'as a follow-up to see what effect the treatment had.' He repeated the assertion by other Bellevue officials that there had been no liver biopsy deaths in recent years.

Surgical instruction at Harlem Hospital has resulted in the amputation of children's congenitally deformed limbs, instead of the more usual rehabilitation procedures, and at least one hysterectomy on a 23-year-old woman without her consent.

Harlem Hospital records show 'no pediatric limb amputations at all,' according to Dr. James B. Parris, the institution's chief resident in surgery. As to the hysterectomy, he said it was 'unthinkable' that such a procedure would be done without a patient's consent or medical necessity. 'We have as many as 10 hysterectomies a week in the routine surgical service,' he said, 'which is more instructional material than anybody needs.'

Five hundred or more mentally retarded children, aged three to nine, at Willowbrook State School were injected with live hepatitis virus in a research program.

At Willowbrook State School on Staten Island a hepatitis immunization research program has been going on for the past 11 years under a U.S. Army contract. Dr. Alan D. Miller, commissioner of the state Department of Mental Hygiene, said it has resulted in an '80 to 85 per cent reduction of this disease at Willowbrook for both patients and employees.' The number of children given hepatitis virus is about 250, not 500, he said.

The Willowbrook administrator, Dr. Jack Hammond, added, 'It may be sensational to say that retarded children are being injected with hepatitis virus, but it leaves out a lot of the story.' Equally important, he indicated, are the facts that (1) no child enters the program without written consent by fully informed parents, (2) if a susceptible child is not injected with hepatitis virus he will get the disease anyway, because hepatitis is endemic at Willowbrook, and (3) hepatitis is a relatively mild disease in children, often nearly impossible to detect for what it is.'

Senator Thaler, in a television interview, acknowledged that some effects of his speech were worrisome. 'I think I may have done a slight disservice to the community at large,' he was quoted as saying. 'When I get calls at home from people who say, "My doctor wants to put me in a hospital and I'm afraid to go," I begin to question whether this should be debated in public view.'

In a more general rebuttal, the Committee of Interns and Residents, which represents house officers in the city's hospitals, said that Senator Thaler's 'smear and scare tactics . . . not only falsely impugn the ability and integrity of the house staff physicians who service the city hospitals, but also frighten patients at those hospitals and thereby inevitably cause such patients to be fearful of and to forgo necessary treatment.'

In addition to the intimidation of patients that the charges are expected to produce, Dr. Ryan said, he foresees 'a profound effect on resident recruitment' at the city's hospitals.

But he also indicated he had not ceased to question whether 'informed consent' was valid from the subjects of some medical research in city hospitals. And he alluded to studies in which 'doctors didn't even think it appropriate to get written consent.'

Written consent from research subjects is required by city hospital regulations, as is authorization for experiments by the City's Commissioner of Hospitals. But in a TV interview of his own, Hospital Commissioner Joseph V. Terenzio said that some unauthorized medical experiments had been conducted in city institutions. He did not elaborate.

The following day, authorities at Kings County (Brooklyn) Psychiatric Hospital acknowledged that written consent had not been obtained from 3,000 patients given experimental drugs in the past 10 years, but the patients suffered no lasting harmful effects, a spokesman said. In many cases they were not the only ones who did not know what drugs they were getting, he added, since a number of the tests were conducted on a double-blind basis and even the physician administering the dosage could not tell whether it was drug or placebo.

RESULT

Meanwhile, Senator Thaler introduced legislation that would amend the State Civil Rights Law to prohibit the use of any person in medical research without his "voluntary, informed consent subscribed to in writing."

The measure also would declare "null and void" the consent given by a parent or guardian on behalf of a child participating in research, excepting in case of emergency "in which immediate treatment is necessary for a physical or mental ailment."

Otherwise, under the bill, an application would have to be made for a court order to authorize the use of a child in research.

Drug Research Reports [20] believes that New York State Senator Thaler's proposed patient consent law "may be a model for legislation in other states." *DRR* describes the principal provisions of the bill:

1. No persons shall be used in a medical experiment or other medical research without his voluntary, informed consent subscribed to in writing.

2. For the purposes of this section only, the term "voluntary informed consent" shall mean the consent of a person so situated as to be able to exercise free power of choice without the intervention of any element of force, fraud, deceit, duress or other form of constraint or coercion. The person shall have sufficient knowledge and comprehension of the elements of the subject matter involved as to enable him to make an understanding and enlightened decision after having been informed of the nature, duration and purpose of the experiment or research, the method and means by which it is to be conducted, all inconveniences and hazards reasonable to be expected, and the effects upon his health or person which may possibly result from his participation in the experiment or research.

The voluntary informed consent of a minor or of a parent or guardian on behalf of a minor shall be null and void, except in cases of emergency in which immediate treatment is necessary for a physical or mental ailment with which the subject is suffering. Upon application to a court of competent jurisdiction by an interested person, the court may authorize a medical experiment or other medical research on a minor when such experiment or research is related to the minor's physical or mental ailment and upon a finding by the court that the best interests of the minor will thereby be served.

4. Any person who initiates, directs, or engages in a medical experiment or medical research requiring voluntary informed consent subscribed to in writing by a subject of the experiment or research as provided for by this section shall keep such writing as a permanent record.

5. Any medical experiment or other medical research conducted in a hospital or public health institution subject to supervision by the state shall be subject to prior approval by a research cmte. composed of not less than three persons established in each such hospital or public health institution. Members of research cmtes. shall be appointed by the medical board or its equivalent in each hospital or public health institutions [sic]. At least one member of the research cmte. shall be a member of the clergy who resides within a 10-mile radius of the hospital or public health institution.

6. Any person who initiates, directs, or engages in any medical experiment or other medical research in contravention to the provisions of this section shall be guilty of a misdemeanor.

7. This act shall take effect June 1, 1967.

G. CONTROLS IMPOSED UPON HUMAN EXPERIMENTATION BY PRACTICE

The term, "practice," may be interpreted in several ways. In effect, most meanings of the term have adequate treatment in earlier parts and sections of the study. However, the performers of "experimentation" on human beings, whether in the course of regular medical practice or in the conduct of a genuine clinical investigation, are doctors who on the whole are guided by the codes, principles, and ethics of the large medical organizations to which they adhere through active membership. According to the *New York Times* of August 15, 1966 [21] "Eight medical organizations have now endorsed the ethical principles approved in 1964 in the Declaration of Helsinki by the World Medical Association concerning human experimentation." The eight medical organizations listed by *The New York Times* are:

"1. American Federation for Clinical Research.

"2. American Society for Clinical Investigation.

"3 Central Society for Clinical Research.

"4. American College Physicians.

"5. American College of Surgeons.

"6. Society for Pediatric Research.

"7. American Academy of Pediatrics.

"8. American Medical Association."

The following is what the organizations are reported to have endorsed:

(1) DECLARATION OF HELSINKI

Recommendations guiding doctors in clinical research

Introduction. It is the mission of the doctor to safeguard the health of the people. His knowledge and conscience are dedicated to the fulfillment of this mission. The Declaration of Geneva of the World Medical Association binds the doctor with the words: "The health of my patient will be my first consideration" and the International Code of Medical Ethics declares that "Any act or advice which could weaken physical or mental resistance of a human being may be used only in his interest."

Because it is essential that the results of laboratory experiments be applied to human beings to further scientific knowledge and to help suffering humanity, the World

---

Footnotes at end of article.

Medical Association has prepared the following recommendations as a guide to each doctor in clinical research. It must be stressed that the standards as drafted are only a guide to physicians all over the world. Doctors are not relieved from criminal, civil and ethical responsibilities under the laws of their own countries.

In the field of clinical research a fundamental distinction must be recognized between clinical research in which the aim is essentially therapeutic for a patient, and the clinical research, the essential object of which is purely scientific and without therapeutic values to the person subjected to the research.

I. Basic Principles

1. Clinical research must conform to the moral and scientific principles that justify medical research and should be based on laboratory and animal experiments or other scientifically established facts.

2. Clinical research should be conducted only by scientifically qualified persons and under the supervision of a qualified medical man.

3. Clinical research cannot legitimately be carried out unless the importance of the objective is in proportion to the inherent risk to the subject.

4. Every clinical research project should be preceded by careful assessment of inherent risks in comparison to foreseeable benefits to the subject or to others.

5. Special caution should be exercised by the doctor in performing clinical research in which the personality of the subject is liable to be altered by drugs or experimental procedure.

II. Clinical research combined with professional care

1. In the treatment of the sick person, the doctor must be free to use a new therapeutic measure, if in his judgment it offers hope of saving life, re-establishing health, or alleviating suffering.

If at all possible, consistent with patient psychology, the doctor, should obtain the patient's freely given consent after the patient has been given a full explanation. In case of legal incapacity, consent should also be procured from the legal guardian; in case of physical incapacity, the permission of the legal guardian replaces that of the patient.

2. The doctor can combine clinical research with professional care, the objective being the acquisition of new medical knowledge, only to the extent that clinical research is justified by its therapeutic value for the patient.

III. Non-therapeutic clinical research

1. In the purely scientific application of clinical research carried out on a human being it is the duty of the doctor to remain the protector of life and health of that person on whom clinical research is being carried out.

2. The nature, the purpose and the risk of clinical research must be explained to the subject by the doctor.

3.a. Clinical research on a human being cannot be undertaken without his free consent after he has been informed; if he is legally incompetent, the consent of the legal guardian should be procured.

3.b. The subject of clinical research should be in such a mental, physical and legal state as to be able to exercise fully his power of choice.

3.c. Consent should, as a rule, be obtained in writing. However, the responsibility for clinical research always remains with the research worker; it never falls on the subject even after consent is obtained.

4.a. The investigator must respect the right of each individual to safeguard his personal integrity, especially if the subject is in a dependent relationship to the investigator.

4.b At any time during the course of clinical research the subject or his guardian should be free to withdraw permission for research to be continued. The investigator or the investigating team should discontinue the research if, in his or their judgment, it may, if continued, be harmful to the individual.

PART V. OTHER DISCUSSIONS, CONSEQUENCES, SUMMARY AND CONCLUSIONS

A. TUE CERTAINTY OF LAW VERSUS THE UNCERTAINTY OF MEDICAL ART

As early as 1881 there was no little impatience with the medicolegal problems of experimental medicine. Elwyn L. Cady, Jr.[1] paraphrases and quotes one of the pioneers of early malpractice cases in America, J.J. Elwell, as follows:

The physician's (or surgeon's) difficulties and doubtful questions are much greater than those of the attorney, for, unlike him, the physician has no court of last resort, whose decision is conclusive, to pass upon unsettled questions.

While the law only holds the medical profession accountable for the faithful use and application of the fact, means and principles already discovered and understood, yet its honor as well as a great moral law, require of its members the discovery of new principles, new regulations, and the new application of old principles.

It seems important that not only should the physician or surgeon be able to vindicate his practice and account fully for the uncertainty of his science, but the lawyer, also, ought to fully comprehend all the embarrassments and impossibilities that environ a notable sister profession.

If the lawyer is clearly satisfied of these difficulties, as he certainly will be, by looking into their causes, very much vexations and ruinous litigation will be prevented, and intelligent, worthy men left unmolested to pursue untroubled their important professional duties . . ."

Here, lawyer Cady is utilizing another's argument "that scientific practitioners cannot properly be held liable for malpractice merely because they employ methods which are considered experimental."

The situation in *1900* is described by Taylor:[2]

One of the rules which the law strictly enforces for the protection of the public is that when there is an established practice or mode of treatment for a particular diseases or injury the physician must conform to the professional custom and adopt the established treatment, but will not be permitted to experiment without incurring liability for resulting injury."

And again in *1913* by Mitchell:[3]

The law deals mercilessly with those who for the purpose of experimentation deviate from the established mode of practice; that is to say, the physician is held to methods which have been universally accepted by the majority of the profession . . . the rule on its face seems harsh and arbitrary, for its application and enforcement means that any advancement in the science of medicine and surgery must be at the risk of the individual members of the profession. To the profession this must be still more apparent when they look back over the various periods of medical and surgical history and see the marvelous progress which has been achieved by the experiments of the learned ones of the profession. But such is the law with certain modifications and it should be kept in mind by the physician and surgeon.

According to Cady,[4] L. J. Regan's admonition in 1949[5] is that the ends are working against the middle and producing a product consumable only by the medico-legal enterprise.

Graphically analyzed, the admonition appears as the off-spring of a conflict between the two fields:

Science, medicine, experimental medicine.
Law, torts, malpractice.

"In the treatment of the patient, there must be no experimentation."

The current scene on these matters is only slightly improved. There are no direct statutes regulating and authorizing the total of human experimentation. Investigations involving human beings appeared in organic law almost as an afterthought in the Kefauver-Harris amendments. There were thousands of pages of testimony during the debate on the floor of Congress before the matter of "informed consent" was mentioned,[6] and a short section on the use of humans in new drug experiments was added to the Act. It is, of course, this statement in the law concerning informed consent of human experimental subjects with which our public health officials are now struggling in the development of regulations and policies. *Written (signed) consent* is now proposed,

---

Footnotes at end of article.

as pointed out earlier in FDA policy statements. This is not provided in the Act itself, and we have no way of ascertaining whether or not the Congress deliberately omitted such provision or whether or not the Congress was informed at the time on how much difference in procedure this technicality would amount to.

The experimental use of human beings for the advancement of science and preservation of health does not fall within regular practice as usually defined in statutes granting licenses to practice. Research is technically illegal or legally without foundation; that is to say, *regular practice is usually diagnosis, treatment, operation and prescription.*

The use of human beings in deliberate experiment does not fall within this definition. The breadth of the physician's practice does not extend to experimentation, nor is there any statute that states that a physician in practice can conduct experimentation. Human or clinical experimentation is regarded as improper behavior, malpractice, etc. The public and its elected officials desire medical advancement, but many view that adequate legal provision is not yet available for the necessary experiments to be conducted. They are conducted anyway, and as a result several students, doctors, and lawyers alike, have stated, "the physician experiments at his peril."

Attorney William J. Curran believes this much quoted statement to be "entirely misunderstood and an out-of-context admonition to researchers." His August 11, 1966 article on "The Law and Human Experimentation" argues that the development of law is now moving away from medical malpractice litigation. He objects to borrowing a "concept of informed consent" based upon much litigation and applying it to the Food and Drug Act and in the Surgeon General's Memorandum of July 1, 1966. He warns that since neither FDA nor the Surgeon General have clarified the concept, the medical profession cannot find security in the use of it, because it is not clear as the courts have thus far employed it. (FDA has since tried to clarify the concept—see Part IV.D.)

The author states that the trend in legal philosophy over the past 20 years is towards protecting individual rights and right of privacy. "Newer courts are not so apt to look kindly on the imposing of substantial risk on human subjects because of the potential benefits to greater numbers coming from experiments." The balance of risk against benefit is "a matter of judgment, pure and simple . . . such judgment relies heavily on hindsight . . . researchers can never rest easily on this issue." Since risk and benefit judgments are subject to review and second guessing, Mr. Curran as a lawyer advising professional people, does "not like this situation." He "prefers legal rules, that once followed, are a clear protection to (his) clients."[7]

It is interesting that Mr. Curran is pleading for "legal rules" for the protection of investigators, patients and volunteers. In contrast, the Committee of Safety of Drugs in Britain, in its second annual report, merely refers to "proposed legislation to provide for many of the procedures which at present are carried out under voluntary arrangements with the pharmaceutical industry. *The Committee has not felt hampered by any lack of statutory powers.* It is certainly important that any legislation should maintain the scope for flexibility and the exercise of professional responsibility which have been welcome features of the early years of drug control."[8]

B. THE TWO AREAS OF MEDICAL EXPERIMENTATION

There have been numerous pleas in literature which we have not cited that there be a clear distinction between the routine patient-doctor relationship and the patient-investigator relationship. This is either assumed to be a real difference or is a distinction required for other reasons. While it may be necessary to draw such an artifical line, it would nevertheless be exactly that. "Treatment without experimentation" is a statement rather than a fact. For example as Doctor Andrew Ivy states:

> In the medical sciences, the only method which can reveal and establish the cause, prevention, and treatment of disease is the method of controlled experimentation on animals and volunteer human subjects . . . Even after the therapy of the disease is discovered its application to the patient remains in part experimental. Because of the physiological variations in the response of different patients to the same therapy, the therapy of disease is, and always will be, an experimental aspect of medicine. We frequently forget to recall the fact that a patient is a volunteer experimental subject to the physician. The physician *practices* medicine today, and (because) the response of different patients to the same therapy will always vary to some extent, the physician will always *practice* medicine on his patients."[9]

A similar point is made more recently by Dr. Alvan R. Feinstein, Chief, Clinical Biostatistics, West Haven, Connecticut Veterans Administration Hospital and Associate Professor of Medicine, Yale University School of Medicine:

> Every act of routine clinical treatment is an experiment . . . as the "material" of clinical therapy, a patient . . . is the only experimental object that can talk and that can choose when, how and by whom the experiment is to be conducted.[10]

In any case, the operating facts are that clinical research and clinical practice are not clearly separable on experimental grounds. The methods of medicine are empirical enough so that a doctor's total clinical *experience* includes *experiment*—and on humans—his patients. Although the corporate body of American physicians may not be involved in human experiment by design, it is illusory to regard the practice of medicine on humans as free of experiment on humans. The relationship may be different, but the risk in numbers of patients is not necessarily less. This statement weakens only as we approach dangerous human experiments, or unnecessary human experiments.

The point is that "bad medicine" and pills are removed from the market, not just because a designed experiment on human beings shows that they are dangerous, but because clinical experience does. Penicillin reactions became known because physicians noted them on human beings in their practice. The conduct of the national field trials of the Salk polio vaccine "is an outstanding example of careful preparatory design and obedience to local legal requirements as well as scientific adequacy," yet it was in practice that risk and damage developed.

Also it is not certain that a single drug firm engaged in a global clinical trial involving 3,000 subjects in a dozen countries on evaluation of a single drug with the test population all under informed voluntary consent—cannot be matched by another drug, whose efficacy, side effects, and other properties are questionable and is being dispensed by physicians to patients in the ordinary course of medical practice. In Britain in 1963, 4,000 reports of adverse drug reactions were reported, most of them coming from general practitioners. The two processes are all part of the advancement of medicine and in the overall interest of public health.

What health officials, and especially the Commissioner of the Food and Drug Administration, desire, is a shift in these processes towards a substantial reduction in dangerous and ineffective drugs in the American marketplace. But the experiments when warranted and needed must be performed on humans somewhere, and this means volunteers and patients wherever clinical investigators are able to find them and obtain their written consent to participate. Safety and efficacy will or will not be established only after many trials and considerable expense. This movement of the evaluation of drugs from the practitioner to the investigator may be quite necessary, but no one should be led to believe that the line can be sharply drawn. The final proof is determined only when the large and varied population of human beings receive a drug under prescription. This is because the experimental groups employed in the drug trials may not be representative samples of the "normal" population seeking aid and comfort from their regular doctors.

C. THE BASIS FOR PREOCCUPATION WITH INFORMED CONSENT

(1) The plea for consent valid in law is based upon the belief that if a subject suffered injury or death as a result of an experiment, the courts might rule in favor of the plaintiff if any doubt existed concerning the investigator's precautions, competence, or accidental negligence. "Valid in law" presumably means that the volunteer be his own judge of the nature and extent of the risk involved and that he acknowledge this judgment in writing. Ladimer[11] and Lauppi[12] express general agreement on the view that statutes, regulations, and case law applying to medical malpractice are pertinent to experimentation. Signed informed consent should therefore protect the experimenter legally.

(2) Signed informed consent would provide the government a means of checking to make certain that investigators are carrying out the provisions in the law.

(3) Signed informed consent also accomplishes the protection of privacy of the individual subject. This point is in vogue and dominates most of the literature on the total subject.

Admitting that individual privacy has come to be an "argument-stopper" in recent months, psychologist Wolf Wolfensberger places the argument that research must not violate a person's integrity (sacred and inviolable) in a new perspective:

> . . . the fact is that society constantly encroaches upon individual lives and freedoms for the sake of the community or mankind as a whole. We do not give driving licenses to 12-year olds—no matter how competently an individual youngster may drive. Traffic and labor laws, the draft for the armed forces, and many other conventions, designed and tolerated for what is believed to be the welfare of society, may detrimentally affect an individual. In some instances we may infringe the rights of an individual not in order to benefit or punish him, prevent him from harming others, or keep him from harming himself, but to benefit others—as when we levy taxes (without individual consent) or ask a man to risk his life (perhaps with his consent) to save women and children during a shipwreck. The crucial point is not that conventions be fair and just in each instance, but that they be administered in a fashion characterized as constituting "due process."

The controversy regarding conduct of research has served to increase the tension between the long-range interests of society, science, and progress, on the one hand, and the rights of the individual, on the other. It is important that this tension should be a creative one resulting in a higher order of problem-solving that safeguards both interests, rather than a solution that gravely impedes the progress of science. Society must preserve the delicate balance between these interests, realizing that the cost of excessive restriction of research can come very dear.

Footnotes at end of article.

If a code of due process of research ethics is ever to be formulated, it must be based on clearly stated principles. In order to identify these principles, the issues must be sharply defined and disentangled from the irrationalities and cliches in which they are currently enmeshed.[13]

The Panel on Privacy and Behavioral Research of the Office of Science and Technology[14] should also be quoted on this issue:

Basically, then, the protection of privacy in research is assured first by securing the informed consent of the subject. When the subject cannot be completely informed, the consent must be based on trust in the scientist and in the institution sponsoring him. In any case the scientist and his sponsoring institution must insure privacy by the maintenance of confidentiality.

Our society has grown strong on the principle of minimizing costs and maximizing gains, and, when warmly held values are in conflict, there must be a thoughtful evaluation of the specific case. In particular we do not believe that detailed governmental controls of research methods or instruments can substitute for the more effective procedures which are available and carry less risk of damage to the scientific enterprise.

Legislation to assure appropriate recognition of the rights of human subjects is neither necessary nor desirable if the scientists and sponsoring institutions fully discharge their responsibilities in accommodating to the claim of privacy. Because of its relative inflexibility, legislation cannot meet the challenge of the subtle and sensitive conflict of values under consideration, nor can it aid in the wise decision making by individuals which is required to assure optimum protection of subjects, together with the fullest effectiveness of research.

Dr. Hedley Atkins in Britain comes back to the stark reality of informing the patient as follows:

From the point of view of ethics the problem arises of whether patients should be informed that they are taking part in a trial. Often this is desirable, and may in many instances be helpful and encourage the patient to attend for the frequent examinations that may be demanded in the interests of the trial rather than the patient. Nevertheless, it is not always desirable, and at a meeting of the Medical Research Council which was attended by the Treasury Solicitors, and where the legal and ethical aspects of this matter were considered, it was decided that there was no obligation on the part of an investigator to inform a patient that he was participating in a trial. Particularly is this so in the trial of methods of treatment for desperate cases or advanced disease. If the trial is ethical by the criteria outlined above, and if therefore the choice of treatment is really being made by the "toss of a coin," it is not considered to be the best part of doctoring to inform a patient so gravely ill that we do not know how to treat her, and that the choice of treatment is being so determined.

If there are problems—ethical, scientific, and even mathematical—associated with controlled trials it nevertheless remains the case that this technique holds out greater promise for advance in therapy than any yet devised. More important, however, is that recognition of the scientific basis upon which such trials are constituted will ensure, so far as is possible, that the undesirable state of affairs prevailing in medicine during the first half of this century will never be repeated to the extent of producing so many false trials and so many unnecessary and unworthy modes of therapy.[15]

Finally, although the problems of informed consent require a more serious approach than that proposed by Preston J. Burnham his facetious "consent form" demonstrates how many risks or points of risk there are is a well established surgical procedure:

Proposed informed-consent form for hernia patient: I ———, being about to be subjected to a surgical operation said to be for repair of what my doctor thinks is a hernia (rupture or loss of belly stuff—intestines—out of the belly through a hole in the muscles), do hereby give said doctor permission to cut into me and do duly swear that I am giving my informed consent, based upon the following information:

Operative Procedure is as follows: The doctor first cuts through the skin by a four-inch gash in the lower abdomen. He then slashes through the other things—fascia (a tough layer over the muscles) and layers of muscle—until he sees the cord (tube that brings the sperm from testicle to outside) with all its arteries and veins. The doctor then tears the hernia (thin sac of bowels and things) from the cord and ties off the sac with a string. He then pushes the testicle back into the scrotum and sews everything together, trying not to sew up the big arteries and veins that nourish the leg.

Possible complications are as follows:

1. Large artery may be cut and I may bleed to death.
2. Large vein may be cut and I may bleed to death.
3. Tube from testicle may be cut. I will then be sterile on that side.
4. Artery or veins to testicle may be cut—same result.
5. Opening around cord in muscles may be made too tight.
6. Clot may develop in these veins which will loosen when I get out of bed and hit my lungs, killing me.
7. Clot may develop in one or both legs which may cripple me, lead to loss of one or both legs, go to my lungs, or make my veins no good for life.
8. I may develop a horrible infection that may kill me.
9. The hernia may come back again after it has been operated on.
10. I may die from general anesthesia.
11. I may be paralysed if spinal anesthesia is used.
12. If ether is used, it could explode inside me.
13. I may slip in hospital bathroom.
14. I may be run over going to the hospital.
15. The hospital may burn down.

I understand: the anatomy of the body, the pathology of the development of hernia, the surgical technique that will be used to repair the hernia, the physiology of wound healing, the dietetic chemistry of the goods that I must eat to cause healing, the chemistry of body repair, and the course which my physician will take in treating any of the complications that can occur as a sequel of repairing an otherwise simple hernia.

D. POSSIBLE CONSEQUENCES OF DRUG REGULATIONS

(1) Reduction in number of new pharmaceutical specialties.

The table below[17] shows a marked reduction in the production of new pharmaceutical specialties since 1959. This includes all forms of new products as well as new single chemical drugs:

31, 1955	403
42, 1956	401
51, 1957	400
44, 1958	370
63, 1959	315
45, 1960	311
41, 1961	265
28, 1962	255
18, 1963	213
17, 1964	162
23, 1965	119
13, 1966	82

31, 42, 51 etc. New Single chemicals.

403, 401, 400 etc. Total number of new products marketed.

These data may reflect the now slower process of obtaining approved New Drug Applications from FDA since the enactment of the 1962 amendments, or they may not. Since the downtrend predates the amendments, it is difficult to point to the amendments as the cause of any effect except possibly the continuation of the trend since 1962. The low number of new single chemicals marketed in 1966 (13) and the total number of new products (82) is a bit on the alarming side in view of the Nation's overall competence in organic and pharmaceutical chemistry and in view of the large amounts of funds invested by government and industry for developing new drugs. Research and Development spending by both government and drug firms has been especially high in recent years in the areas of cancer chemotherapy, psychopharmicals, vaccines, and antibiotics. It is unlikely that the 1966 data in the above chart reflect the July 1, 1966 policies from Bethesda or the August 24, 1966 "patient consent in writing" policy of FDA.

The low number of new drugs in some categories probably indicate industrial efforts to concentrate research on more original and effective drugs and perhaps on newer methods of comparative physiology and chemical testing. The purpose of these new methods is to "signal" the promise, or lack of it, of a new chemical without the risk and expense of human trials. Fewer products and the extensive technical information required by FDA, of course, increase the cost per product. The Pharmaceutical Manufacturers Association now estimates the average cost of a single fundamental new drug entity at $5 million.[19] DuPont's "Symmetril" cost $8 million dollars. Clinical trials (human experiments) were conducted on 300 volunteer college students at or organized by the University of Illinois College of Medicine.[20]

(2) Difficulty in obtaining volunteers.

The Army and Air Force report difficulty in obtaining volunteer donors for participation in the "research programs involving the use of adenine to the standard anticoagulants for the purpose of prolonging the useful viability of the red blood cells."

It is reported that only about one of ten donors approached agreed to participate in this research and then only when they are paid the minimum donor fee of $25.00.

In the recent Veterans Administration Research Conference it is reported that 80% to 90% of individuals who had agreed to participate in research in VA hospitals withdrew when they were informed they would be required to sign the research consent forms.[21]

E. THE STATE OF HEALTH OF AMERICAN MEDICAL ETHICS

Dr. Irving H. Page of the Cleveland Clinic, is not so confident of the current status of medical ethics. He believes the public as well as physicians are constributing to the erosion of ethics and to the loss of the singular position of the physician in society. In an editorial in *Science,*[22] Dr. Page continues, "The sanctity of the human body has long been considered inviolate, as has the relationship between patient and physician. It is on just these questions that the problem of consent for operations, drug testing, organ transplanting, and experimentation has hit a snag. Despite millions of words, we are no closer to solving such problems than we were before the Kefauver investigation. Indeed, we have managed to hide our dilemma by the simple device of word coverage."

Dr. Irving S. Cooper, Research Professor of Neuronatomy, New York Medical College, believes the dilemma to be in society and particularly in medical education itself:[23]

Footnotes at end of article.

Among basic causes of this ethical crisis is impersonality of graduate education. Some medical scientists, tending to seek conditions of experimentation of the physical scientist, are not sufficiently mindful of the fact that patients being studied are not objects. They thereby tend to confuse means with ends.

If . . . arrogance, lack of compassion, indifference and inhumanity exist within the realm of clinical research in alarming proportions, these are, in part, a reflection of the same traits in our society at large. However, although lack of humaneness can be overcome in society by stricter enforcement of laws, in medicine the ultimate concern with the individual patient will always depend upon the individual physician.

Because of the increasingly scientific and complex nature of medical specialties, it is often necessary to approach problems of clinical research in a fragmental manner. To assure precision, concentration, quantitation and controlled experimentation, it is sometimes necessary to become overconcerned with the ultra-little.

This overconcern with fragmentation in the applied biologic science of medicine makes it not only more difficult but also dangerous, in a scientific sense, to face the larger question or the greater responsibility. This is exemplified by the retreat of many full-time clinical professors to the laboratory. This not only enhances their scientific status; it makes it unnecessary to make more than token appearances on the wards. This attitude, in itself, is commendable from a scientific standpoint. But it does diminish (in the mind of the medical student, if not the professor himself) the worth and importance of the patient. It may even contribute to diminution of the value of the student's image of himself as an individual, as one more aspect of the conglomerate society.

. . . a thoughtful effort to give language real meaning when defining and teaching medicine should be undertaken. For example, despite strides during the past two decades towards application of scientific principles to diagnosis and therapy, medicine in its broader sense is still a very inexact applied science. The temptation to teach medicine as though it were a pure science should be resisted. The philosophy and morality of the physician or surgeon, in some instances, contributes as much to the result of the exercise of his healing art as does his scientific training—even in the technologically complex surgical specialties.

The physician, for his own sake as well as for the welfare of his patients, must be able to understand the general anxieties and preoccupations that diminish man in his own view, and which play an increasingly important role when he is ill. The metaphysical anguish of the absurdity of the human condition in the modern world is seen in its purest form in the estranged, lonely inhabitants of our hospital wards. Purposeful training towards an understanding of this greater problem should be part of medical education.

Dr. Cooper proposes a "continuing course in Humanities throughout the four-year medical school and beyond . . .

Not only would this go a long way towards realizing an intelligent, informed, compassionate physician, able to render judgments, it would also contribute towards an educated, well-rounded medical profession capable of preserving not only medical research grants but the society in which we live.

Dr. Cooper's proposal to include the Humanities in the medical school curriculum will be realized soon in at least one medical school; namely, the new College of Medicine of Pennsylvania State University at the Milton S. Hershey Medical Center. A humanities department is scheduled to begin operation next September. "The department according to Dean George T. Harrell, will include faculty in comparative religion, philosophy and ethics, history of science, and will start with one man in each field. Eventually, Harrell said, he hopes to double the faculty. The humanities will be taught through seminars and lectures interwoven throughout the regular medical school curriculum." [23]

F. SUMMARY AND CONCLUSIONS

It seems clear enough from the information gathered and presented in this report, particularly Part II on "the Extent of Medical Experimentation on Human Beings," that thousands of clinical tests, trials, and experiments are being conducted in the United States. The increase in such investigations in recent years may be ascribed in part to the extensive number of clinical trials required by FDA to establish the efficacy and safety of a new drug before it can be approved for regular patient use. Another factor contributing to the large number and variety of experiments involving humans is the escalating scale in underwriting clinical research by our Federal Government.

Nevertheless, the degree of carelessness, mistakes, or poor judgment in this national effort to protect the public and yield effective modes of therapy must be relatively small. The language of the numerous controls, old and new, is too strong and overall professional scrutiny now too extensive for the situation to be otherwise. Should all of the charges of unethical or questionable procedures over the past year be indefensible, which they are not, the extent of such cases compared to the extent of genuine ethical manipulative experimentation would be well below the usual percentage of misconduct in other comparable areas of our culture.

Although the more recent attention to the question of human experimentation evolves largely from the "consent in writing" issue, the use of signed consent of humans in treatment by surgery or in deliberate experimental manipulations of a risk provoking nature, has been a part of civilian and military research for many years. This does not mean that all clinical investigations are without fault with respect to morals and ethics; it does mean that practice has kept a reasonable pace with the emphasis on civil and individual rights, and that in some types of research such practice has been well ahead of the specific principles now emerging from public health officials. (See Part III.)

Indeed, one question which the Congress might explore is whether the new promulgations of the Public Health Service and the Food and Drug Administration represent a recently acquired knowledge on their part that human experimentation is now conducted in disregard of traditional ethics or that such promulgations are regarded as the only means of coping with certain professional, political, and journalistic attitudes.

The medical profession, charged by Congress over the past few sessions, to "get on" with new dimensions of prevention and treatment of the ills of man, could well use a vote of confidence from the people's representatives. The Public Health Service, the Food and Drug Administration, the pharmaceutical industry and the medical community at large, deserve commendation for their efforts, judgment, and ethical precautions to date in the hot war against disease. And while the complex and fundamental issues of medical research on human beings undergo re-evaluation, it should be made clear to the public and to non-experimenting M.D.'s that the battle to conquer disease may often become very "rough" and that the exquisite corners of declarations, codes, and conventions will from time to time suffer from the abrasion of enthusiasm and error.

With the welfare of mankind at stake personal incentives must be put aside, and the core of medical ethics and means of progress inspected with an unprecedented objectivity. And as Harvard Professor Paul Fround states, the problems and issues belong to an informed populace:

> It behooves the medical profession to take the public into its confidence and to educate the public opinion rather than risk the shock and explosion of pent-up revulsion if the lid is pressed down on information and then blown up by some melodramatic case.[24]

This study suggests that the foregoing may be undertaken with deliberation rather than haste. The danger is recognized and provisions concerning it are in effect. The steps taken thus far seem more than sufficient to contain the public's concern and to protect patients and subjects in ongoing experiments. These steps now require further scrutiny for at least two reasons: First, they may be too hurried and too often superseded by closely spaced revisions and clarifications. Second, they may reflect the voice of one side of the discussion—the critics—the nature of whose statements appear to bear the mark of the overzealous. Dr. Maxwell Finland of Harvard Medical wrote a "critical commentary" on this general theme last year in *The Journal of the American Medical Association:*

> Among the recent fallout of these explosive events, have come some broad accusations as well as specific indictments of immoral and unethical practices in studies carried out by unnamed but readily identifiable investigators. In some if not most instances, the competence of the accuser to judge the subject matter—with the advantage of hindsight—including the limited acquaintance of the critic with the logistics or the details of the studies, are at least as debatable as the propriety of the investigations to which objections were taken. And even were the critic knowledgeable in these regards, it would certainly be most unfortunate if the personal experiences that impel once admittedly competent physician-investigator to carry out studies at a given time and in a given manner were to result in accusations of moral or ethical irresponsibility because another investigator with different experience—or the critic himself—holds contrary opinions or convictions.
>
> Many thoughtful and responsible individuals involved in the current discussions have expressed concern that, as a result of all this turmoil, restrictions may be put on investigations in human beings which may stifle further scientific pursuits essential for improvements in our understanding, management, and prevention of the ills of man. Perhaps the least vocal among these individuals have been just those conscientious investigators who have been most deeply respectful and considerate of the interest of their patients and investigative subjects and who have gone to the greatest difficulty, because of the added effort required to abide in detail by the letter and fullest intent of the current restrictions. The more conscientious among them would be the most concerned about the interpretations given their studies by unsympathetic or hostile critics. Though these conscientious investigators may have real and valid objections, they may choose to remain silent less their motives be misinterpreted by zealous crusaders.[25]

While there is no evidence that the temple of medicine is under seizure by irresponsible investigators who are ignorant or indifferent to the commandments of the profession, there remains an enigma that an enterprise so important to the culture and so fraught with "occupational hazards" functions in nearly the complete absence of statute which authorizes the occupation in the first place or protects the responsible participants from the hazards of that occupation in the second place. The temple hierarchy, which usually rejects the concept of control by "external" statute, may be unwary of the potential problems that lie ahead in the

legal and ethical dynamics of an intensified attack on the diseases of man.

. . . there are no doubt many paths which lead to the acquisition of clinical knowledge that might profitably be explored; but if there are many paths I believe there is only one high-road to an increase in therapeutic knowledge, and that is the controlled clinical trial."

HEDLEY ATKINS,
President of the Royal College of Surgeons of England.[26]

ADDITIONAL COSPONSORS OF BILLS AND JOINT RESOLUTIONS

S. 2794

At the request of Mr. WILLIAMS, the Senator from Texas (Mr. TOWER) was added as a cosponsor of S. 2794, the "National Flood Insurance Act Amendments of 1971."

S. 3441

At the request of Mr. KENNEDY the Senator from Wisconsin (Mr. NELSON) was added as a cosponsor of S. 3441, a bill to extend the traineeship program for professional public health personnel.

S. 3615

At the request of Mr. CRANSTON, the Senator from Massachusetts (Mr. KENNEDY), the Senator from New Jersey (Mr. WILLIAMS), and the Senator from Oklahoma (Mr. HARRIS) were added as cosponsors of S. 3615, a bill to authorize grants to the D-O University.

S. 3639

At the request of Mr. CRANSTON, the Senator from California (Mr. TUNNEY), the Senator from Michigan (Mr. HART), the Senator from Minnesota (Mr. MONDALE), the Senator from Missouri (Mr. EAGLETON), the Senator from Utah (Mr. MOSS), the Senator from West Virginia (Mr. RANDOLPH), and the Senator from Wyoming (Mr. MCGEE) were added as cosponsors of S. 3639, a bill to amend the Food Stamp Act of 1964 to authorize the use of food stamps by elderly persons to purchase meals prepared and served by certain institutions.

S. 3752

At the request of Mr. KENNEDY, the Senator from Wisconsin (Mr. NELSON) was added as a cosponsor of S. 3752, the Medical Libraries Act of 1972.

S. 3762

At the request of Mr. KENNEDY, the Senator from Wisconsin (Mr. NELSON) and the Senator from Colorado (Mr. DOMINICK) were added as cosponsors of S. 3762, a bill to extend the program for health services for domestic agricultural migrant workers.

S. 3858

At the request of Mr. KENNEDY, the Senator from Wisconsin (Mr. NELSON) was added as a cosponsor of S. 3858, the Emergency Health Personnel Act Amendments of 1972.

S. 3881

At the request of Mr. CHILES, the Senator from Oregon (Mr. PACKWOOD) and the Senator from California (Mr. TUNNEY) were added as cosponsors of S. 3881, a bill to provide that meetings of Government agencies and of congressional committees shall be open to the public.

S. 3923

At the request of Mr. METCALF, the Senator from Oklahoma (Mr. HARRIS) was added as a cosponsor of S. 3923, the Corporate Ownership Reporting Act.

SENATE JOINT RESOLUTION 170

At the request of Mr. BAYH, the Senator from Illinois (Mr. PERCY) was added as a cosponsor of Senate Joint Resolution 170, a proposed amendment to the Constitution of the United States lowering the age requirements for membership in the Houses of Congress.

SENATE CONCURRENT RESOLUTION 93—SUBMISSION OF A CONCURRENT RESOLUTION RELATING TO THE 100TH ANNIVERSARY OF THE FOUNDING OF THE AMERICAN PUBLIC HEALTH ASSOCIATION

(Referred to the Committee on the Judiciary.)

HONORING THE 100TH ANNIVERSARY OF THE AMERICAN PUBLIC HEALTH ASSOCIATION

Mr. WILLIAMS. Mr. President, today I am introducing a concurrent resolution extending appropriate best wishes to the American Public Health Association on the occasion of its 100th anniversary.

Only 100 years ago, when knowledge and experience in the area of health care was minimal, it was fortunate for any person to survive from childhood to 40 years of age. At that time, a newborn child was given only a 75 percent chance of reaching his 50th birthday. Stephen Smith, a New York physician and health-care pioneer, appropriately summarized the situation in the mid-19th century when he stated:

> Smallpox, scarlet fever, measles, diphtheria, were domestic pestilences with which the people were so familiar that they regarded them as necessary features of childhood.

No organization devoted solely to the public health was then in existence. Convinced of the need for an independent body to establish national and international standards for public health, Dr. Smith invited a group of health workers to join him in forming an association for sanitarians. On September 12, 1872, in Long Branch, N.J., the American Public Health Association was organized.

The subsequent 100 years that form the life of the APHA span a period of unparalleled progress in the conquest of disease and the maintenance of good health. The association's innumerable contributions to the quality of life and health now enjoyed by millions of Americans stand as direct fulfillment of its commitment 100 years ago to the "advancement of sanitary science and promotion of organizations and measures for practical application of public hygiene."

Annual meetings of the association have continually provided a forum for the exchange of ideas among physicians, health officials, nurses, laboratory and environmental specialists, and other professional and private citizens whose goal is the preservation of the life and health of the American people. These ideas have been carried to a national and international audience by the American Journal of Public Health, a scientific journal first issued in 1873.

Shaping the association's record of accomplishments in disease control and personal health services were such men as Walter Reed, presenting his "mosquito theory" of yellow fever; Prof. F. A. P. Barnard, reporting on the "Germ Theory of Diseases," and George and Gladys

---

*Quoted by Cady as in reference (1).

Dick, describing their immunization for scarlet fever. In the areas of community health and health administration, such public health pioneers as Charles V. Chapin, C. E. A. Winslow, Haven Emerson, and William T. Sedgwick revolutionized the health practices of the Nation.

In later years, the report on "Control of Communicable Disease in Man" and other publications, such as those on standards for examination methods for water and dairy products, community health action and planning, and housing, emerged as international, definitive standards in the fields, and have had a measurable impact on public health policy and practice worldwide.

Members of the association, through scientific reports, professional publications, and policy resolutions, have provided leadership for reform and innovation in such areas as public health administration, vital statistics, strengthening the Federal, State, and local health structure, environmental pollution control, population control, medical care, and equal access for all American people to health care and the health professions.

Reflecting the century of tremendous progress in health and medicine and the sweeping social changes that have occurred in that time, the association in 1970 adopted as its credo:

> The protection and promotion of personal and environmental health, continued leadership among health professionals and the general public, and research for improved quality of life for all Americans.

Therefore, Mr. President, on the occasion of the centennial anniversary of the American Public Health Association, I urge all citizens to salute the thousands of public servants who endeavor, as they have in the past, to fulfill the goal of quality health care for everyone. I am hopeful that this concurrent resolution will be passed quickly in time for the association's anniversary.

The concurrent resolution reads as follows:

S. CON. RES. 93

Whereas, the American Public Health Association had its first organizational meeting in Long Branch, New Jersey on September 12, 1872; and

Whereas, the American Public Health Association was instrumental in establishing the National Board of Health in 1879 and the creation of the United States Public Health Service in 1902; and

Whereas, the American Public Health Association has supported and contributed to improved health programs at the Federal, State and local levels; and

Whereas, the American Public Health Association has continually contributed to cooperative efforts among nations in behalf of improving the health status of mankind; and

Whereas, the 55,000 members of the sections and affiliates of the American Public Health Association are dedicating the experience and knowledge of more than 40 health professions to advance the health of mankind; and

Whereas, the American Public Health Association serves as a source of competence in the formulation of health standards, model codes, professional health personnel standards, and public health programs; and

Whereas, the American Public Health Association will celebrate its centennial anniversary and a century of service toward improving the health of man in Atlantic City, New Jersey, during November 13–17, 1972; Now, therefore, be it:

Resolved by the Senate (the House of Representatives concurring), That the Congress extends its greetings and felicitations to the American Public Health Association on the occasion of the one hundredth anniversary of its founding:

ADDITIONAL COSPONSOR OF A CONCURRENT RESOLUTION

SENATE CONCURRENT RESOLUTION 89

At the request of Mr. THURMOND, and by unanimous consent, the Senator from Alabama (Mr. SPARKMAN) was added as a cosponsor of Congress Resolution 89, in behalf of prisoners of war and missing in action.

INTERIM AGREEMENT BETWEEN UNITED STATES AND U.S.S.R.—AMENDMENT

AMENDMENT NO. 1449

(Ordered to be printed and to lie on the table.)

Mr. SAXBE submitted an amendment intended to be proposed by him to the joint resolution (S.J. Res. 241) authorizing the President to approve an interim agreement between the United States and the Union of Soviet Socialist Republics.

Mr. SAXBE. Mr. President, the U.S. Government must be consistent in its statements and actions concerning the strategic arms limitations. We cannot prohibit the Russians from doing one thing and then do that thing ourselves. We cannot define equality in such a way that will consistently make us superior and expect the Russians to believe we are sincere. My amendment overcomes the problem of inconsistency. It puts the U.S. Congress on record as reaffirming the long standing U.S. policy that we have not, in Secretary Laird's words:

> Developed and are not seeking to develop a weapon system having or which could reasonably be construed as having a first strike potential.

It puts the Soviet Union on notice that we expect them to abide by this policy too. My amendment implies that if they do not abide by that policy then we might consider their nonadherence to be a threat to our supreme national interests.

My amendment also puts the U.S. Congress on record as saying that we agree that the United States and the Soviet Union should seek strategic equality. However, it does not imply a false measure of strategic equality which would have the effect of making the United States superior. My amendment encourages the President to seek a definition of strategic equality that can be accepted both by the United States and the Soviet Union. This definition would necessarily include as part of a true overall strategic balance, all "strategically useful forces" which each country has at its disposal. My amendment would allow the President of the United States to play his proper role as Commander in Chief and foreign policy leader. My amendment allows the President to decide how, in his best judgment, to evaluate such things as forward deployment bases, and strategically useful tactical weapons. It would not dictate to the President a method of calculating our overall strategic strength that would overemphasize intercontinental components of our arsenal. My record in the area of tying the hands of the President is clear. I have not supported tying the President's hands in our Vietnam negotiations and I do not support tying the President's hands to some inadequate yardstick in future strategic negotiations either.

Mr. President, we could allow the Commander in Chief to play his leading role in strategic arms limitations by approving the interim agreement with minimal language. But if the Senate must spell out the sense of Congress then I say if we sincerely want to continue negotiations we must be consistent; we cannot have our cake and eat it too. We must also seek areas for mutual argument with the Soviets. My amendment allows for both, my amendment implies that the Soviet Union and the United States will both adhere to the same principle as to development of counterforce weapons. My amendment allows the President to seek a mutually acceptable definition of overall strategic balance. To paraphrase the Senator from Washington, What's wrong with consistency; and what's wrong with trusting the President to find areas of mutual agreement?

REVENUE SHARING ACT OF 1972—AMENDMENT

AMENDMENT NO. 1448

(Ordered to be printed and to lie on the table.)

Mr. HATFIELD submitted an amendment intended to be proposed by him to the bill (H.R. 14370) to provide payments to localities for high-priority expenditures, to encourage the States to supplement their revenue sources, and to authorize Federal collection of State individual income taxes.

AMENDMENT NO. 1450

(Ordered to be printed and to lie on the table.)

Mr. McCLELLAN (for himself and the members of the Committee on Appropriations) submitted an amendment intended to be proposed by them jointly to the bill (H.R. 14370), supra.

AMENDMENTS NOS. 1451 THROUGH 1458

(Ordered to be printed and to lie on the table.)

Mr. HARTKE submitted eight amendments intended to be proposed by him to the bill (H.R. 14370), supra.

AMENDMENT NO. 1459

(Ordered to be printed and to lie on the table.)

Mr. METCALF (for himself, Mr. MANSFIELD, Mr. JACKSON, Mr. BURDICK, Mr. HARRIS, Mr. HUMPHREY, Mr. PACKWOOD, Mr. GRAVEL, Mr. KENNEDY, Mr. MOSS, Mr. MONDALE, Mr. BIBLE, Mr. MUSKIE, Mr. CHURCH, and Mr. STEVENS) submitted an amendment intended to be proposed by them jointly to the bill (H.R. 14370), supra.

ADDITIONAL COSPONSOR OF AN AMENDMENT

AMENDMENT NO. 1436

At the request of Mr. STEVENS, the Senator from Massachusetts (Mr. KENNEDY) was added as a cosponsor of amendment No. 1436, intended to be proposed to S. 3771, a bill to provide compensation to U.S. commercial fishing vessel owners for damages incurred by them as a result of an action of a vessel operated by a foreign government.

ADDITIONAL STATEMENTS

REVISION OF "TAX GUIDE FOR SMALL BUSINESS"

Mr. BIBLE. Mr. President, over the years the Select Committee on Small Business has consistently attempted to be of assistance to the 95 percent of American firms which are "small business" in the field of taxation. The tax law and its administration have a life and death effect on the fortunes of small, new, growing, and independent business. Pursuant to this responsibility, the committee in 1956 first published the "Tax Guide for Small Business" as a committee print.

Annually thereafter, the Treasury Department and the Internal Revenue Service have reissued this helpful publication, and last year more than 456,000 copies of the guide were distributed. These volumes are thus being consulted by a substantial proportion of smaller businessmen and their accounting and tax advisers. At the same time, the guide brings in substantial revenue to the Treasury over and above its publication costs—a profit of $172,000 in 1971. With some justification, I think that we can label this a "success story."

During 1972, our committee felt that the passage of time, as well as extensive changes in the tax law of the past 3 years, called for a comprehensive reexamination of the "Tax Guide for Small Business," with a view to making it an even more useful reference for small businesses.

On April 14, a meeting was convened by our committee for this purpose and attended by representatives of the Internal Revenue Service, the Small Business Administration, our committee staff, and members of the following private organizations:

American Bar Association, Section of Taxation, Small Business Committee;

Federal Bar Association, Committee on Taxation;

American Institute of Certified Public Accountants;

National Association of Small Business Investment Companies;

National Small Business Association; and

Smaller Business Association of New England.

These associations were most gracious in their cooperation, allowing their top experts to attend and express their individual views, so that the tax guide might benefit from their advice under the short-term publication deadline of October 1, 1972.

As a consequence of this meeting, further specific suggestions were developed by the participants, which were then circulated among themselves and to the Internal Revenue Service. These submissions served as a basis for a further meeting which took place on August 10.

At that time, a substantial number of the recommendations as to both substance and form of the booklet were accepted, and others were fully aired.

During the course of these two meetings, the participants also gained in an understanding of IRS problems and publication schedules, which should make future sessions on this guide even more productive. For the purpose of carrying this project forward, the group is now looking forward to reconvening fairly early in 1973.

Mr. President, I should like to make note of the cooperative posture of the Internal Revenue Service throughout this first full-scale review of the Guide. From the beginning, Mr. William Hagemann, Chief, Technical Publications Branch, and his associates, Dean Ludeman and W. L. Rogers, were of substantial assistance in scheduling these meetings, making procedural suggestions and beng prepared to give "yes" or "no" answers on specific items on August 10, less than 4 months after the opening meeting.

The substantial number of suggestions which were accepted testifies as to both the thought and effort of the individuals and groups contributing their advice, and also the conscientious consideration of this material by the Internal Revenue Service.

Also important, in my opinion, is the opening of an exchange of views between the administrators of our tax system and the representatives of hundreds of thousands of users of the "Small Business Tax Guide," and ultimately of over 12 million business enterprises in this country. I am gratified at the prospect of this dialog taking place periodically, and feel that many small business tax problems will be solved and others avoided through this periodic contact.

I would thus like to commend the Internal Revenue Service for its constructive cooperation with the committee toward the revision of the "Tax Guide for Small Business." We hope that we can make this good publication even better in future years for the small businessmen and women using it across this land.

THE GROWING TREND TOWARD AN ADVERSARY PRESS

Mr. SAXBE. Mr. President, I invite the attention of Senators to an article entitled "The Press as Mob," published in this week's issue of the New Republic. It concerns primarily the unfortunate affair of our fellow Senator TOM EAGLETON, but it goes even further in commenting on the growing trend toward an adversary press. It is interesting to note that this situation was even more common 100 years ago.

I particularly enjoyed the article because the New Republic is not noted for its altruism or enlightenment when advocating a cause.

Mr. President, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PRESS AS MOB

The destruction of Tom Eagleton by the press was instructive. I watched four channels and read three newspapers sporadically during the crucial days of the killing, and it seemed to me like a mob scene out of Shakespeare. Shakespeare, remember, didn't like mobs, calling them the mutable, rank-scented many, and suchlike.

A Washington Star-News reporter covering Eagleton in Hawaii noted innocently that Eagleton wanted to talk about other things than electric-shock treatment, but that people kept wanting to talk about electric-shock treatment. People hell, it was journalists who were the rank-scented many and who wanted to talk, and did, until finally a few of the more sensitive ones began to realize that what they were doing collectively was rank-scented. In San Francisco, for example, an interviewer asked Eagleton if he minded the hysteria of the press. He was disarmingly nice, but both he and the reporter seemed to agree that "hysteria" was a good word. It was. In fact only by calling it hysteria can we escape calling it worse; the difference between first and second-degree murder is that one is premeditated.

Right in the middle of the fuss Supreme Court Justice William Douglas stopped the Ellsberg trial pending the resolution of a wiretap complaint from the defense. Douglas' particular point has no bearing here—he was insisting on the right of a defense lawyer to speak in confidence with his client—but he took a whack at the feds en passant, observing that "the ear of the government . . . these days seeks to learn more and more of the affairs of men." Yes, and of course, the press has been extremely militant about the ear of the government. But what of the ear of the press?

Bad-tempered Charles Dickens visited our country in 1842 and was impressed by our jails and hospitals but distressed by our newspapers and politicoes. His sour concluding remarks included these gems: "You [Americans] carry . . . jealousy and distrust into every transaction of public life. By repelling worthy men from your legislative assemblies it has bred up a class of candidates for the suffrage who . . . disgrace your institutions and your people's choice. . . . For you no sooner set up an idol firmly than you are sure to pull it down and dash it into fragments. . . . Any man who attains a high place among you, from the president downward, may date his downfall from that moment: for any printed lie that any notorious villain pens . . . appeals at once to your distrust and is believed. . . . Is this well, think you, or likely to elevate the character of the governors or the governed among you?"

Dickens found a few good journals amidst the "licentious press," but he felt they were helpless against "the moral poison of the bad." The bad he described as a "monster of depravity" against which no "private excellence" was safe from attack. He added that the "press has its evil eye in every house, and its black hand in every appointment in the state."

One might of course ask Charles Dickens to stick to the facts; he did have a penchant for editorializing. The interesting point here, however, is not that he editorialized but that he editorialized against what he thought of as villainy, as evil, whereas what we have before us as subject for editorializing now would seem to be instead a sort of mischancefactor built into our competitive system, a factor that sends hundreds of reporters, cameramen, technicians and all manner of self-appointed instant wisemen chasing without malice (mostly) after political candidates as if on a foxhunt.

The Agnew-Nixon-Clay Whitehead school of thought about the press is still Dickensian, with the Eastern Establishment vaguely cast in the role of villain. I respect and wholeheartedly sympathize with the defensiveness that has developed at the White House in the face of the press's enormous presence, but I do think the White House has found the wrong cause for its trouble. From the high-falutin James Reston right on down to Jack (Scoop) Anderson I don't see villainy, and though I confess that Anderson's notions of how to be competitive strike me as wholly contemptible I think of him as an agent of our media chaos, not in himself a cause. In other words the media *system* has become the cause (the medium is not the message but the tyrant), a system that demands of journalists caught in the system that they traipse around in clusters, like army ants, after the big story. Yet, hysteria is the word rather than villainy.

Yet we probably can distinguish, if only impressionistically, between malicious and neutral news coverage of such an event. In the Washington papers it was the *Star-News* surprisingly that seemed chiefly to have the knife out for Eagleton, with loaded bannerheads for the whole week ("McGovern Ponders"—"McGovern Shifting on Eagleton"—"Eagleton Gets Word Tonight") and with columnist Mary McGrory casting heavy ironies about Eagleton's and McGovern's bad judgment through the back pages. I say the *Star*'s role was surprising because the *Post* is now formally Washington's loaded newspaper, an expensively capitalist manifestation of the New Journalism, with hardly a reporter on its enormous staff normally designing to play a story straight like in the dear old dead gone days. But in this instance the *Post* front page, in headline and copy, was relatively straight-faced about Eagleton, though the editorial page took out after him.

On the tube NBC's John Chancellor was the objective one. He has a fine detachment of manner; there is no malice when he speaks. The other networks were consistently more aggressive, especially CBS, which has developed, I say again impressionistically, a more inquisitorial mode of interviewing (did it all begin with Mike Wallace?) than the others. The inquisition-technique was especially evident on the Sunday think show "Face the Nation" where Eagleton and Anderson confronted each other and where moderator George Herman managed to dig in like a Jewish mother who suspects her son of lying; he started one question by saying "Senator, you sound very decisive and confident," and later got so nosy about the skeletons in Eagleton's closet that Eagleton had to joke that he had "given up pickpocketing for a living," at which point Herman said, "No, I don't mean it as a joke, because you must know you're under very strict scrutiny." Indeed.

Unfortunately it doesn't seem to matter whether the reportage is aggressive or neutral, so long as it is there for a week or so, propping up before a billion eyes doubts about the candidate's character. Just to have the questions there is enough to kill him off; the results are the same with or without malice. Or, to go back to Dickens, the results are the same whether evil or hysteria runs the show; in either case a politician is destroyed—and destroyed in the Eagleton instance with such thoroughness and dispatch that even Dickens' rhetoric would have trouble rising to the occasion.

All in all what impressed me throughout the proceedings was the dazzling insensitivity of the press to their power role. Mary McGrory, for example, observed in a witty but aggressively judgemental piece following Eagleton's "resignation" that an execution had taken place and that the executioner was—you guess—George McGovern. She didn't mention the press. And in a *New York Times* follow-up there we detailed coverage of the McGovern staff's day-by-day changes of opinion about what the great Eagleton affair signified, yet no attention was paid to who created the significance.

For what it's worth I'm personally undecided about the merits of removing Eagleton from the ticket; his case is a complicated one that will be a good conversation piece for politicoes, historians, psychologists and even ordinary people for a long time. But I do think it is important here to separate the Eagleton case itself from those who moved in to settle the case, and to ask by what particular dispensation from God or Jefferson or even the Democratic Party they did so. For it does seem apparent that in this case we have a stunning contemporary instance of how the press has come inadvertently to display all the tyrannous powers that our country has traditionally feared to be vested in the hands of government. The journalists have set *themselves* up as the appropriate makers and unmakers of a presidential candidate, though candidate-choosing is conventionally thought to be a matter for our political parties and the citizenry as a whole, a matter that the press is expected merely to report on. We do not, I think, have the bad will around us that Dickens attributed to journalists in the 1840s, but if journalists have more rope to run things the way they ran Eagleton, they may well produce the bad will. Then Dickens' loaded words below may come to seem thoroughly appropriate again:

> It is the game of these men and of their profligate organs to make the strife of politics so fierce and brutal, and so destructive of all self-respect in worthy men, that sensitive and delicate-minded persons shall be kept aloof . . . and thus this lowest of all scrambling fights goes on, and they who in other countries would, from their intelligence and station, most aspire to make the laws, do here recoil the furthest from that degradation.

VOLUNTEERS IN PEACEFUL POLITICAL PARTICIPATION

Mr. HUMPHREY. Mr. President, I invite the attention of Members of Congress and State and local leaders to a project undertaken by the Greater Miami Jaycees. Under the leadership of Mr. Stuart Alan Rado, the Jaycees of the Miami area are sponsoring a youth participation drive entitled "Volunteers in Peaceful Political Participation."

The goal of this project is to stimulate greater participation by young people in serious political work, beginning with the two political conventions of our national parties in Miami Beach. Over 600 persons agreed to volunteer to work in the activities of the Democratic and Republican conventions, and I know from personal experience how meaningful and helpful this was.

The proper coordination and functioning of a political convention takes thousands of people. The "Volunteer in Peaceful Political Participation" played a valuable role at the Democratic Convention as typists, drivers, clerical personnel, and in many other positions. I am sure that they will be an asset to the Republican Convention beginning on August 21.

The Jaycees of the Greater Miami Beach area are to be commended for encouraging meaningful participation on behalf of people who are too often left out of the political process. Those in the political process ignore the ideas and the enthusiasm of the young at their own peril.

Mr. Rado has informed me that this effort by the Jaycees to encourage serious participation in politics by young people will not stop with the conventions. Local and State chief executives throughout the country are encouraged to recognize and promote this program by proclaiming similar periods—during the coming campaign—of a day, week, or month—as "Volunteers in Peaceful Political Participation Week," for example, in their own areas.

Mr. President, I ask unanimous consent that several newspaper articles and the texts of a number of proclamations by governors and mayors in support of the Volunteers in Peaceful Political Participation be printed in the Record.

There being no objection, the items were ordered to be printed in the Record, as follows:

[From the Daily Sun-Reporter, July 12, 1972]

Beach Groups Seek Convention Workers

A Volunteer Program, jointly sponsored by the Miami and Miami Beach Youth Advisory Boards and the Greater Miami Jaycees, is supplying volunteers to help Democratic candidates for president and vice president.

To date, over 600 persons have written to volunteer for the Democratic and Republican conventions. Most have been students, however there have been numerous adults and even some senior citizens.

Jobs have been filled for drivers, typists, clerical personnel, and various other positions.

After the conclusion of the Democratic Convention, emphasis will be placed on securing workers for the Republican Convention. There is no guarantee that everyone who volunteers will be given a job with either convention, however every effort will be made to use the volunteers where needed.

There is no tabulation yet available as to how many volunteers from this program were used for the Democratic Convention.

Anyone interested in working now for the Republican Convention may do so by writing name, address, and phone number on a post card and sending it to: Volunteers, Post Office Box 2036, Ocean View Branch, Miami Beach, 33140.

Also those who have an interest in working for the various Democratic or Republican office-seekers for the election in November may volunteer by following the above instructions.

Although the program was originally aimed at students, it has been expended to include all who wish to volunteer.

Purpose to the program is to act as a catalyst to get young people actively interested in the political process.

"Young" Commission Growing Up Fast

(By Richard Fatigati)

Miami Beach's Youth Commission is taking the initiative on several fronts, plugging in a youthful outlook to politics and ecology.

Although the commission is just under four months old, it has been successful in mobilizing "Operation Volunteers," a political service group to serve in national campaigns, and connecting up with the Miami River Restoration Project and the League of Women Voters to initiate joint projects with them.

Local junior high and high school students, under the direction of Stewart Rado, 26-year-old marketing researcher, have been working for themselves in getting across youth's point of view to community, state and national leaders.

Operation Volunteers placed youth in various positions at Convention Complex during the Democratic Convention and helped others work for the candidate of their choice. Through Volunteers, young people had the opportunity to be runners, clerks and typists at the convention or to work at their candidates offices here. The same program will be in effect during the Republican Convention.

(Contact Operation Volunteers, P.O. Box 2036, Ocean View Branch, Miami Beach, Fla. 33140 for further information.)

Rado, who was an alternate delegate to the convention from the 11th congressional district, took advantage of his floor privileges to introduce the idea of youth involvement in politics to the democratic governors at the convention.

Meeting at least 20 governors, Rado got an enthusiastic reception to the commission's program. Following the convention, Gov. Daniel J. Evans of Washington, Gov. Marvin Mandell of Maryland, Gov. Linwood Holton of Virginia and Gov. J. James Exon of Nebraska sent letters to Rado to underscore their endorsements.

According to Rado, several governors had indicated at the convention that they would be in touch with him regarding establishment of similar programs in their states, with an eye to stimulating interest in state and local elections as well as national contests.

Janice Geld, a youth commission member, cut off another slice of political business by aiding the League of Women Voters in voter registration here. Working with Warner Brothers Studies, Janice registered 30 people in connection with a promotional effort over a new movie "The Candidate," a politically-oriented film.

In other work, commission youth plan to establish an ecological beachhead with the Miami River Restoration Project against the decline of area waterways.

[From the Miami (Fla.) News, July 1, 1972]

Jaycees To Aid Conventions

For the Greater Miami Jaycees, Stuart A. Rado is project chairman of an effort to obtain volunteer workers for political candidates.

Aiming mostly at the local student population, Rado said he has recruited more than 400 volunteers to handle a variety of tasks for the staffs of the presidential nomination candidates.

"We're endeavoring to do something that hasn't been done in political history—to supply both political parties with volunteer help," Rado said.

"The purpose is to allow students to voice a preference for who they're going to work for. There's no guarantee that if they volunteer for one candidate, they'll get the job, but this allows that candidate to know that if they want any volunteer help in the Miami area, it's there at their disposal.

"We've had offers from photographers, people to drive, people to type, people with secretarial skills."

Rado said the volunteers he has consist mostly of senior high school students—70 per cent—with the rest divided among junior high students and older people.

Group Tries To Find Spots for Convention Volunteers

Some 500 adults and young people have registered with Volunteers in Peaceful Political Participation, a non-partisan clearing house for volunteer service during the coming political conventions.

Stuart Rado, chairman of the Miami Beach Youth Advisory Board, is director of the volunteer group, which is sponsored by the board and the Greater Miami Jaycees.

Volunteers may register to work with either major political party or can specify a particular candidate. "We cannot guarantee jobs for all who write in," said Rado, "but all names are forwarded to either the party or candidate."

"We particularly need volunteers over 21 to work as drivers for the delegates and alternates," he said. "We will also need volunteers to work after the conventions to help man phones and answer mail."

"The project has been endorsed by every city in Dade County," said Ken Friedman, president of the Greater Miami Jaycees.

Registrations can be made to P.O. Box 2036, Ocean View Branch, Miami Beach, Florida, 33140.

Proclamation

Whereas: with the arrival of two political conventions in our area the young people of Greater Miami have a unique opportunity to participate in the political process and help the candidate of their choice, and

Whereas because of the concern of the community, the Greater Miami Jaycees and the Miami and Miami Beach Youth Advisory Boards are jointly sponsoring "Volunteers In Peaceful Political Participation," thereby giving all interested students a chance to volunteer to work for a candidate at one of the conventions, and

Whereas students may volunteer to work for a candidate by writing their name, address and phone number, along with the name of their candidate on a post card, and sending it to "Volunteers," P.O. Box 2036, Ocean View Branch, Miami Beach, Florida 33140:

Now, therefore, I, David T. Kennedy, Mayor of the City of Miami, Florida, do hereby proclaim July 9–14 and August 20–24, 1972, as Volunteers In Peaceful Political Participation Weeks.

In observance thereof, I urge students to take advantage of this program and ask citizens to encourage these young people to support and participate in this novel and meaningful experience.

In witness whereof, I hereunto set my hand and cause the seal of the City of Miami to be affixed.

Done in the office of the Mayor of the City of Miami, Florida.

State of Maryland,
Executive Department,
Annapolis, Md., June 28, 1972.

Message From Gov. Marvin Mandel

I am delighted to lend my enthusiastic support to the "Volunteers In Peaceful Political Participation" drive being undertaken in the City of Miami.

It is my understanding that this effort is designed to stimulate greater participation in the political process by the young people of Miami, by encouraging them to work for a candidate at one of the political conventions being hosted in your City.

As one who understands the urgent need for more of our citizens—young and old alike—to become involved in our nation's politics, I am impressed by the initiative the sponsors of this program have taken.

And as Governor of a state that recognizes the many contributions of its young people to their communities and our nation, I send you my best wishes for the success of this important endeavor.

Commonwealth of Virginia,
Office of the Governor,
Richmond, June 26, 1972.

Mr. S. A. Rado,
"Volunteers" Ocean View Branch,
Miami Beach, Fla.

Dear Mr. Rado: I think that the "Volunteers In Peaceful Political Participation" project is a fine opportunity for young people to participate in the political process. I hope that many will take the opportunity thus provided to support the candidate of their choice. I am sure that if they do they will have some exciting and memorable moments and will gain valuable insight into the political process.

Best wishes for the success of the "Volunteers".

Cordially,

Linwood Holton.

Metropolitan Dade County, Fla.,
Miami, Fla., June 23, 1972.

Mr. Stuart Alan Rado,
Project Chairman, Greater Miami Jaycees,
Miami, Fla.

Dear Mr. Rado: Your volunteer program of asking the youth of the community for peaceful political participation in the upcoming Democratic and Republican Conventions is both unique and commendable.

I feel, along with you and the Greater Miami Jaycees and the Miami and Miami Beach Youth Advisory Board, sponsors of "Volunteers in Peaceful Political Participation", that it offers a fine opportunity for the youth of our area to become more aware of political commitments and those ideologies by which people are governed.

I wish all of you best wishes in the success of your program.

Sincerely,

Stephen P. Clark.

City of Miami, Fla.

Mr. Stuart Alan Rado,
Project Chairman, Greater Junior Chamber of Commerce, Miami, Fla.

Dear Mr. Rado: I wish to commend you, the Greater Miami Jaycees and the Miami and Miami Beach Youth Advisory Boards on your jointly-sponsored project, "Volunteers in Peaceful Political Participation."

This effort presents a unique opportunity for students to participate in the political process while helping the candidate of their choice.

The youth of Miami certainly are privileged to have access to such a fine program as this.

Sincerely,

David T. Kennedy.

City of Miami Beach,
Miami Beach, Fla., June 13, 1972.

Mr. Stuart Alan Rado,
Miami Beach, Fla.

Dear Mr. Rado: I was delighted to hear that the Greater Miami Jaycees are giving the youth of this area an opportunity to participate in the great American political process, by working for candidates.

I wish you every success with the program, and I am certain that it will provide memorable and valuable experience for many of our young people.

Cordially,

Chuck Hall, *Mayor.*

City of Hialeah,
Hialeah, Fla., June 13, 1972.

Attention Stuart Alan Rado,
Chairman, Volunteers,
Ocean View Branch,
Miami Beach, Fla.

Dear Sir: Please accept my congratulations on your most note worthy "Volunteers In Peaceful Political Participation".

I certainly agree with you that, in addition to increased vigilance and awareness, the presence of both Conventions in our area affords the youth of our community a unique opportunity to participate in our great American Democratic Political Process.

To affirm the participation of the youth of Hialeah, please do not hesitate to contact Jack Brickman of the Hialeah Jaycees. His organization has been instrumental in bringing about the success of such projects in Hialeah.

Best wishes for success.

Very truly yours,

Henry Milander,
Mayor.

U.S. Senate, Committee on
Interior and Insular Affairs,
Washington, D.C., July 24,1972.

Mr. Stuart Rado,
Project Chairman, "Volunteers"
Miami Beach, Fla.

Dear Stuart: I wish to express to you my sincere appreciation for your efforts in helping me obtain volunteers for my operations at the Democratic National Convention.

Through the lists which you gave me, approximately 15 Floridians came into my organization and helped with the tremendous workload. I hope that more local organizations like the Jaycees will promote such activities across the country.

Again thanks for your service and best wishes.

Sincerely,

Mike Gravel.

U.S. Senate,
Committee on the Judiciary,
Washington, D.C., June 19, 1972.

Mr. Stuart Alan Rado,
Project Chairman, Greater Miami Jaycees,
Ocean View Branch, Miami Beach, Fla.

Dear Mr. Rado: As usual, the Jaycees are using brains and time in a manner to benefit the entire community.

There is no better way of supporting Democracy than by working for a candidate of your choice. This is the way the system was designed. This is what will serve to keep it a free and open system for all men, regardless of their views.

With best regards,

Sincerely,

Edward J. Gurney,
U.S. Senator.

COMPENSATION FOR DAMAGE TO U.S. FISHING VESSELS

Mr. MUSKIE. Mr. President, I wish to comment on S. 3771, a bill which I have joined Senators Brooke and Kennedy is sponsoring. The bill, introduced on July 29, would provide compensation to U.S. commercial fishing vessel owners for damages incurred as a consequence of action by vessels operated by foreign governments or individuals.

Current laws to protect fishermen have proved quite inadequate, since they do not provide immediate or direct relief for such losses. The Fishermen's Protective Act of 1967 provides reimbursement to vessel owners only for losses resulting from seizures of fishing vessels. Although the Senate has approved an amendment to this act extending coverage to damaged vessels, the law would still be inadequate because the financing mechanism does not provide for immediate relief.

Under the law, the U.S. Government must first seek to gain reimbursement from the foreign nation whose vessels caused the damage. If such reimbursement is not forthcoming in 120 days, then the Secretary of State is authorized to pay the claim reducing that nation's foreign aid by an equivalent amount. Such a procedure is obviously cumbersome and applies only to nations which receive our foreign aid. Under the new legislation, funds would come from the general Treasury of the United States. A total of $5 million would be available initially for incidents occurring since January 1, 1971.

We all can agree that the best solution would be to prevent such incidents from occurring at all. However, the proposed legislation would at least assure that our independent fishermen, who have contributed and continue to contribute much to the New England economy, will not be denied a livelihood as a result of damages to their vessels or gear.

Many are familiar with the unfortunate incident involving the *Roseanne Maria*, a boat owned by a Gloucester, Mass., fisherman, which was sunk as the result of a collision caused by an East German boat. The owner of the *Roseanne Maria*, Mr. Louis Biondo, lost his sole means of support as a result of this incident.

Mr. Biondo is typical of most fishermen in Maine who have invested their life's saving in boats and gear. For example, in June of this year, Mr. Newbold Varian lost $6,800 worth of gear as the result of an action by an East German boat off the coast of Maine near Boothbay Harbor. Replacing such equipment is indeed difficult for fishermen whose yearly incomes are often barely sufficient to meet current expenses. The experience of Mr. Varian has been amplified in recent weeks by letters and calls to me from Maine fishermen and their wives expressing concern over the increasing frequency of such incidents.

Maine's fishing industry faces many serious problems. not the least of which is the inadequate response given by the Congress and the executive branch. Mr. President, I urge the swift enactment of S. 3771.

The added fear of a damaging accident at sea is a totally unnecessary cause for concern. The knowledge that their property losses will be promptly reimbursed will serve to still the fear of our fishermen, whose work is long and hard enough, that they can lose a life's investment as a result of the negligence of a foreign vessel.

EMERGENCY HEALTH PERSONNEL ACT OF 1970—TESTIMONY OF SENATOR STEVENS

Mr. STEVENS. Mr. President, I am happy to report that the Committee on Labor and Public Welfare has reported favorably a number of amendments to the Emergency Health Personnel Act of 1970, including my amendment, S. 3867. This is a vital piece of legislation for my State as well as other areas in the country with a health manpower shortage. I ask unanimous consent that my testimony be printed in the Record.

There being no objection, the testimony was ordered to be printed in the Record, as follows:

Testimony of Senator Ted Stevens Before the Health Subcommittee of the Senate Labor and Public Welfare Committee, August 11, 1972

Mr. Chairman, thank you for allowing me the opportunity to testify before you today. I am testifying today to strongly urge the Committee to report favorably on my amendment, S. 3867, to the Public Health Service Act. This legislation would establish a Scholarship Training Program for the Public Health and National Health Service Corps for persons entering medical, dental or other related medical academic training.

My amendment provides both for the payment of tuition and also a generous stipend which includes a salary equal to the basic pay and allowances of a commissioned officer on active duty in pay grade O–1 ($577.88 per month if unmarried; $686.78 if married and without dependents; and $719.48 if married with dependents), books, supplies, student medical expenses and other necessary educational expenses. In return for this scholarship, the individual is required to serve one year in the Commissioned Corps of the Public Health Service or as a civilian member of the National Health Service Corps for each year of academic training received.

It is important to realize that this program is only a scholarship, provided the individual carries out his active duty service obligation. On the other hand, should an individual renege on his commitment, the scholarship is, in effect, converted into a loan. This loan must be repaid in full with the maximum legal interest rate. This would obviously discourage individuals from "buying out" of their active duty service obligation. Thus, if the individual carries out this commitment, he or she will be doing this country a great service by helping to solve the health manpower shortage by serving in HEW's programs where we urgently need more health professionals. If not, the government would not lose a cent. If the program is successful, as I firmly believe it will be, then it is certainly worth the expenditure.

The Public Health Service and National Health Service Corps are two of our most vital federal health agencies. The Public Health Service Corps has a total of 2,583 physicians and 546 dentists. A clear majority of these are commissioned non-career officers. 59% of the medical officers are engaged in clinical functions, primarily in PHS hospitals and IHS facilities. In other words, a majority of the health personnel in the Public Health Service Corps is directly involved with the people who are in such dire need of their aid.

The National Health Service Corps provides primary health care services to remote, rural and overcrowded inner city areas designated by the Department of Health, Education and Welfare as having critical health manpower shortages. This program is a relatively new one, but, I must add, a most worthwhile one thanks to the efforts of Senator Magnuson. At present, the National Health Service Corps has only 152 doctors, 20 dentists and 116 other health personnel. Both of these Corps are extremely important in providing our Nation with the additional health care it so desperately needs.

To illustrate this real need for more health care in the United States, there are 132 counties in this country which have no physicians and 225 counties with no dentists. Dr. H. McDonald Rimple, Director of the National Health Service Corps, stated in a May 24th press release of the Health Services and Mental Health Administration that there are approximately 5,000 communities without any health care services. As of May 24th, only 122 communities had been designated as critical health manpower shortage areas.

My own State of Alaska is the only state which, in its entirety, has been given this classification. Although the national average ratio of non-federal doctors to patients is 166 per 100,000, and New York State has a ratio of 193 per 100,000, Alaska has only 64 non-federal doctors for every 100,000 people. Obviously, this is an unbearable load on any doctor as well as an indication that many Alaskans are receiving a very minimum, if any, medical aid.

Most of the health care service to rural areas in my State is provided not by private physicians but by the Indian Health Service. In the State of Alaska, the IHS provides 68 physicians and 30 dentists. Sixty-two of the physicians and all 30 of the dentists are in the Commissioned Corps. Even with these federal health service officials, Alaska is in dire need of additional health professionals. I cannot impress upon you enough the importance of the Indian Health Service to the people of my State. My amendment will contribute to assuring the continued availability of health personnel to the Indian Health Service which is imperative if Indian and Native people, not only in Alaska but throughout the United States, are to receive the delivery of essential comprehensive health services.

Realizing the importance of the Public Health Service and National Health Service Corps to the people of our Nation, I believe it is imperative that we do everything we can to assure its survival and flourishment. The most critical problem facing the PHS and NHS Corps today is the recruitment of qualified health personnel. The major cause of this problem is the reliance of the Corps on the draft as a recruitment incentive. Since the Selective Service Act of 1949 provided that service in the Public Health Service Corps would fulfill the draft obligation, the Corps has depended almost exclusively on this provision for recruitment. Approximately 99% of the physicians, and 96% of all officers being recruited into the Corps today are recruited through the use of this draft mechanism. With this dependence on the draft as a recruitment incentive, the voluntary recruitment machinery of the Corps has drastically degenerated. With the trend toward the abolishment of the draft to create an all-volunteer army, the Corps is in serious trouble. One of the findings of the 1971 Report of the Secretary's Committee to Study the Public Health Service Commissioned Corps states that, "The recruitment and retention of physicians and dentists will constitute the critical problem following the end of using the draft mechanism and plans to meet this problem must be developed."

My amendment will help alleviate this problem by offering a positive incentive to serve in the Corps instead of relying almost totally on the negative incentive of the draft. An incentive such as this scholarship is most definitely needed to attract young men and women to HEW programs which service areas with a dire need for health services. It is quite obvious that the long run needs of the Department of Health, Education and Welfare's programs will be better served by such positive incentives for recruitment rather than by the negative incentives involved in the draft.

The Corps not only needs new, positive recruitment incentives but they must also have incentives which allow the Corps to adequately compete with the Armed Forces. All branches of the Armed Forces have effective scholarship programs comparable to this one I am proposing and are planning to expand their present programs. H.R. 2, which has been passed by both the House of Representatives and the Senate, would increase the number of scholarships to 5,000 per year. We must make certain that the PHS and NHS Corps can also attract young men and women with a scholarship program which is as attractive to them as the programs now offered by the Armed Services.

Another factor which could drastically affect the recruitment ability of the Corps, if the draft is not abolished, is the possible elimination of undergraduate student deferments. With the elimination of this deferment, students entering college will either have completed their obligated service or have had their maximum exposure to the draft under the lottery system long before they enter medical or dental school. Either way, avoidance of the draft will no longer be an incentive for young men to join the PHS or NHS Corps. Thus, even if the draft were continued beyond the July 1, 1973 cut-off, the use of it to obtain health personnel will gradually phase out over a period of years.

The time to act on this recruitment problem is *now*, before it becomes too critical to correct and before one of our most valued governmental services is lost. By enacting this scholarship program now, we will begin to build in the incentives urgently needed to maintain the Corps and will work toward avoiding a last-minute personnel manpower crisis when and if we abolish the draft.

But regardless of this motivation, I also believe this is good legislation in its own right for today's situation. It gives the PHS and the NHS Corps a strong scholarship recruitment vehicle such as the military has had for years. The Department of Health, Education and Welfare's programs provide health care for some of our most needy areas through the Public Health Service and National Health Service Corps and are, I believe, extremely important to the health system of our Nation. They need and deserve a recruitment program of the highest caliber to attract our citizens who wish to enter the health field, through their ranks, so these important health delivery programs of HEW will be adequately staffed and well operated.

I understand, Mr. Chairman, that S. 3858 which you recently introduced, already has a scholarship program in it. I would like to point out a few of the differences between this bill and the one which I introduced. One major difference between the two proposals is in the pay-back time required of an individual. S. 3858 requires only 6 months of active duty service in the Corps for each year of academic training received. I admit that this lesser amount of required service time would be an added incentive, but I also believe that this is not a long enough period for the needs of HEW's programs. My amendment would increase the amount of time the health professional would be spending in the community in which he is serving. The impact on the community would be that of increasing quality care by extending the continuity of the relationship between the patient and the health professionals. Many areas that are serviced by the PHS and NHS Corps have a culture and a way of life totally different than what most of us are accustomed to. The Indian Health Service and Public Health Service facilities in my State are a prime example of this. It is very important that an individual remains in one area long enough to grow accustomed to the people he is serving.

A second major difference between the two scholarship programs is the amount of money provided each student. As I stated earlier, my amendment provides tuition, salary and all educational expenses, whereas S. 3858 sets a maximum of $5,000 per year. I feel that offering not only tuition and educational supplies but also a regular salary opens this scholarship program up to any individual regardless of income level. A lower income student could readily take advantage of the program offered by my amendment but would have difficulty affording additional expenses not covered by the other programs. One benefit of attracting lower income individuals is that they are more likely to return to the areas they came from to practice and more likely to remain there on a permanent basis. A recent American Medical Association survey revealed that 49% of the physicians raised in small towns were practicing in communities of 2,500 or less. Since a majority of the health manpower shortage areas, approximately 80%, are rural, attracting rural, lower income individuals into this program—who would be more likely to remain in the area—would have a lasting effect on the Public Health Service and National Health Service Corps.

The Public Health Service and National Health Service Corps definitely need a strong scholarship program with positive incentives. They have relied in the past on the draft as an incentive but will very likely have to depend on positive incentives such as this program in the near future. The Crops needs a scholarship program that is at least as good as that offered by the Armed Forces so it may compete for doctors, dentists and other health professionals. Considering the vital services provided by the Department of Health, Education and Welfare, I firmly believe that they are entitled to a recruitment program which is as strong and comprehensive as that of the military. My amendment would provide just a scholarship program.

LITTLE REASON TO CELEBRATE ANNIVERSARY FOR NEW ECONOMIC POLICY

Mr. PROXMIRE. Mr. President, on the first birthday of the new economic policy I think it appropriate to remind ourselves that August 15 marks not the celebration of a healthy and rapidly advancing economy, but the retarded recovery from a Nixon administration-induced recession. As the Washington Post commented earlier this week:

> One can commend the captain for the decisive way in which he refloated his ship without handing him a medal of honor for running it aground in the first place. If the President and his advisers had recognized sooner that they were off course—that inflation was not yielding, while unemployment was mounting—such drastic salvage operations would not have been necessary.

The Nixon administration's economic policies during the first 2½ years of the administration and the severe measures that had to be taken to correct the course of a floundering economy have cost us plenty. We have lost $160 billion in productive output, over $70 billion in Federal revenues, and $100 billion in lost wage income. One of the most significant reasons for the large budget deficits is the Nixon administration's recession. If we had been operating at full employment most of the last 3 years, deficits would have never occurred.

There is even less cause for celebrating the NEP when we recognize that 5 million persons are still unemployed, and 3 million more are either working part time because they cannot find full-time jobs or have stopped looking for jobs altogether because they do not think they can find one. The Sunday New York Times faults the administration's unemployment policy, a policy characterized by inaction:

> Even granting that some structural changes in the labor force may make the attainment of full employment more difficult today than in earlier years, the White House deserves criticism for its failure to launch a more forceful direct attack on unemployment . . . The time has come for the statutory pledge of full employment to be interpreted—by this or any future Administration—to mean

that every American who wants a job can be assured of getting one—either in the private or the public sector.

While the administration finally recognized its failure, after 2½ years, they are still ignoring the plight of the unemployed. I see little reason for celebrating the first anniversary of the NEP—as Joseph Kraft said, that would be like "applauding a rubber ball for bouncing up after it has been thrown down."

Mr. President, I ask unanimous consent that four articles published in the Washington Post and New York Times be printed in the RECORD. They are incisive analyses of the economic situation.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, Aug. 13, 1972]

ECONOMIC ANNIVERSARY

A year ago on a Sunday evening in mid-August, President Nixon went on television to loose three economic bombshells—the floating of the dollar, the freezing of wages and prices, and a big package of tax cuts in the face of a big budget deficit. This was his New Economic Policy, an about-face from the policies his Administration had pursued through its first two and a half years.

An alarming worsening in the balance of payments, signs that inflation—after a brief slowdown—was again accelerating, and the persistence of unemployment had combined to force adoption of policies similar to those the Administration's political opponents had long counseled—and which Mr. Nixon and his advisers had vociferously denounced.

Although the American economy still bears scars of the long delay in changing the original Nixon game plan, the N.E.P. appears to be on the way to success in most respects.

INDUSTRIAL RECOVERY

The economy is rising strongly. The total output of goods and services, corrected for inflation, rose at an annual rate of 8.9 percent in the second quarter of this year. Even though so spectacular a rate of increase cannot be expected to continue, it still appears likely that real gross national product will climb by nearly 6 percent in 1972 and that this increase will continue well into 1973.

The economy's recovery has been accomplished by a slowing of inflation—partly due to the delayed effect of the long recession and the wide gap it opened between the country's actual operating rate and its potential, partly to the increase of productivity, and partly to the impact of wage-price controls.

After rising at an annual rate of nearly 6 percent in 1970 and the first half of 1971, the price index for the economy as a whole slowed to a 2.1 percent rate in the second quarter of this year. It will almost certainly not stay so low for the year as a whole; yet the chances are good that 1972 will see a rise of only about 3.5 percent for the over-all price index.

WORRISOME UNEMPLOYMENT

Unemployment has also come down from the 6 percent plateau. However, five million workers, 5.5 percent of the labor force, are still out of work, and the outlook is for unemployment to stay above 5 percent for the rest of this year and 1973 as well. The Administration is unduly complacent about so high a level of joblessness.

Even granting that some structural changes in the labor force may make the attainment of full employment more difficult today than in earlier years, the White House deserves criticism for its failure to launch a more forceful direct attack on unemployment. It has depended too much on general fiscal and monetary policies to deal with idleness that results from social causes, imperfection in labor markets and shifts in job availabilities.

The Employment Act of 1946 did not imply a goal of "maximum employment" to mean whatever unemployment rate existed as long as business was in a boom or semi-boom. The time has come for the statutory pledge of full employment to be interpreted—by this or any future Administration—to mean that every American who wants a job can be assured of getting one—either in the private or the public sector.

DEVALUED DOLLAR

In the international area, the Administration warrants great credit for severing the link between the dollar and gold and for forcing a realignment of exchange rates. Sooner or later this will mean a strengthening of the American balance of payments, although the nation is far from out of the woods. Compared to the enormous monetary drain in 1971 there has already been much improvement. That is true even though the balance of trade has worsened, due to the initial effects of dollar devaluation.

While the Administration can be faulted for the rough bargaining tactics used by former Secretary of the Treasury Connally, the over-all international strategy of the Administration was correctly based on the conclusion that the United States dollar was overvalued. The net devaluation of the dollar by 12 per cent has reduced this country's cost and price structure relative to its foreign competitors. The White House has sought to pressure other countries into granting unilateral trade concessions to the United States. Thus far, the Administration has little to show on the trade front and it has raised doubts about its commitment to maintaining close economic and political relations with its allies. Indeed, the Administration's balance-of-power approach to economic policy—with this country playing a lone hand among the Western European countries, Japan and the Communist states—could split the Western world into antagonistic blocs.

Mr. Nixon, furthermore, remains too willing to yield to protectionist demands of some industries and labor unions, although it must be granted that those pressures have been intense. Full employment policies would do more than any other thing to contain protectionist demands.

One of the major pieces of unfinished business facing the Nixon Administration or its successor will be the negotiation of reforms in the international monetary system. The more cooperative attitude and actions the Federal Reserve and Treasury have displayed toward other nations in recent weeks have improved the outlook for the international monetary negotiations that begin in Washington next month.

POCKETBOOK CONTROLS

Short of embracing Marxism, no economic approach was more abhorrent to President Nixon in his first thirty months in the White House than the notion that an inflation-beset economy might benefit from mandatory controls on wages and prices. It was an item of dogma for him that such controls never had and never could work in a democracy except in periods of total war.

In the year since Mr. Nixon imposed a ninety-day freeze as Phase One of his embarkation on a regulated economy, his Administration has been giving a generally persuasive demonstration that, even in the face of hostility from most of organized labor, controls can moderate the wage-price spiral without stifling economic growth or building up a monstrous bureaucracy.

It is true, however, that the evidence remains inconclusive, both as to how fairly the program has been applied thus far and, even more, as to how adequate it is to meet the triple-barreled challenges just ahead of faster business expansion, mounting Federal deficits and a heavy 1973 calendar of union demands in major industries.

LOOPHOLE ON FOODS

Most observers give the Price Commission high marks for the vigor with which it has sought to achieve its goal of holding the over-all level of price increases to 2.5 per cent, but the exemption from controls of raw foods has proved a handicap so severe that the commission itself vainly appealed for White House action to put the whole family market-basket under ceilings.

The Administration response, born of reluctance to tangle with the farmers in an election year, was to settle for a much milder curb, a temporary lifting of meat import quotas. That hole in the price net makes it probable that 1972 will end with the price level a full percentage point above the anti-inflation target. On top of that, the high level of second-quarter corporate profits has brought a fresh deluge of labor complaints that the whole program is unfairly loaded in favor of big business.

The Pay Board, aided by a relatively light collective bargaining schedule, did an even more effective job than the Price Commission after an exceedingly rocky baptism. Despite the walkout of four of its five union members, the board has succeeded in trimming first-year pay increases in new contracts involving large unions from better than 11 per cent in the year before controls to just above 7 per cent now.

Even the rampaging construction unions, operating under a semi-autonomous stabilization mechanism of their own, have come way down. More important, the wage regulators faced up to such tough customers as the East and West Coast longshoremen on the need for shaving negotiated increases that would have torpedoed the whole control effort—and did it without touching off strike defiance of the kind British dock workers are currently directing against that country's new Industrial Relations Act.

WAGE GUIDEPOST

The combined average of increases approved for organized and unorganized workers is running at 4.9 per cent, well below the 5.5 per cent basic yardstick established by the Pay Board last November. It will meet this week to consider cutting the guidepost still lower, though there is no prospect it will come down to the old Kennedy-Johnson productivity standard of 3.2 per cent. Much more progress toward price stability will have to be made before that becomes a realistic guidepost for pay envelopes.

The real election test for both parties will be to tell the country what monitoring machinery they plan to hold the line of wages and prices. An abrupt termination of controls when the present Economic Stabilization Act runs out next April would almost certainly reactivate the senseless leapfrog which wiped out the purchasing power of higher wages before workers could get to the supermarket to spend them.

It is plain that the factors of monopoly power in big industry and big labor which prompted a conservative Administration to move from Adam Smith to John Maynard Keynes are only temporarily in check. The question now is how best to balance the imperatives of social responsibility and economic freedom when Phase Two ends.

[From the Washington Post, Aug. 15, 1972]

THE NEW ECONOMIC POLICY AFTER 1 YEAR

On this date a year ago, the President went on national television to proclaim his New Economic Policy. His announcement was a shocker—a surprise attack on three fronts at once with weapons hardly anyone expected a Republican administration to use.

The assault on inflation involved an immediate 90-day freeze on wages and prices, to be followed by an elaborate and comprehensive system of wage and price controls. The attack on unemployment called for tax cuts and deficit spending to knock the economy out of its lethargy. The battle to improve the balance of international payments involved halting the convertibility of dollars to gold and imposing a temporary import surcharge in hopes of forcing a currency realignment more favorable to the United States and creating a more flexible international monetary system.

The economic situation a year ago was bleak and discouraging. The unemployment rate, which had been about 3.3 per cent when President Nixon took office, had climbed to over 6 per cent. Consumer prices were climbing about 6 per cent per year and showing only slight signs of slowing down. To top it off, balance of payments deficits kept piling up at record levels, and foreigners, increasingly reluctant to hold large amounts of dollars, were asking for gold. America's hither-to comforting gold reserves were beginning to look a bit puny.

As the economy creaked along through the first half of 1971, the administration seemed paralyzed by its own inflexible ideology. The President and his advisers professed shock at the very idea of devaluing the dollar and vociferously opposed all suggestions for controls on prices and wages—even the promulgation of wage-price "guidelines." They were sure that holding down government spending would cool off the economy and slow the price rise. When the policy failed and only unemployment resulted they seemed to have no fall-back position. They blamed the unemployment on the deescalation of the war (or denied that it was serious) and insisted things would get better.

Compared with what might have happened had the President not finally acted last August 15 (and this is the comparison he clearly wants us to draw) the New Economic Policy is a success. Indeed on the international scene he could not have let things slide much longer. The dollar was over-valued and its use as the world's main international money put the United States in an untenable position. Suspending gold payments was a good way of communicating that the United States was serious about setting up a new system and the import surcharge may even have been necessary to get the interim currency realignment negotiated at the Smithsonian meeting in December. The tough talk and Mr. Connally's bluster which accompanied these moves, did do serious damage to our relations with Japan and Europe, however, and delayed rather than hastened the process of constructing a new monetary system.

On the domestic scene things are clearly better than they would have been if the old game plan had been followed. Prices subject to controls are not rising as fast as they were, although food prices remain a problem. It is true that the rate of increase in consumer prices was slackening even before the controls, but that does not prove the controls were unnecessary. The existence of controls has undoubtedly allowed the government to stimulate economic activity without reescalating the inflation. And the stimulation has worked. All the domestic economy's vital signs have turned in a healthy direction since the first of the year, profits are soaring and even the stubborn unemployment rate has finally inched down from 6.0 to 5.6 percent.

But one can commend the captain for the decisive way in which he refloated his ship without handing him a medal of honor for running it aground in the first place. If the President and his advisers had recognized sooner that they were off course—that inflation was not yielding, while unemployment was mounting—such drastic salvage operations would not have been necessary. Individual incomes could have been substantially higher than they are today and millions of the unnecessarily unemployed would have been spared bitterness and hardship.

Even starting from where the President found himself a year ago, we do not view the New Economic Policy as an unmixed success. The price control apparatus remains far too comprehensive to be effective even after decontrol of very small business. Attempting to monitor the prices of retail outlets and small-to-moderate sized manufacturers (whose prices are controlled by competition anyway) creates an illusion of action and adds to the national paperwork indigestion, while deflecting the Price Commission and its staff from the serious work of scrutinizing price hikes by major manufacturers. It is these giant firms that have the market power to push up prices and their recent profit levels indicate they have not been exactly suffering from too stringent price controls.

We also believe Mr. Nixon relied far too heavily on tax relief to business as a way of stimulating the economy. The investment credit on top of liberalized depreciation rules has proved a bonanza for business and has intensified the wage-earner's justifiable feeling that his government looks after big business while he pays the bill. Increased spending of temporary tax relief for consumers would have stimulated the economy in a more equitable way. Better still, as we have noted, the deliberately created recession of 1970–71 could have been avoided. At best, then, it can be said that Mr. Nixon recognized his own mistakes before the vessel was totally wrecked and took bold, if and so far only partially successful actions to get it back on course.

[From the Washington Post, Aug. 13, 1972]

The Flawed Recovery

(By Joseph Kraft)

An undoubted recovery has taken place since President Nixon's New Economic Policy went into effect a year ago this week, but it is a normal recovery from a year of recession, and to honor it with the ballyhoo of a special report from the President's advisers, as the administration is now doing, is a little like applauding a rubber ball for bouncing up after it has been thrown down.

Moreover, the recovery is flawed, particularly as regards the allocation of gains to different groups in the country. And politically what counts is the capacity of the presidential candidates to deal with these flaws.

Virtually all signs announce the dramatic pickup in economic activity during the past year. Real growth in gross national product was inching forward at a rate of about 3 per cent annually in the first part of 1971. Now it is advancing at a rate of better than 7 per cent annually, and the outlook for next year is good.

Unemployment was running at 6 per cent and over in 1971. It has been cut to 5.5 per cent, and the drop took place with a record number of Americans holding jobs. At the same time, large numbers of new entries are flooding the job markets every month.

Thanks to the 90-day freeze and the wage and price controls now in effect, there has been some easing of inflation. In the seven months before controls were applied last year, the consumer price index was rising at 3.9 per cent annually. The comparable figure for the last seven months was 3.1 per cent.

Putting aside special conditions, it is probably fair to say that the economy was subject to inflation at a 5 per cent annual rate about a year ago. It is probably fair to say that inflation has now settled down to a 3 per cent rate.

But within this generally good picture there are some obvious bad spots and inequities. The poor, particularly blacks caught in the inner cities, have participated hardly at all in the general bounty. Indeed, it may be that they are losers.

For as part of the New Economic Policy, the President postponed for one year action on two pieces of legislation chiefly designed to help the inner-city poor—the Family Assistance Plan for welfare reform and the revenue-sharing proposal. It is not clear now that these measures will be passed even this year.

Wages and profits are notoriously hard to compare. But there is some evidence that companies are doing much better, at present, than workers.

Average hourly earnings were up by 3 per cent in the second quarter and are rising at a declining rate. But corporate profits per unit of manufacture were up by 20 per cent in the first quarter. The second-quarter figure, though not yet in, is said to show another healthy gain.

In the battle between consumers and producers, moreover, the consumers seem not to be holding their own. The prices of food, a staple which takes a particularly large share of the earnings of middle- and low-income families, are rising much faster than the 3 per cent basic inflation rate.

One major group of producers, the American automobile manufacturers, have probably been the chief beneficiaries of the recovery. The New Economic Policy seems to have been made in Detroit.

But that poses real questions about priorities. Is the point of prosperity more cars? Is what's good for General Motors really good for the country after all?

The political consequences of this showing are mixed. The change in policy last year ended what is probably the most dismal period of economic history in the postwar era. President Nixon can go to the electorate pointing with pride to prosperity. In the battle of the statistics he is not in bad shape.

But George McGovern has a large fund of voter resentment to draw on. He can still attack the administration for three lean years, the more so as the recession was ended only thanks to the President's belated adoption of Democratic policies a year ago.

Moreover, most individuals feel less good about their daily life than the statistics say they should. All present signs point up the validity of McGovern's big emphasis on changing priorities. So it will be surprising if the economy does not become the big issue of 1972.

[From the New York Times, Aug. 16, 1972]

Will Voters Recall Slump or Boom?

(By Leonard Silk)

In the midyear report of the Council of Economic Advisers, the Administration has warmly praised itself for having shown "a high order of responsibility, innovations and activism in dealing with its problems." But the Democratic members of the Joint Economic Committee of Congress, reacting to the mid-year report, contend that it is not enough for the electorate to ask only what the Administration has for it lately. "For the last three years," the group headed by Senator William Proxmire, Democrat of Wisconsin, said, "the economy has experienced a prolonged recession brought on through a deliberate policy of reducing the growth of output and employment in the vain hope that this would reduce inflation.

"It is only because output was first allowed to fall $80-billion below its potential and unemployment forced to rise to 6 per cent and remain there for 18 long months that the last few months look like good news by comparison."

MEMORY MIXES WITH DESIRE

In the wasteland of politics, memory mixes with desire. But it is still too early to know whether, by Election Day in November, the voters will be more haunted by the memory of the Nixon slump or more desirous of a continuation of the Nixon boom that is now getting underway.

Looking to the future, the Democrats will try to convince the voters that the Republicans, having gone all out to reflate the economy in time for the election, are likely to deflate it, and produce another slump, once the election is over.

The Democratic rebuttal to the C.E.A.'s midyear report contends that Republican economic policies "are unduly influenced by a fear of inflation and by a stubbornly held, but erroneous, belief that the way to control inflation is to restrict the growth of output and employment."

INFLATION CALLED SERIOUS

As evidence, the Democrats point not only to the Nixon recession of 1969–70 but also to the Eisenhower second-term recessions of 1957–58 and 1959–60.

The Democrats, while agreeing that inflation "continues to be a most serious problem," insist that the nation's best hopes for coming to grips with inflation lies in a rapid return to prosperity, "accompanied by carefully formulated prices and incomes policies."

But the Democrats are focusing on unemployment as their best economic issue, and they say it will be necessary to keep the economy growing at a 7.5 per cent annual rate for the rest of this year and all through 1973 to reduce unemployment from its present 5.5 per cent rate to 4 per cent by the end of next year.

Indeed, they do not want that rate to be the final target but advocate policies to reduce unemployment to 3 per cent.

But President Nixon's economic advisers say that they do not believe that "the option of retaining tight controls while pumping up excess demand and thereby achieving price stability and very low unemployment is a viable one."

Nor is it a new option, they say; rather, "it is the classical siren song which has lured many anti-inflation efforts to disaster."

POSTELECTION PLANS SOUGHT

The Democrats are seeking to press the Nixon Administration to disclose its postelection plans for wage and price controls, but the Republican economists say they have no fixed scenario for the "termination or alteration" of controls. However, they insist that "we must prepare ourselves to rely even more in the future on prudent policies to control demand, rather than on wage and price controls."

Mr. Nixon's preferred course for checking the rise of total demand is to impose a $250-billion ceiling on Federal spending. He suggests that he alone—by the veto route—cannot ensure that ceiling; if the people insist on spending more than that, Mr. Nixon said, "such spending will be done." But he warns that, if the people insist on more spending, inflation will be revived and taxes will have to be raised.

Thus the Democrats continue to favor what Alvin Hansen, professor emeritus of economics at Harvard and once a leading adviser of President Franklin D. Roosevelt, called "high-pressure economics"—a strong and steady fiscal stimulus to keep the economy at or near full employment—while the Republicans favor "low-pressure economics," at least after the election.

Since Mr. Nixon launched his New Economic Policy last August, Republican fiscal policy has been about as "high-pressure" as any Democrat would have wanted.

After running budget deficits of about $25-billion a year in fiscal years 1971 and 1972—largely a consequence of slump-caused shortfalls in Federal tax collections—the Administration is facing a still-larger deficit in the current fiscal year.

The Administration is still putting the fiscal 1973 deficit at $27-billion, but some outside observers think it may reach $40-billion.

BALANCE STRAINED

The C.E.A. midyear report says that Mr. Nixon's proposed budget for fiscal 1973 "would have been balanced under full-employment conditions, although "this balance has been strained by a number of developments so far this year, but the President is determined to prevent significant departure from full-employment balance by seeking offsets to budget overruns."

The President also intends, his economic advisers say, to achieve full-employment balance in fiscal 1974. The Republican economists continue to use a 4 per cent unemployment rate as the basis on which the full-employment budget is calculated, although they have in the past suggested that 4 per cent unemployment may not be reconcilable with price stability, owing to a worsening of the tradeoff between unemployment and inflation.

DIFFERENCES OF OPINION

The battle between the Republicans and the Democrats will not be over just the level of the budget but over its composition on the expenditure side and the structure of taxes. Mr. Nixon's advisers now say that the President intends to submit a program for improving the equity of the tax system.

However, the President's economic advisers think it is not prudent to count on raising much money from tax reform when "we consider the differences of opinion that exist about what equity is, when we consider the possible inequities of suddenly changing long-established practices and when we consider the past record of Congress in these matters."

On the expenditure side, Mr. Nixon plans to increase defense spending, but Senator George McGovern would cut defense outlays sharply—by about $30-billion over the next three years. By contrast, Mr. McGovern would be far more generous on social outlays to help the poor, the black, the young and lower-income groups generally.

But the Republicans think the South Dakotan has taken the short end of the stick in an affluent society. They are counting on the current expansion of the economy and the rise in personal incomes to keep the bulk of the voters happy.

Gross national product was running at an annual rate of $1,139-billion in the second quarter of this year, and is likely to rise by more than $100-billion in the next four quarters.

"Money is human happiness in the abstract," said the 19th century German philosopher, Arthur Schopenhauer. "He, then, who is no longer capable of enjoying human happiness in the concrete devotes himself utterly to money."

But a 20th century French philosopher, Simone Weil, observed: "Sin is nothing else but the refusal to recognize human misery." That appears to be the basic theme of Senator McGovern's attacks on both Mr. Nixon's domestic and foreign policies. Whether Weil can outsell Schopenhauer this year, however, remains dubious.

POISONS, PREDATORS, AND PRESERVATION

Mr. BAYH. Mr. President, congressional and public concern about the widespread use of poisons has been building for the last several years. As a result of the effective campaign by conservationists and citizen groups, the administration this year has placed severe limitations on use of DDT, an insecticide, and highly toxic poisons which are used in predator control programs.

Unfortunately the temptation to use fast, effective poisons remains strong. Despite the President's Executive order banning the use of the most dangerous predator poisons, pressures on the executive branch to rescind the order will continue until an effective alternative is developed. Within the past year I have testified twice in favor of immediate passage of legislation to promote the development and use of alternative, nontoxic devices to control unwanted predators.

At the same time, I have called for a legislative ban on the use of poisons on public lands; such a ban would accelerate desperately needed research for nontoxic deterrents. In line with this point of view, I would like to call the attention of the Senate to the fact that one replacement for DDT has already been discovered; USDA has recommended this substitute insecticide for controlling insects on dairy cattle as well as in dairy barns. I believe that a replacement for predator poisons—either chemical or nonchemical—can be found as quickly, once Congress has demonstrated its strong and permanent opposition to the indiscriminate use of harmful poisons.

I ask unanimous consent that a CBS radio release, the USDA recommendation of the substitute, and several news stories be printed in the Record.

There being no objection, the items were ordered to be printed in the Record, as follows:

INVENTOR OF DDT REPLACEMENT, NONTOXIC TO HUMANS, HEARD FIRST, NATIONALLY, ON "THE BUYER'S SCENE"

A commercial insecticide as effective as the government-banned DDT, but harmless to humans and pets?

Yes, said Dr. Allan Becker to CBS News Reporter Christopher Glenn during the scientist's first nationwide broadcast interview. Becker, a 29-year-old Ph. D in organic chemistry, was heard during the Thursday, July 20 CBS News broadcast "The Buyer's Scene"—on the CBS Radio Network.

Becker, President of Ecological Manufacturing Corporation of North Bergen, New Jersey, told Glenn his firm is about to market the product under the trade name of Emtex.

"Emtex," noted Becker, "is a very broad spectrum item. It will kill mice, rats, roaches, lice, ticks, fleas and a vast array of crop infestations. It works also as a fungicide on molds which attack plants."

Becker explained that Emtex, the company's trade name for methoxychlor, is unlike DDT, "which is stored in the body fat. Emtex is excreted in a 48-hour period of time. This," he emphasized, "has been documented through various human toxicology studies."

In discussing the wide-range application of Emtex, Becker said: "This type of product can be used not only agriculturally, but in food processing situations as well as in the home for silverfish, rodent and roach control, with virtually total safety to humans and pets."

Emtex, Glenn reported, is currently used only by exterminators. "The new ban on DDT will change all that, however, and its for sure that Ecological Manufacturing Corporation has itself a hot product."

USDA APPROVAL

The United States Department of Agriculture made the following recommendation. U.S. Department of Agriculture, "USDA Entomologists Recommend Substitute Insecticide for DDT to Control Insects on Dairy Cattle and in Dairy Barns." Unnumbered release.

"DDT should not be used for insect control on dairy cattle," the entomologists of the U.S. Department of Agriculture announced today. Even small amounts of DDT in a food such as milk, a universal diet especially for infants and small children, might prove harmful in time, toxicologists of the Food and Drug Administration, Federal Security Agency, now say after several years of study. They say presence of the chemicals in milk would be contrary to the Food, Drug and Cosmetic Act.

The entomologists now recommend that Methoxychlor, another effective insecticide be substituted for DDT to control insect pests on dairy cows.

Methoxychlor, one of the new chlorinated hydrocarbon insecticides, can be used satisfactorily in the same way as DDT on dairy cattle for controlling major insect pests such as hornflies, stable flies, and lice. Little or none of this insecticide appears in milk of dairy cattle when it is applied to the animals in amounts necessary to control the insects. The Food and Drug Administration has stated that Methoxychlor, used in place of DDT for this purpose is unobjectionable from the health standpoint."

[From the Journal-News, July 16, 1972]

DDT SUB FOUND

(By Stanley Johnson)

NEW YORK (AP).—A successor to U.S. government-banned DDT has been put on the market by young New Jersey manufacturers. They claim it is more efficient than DDT and "kills bugs, but doesn't kill people."

Dr. Alan Becker, president of the Ecological Manufacturing Corp. in North Bergen, has named the product Emtex.

He said in an interview that it will be nationally available within six months. At present, it must be bought through professional exterminators.

"It's obvious that insecticides are needed," he said.

"We set out to find the best chemical substance available that wouldn't kill a human."

However, "we don't expect to make it for more than 10 years. By then the ultimate pesticide will have been found—and it will be organic."

Becker, a dark-haired man in his early 30's, said manufacture of the product developed through an academic discussion group thrashing out the problem of pesticides.

The developers investigated four or five products and discovered methoxychlor, which had been patented in Switzerland in 1926, bought by E. I. du Pont de Nemours Co. but never offered for sale.

"The patent had run out and we got hold of it and improved it drastically," he said. "We have a new manufacturing process and the product is 96 per cent pure."

Becker said that because of its purity the product could be used not only for such traditional things as spraying cotton and getting rid of flies but directly in such places as restaurant kitchens.

Moreover, he said Emtex can be pigmented into paints and used on walls, ceilings and floors to provide a permanently bug-free room.

Last fall, 20 volunteer inmates at a prison in Pennsylvania, under direction of the Pennsylvania Medical School, ingested Emtex. When blood and urine specimens were taken after 24 hours, the subjects had thrown off 98 per cent of the Emtex.

The six-week test was conducted with the approval of the Food and Drug Administration, "It can be used as an effective, nonpolluting replacement for DDT," said Becker. "It is the safest to warm-blooded animals. It has little or no tendency to be stored in body fat. It kills flies faster than DDT and can be used on sensitive plants, such as tomatoes."

Becker and his vice president, Dr. Henry Nathan, both feel they have a personal interest in the pesticide.

"I am going to be eating lettuce," said Becker. "I'm going to be drinking milk. I don't want anything that's toxic.

"So," he said, "We have treated the chemical as pharmaceutical, because we know some of it is going to be ingested. We know it won't be entirely washed off the lettuce."

As for dairy products, the Ecological Manufacturing Corp. shows a release from the U.S. Department of Agriculture saying "Methoxychlor, one of the new chlorinated hydrocarbon insecticides, can be used satisfactorily in the same way as DDT on dairy cattle for controlling major insect pests such as hornflies, stable flies and lice. Little or none of this insecticide appears in milk of dairy cattle when it is applied to the animals in amounts necessary to control the insects.

"The Food and Drug Administration has stated that methoxychlor, used in place of DDT for this purpose, is unobjectionable from the health standpoint," USDA said.

[From the Newark (N.J.) Evening News, July 17, 1972]

ECOLOGISTS' DREAM INSECTICIDE READY

(By Laurence Sutter)

NORTH BERGEN (UPI).—A group of chemists, physicians and insect experts here are about to put on the consumer market what appears to be the ecology movement's dream product: an insecticide as effective as DDT but harmless to humans and pets.

Allan Becker, a 29-year-old Ph.D. in chemistry from Park Ridge, is the president of the firm. Ecological Manufacturing Corp., which is about to market the product under the trade name of Emtex.

Becker appeared on a New York radio show over the July Fourth weekend to talk about his product, and says that since then requests for information and orders have been pouring in from the U.S. and abroad.

But in between answering telephones, the chemist can find time to say that the product is, technically, 2, 2-bis P-methoxyphonyl 1,1,1, trichloroethane, otherwise known as methoxychlor, otherwise known as Emtex.

According to Becker, the product kills all manner of household, farm and granary pests—flies, roaches, lice, small rodents, mosquitoes, fruit and vegetable beetles and worms, silverfish and bedbugs—but is least harmful to warm-blooded animals, such as man and household pets. It also will not kill sensitive plants such as tomatoes and cucumbers.

WIDE-RANGING EFFECT

The point about Emtex, Becker says, is not only that it is harmless to people, but that it has as wide ranging an effect as DDT—a major reason for DDT's universal popularity, until the federal government banned it as too dangerous for use.

DDT builds up in the body's fatty tissues, and is never broken down. Becker explained that some obese individuals died of DDT poisoning when they went on crash diets and were poisoned by the residual DDT in their systems.

Tests on prisoner volunteers last year, however, showed that the body eliminated 98 per cent of Emtex within 48 hours—as opposed to 10 per cent of DDT.

Becker, who has worked as a commercial chemist, said his interest in agriculture contributed to the development of Emtex, developed over the past three years in New Jersey by the scientists who are now directors of the corporation.

Another factor, he said, was his interest in the environment.

"We're environmentally concerned," Becker said in an interview. "People are becoming much more aware of what they're eating, and are beginning to question. I'm beginning to question.

SATISFIED FOR NOW

"We're satisfied, at this point—we're temporarily satisfied. The ultimate insecticide will be a totally organic material totally nontoxic to man. In the interim, this material, we feel, is the safest broad-spectrum item available today."

The material, in aerosol form, should be on supremraket shelves in about 90 days, Becker says. And although the company has done only test marketing so far, he has no doubts about the product's success.

"We already know we can market more than we can handle," he said. "So it's a start-up operation, but not in the classic sense."

The basic ingredient, methoxychlor, Becker says, was developed by Swiss scientists in 1936; what Ecological has done is perfected the commercial process for manufacturing it. But Becker isn't worried about competition or imitation.

"First of all," he said, "we feel we have at least a two-year jump because of the work we've put in developing the process. And secondly, we could all go into business tomorrow and not fill the void left by DDT. It's a $200 million market."

RELATIVELY HARMLESS

Like DDT, methoxychlor kills by interfering with its victims' metabolic processes, and Becker concedes that Emtex's harmlessness is relative—although pointing out that too much of anything will kill people.

However, the lethal dose is 6,000 times greater than that of DDT—much more than the average spray-user could accidentally swallow if he spilled it on his hands, or the average child or pet could lick off walls and floors.

[From the Record (N.J.), July 18, 1972]

NORTH BERGEN FIRM FILLS DDT VOID

(By James T. Prior)

Barry Farber, the radio personality, says the firm should get the Nobel prize. Dr. Robert Schoemer, a Teaneck veterinarian and member of the President's Commission on the Environment, calls the firm's product a welcome alternative to DDT.

The company is Ecological Manufacturing Corp. of North Bergen, headed by a team of Bergen County businessmen, chemists, and biologists. Its product is Emtex, an insecticide as effective as DDT but harmless to humans and pets.

Backed by a public stock offering last week of $2.50 per share, which was oversubscribed, the firm is rushing into production with an aerosol spray which should be on supermarket shelves in 90 days.

Dr. Alan Becker, a 29-year-old Ph. D. in chemistry from Park Ridge, is president and founder of the firm. He estimates his company has a two-year jump on other firms because of the research, development, and test marketing already completed. Moreover, he says, the insecticide market is big enough for everyone now that the United States has outlawed the use of DDT.

Becker was on Farber's show earlier this month to describe his firm's efforts to market a safe insecticide. Sixty-five calls were received the next day and several hundred since—asking for information or placing orders.

A story on the fledgling firm first appeared in the Record eight months ago, when Becker joined other Bergen executives and medical people to start the corporation. It has since gone public, moved into leased facilities at 5401 Tonnelle Ave., North Bergen, and begun production.

Emtex is EMC's brand of methoxychlor, a chlorinated hydrocarbon insecticide which is almost nontoxic to humans, virtually eliminated from the body in a brief time if ingested, and biodegradable (it breaks down in the soil).

Becker says anything is toxic if enough is ingested. "You can die from too much salt, if you eat enough of it," he says.

SWISS ORIGIN

Methoxychlor kills insects by interfering with the metabolic processes. It was developed by Swiss scientists in 1936, but Becker's firm has added certain ingredients and worked out a manufacturing process that produces Emtex. It would take 6,000 times more Emtex than DDT to kill a human.

"It can be used as an effective nonpolluting replacement for DDT", says Becker. "It is the safest to warm-blooded animals of the commercially available organic insecticides. It has little or no tendency to be stored in body fat, and is effective against a wide range of crop, livestock, household, and other pests."

According to Becker, methoxychlor kills flies faster than DDT. Yet, it can be used on sensitive plants, such as tomatoes.

According to Becker, pathologists have found DDT in the fatty tissue of dieters who died. When on a crash diet, their DDT blood level rose out of proportion to body weight.

TESTS ON INMATES

EMC tested Emtex on volunteer prisoners under supervision of the Food and Drug Administration. Twenty prisoners ingested some, and blood and urine samples were taken during a 24-hour period. Each was given five milligrams and more than 98 per cent was thrown off by the body within 24 hours.

As Becker explains it, the firm was taking a pesticide and making a pharmaceutical of it in order to test its effect on humans.

"Without going into technical data, Emtex is a homologue of DDT, which means it is an analogue of DDT," he says. "It is similar to DDT—it has all of its beneficial effects and through our scientific endeavoring we were able to eliminate the No. 1 problem with DDT, the storage in the body fat."

Becker looks to the future for an even better product. "There is no chemical substance in the world that is nontoxic—it's a question of degrees. We have a product that is the best solution today. It is the broadest spectrum material available today. This is still a chemical material. However, the ultimate pesticide is still an organic material."

THE NEED FOR BICYCLE ROUTES

Mr. BOGGS. Mr. President, the Committee on Public Works earlier today ordered reported proposed legislation that would authorize further progress on our national highway program.

One of the bill's sections establishes a special, $10 million-a-year fund for the construction of bicycle and pedestrian routes. It is my intention to discuss the merits of this bicycle-pedestrian provision at greater length during the Senate's consideration of the bill, as I believe this bicycle-pedestrian provision is essential to promoting highway safety.

The Wall Street Journal, earlier this week, published an interesting article that pointed out the inherent danger when bicyclists and motorists compete for the same highway space. The article notes the estimate of the National Transportation Safety Board that nearly 1,000 bike-related deaths will occur this year.

Nearly all those deaths could be prevented. If we can provide alternative, inexpensive bicycle routes, attracting bicyclists away from main highways, I am convinced that we can reduce that death rate to practically zero.

The reported highway legislation, on which the Senate will soon have the opportunity to act, will provide a program to make that dramatic reduction.

Mr. President, I ask unanimous consent that the Wall Street Journal article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE BOOM IN BICYCLING BRINGS WITH IT A SURGE IN ACCIDENTS AND DEATHS

(By John S. Brecher)

Josephine Simonds decided early last year that she wasn't getting enough exercise.

To help remedy the situation, she decided to start riding her bicycle to work. That meant an eight-mile daily round trip from her home in Silver Spring, Md., to her job as a researcher at the National Institutes of Health.

For a while, it was great. Then came the day when, as she approached an intersection, a fast-moving car swerved in front of her. She didn't collide with the car, but she did have to slam on her brakes so hard that she lost her balance and went sprawling into the street.

"The next thing I knew, I was covered with blood," says the 51-year-old Mrs. Simonds. Among other things, she suffered severe cuts, a concussion and partial amnesia, and she experienced vertigo for several months.

Thus, Mrs. Simonds joined the rapidly growing number of bike enthusiasts who are finding that while cycling may be great fun, may contribute to saving the environment and may keep riders in fine physical shape, it can also be exceedingly dangerous.

The bike safety situation, says Harold E. Heldreth, an official at the National Safety Council, "is getting to be a critical problem. Fatalities are going up, and officials from the federal government on down are concerned about it."

TRAGEDY HITS A FAMILY

Secretary of Transportation John A. Volpe, an ardent supporter of bicycling, was a prime mover in setting aside a "Bicycle Day" in Washington last year to call attention to the joys of biking, Mr. Volpe noted in an address on the subject, however, that "the main problem with bike riding is the danger involved."

Indeed, with the biking boom gaining steam throughout the nation, bike-related mishaps and tragedies are cropping up almost daily. Not long ago, a family of four in Orlando, Fla., out for a bike ride, was killed when their bikes were hit by a car. Police say the family was riding legally, but the motorist, who was fined $36 for reckless driving, told investigators: "I never even saw them."

According to the National Safety Council, about 880 bicycle riders are likely to be killed this year in bike-auto accidents. Such fatalities have risen steadily in recent years, from 490 in 1961 to 850 last year. The National Transportation Safety Board estimates that about 130 additional bike-related deaths will occur.

Nonfatal injuries, too, are soaring. Local police departments and hospitals say the problem has become acute. In the Cleveland suburb of Rocky River, for instance, police report one death and nine injuries so far this year; in all 1971, there were only four injuries. And an official at the University of Texas Health Center and Hospital says the number of bicycle-related injuries treated at the facility has doubled in the past two years.

PHENOMENAL RISE IN POPULARITY

Because of the growing safety problem, efforts are under way to make biking safer. Last year, a bill called the Bicycle Transportation Act of 1971 was introduced in both houses of Congress; it would permit states and communities to use federal highway funds to develop bicycle commuter systems. Already, a number of cities, such as Denver and Austin, Texas, are setting aside funds for "bike lanes," in which autos wouldn't be permitted.

Behind the bike-safety problem are a variety of considerations. The most important, police and biking enthusiasts agree, is the near-phenomenal rise in the popularity of biking. According to the Bicycle Institute of America, a trade group, the number of bikes sold in the U.S. rose to 8.9 million in 1971 from four million in 1961. This year, the industry expects to sell more than 10.5 million bikes. The Bicycle Institute also says that more than 75 million people are riding bikes now, compared with about 55 million in the late 1960s.

Moreover, bicycling is fast losing its old image as something mainly for children too young to get a driver's license. Increasingly, it's being taken up by adults who regard bikes as a legitimate form of transportation. In Washington, for instance, a recent study conducted by the city council found that some 6,000 individuals ride bikes to work each warm day. Some enthusiasts ride whatever the weather.

Biking is also gaining stature as a form of recreation, a way to keep physically fit and contribute to saving the environment. Even in New York, where only the bravest of motorists dare go, bike riders now are to be seen everywhere, taking their chances with the heavy flow of traffic. Elsewhere, in cities and suburbs across the country, countless families and elderly couples can be seen out for a ride on any given day.

NOW IT'S "THE THING TO DO"

And many teen-agers, who not long ago considered riding a bike an insult to their dignity, now are taking it up. Says Anne Florence, a 17-year-old high schooler in Rocky River, Ohio, who rides often: "When I was in junior high school, a bike would have really been a good way to get to school, but it just wasn't considered the thing to do."

With more bikes rolling, and rolling more of the time, it's small wonder that accidents are on the rise. But a number of other factors also come into play. Jerry Peabody, a researcher for the Urban Institute in Washington says he believes he detects "a redneck kind of attitude" on the part of some motorists, who deliberately try to force bike riders off the road. Such motorists, he says, "don't realize that by law bikes have equal rights as cars."

But bike riders also get their share of the blame. Almost all police and safety officials agree with Rocky River police Lt. Robert J. Nicholson when he says, "If we could get across to the children and parents that they must obey traffic laws when they're on their bicycles, we could cut injuries in half." And many pedestrians, imperiled by bikers whizzing through red lights, find it hard to sympathize with complaining bikers.

Not only are both chlidren and adult riders often negligent about obeying traffic laws, officials say, but also they often choose to ride in obviously dangerous places, such as on busy highways, with all-too-predictable results. Even when they are experienced riders who take special precautions, accidents can happen.

Consider, for example, the experience not long ago of Dave Chaney, a 55-year-old advertising man in Chardon, Ohio, when he was making a long-distance ride with some other bike enthusiasts. Mr. Chaney was riding all the way off on the shoulder of a four-lane highway in Pennsylvania when a trailer-truck roared past him. A violent wind current caused by the passing truck sent Mr. Chaney and his bike sprawling. He received a broken hip, broken clavicle and a slight concussion. He'll be on crutches for six months.

(A spokesman for the Insurance Information Institute, an industry group in New York, says there is currently no special coverage needed or offered for bicyclists, since bike injuries are covered by policies that most people already own—homeowners' policies, accident, health and hospitalization policies, and personal liability policies. The spokesman added that he doesn't know if more of these policies have been sold as a result of the bike boom.)

Numerous other perils await bike enthusiasts. Frank McGuire, a past-president of the Rochester Bicycle Club in Rochester, N.Y., tells of the time last year when he was out riding with William Sheets, then president of the club. A dog ran out of a driveway and attacked Mr. Sheets' leg and tipped his bike over. Mr. McGuire says his biking partner fell off his bike, struck his head against the pavement and died in a hospital a few hours later.

Jerry Peabody, the Urban Institute researcher in Washington, tells of being knocked semiconscious earlier this year when a motorist opened a car door just as he was passing. Mr. Peabody, who now wears a crash helmet, as do many bike enthusiasts, says he flipped over his handle bars and landed a full six feet beyond the car door.

Riders also say that because they usually have to share road space with autos, they're subject to all kinds of other dangers. A common complaint concerns sewer gratings, which often consist of steel bars laid along the curbs of streets over storm drains. Riders say their front wheels can slip between the bars, throwing them from their bikes. If they swerve to miss gratings, they say, they may be hit by a passing car.

Relatively few serious injuries are attributed to failures on the part of bikes themselves. However, a number of safety officials believe certain types of bikes contribute to the casualty toll. Most frequently cited are the bikes called "high-risers." With low-slung frames, small wheels and high-rising seats and handle bars, such bikes are especially popular with children. The National Transportation Safety Board found in a recent study that "part of the increased hazard may be due to (the high-riser's) attractiveness as a vehicle with which to engage in acrobatics."

But most authorities attribute the rising toll to the sheer fact that bikes compete with autos for space on the road, and almost all efforts to improve the situation involve separating bike traffic from cars and trucks. Denver, for example, recently appropriated $25,000 to $56,000 for an experimental bike lane, and the city of Austin is cooperating with the University of Texas to build a $7,000 bike lane. One state, Orgeon, has approved a measure that provides 1% of state highway money for bike trail and path construction and maintenance.

But making room for bikes, in Denver, at least, infuriates some motorists. The bike lane proposal for the city involves taking certain parking spaces for conversion into bike lanes, which has irked shopkeepers and apartment house owners who would no longer have curbside parking space. City officials and biking enthusiasts are confident that a compromise can be reached.

Experts on Bicycling Offer Safety Advice for Riders

Bicycle experts say the hazards of bicycling can be reduced by observing a few rules. Among other steps, they advise:

Take biking seriously. It's no game. Stay alert for cars, other bikes, pedestrians, chuckholes and other hazards.

Ride a bike that fits, both physically and the type of riding you do. Long-distance riders usually prefer the English-style 10-speed touring or racing bikes; casual riders lean toward heavier three- or five-speed machines. Children often prefer the small and sporty "high-risers," but some experts warn these can be dangerously awkward to maneuver.

Don't skimp on certain accessories. Reflectors all around are musts; a horn or bell is a good idea. Night riders need good lights, fore and aft. Most other frills merely add weight.

Maintain bikes carefully. Faulty brakes are particularly dangerous. A loose bolt can cause mechanical failure and result in an accident.

Try to avoid riding in heavy auto traffic traveling at high speed.

Wear a safety helmet—anything from an old football helmet to a racing driver's crash helmet.

Learn the law and obey it. Although many parents instruct their children to ride facing the traffic, all states by law require bikes to follow the same rules as cars. In some towns, however, safety officials prefer that bikes be ridden on sidewalks; others want all riders in the street.

SENATOR BAYH ASKS FOR BIPARTISAN SUPPORT ON ISRAEL

Mr. BAYH. Mr. President, Governor Rockefeller, of New York, earlier this week raised, then quickly dashed hope for a breakthrough in the Soviet Union's policy toward Jews who seek exit visas to emigrate to Israel. The Governor was widely quoted in news reports from Israel to the effect that the President had secured an agreement from the Soviet leadership to permit 35,000 Soviet Jews to emigrate every year.

Upon his return to the United States, the Governor quickly corrected his earlier statement—leaving only some vague reference to the fact that the President had raised this issue during his visit to the Soviet Union earlier in the year. This corrected version of Governor Rockefeller's understanding of the situation is more directly in keeping with the communique issued after the Moscow meetings. According to the communique, the President and the Soviet leaders did discuss the Middle East situation—but without reaching any agreements. The wording was deliberately vague and very general; if anything of substance came from the discussions it was well hidden and is yet to emerge.

Given the apparent lack of success in Moscow in resolving any matter relating to the Middle East, Governor Rockefeller's retraction this week is consistent with the back-burner role which the administration has given to the Middle East situation. The unhappy truth is that the administration brings the Middle East to the forefront only when it wants to draw an improper analogy with Vietnam, or when it wants to lure the Congress into spending hundreds of millions of dollars for Southeast Asian dictatorships, or—in this election year—when it thinks it can reap easy political gain with ready lipservice.

First, consider the popular, but false, analogy between the situation in Vietnam and the situation in the Middle East. I firmly believe that there is no contradiction in my own often expressed view that we leave Vietnam and, at the same time, provide Israel with the means to deter aggression and guarantee its own security. The Vietnamese-Israel analogy has been discredited time and again, with many good reasons:

Israel is a viable democracy; South Vietnam is a repressive military dictatorship that falls far short of even the most minimum conditions of an open society.

Israel has never asked for a single American soldier; the present Saigon regime is there only because more than 50,000 Americans gave their lives and four times that many Americans became casualties of war.

Israel is ready and willing to pay for the military equipment it needs; South Vietnam has never paid for the tens of billions of dollars of U.S. aid which have been used to prop up its corrupt government.

The need to clearly distinguish between areas of national interest is increasingly relevant in this election year because of the obvious political attempt to convince the public that Senator McGovern's responsible call for an end to the Vietnam war means that he would somehow let Israel fall prey to its aggressive neighbors. Having served in this Chamber with the Senator from South Dakota for 10 years, I can say without hesitation that he has a full and sincere understanding of the importance of Israel's viability to U.S. national interest.

In addition to its blatant use of this phony analogy, the present administration has also sought to exploit U.S. support for Israel as a means of serving other far less valid foreign policies. In the case of the fiscal 1973 foreign assistance authorization, for example, the Committee on Foreign Relations determined that the administration request for military assistance for Southeast Asia would lead to our continued overinvolvement in the area. The administration, anxious to provide the armaments needed to shore up week puppet regimes in Southeast Asia, sought to increase the authorization on the Senate floor. In an ill-disguised attempt to add $225 million in military aid for Southeast Asia, the administration sought to sweeten the bitter pill by tying in an additional $20 million in credits for Israel.

Working with the distinguished Senator from Idaho (Mr. Church), we offered an amendment—adopted by a 54 to 21 vote—increasing the credits available to Israel, but without increasing military aid anywhere else. The continuing wide support for Israel in this body, Mr. President, is important evidence that the concern for Israel's safety must continue to be a bipartisan effort based not in domestic politics or the shifting world balance of power but on our own national security needs and our kindred spirit of friendship for Israel's democratic experiment.

In a brazen attempt to exploit the Senate's understandable concern for Israel, the administration went so far as to suggest that congressional opposition to excessive expenditures in Southeast Asia and Senate initiatives to end the Vietnam war could result in stopping supporting assistance for Israel. The President, in a letter to the distinguished minority leader said, regarding congressional opposition to certian administration programs:

> Without these programs, our friends and our interests—in the Midlde East, for example—are left high and dry.

The Senate of the United States, it appears, was being blackmailed. The Senate has the constitutional authority to provide Israel with the means for an adequate deterrent—without relinquishing its perogratives to cut other proposals. Aid to Israel must not, and will not, be held hostage for aid to far less worthy governments in other parts of the world.

Mr. President, like many Senators on both sides of the aisle, I was deeply troubled by the Nixon administration's failure to act on Israel's request for much needed jet aircraft. The long delay which preceded the resumption of the sale of Phanton jets to Israel served only to encourage Arab intransigence. For months Israel watched sophisticated Russian jets accumulate on Egyptian runways, while Israel pleaded for the right to buy Phantoms. The administration waited and waited as the balance of power began to tip and after 2 years finally approved the sale of additional Phantoms. This kind of brinksmanship does not serve the cause of peace. Unfortunately, it has all of the earmarks of a delicate political maneuver designed to maximize partisan use of the belated sale.

For two and a half years, then, while Israel had a legitimate and dire need for that equipment, the administration stalled. It seems fair to ask, Mr. President, why? Why no jets in 1969 or 1970 or 1971?

Recently, Mr. President, the situation in the Middle East took a new turn as Soviet military personnel were sent home from Egypt. This does lessen the possibility of a direct confrontation in the Middle East between the two superpowers. But in doing so, it reduces the risks facing Egypt should that nation decide to move against Israel. An effective check on overly ambitious Egyptian military personnel has been removed—thereby rendering the situation still more complex. And relaxation in U.S. support for Israel at this critical juncture might well be interpreted in Cairo as the sign for military advancement. We can little afford such a risk.

What the policy of the administration will be at this turning point is still unclear. In fact, the administration seems to have opted once again for a backburner role for the Middle East.

A far wiser course would be to encourage, through all available channels, Egyptian acceptance of Israel's latest peace initiative. Instead of standing by during this period of transition, we should be pursuing all possible avenues for bringing the parties to the negotiating table to arrange for direct talks on a peace agreement.

Mr. President, the distinguished senior Senator from Connecticut (Mr. Ribicoff) has prepared a chronology of Senate action regarding the Middle East and the actions of the present administration in this area. I ask unanimous consent that the chronology and an article from the August 8 New York Times, which pointed to the administration effort to unfairly tie aid to Israel to its other foreign policies, be printed in the Record.

There being no objection, the items were ordered to be printed in the Record, as follows:

SUMMARY OF SENATE INITIATIVES ON THE MIDDLE EAST AND THE NIXON ADMINISTRATION POSITION

1. After the 1968 election, William Scranton was sent as an emissary of President Nixon on a tour of the Middle East. Upon his return he called for more "even-handed" U.S. policies in the Middle East.

2. On February 6, 1969, President Nixon announced that the United States would engage in bilateral and Four Power talks in order to reach a Middle East settlement. A few weeks later, President Nasser began to blackmail the Big Powers, opening his way of attrition along the Suez Canal.

3. On April 24, 1969, 70 Senators released a statement which warned against an imposed settlement in the Middle East and declared that there could be no effective substitute for direct negotiations.

4. In September 1969, 22 Senators joined in sponsoring legislation for a $40 million U.S.-Israel desalting project. The Congress approved a $20 million grant but the Adminitration refused to implement this proposal.

5. On December 9, 1969, Secretary Rogers publicly announced the U.S. position on a peace settlement in the Middle East. The so-called "Rogers Plan" called for practically complete Israeli withdrawal from territories occupied in the Six-Day war. In order to pressure Israel toward acceptance, the Administration held up all major Israeli arms requests including shipments of Phantom jets. This undoubtedly emboldened Nasser to continue his war of attrition.

6. In January, 1970, 70 Senators and 244 Representatives called for direct negotiations and the maintenance of Israel's deterrent strength.

7. On May 23, 1970, seven leading Senate critics of the Administration's Vietnam policies sent a letter to President Nixon urging him to sell aircraft to Israel.

8. May 26, 1970—76 Senators signed a letter to Secretary Rogers calling attention to the Soviet military intervention in the Middle East and urging the shipment of the Phantom aircraft to Israel.

9. July 30, 1970—72 Senators signed a letter to President Nixon citing their previous letter to the Secretary of State. They noted the danger posed by increasing Soviet intervention to vital American interests in the Middle East and called for "recognized and secure" borders as part of a peace settlement.

10. August 7, 1970—Massive Soviet and Egyptian violations of the Suez Canal ceasefire were met with deafening silence by the U.S. Israeli photographic proof of the violations was ignored and the Soviet missiles remain in place today. It was not until after these massive violations of the ceasefire that the Administration finally approved the sale of only 18 Phantom jets and a number of Skyhawks. This was almost a full year after Mrs. Meir had come to Washington to seek military and economic aid.

11. September 1, 1970—The Senate authorized $500 million in credits for military purchases by Israel by a vote of 87-7 (the Jackson Amendment). Appropriation approved 62-15 in February 1971.

12. March 1971—Following a well-attended meeting in the Capitol between Senators and Israeli Foreign Minister Eban, Secretary Rogers asked for "equal time." His briefing led some Senators to believe that the Administration was seeking an Israeli commitment to total withdraw from the Sinai prior to negotiations. Senators Ribicoff and Javits in a March 26, 1971 letter queried the Secretary of State on this vital point. No reply was ever received.

13. August 7, 1971—Ten members of the Senate Foreign Relations Committee wrote to the Secretary of State urging favorable consideration to Israel's request for grant supporting assistance in view of its very heavy defense burdens. This assistance, $50 million, was later voted by the full Senate and House. The Administration opposed this grant assistance stating Israel did not need it.

14. October 15, 1971—78 Senators cosponsored S. Res. 177, calling for the immediate shipment of Phantom aircraft to Israel in order to maintain the arms balance in the Middle East. Israel was desperately seeking reassurance that it would receive more than the 18 Phantom jets that had been doled out at the rate of two per month.

15. November 23, 1971—The Senate again voted against Administration wishes, 81–14, to provide $500 million in credits for Israel with $250 million specifically earmarked for Phantom jets. The White House Press Secretary said that the Administration regarded this legislation as "permissive" not mandatory. On the same day, 8 Senaors met with Secretary Rogers. At this meeting Secretary Rogers expressed doubts about Israel's future if it continued its "intrasigent attitude".

16. December 2, 1971—Prime Minister Golda Meir met with President Nixon in Washington. In early 1972, the Administration for the first time on its own asked for $50 million in grant supporting assistance for Israel plus some $300 million in military credits. The Senate later added an additional $35 million in supporting assistance to the original $50 million. The arms embargo ended and limited shipments of aircraft artillery and other advanced military equipment were started.

17. On February 8, 1972—46 Senators introduced a bill, S. 3142, to provide $85 million for the resettlement of Jewish refugees from the Soviet Union. This was authorized in both Senate and House and is now awaiting a final appropriation. The Administration in its testimony maintained that these new funds were not necessary, and that the thousands of refugees could be taken care of from the $50 million in supporting assistance already requested.

18. June 1972—According to news reports, the Soviet Union had informed Egypt that President Nixon told Secretary Brezhnev that the U.S. could not work out a Middle East peace settlement until after the American elections in November.

19. June 23, 1972—The Senate, by a 51 to 21 vote, an Amendment to the Foreign Assistance Authorization to increase supporting assistance to Israel from $50 million to $85 million. The Amendment was offered by Senators Birch Bayh and Frank Church.

Query: Once the elections are over will a second Nixon Administration revert to the imposition of the Rogers Plan, the arms embargo against Israel, and seek to impose a disastrous settlement in the Middle East?

[From the New York Times, Aug. 8, 1972]

NIXON AND THE END-THE-WAR VOTE

(By John W. Finney)

Washington, August 7.—In the opinion of some Republican Senators, President Nixon contributed to his own defeat on the Vietnam issue in the Senate last week by presuming in a letter, to lecture Congress on its responsibilities.

Senator Hugh Scott, the Senate Republican leader, found the President's letter so objectionable and insulting, according to Republican colleauges, that he sent it back to the White House as unacceptable. The letter written on July 27 to the Congressional leaders of both parties, was similar to many that Mr. Nixon has sent to Congress in advance of a vote on the Vietnam issue, with the obvious aim of influencing the outcome. It recited all the reasons that Mr. Nixon found any end-the-war amendment by Congress to be intrusive on the powers of the Presidency and obstructive in the Paris peace negotiations.

But then, in the concluding paragraph, the President offered what was regarded by some Senators as a gratuitous insult. "If the Congress wants to undertake greater responsibilities in the field of foreign affairs," he suggested, "it should start by showing a sense of responsibility in fulfilling the important duties it now has."

Earlier in the letter, the President made what appeared to be an attempt to play upon pro-Israel sentiments in Congress by suggesting that the amendments relating to Vietnam were jeopardizing aid to Israel. Contending that the end-the-war riders were threatening passage of foreign aid and military procurement bills, the President said: "Without these programs, our friends and our interests—in the Middle East, for example—are left high and dry."

The foreign aid authorization bill—which died in the Senate after a Vietnam troop-withdrawal amendment had been attached—provided some $335-million in economic assistance and military credits for Israel. At the suggestion of Senator Henry M. Jackson, the Senate, in the military procurement bill that was approved last week with a Vietnam amendment, authorized the President to sell Israel such arms as are deemed necessary to maintain a military balance in the Middle East.

To some Senators, including Mr. Scott, who discussed the matter with Republican colleagues, Mr. Nixon's letter, with its apparent presumption that the President could define Congressional responsibilities, was disrespectful of Congress as a coequal branch of the Government. This reaction, in turn, contributed to an attitude that, as a matter of principle and constitutional responsibility, the Senate had a right to lay down a legislative mandate for ending the United States involvement in the war.

The Vietnam amendment, requiring the withdrawal of all U.S. forces from Indochina in four months if American prisoners of war were released, was attached to the military procurement bill by a vote of 49 to 47 in the Senate. The Administration's defeat was attributed primarily to the White House's failure to switch a few crucial Republican votes. During the debate, Senator Scott made no mention of the Presidential letter and presented only a brief argument against the amendment.

PERIODIC TENSIONS

Mr. Nixon's letter and the Senate reaction were indicative of the periodic tensions of recent months between the White House and the Senate Republican leadership.

The White House, which has become increasingly annoyed at the independent stance of the Senate, tends to look upon Senator Scott as its agent for pushing Administration proposals through the Senate. But Senator Scott, who pointedly notes that his commission as minority leader derives from the Republicans in the Senate and not from the White House, sometimes feels that the White House is bullheaded and impervious to the mood of the Senate.

On the Vietnam issue, for example, Senator Scott vainly sought White House concurrence in a compromise amendment. The White House insisted, however, upon a clear-cut vote on the issue and lost.

The Vietnam issue is due for a crucial test in the House of Representatives this week with a vote, either Wednesday or Thursday, on an amendment that the once-hawkish House Foreign Affairs Committee has attached to a foreign aid authorization bill. The amendment would require the termination of all hostilities by Oct. 1, subject to release of prisoners of war and a limited cease-fire with North Vietnam to assure the safe withdrawal of American forces.

CLOSE VOTE EXPECTED

The vote on the amendment is expected to be close, and the outcome may depend upon two Democratic leaders—Speaker Carl Albert and Representative Hale Boggs, the majority leader—upon whom the White House has been able to rely in the past to defend the President's position.

Mr. Albert and Mr. Boggs are uncommitted at this point, an indication that they may shift to support the amendment. If they do, they may be able to bring over enough middle-of-the-road and border-state Democrats to assure approval of the amendment.

The vote is also being watched by more liberal Democrats as a test of whether the two Democratic leaders are responsive to the will of the Democratic majority in the House and the Democratic caucus.

THE 50TH ANNIVERSARY CELEBRATION OF ORDER OF AHEPA

Mr. JORDAN of North Carolina. Mr. President, a very fine Greek-American fraternal organization is celebrating its golden anniversary throughout the Nation this year.

Known as the Order of Ahepa—American Hellenic Educational Progressive Association—it was founded in Atlanta in 1922 and now has 430 local chapters in 49 States, Canada, and Australia. It was established to foster principles of civic responsibility, family stability, common understanding, and good citizenship among its members and to further charity, civic improvement, and educational causes.

The record the organization has established during the ensuing half century is indeed an outstanding one and marked by significant investment by chapters and members of both time and resources to a great many worthwhile projects.

I have been particularly impressed by the work accomplished by the 10 chapters of AHEPA in North Carolina during the years in which I have been acquainted with the organization and with the degree to which those in the State have figured in national AHEPA affairs.

A North Carolinian—Thomas Cavalaris, of Charlotte—currently heads the AHEPA Educational Foundation. John G. Plumides, of Charlotte, is a past supreme president, and Michael G. Plumides, of the same city, is a former supreme lodge officer.

Three other North Carolinians—George L. Spanos, of Winston-Salem; George Kostakes, of Charlotte; and Charles Peterson, of Greensboro, currently hold high district lodge positions.

I welcome this opportunity of commending these men and other members of AHEPA in North Carolina and throughout the country for the splendid record they have achieved and want to wish the organization every success as it launches its second half-century of service.

THE LABOR-HEW VOTE

Mr. MOSS. Mr. President, President Nixon yesterday revealed the distorted priorities of his administration by vetoing the Labor-HEW appropriations bill. He has charged that increases in appropriations for health, education, and welfare cannot be tolerated.

How large is this increase, and how did the President reach the view that "competing priorities" necessitated his veto? The bill Congress sent to the President was $1.8 billion above his request. But the Senate has cut more than that amount from military weapons systems this year. The Senate under the able leadership of Senator JOHN STENNIS, chairman of the Armed Services Committee, reduced military procurement by $2 billion. So the competing priorities argument of the President evaporates under close examination. What is actually revealed is his strong preference for military spending over domestic programs.

Why is military spending not inflationary, while money for research into diseases that kill thousands of children daily is inflationary? Why is money for special education for children from poor backgrounds inflationary, and why is money for general improvement of health and education at all levels for all Americans inflationary?

The President, with one hasty, inadvisable stroke of the pen, has undone months of work by the Congress.

This bill was a compromise of high quality, forged by the heat of months of intense examination. Volumes of testimony were taken, and hundreds of man-hours went into the deliberations that produced this bill. It was the will of the Congress. Congress always has been closer to the thinking of the people on the items in this bill than has been the President.

Why does the President always select a bill dealing with the poor, the uneducated, or the sick when he chooses to wield his power of veto? Why did he insist on a $5 billion increase in military expenditures and say that such spending was not inflationary?

Congress offered the President a bill to impose a spending limitation, but he refused to support any kind of ceiling that did not give him unlimited power to ignore the appropriations made by Congress and to freeze funds freely whenever he chose. From the President's action yesterday, we can see he wants ever mounting billions of dollars for military spending and while he ignores the needs of those who desire better education, health and welfare.

Where did Congress make its additions in this HEW money bill? We added $112 million for hospital construction. How much did the President request? Nothing. No money was requested for the construction of hospitals when the country is facing a severe problem of providing adequate medical care throughout the land.

The Senate and House added additional aid for schools heavily impacted by the presence of the Federal Government. The President had requested an unbelievable reduction of more than $170 million in this program. If the President is successful in this endeavor, then Utah will have its impact aid money reduced by more than 60 percent. Every district in the State of Utah would lose money under the President's proposal. Utah would also lose more than $4.5 million for the aid of its disadvantaged students. The bill vetoed by the President includes $1.27 million for library programs in the State of Utah. These are the "inflationary additions" made by the Congress—Republicans and Democrats—535 dedicated men and women.

When the President distorts national priorities by vetoing such a vital bill, it affects every State in the Nation, and every school district across the land. Hospitals, health research, college programs, vocational training, drug rehabilitation programs—all of these will be reduced because of the President's veto.

The House last night voted to override the President's veto by 203 to 171. This is a solid majority but it falls short of the two-thirds majority required. The Senate, therefore, will not face the President's veto directly. We have no chance to vote to override. The country, however, will directly feel the impact of this unfortunate and ill-advised action by the President.

A NATIONAL SYSTEM OF BICYCLE AND PEDESTRIAN TRAILS

Mr. ROTH. Mr. President, the Committee on Public Works today ordered reported to the Senate the Federal-Aid Highway Act of 1972.

Included in this major piece of transportation legislation is an amendment sponsored by my colleague from Delaware (Mr. BOGGS) that is small in terms of the overall bill, but if finally enacted into law will play a major role in developing a national system of bicycle and pedestrian trails.

Under the terms of the proposal by Senator BOGGS, $10,000,000 each year would be allocated from the highway trust fund for use in building bicycle and pedestrian paths. The Boggs amendment provides that no State will receive less than $100,000 a year for this purpose.

This morning's New York Times summed up the merits of the Boggs proposal very succinctly when it said editorially that it "could help convert the current bicycle craze into an enduring boon to the national health and environment."

I heartily endorse my colleague's proposal. I ask unanimous consent that the editorial, entitled "Pedal Power," be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PEDAL POWER

> Standing on a midtown corner these pleasant summer mornings, one can expect to see a half-dozen bicyclists whizzing through the rush-hour traffic in the course of a single light change—men and women of all ages and conditions, diligently pedaling their ways to work for the sake of economy, speed, health and environmental protection. Driving out of town on a weekend, one spots scores of bicycles lashed to the rooftops of cars or jammed into station wagons, soon to join the swarms of cycles encountered on almost any country byway these days.
>
> The bicycle boom which began in the nineteen-sixties has become an explosion, with an estimated 80 million Americans riding bikes, mostly for recreation but increasingly for commutation and errands as well. The Bicycle Institute of America estimates that more bikes than automobiles will be sold this year—some 11.5 million, compared with 3.7 million in 1960.
>
> But, for all its pleasurable and useful qualities, bike-riding can be perilous on heavily traveled streets and highways. Bicycle fatalities rose to 850 last year, according to the National Safety Council, and many more cyclists were injured. Safety is a major consideration behind a proposal by Senator Boggs of Delaware to let states spend up to 1 per cent of money from the Federal highway trust fund for bikeways designed to separate cyclists from automobile and truck traffic. A similar diversion of state highway funds has already been voted by a number of states, and numerous communities are appropriating their own funds to build separate bicycle paths. The Lindsay administration, a pioneer booster of urban bicycling, has designated bikeways on some Manhattan streets. Unfortunately, however, cyclists still have to share their lanes with cars, trucks and buses at terrifying risk to life and limb.
>
> If cycling is to continue to thrive, cyclists must be given safer places to ride. The Boggs proposal, under consideration in the Senate Public Works Committee this week, could help convert the current bicycle craze into en enduring boon to the national health and environment.

THE ROLE OF THE UNITED NATIONS UNDER THE GENOCIDE CONVENTION

Mr. PROXMIRE. Mr. President, some opponents of the Genocide Treaty have claimed that acceptance of the treaty will lead to an unjustified expansion of the powers of the United Nations. They fear that it will enable the United Nations to take actions not allowed under the present charter.

Article VIII of the Convention states:

> Any Contracting Party may call upon the competent organs of the United Nations to take such action under the Charter of the United Nations as they consider appropriate for the prevention and suppression of acts of genocide or any of the other acts enumerated in article III.

Clearly, any action which the United Nations may choose to take is still limited by the present charter. The United Nations will not be allowed to meddle in the domestic affairs of nations because of article 2(7) in its charter. It is prohibited from intervention "in matters which are essentially within the domestic jurisdiction of any state . . ." The treaty does not allow the United Nations to usurp powers which rightfully belong to sovereign nations.

Furthermore, if it should try to use Security Council enforcement powers which do not rightfully apply, the United States has the veto power and has demonstrated the will to use that prerogative to prevent unwarranted actions.

Some may still argue that if we accept the Genocide Treaty we will be making the United Nations a forum for the unjustified criticism of us and other nations on the charge of genocide. But those charges may be brought in the United Nations whether or not we are a party to the Genocide Treaty.

Unsubstantiated charges will continue to be made for propaganda purposes despite whatever action we take on the treaty. However, if we ratify the treaty, we eliminate a claim to credibility that those people making the charge may pretend to have. Therefore, I urge that the Senate ratify the Genocide Convention.

COMMEMORATION OF THE FOURTH ANNIVERSARY OF THE CZECH INVASION

Mr. BUCKLEY. Mr. President, in a short time, the fourth anniversary of a tragic event will be upon us. That event, of course, was the invasion of Czechoslovakia by the combined force of between 500,000 and 750,000 troops, of which at least three-fourths were Soviet, the remainder being East German, Polish, Hungarian, and Bulgarian.

Mr. President, it was with anguish and despair that the people of Czechoslovakia first heard word of the invasion as the reform-minded Czech leadership made this announcement over the local airwaves at 1:50 a.m. on August 21, 1968:

> To the entire people of the Czechoslovak Socialist Republic:
>
> Yesterday, on 20 August at around 2300 hours, troops of the Soviet Union, the Polish People's Republic, the German Democratic Republic, the Hungarian People's Republic, and the Bulgarian People's Republic crossed the frontiers of the Czechoslovak Socialist Republic. This happened without the knowledge of the president of the republic, the president of the national assembly, the Premier, or the first secretary of the Czechoslovak Communist Party Central Committee.

The message went on to state:

> The Czechoslovak Communist Party Central Committee Praesidium regards this act as contrary not only to the fundamental principles of relations between socialist states but also is a denial of fundamental norms of international law.

Mr. President, the events which took place in Czechoslovakia 4 years ago can not be simply dismissed as part of past history. The full force of those events are still with us.

The most visible manifestation of that force is the series of trials that have been taking place since mid-July throughout Czechoslovakia. As of the end of last week, 46 Czechs—all of whom had been involved in Alexander Dubcek's attempt to give a Communist system a "human face"—have been tried and found guilty of subversion. Ostensibly, they are being brought to trial for the "criminal acts" of printing and circulating leaflets advising the Czech citizens of their constitutional rights in last November's parliamentary elections. The leaflets advised that voters could cross out names from the printed ballots, write other in, or simply not vote.

But it is not without reason that all those tried and convicted had been supporters—some in very high places—of Dubcek's ill-fated attempts at democratizing a Communist totalitarian state.

Early this month, the International Commission of Jurists in Geneva sent a letter to Gustav Husak, the opportunist who acceded to power with the Kremlin's blessings after the overthrow of Dubcek. The letter, signed by Mr. Niall MacDermott, the commission's secretary-general, stated that:

> The trials amounted to "a political purge carried out under cover of legal proceedings."

The letter further mentions that to foreign lawyers examining the legal basis of the trials the principal charges brought against the accused seem to be virtually without foundation.

In reality, Mr. President, these trials are directed at intimidating the intellectuals who as a body were in the forefront of Dubcek's democratizing movement. And this effort has been successful. There is fear among the ranks of the intellectuals, the flow of underground publications and journals has dried up almost completely.

But the living reality of the invasion goes beyond even these trials.

Mr. President, over the last 4 years, nearly 40 percent of Czech journalists have been purged from the profession. In addition, tens of thousands of Dubcek supporters, both Communist and ordinary citizens, have been deprived of work for their political convictions. Writers have been condemned to silence, theaters have been closed, famous directors are either out of work, or out of the country.

The situation is such that the ministry of culture no longer even recommends for publication or production antifascist works because the public might find "dangerous parallels" which would lead to "provocative applause."

Mr. President, the reality of the invasion lives today. It lives in the 80,000 Soviet troops who are still in Czechoslovakia, 4 years after the invasion, continuing to render the "fraternal assistance" which was internationally condemned in August 1968.

The repression in Czechoslovakia over the last 4 years is a brutal fact. But this fact, terrible as it is, effects only Czechoslovakia, and to its people, we Americans extend our heart-felt sympathy.

But the living reality of the invasion has implications that directly effect both us and other nations.

Most striking—and one of immediate importance to us especially in light of the recent initiatives towards detente—is the timing of the invasion. Throughout the month of July 1968, the Soviet Union and its East European allies publicly villified the Czech leadership and their reforms. As the tempo of these attacks progressively intensified, the threat of a direct military invasion became distinct.

The Czech leadership, therefore, was pressured into a meeting with the entire Soviet Politburo at Cierna, in Czechoslovakia, at the end of that month. The meeting lasted 3 days, and the two countries agreed not to interfere in each others affairs. This agreement took place just 3 weeks before the actual invasion, and it can be argued, therefore, that the most dangerous period in any confrontation with the Soviet Government is likely to be immeditately after a political agreement has been reached.

In a study done for the prestigious international institute for strategic studies in London, Philip Windsor stressed this important consideration. He wrote:

> The invasion followed an agreement, signed barely three weeks before, in which all the states concerned had pledged themselves not to intervene in each other's internal affairs. The first question that this conduct raises is whether the Soviet Government can be trusted in international relations for the time being, or whether its behavior has shown that all hopes of an East-West detente have been illusory and that the old fears of an expansionist and aggressive superpower must be revived.

Mr. President, there is one final implication of the invasion which we should consider. And that is the consideration as to why the Soviet Union found it necessary to extinguish the Czech experiment by force of arms.

The Soviet Union itself has partly answered that question. According to the first Tass statement on the invasion made on August 21:

> Party and governmental leaders of the Czechoslovak Socialist Republic have asked the Soviet Union and other allied states to render the fraternal Czechoslovak people urgent assistance, including assistance with armed forces.

The Tass statement went on to state that the request "was brought about by the threat which has arisen to the Socialist system, existing in Czechoslovakia."

This statement is especially interesting for two reasons. First, a full 4 years after the invasion, those Czech party and government leaders who had supposedly requested the invasion, have yet to be identified. Despite the fact that the invasion has consistently been portrayed in the Soviet and Eastern European press as a high example of Socialist unity and courage, the "heroes" who originally requested it have not been publicly honored, nor has anyone laid claim to such honor.

But more important is the consideration of what it was which actually threatened the Socialist system, as the Tass statement asserts. And this consideration is vitally important to us today if we are to truly understand the Communist mind with which we must deal. To discern it, we must review the events of the Prague spring leading up to the invasion.

Alexander Dubcek immediately committed himself to a program of reforms in Czechoslovakia when he replaced the Stalinist Antonin Novotny as first secretary of the party in January 1968. The promise of reforms and liberalization by newly installed Communist leaders is not something new. Throughout the 50-odd years of Communist power, various leaders, both in the Soviet Union and in the other Communist states, have promised liberalization and reform when the oppressive burden on their peoples was becoming too great to bear. These various attempts as liberalization always bore two main characteristics—liberalization is conceded from above, that is, from the top Communist leadership; and it is reversible.

With Alexander Dubcek's program, however, we find not merely another experiment, a tactical adjustment to insure continued control, but a fundamental commitment to a complete and definite change. It was not another policy of "liberalization," but a program of democratization—aptly called "socialism with a human face." And the people ecstatically greeted it.

Dubcek's reforms did not challenge the socialist direction of the country, nor was Czechoslovakia's position within the Warsaw Pact ever doubted. What the reforms did do, however, was to initiate a full-fledged attack upon the totalitarian structure of the Communist society that had been in existence since 1948. Dubcek attempted to combine Communism with Democracy, and this is what frightened the Kremlin leaders and their East European vassals.

Dubcek's list of reforms were more than impressive, they were unique in a Communist system. By the end of February, censorship had ceased to function. A "cultural explosion" in music, the theater, and the cinema quickly followed. The intellectuals, writers, journalists, playwrights, artists, and filmmakers all began to exert an influence in the democratizing process. Religious freedom was initiated as several bishops who had been forcibly removed from their dioceses 18 years before were allowed to return.

In March, Dubcek promised the "widest possible democratization" for the country. He stressed that there would be cadre changes in the party to bring in new blood, and pledged greater autonomy for the government, the courts, the trade unions, and the economic enterprises. In April, the leadership's "action program" was published which promised a separation of party and government functions and responsibilities.

In late May, the first steps were taken toward the rehabilitation of 40,000 people who had served sentences in prisons or concentration camps for political reasons during the last 20 years.

In June, as the Prague leadership officially abolished censorship, troops from the Soviet Union, Poland, East Germany, and Hungary entered Czech soil ostensibly to take part in Warsaw Pact maneuvers. Agreement to the exercises, scheduled for June 20 through June 30, had been forced upon the Czech leadership the month before. Although the exercises officially ended on June 30, Soviet troops lingered on Czech soil until the end of July.

Throughout that month, Soviet newspaper attacks increased in vehemence and the possibility of military intervention could no longer be discounted. The Dubcek leadership was pressured into meeting the Soivet leadership at Cierna, in Czechoslovakia, at the end of the month. It was at this meeting that Leonid Brezhnev stressed the real reason for Soviet apprehension over the reforms. Brezhnev charged that Dubcek was betraying the most cardinal of all Communist principles, that of democratic centralism—the spiraling principle of control that asserts that an entire society is bound by the decisions of the Communist Party; that the entire party is bound by the decisions of the small group that comprises its leadership in the Presidium; and that ultimately, their decisions must be in accord with those of the Kremlin leaders.

A compromise solution was worked out at Cierna and was reaffirmed at a meeting with the other Warsaw Pact countries at Bratislava. Shortly after the conferences, Dubcek stated in an address to the Czech people that there "was no need to fear for the sovereignty of our country." The Soviet Communist Party newspaper Pravda loudly acclaimed that the Cierna conference was "an example of how socialist countries solve their problems by means of a comradely exchange of opinion in an atmosphere of sincerity and mutual understanding."

But Dubcek did not initiate any policy reversals as the Soviets had expected. Worse yet was the publication on August 10 of the draft statutes of the Czech Communist Party which permitted an out-voted party minority to continue adhering to its views. The statutes also provided for secret voting, and set a limitation on the period of office for party functionaries. These reforms ran directly counter to the Soviet demand for a reaffirmation of democratic centralism—the key to the Communist totalitarian system.

With an extraordinary party congress planned for September which would purge the remaining neostalinists in the Czech party, the Soviets had to act quickly to defend Communist totalitarianism, that is, "the socialist system" in Czechoslovakia. And on the night of August 20, they did act, in coordination with Poland, East Germany, Hungary, and Bulgaria.

Mr. President, the implications of this invasion are clear. With the formulation of the "Brezhnev doctrine" and its deathblow to the concept of "national roads to socialism," the Kremlin has demonstrated that it will not tolerate any threat to the total Communist control over society which is posed by an attempt to develop a "socialism with a human face," an attempt to combine democracy with communism; it has made it clear that any such attempt among its vassal states will be met with Soviet tanks.

Some suggest that the invasions on Czechoslovakia is an isolated incident. The events in East Germany in 1953 and in Hungary in 1956, and the formal declaration of the Brezhnev doctrine attest that it is not.

Mr. President, communism is an ideology of total power. It cloaks itself in humanistic ideals, and then bleeds the present generation for the supposed betterment of some future generation whose coming is always expected but somehow never arrives. The Soviet Union is in its third generation since the Bolshevik seizure of power, and still the people are sacrificed for the better tomorrow. In 1960, Nikita Khrushchev had promised that the Communist stage of development would finally arrive by 1980. His successors, however, have not seen fit to repeat that promise because it was so unrealistic.

The Red Chinese leadership, at least, has been more candid. They have stated that the Communist stage of development, with its promised fruits of human satisfaction, would not be reached for several hundred years, maybe even longer.

Mr. President, the trials currently taking place in Prague and Brno are a manifestation of the Communist system, not an aberration from it. They are paralleled by the increased repression of dissidents which has been taking place throughout the Soviet Union since this January. They are paralleled further in the repressions in Red China which has resulted in a flight of refugees to Hong Kong which, last month, was greater than any other month in the last 10 years.

Mr. President, as the West gears up for another round of international conferences aimed at "East-West understanding," let us not easily disregard the lesson of the Czech invasion—for this, in a very brutal and tragic way, forcefully underlines the Communist reality—the reality of a system whose objectives are power through total control.

TO SECURE THE PEOPLE'S RIGHT TO KNOW

Mr. ERVIN. Mr. President, yesterday, on behalf of myself and Senator JAMES PEARSON, of Kansas, I introduced proposed legislation protecting newsmen from the compulsory disclosure of information in Federal criminal proceedings where such disclosure is not necessary for the proper functioning of our criminal justice system. The ultimate purpose of this legislation is to secure the people's right to know.

The bill, S. 3925, responds to the serious problem of increased Government subpenaing of newsmen over recent years. In some cases, it would appear that Government has wanted to turn journalists into Government investigators. There have been too many instances where Government has demanded disclosure of reporter's confidential sources and information without a compelling public need to have such material and without utilizing its own extensive resources to obtain information. Neither the long-term goals of public justice nor the interests of freedom of the press have been served by this practice.

Hearings by the Senate Subcommittee on Constitutional Rights in the fall of 1971 and earlier this year underscored the threat which careless and widespread subpenaing of newsmen poses to freedom of the press in America. Journalists from both the printed and broadcast media expressed their great concern over the ability of newsmen to seek out the truth for the American people when they are under a continuing threat of Government interference with their day-to-day activities.

Further attention was focused on this matter by proceedings in the case of Earl Caldwell, reporter for the New York Times. In an excellent and thoughtful opinion, the Court of Appeals for the Ninth Circuit held that, in the special circumstances of this case, Earl Caldwell did not have to appear before a Federal grand jury and disclose confidential information given to him in his capacity as a reporter. The court of appeals based its decision upon an analysis of the first amendment's guarantee of freedom of the press. Unfortunately, the Supreme Court did not abide by the wisdom of this decision. On June 29, 1972, in Branzburg against Hayes, the Supreme Court by a 5-to-4 vote determined that the first amendment grants no protection to newsmen from compulsory disclosure of information to Government.

On previous occasions I have said that the first amendment itself was the most effective protection which could be given newsmen from Government intimidation. I have always believed that there is considerable danger in trying to implement fundamental constitutional principles by legislation for fear of inadvertently limiting rather than securing these principles. Nevertheless, in view of the Supreme Court's decision in Branzburg against Hayes, I now believe that it is necessary for the Congress to enact legislation which will insure that freedom of the press shall be secure from unwarranted Government interference.

In recent weeks, I have discussed this matter with several Senators and with a wide range of representatives from the news media. Many of these persons have long been convinced of the necessity of some legislative action in this area. A number of them have expressed approval of S. 1311, a "newsmen's privilege" bill previously introduced by Senator PEARSON and the subject of considerable discussion at the subcommittee's hearings on freedom of the press. Following the Supreme Court's decision in Branzburg against Hayes, Senator ALAN CRANSTON introduced legislation providing for an "absolute privilege" for newsmen.

It is my hope, and that of Senator PEARSON, that the bill which we introduced yesterday will receive the support of all those persons and groups who have expressed their concern over the subpena problem. While S. 3925 is more limited in its scope than other proposals which have been suggested, I believe that it will effectively cure the problem of the dangerously widespread and careless government subpenaing of newsmen. I believe that it incorporates a reasonable balance between the competing interests of law enforcement and freedom of the press. And, finally, I believe this bill can win widespread congressional support and be enacted into law.

Mr. President, I urge other Senators who are concerned about this matter to examine S. 3925 with a view toward joining in cosponsoring this bill. It is now imperative that Congress enact legislation to secure freedom of the press from unwarranted governmental interference and intimidation. No less is at stake than the right of the people to know the truth. If there is no freedom to gather the news, freedom of the press loses its meaning. And, as the history of nations dramatically demonstrates, the loss of freedom of the press perils all those freedoms which we in America have come to cherish.

Mr. President, I ask unanimous consent that the text of S. 3925 be printed in full at this point in the CONGRESSIONAL RECORD.

There being no objection, the bill was

ordered to be printed in the RECORD, as follows:

S. 3925

A bill to be entitled "An act to regulate the testimony of newsmen in Federal criminal cases"

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. As used in this statute, the term "Newsman" means any person who gathers information for dissemination to the public as news or pictures through the instrumentality of the press, a radio station, a television station, or any other medium of communications; and the pronouns he and him refer to any such person of either sex.

SEC. 2. A newsman shall be competent and compellable to testify as a witness in a criminal proceeding before a federal grand jury or a criminal action in a federal court in respect to information gathered by him for the purpose stated if these conditions concur in respect to such information: First, the information is based on the personal knowledge of the newsman rather than on hearsay communications received by him from others; second, the information tends to prove or disprove the commission of a crime allegedly committed by a third person which is being investigated by the grand jury or made the subject of prosecution in the court; and third, testimony similar to the information is not readily obtainable from another source.

SEC. 3. When a newsman is subpenaed to testify in a criminal proceeding before a federal grand jury or in a criminal action in a federal court, the newsman may move before the judge of the court in which the grand jury is sitting or in which the criminal action is pending to quash the subpena on the ground that the testimony sought to be elicited from him under it does not satisfy the three conditions enumerated in the preceding section. After notice to attorneys for the prosecution and defense, the judge shall hear and determine the motion of the newsman in camera and enter such order as may be necessary to protect the newsman against disclosing any information gathered by him for the purpose aforesaid which does not satisfy the conditions enumerated.

CHILDREN'S LOBBY

Mr. MONDALE. Mr. President, recently the first annual meeting of the Children's Lobby was held in Washington, D.C. Representative ORVAL HANSEN and I had the privilege of meeting with the delegates on the final day of their conference.

During the conference, the Children's Lobby elected as its first president, Mr. Jule Sugarman, the former Director of Headstart, who currently serves as administrator of Human Resources in the city of New York. As one of its vice presidents, the Children's Lobby chose Gregory Coler, executive director of the Greater Minneapolis Day Care Association. It has been my pleasure to work closely with both of these men in recent years, and I think the lobby is very fortunate to have such gifted and energetic individuals in leadership positions.

In my judgment, the creation of this organization is an extremely encouraging initiative for those of us interested in justice for children. In conjunction with the work of a number of existing agencies and organizations concerned with children and their families, the Children's Lobby can help inform Congress and the public about the impact of various legislative proposals and administrative actions on children.

In addition, the children's lobby can take stands on the major legislative issues before the Congress. It can give those of us in public life its judgment of the merits of proposals affecting children.

As part of this first annual meeting, the children's lobby held a series of workshops on a wide range of issues concerning children and adopted a series of resolutions. I ask unanimous consent that the text of these resolutions appear at the end of my remarks. I do not necessarily agree with all these recommendations. But whether or not I, or any other elected official, agree with every one of the positions this lobby takes is unimportant. What is important is that the children's lobby is helping all of us to focus on how Government actions affect children, and is helping assure that decisions affecting children will no longer be made without adequate information about and attention to their potential impact on our Nation's most precious resource.

Mr. President, permit me to close with my expression of appreciation to all of those who had a hand in creating this new lobby, and of those who will join with it in its fight on behalf of justice for children.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTIONS—"AREAS OF CONCERN"

GROUP I: CHILD DEVELOPMENT AND DAY CARE

An overview of the pending status of Child Development and Day Care issues in Congress was presented and discussed.

Recommendations and/or resolutions:

1. Children's Lobby utilize every means to defeat H.R. 1.

2. Audience be sought with President Nixon tomorrow (April 10) to set forth our position regarding our stand on comprehensive child development in our Nation.

3. Children's Lobby should *focus* on comprehensive child care and/or development services as an entity thus avoiding being side tracked or shuttled.

The following basic principles were set forth as guidelines for considering any proposition, issues or legislative matters dealing with children:

1. That programs must be of high quality, comprehensive, and developmental oriented to *needs* of children and their families and available to all children.

2. That parents must be directly involved in policy decisions affecting their children.

3. That programs be flexible enough to meet individual and community needs and locally controlled by a body whose majority are parents.

4. That programs must be designed to include children with a variety of socioeconomic backgrounds.

5. That adequate protections must be provided to assure that the needs of minority group and economically disadvantaged children are met.

6. That this nation *must not only continue* existing funding of children's programs but also *must* make a substantial commitment of new public funds to begin to meet the compelling and immediate need for these services.

7. That the Children's Lobby work out a mechanism to monitor the implementation of all federally funded children's programs.

Leaders: Elinor Guggenheimer of New York—Funding Director, Day Care and Child Development Council of America, Inc.; Evelyn K. Moore, Executive Director, Black Child Development Institute, Washington, D.C.

Recorder: Mrs. Allie Mitchell, Project Manager for Head Start; Leadership Development, Southwest Region, Houston, Texas.

GROUPS 2 AND 5: CHILD WELFARE AND FAMILY LIFE

Before getting into specific recommendations, group members agreed that the Children's Lobby would need to differentiate between short-time and long-time goals.

*Recommendations**

1. The Children's Lobby should insist that the Federal Government, both Legislative and Executive, place top priority on, and appropriate adequate funds for, human services that will enhance individual and family growth and development.

2. Services should be universally available for children who need them. Eligibility should be determined by the need for service and not by economic status. The quality of child welfare services should be the same for all children without the requirement of a means test. There should be a freedom of choice for the client to obtain services from either public or voluntary agencies.

3. It is essential that federal matching funds for child welfare services in the states be available. These funds should be open-ended and the federal matching should be 90%, covering a comprehensive variety of family and children social services.

4. Federal funds must be made available to the states and localities for the construction of all necessary facilities—such as shelter care, day care and others—to provide the above family and children services for all who need them.

5. Within the total funding, there shall be provision for training for all categories of personnel working with children; for comprehensive planning for all services; and for demonstration programs for the development of new models of service delivery.

6. The Children's Lobby needs to continue to support the present trend of a combined delivery of Family and Children's Services, *not* to separate them.

7. In order to develop a base for "adequate" funding for programs for families and children, it is necessary to:

A. To have an analysis of all budgets of present federal family and children programs in order to determine what is presently being accomplished in relationship to where the money is currently being spent.

B. Create a National Advisory Council on Family and Children to advise the President, similar in nature to the National Economic Council or the Council on National Defense.

C. Have conducted a review of the present organizations of Family and Children programs at the federal level so that a more appropriate organization might be developed. Present organization has created so much fragmentation of programs and monies that service efforts are inhibited and frequently duplicated. (This might be repaired, e.g., by a federal Department of Family and Children Services.)

Leader: Dr. Frederick Delliquadri, dean, School of Social Work, University of Wisconsin, Milwaukee, Wisconsin.

Recorder: Maurice A. Harmon, director, Baltimore City, Department of Social Services, and first vice president, American Public Welfare Association.

---

*All the recommendations relative to funding were made in spite of funding arrangements spelled out in H.R. 1, in that the group was against the passing of H.R. 1 in its present form.

GROUP III: EDUCATION

Integration

We reaffirm the control importance of a racially and socially integrated society to the realization of the American dream. We vigorously oppose any type of governmental action—whether by Constitutional amendment or by legislative riders—which would have the effect of impeding *local* options to create conditions for effective integration. The role of the Federal government should be to encourage genuine integration and to give more leadership to the end of building a unified and nondiscriminatory society.

At the same time, we stress that integration must be much more than a mere mechanized mixing of bodies of various colors. What we seek is a true integration of varied ideas, values, and thought—a rich and pluralistic recognition of America's diverse heritage and not simply a merger of all groups into one dominant white culture. Integration, ultimately, means an honest and eager recognition of our country's multi-racial, multi-cultural history and character.

While we cannot presume to instruct the Federal judiciary, we do urge, in the spirit of the foregoing statement, that each court look beyond mere mechanistic and arithmetic racial formulas to the possibility of genuine *educational* integration.

Finally, we stress that the real issue is neither bussing nor anti-bussing, but rather the climate of fear and division which is being fostered by politicians—in both political parties—who purport to be our leaders. What is needed now is an end to such dangerous demagoguery and an immediate and vigorous effort at national conciliation—the creation of a climate of national unity based on a frank acceptance of America's social and cultural diversity.

Funding of existing Federal programs

The broad array of present Federal education and child care programs must be funded more nearly in accordance with the promise this society has made to the disadvantaged, the poor, the sick and young. We reject all counsel which says "money doesn't make a difference." Rather, we want *to try* delivering on the promises of yesterday.

This does not mean that we are uncritically accepting of every program now on the statute books. On the contrary, we know of few unblemished success stories in Federal aid programs. All too often, the intended beneficiaries of Federal aid are not the ones who actually receive the Federal aid; all too often, programs are poorly administered by state and local authorities without adequate reference to legislative intent; all too often, Federal aid is spent in a "business as usual" fashion. Thus, at the same time as Federal funds are expanded the conscience of the nation must be refocused on making truly effective use of every tax dollar.

New programs and new funding

The percentage of our government devoted to children and their needs is totally unacceptable. At the same time that more money is needed, we must guard against the tendency to play off one public sector against another, e.g., education vs. child care, health vs. nutrition, etc. We believe that the only chance we have to build a truly great nation is by attacking all of our social problems in a coherent and concentrated manner. Thus, we favor greatly expanded prenatal care, nutrition, comprehensive child health, day care, etc., as well as an expansion of our national spending in education.

We must also guard against the tendency of many who want tax cuts and personal gains as we shift away from military spending. America must spend more in the public sector than ever before—and not merely at the Federal level. Taxes are woefully inadequate for a nation as collectively wealthy as this; we must finally recognize that true prosperity can only be purchased by being willing to tax ourselves for the neglect of the past and for the sake of our children's future.

Specifically in education, we insist that Federal funding, several times greater than current levels, must always have a reformist character. It would be self-defeating and useless for the Federal government to enact legislation with no indication of national priorities and concerns. While some of us favor general aid for education and others of us support only broad categorized programs aimed at educational revival and specific unmet needs (e.g., handicapped children, compensatory education, career education). We all agree that, at the minimum, Federal funds shall be accompanied by measures to:

1. Prevent reduction of State and local tax effort;

2. Encourage the enactment of progressive State tax measures;

3. Ensure that Federal funds are distributed with special attention to children with special needs (e.g., disadvantaged, non-English speaking, handicapped, etc.);

4. Encourage States and localities to distribute their own resources more equally than is now the case;

5. Ensure that programs are preventive in character and not merely remedial, an early identification of child health and other handicaps is especially needed;

6. Guarantee that educational research and development to review the system will be a high and constant priority;

7. Ensure effective parent education and community involvement in order to overcome the traditional isolation of the schools from the adult world. Schools henceforth must be more accountable to adults for the measurable learning of our children;

8. Give high priority to teacher training and retraining (recognizing that teacher education is a vital community concern and not merely a select professional province).

Disparities in educational spending within (and among) states must be rapidly eliminated. However in the light of the recent Serrano decision, we caution against simplistic notions that equality of educational spending will give us the kind of educational success we seek. The special needs of urban areas and depressed rural areas must be recognized financially in any aid formulas if true equality of opportunity is to be achieved.

Finally, in line with an earlier statement concerning integration, we believe that society must devote substantially more resources to the development of multi-cultural and bilingual educational materials. Our curriculum must be totally reshaped to reflect the true pluralism and diversity of our nation. Ultimately, in fact, we would hope that every child would be proficient in at least two languages as well as knowledgeable about the cultures of all the peoples who have contributed to the building of our nation.

Leader: Donald Morrison, President, National Education Association, Washington, D.C.

Recorder: Dr. Samuel Halperin, Director, Educational Staff Seminar, George Washington University, Washington, D.C.

GROUP IV: EXCEPTIONAL CHILDREN

Exceptional children include those who are handicapped and those who are gifted. In defining the criteria for handicap, it was agreed that a child who persistently, extensively, significantly and intensively reveals deficits or deviations in several vital areas of functioning, including physical, intellectual, emotional, perceptual and developmental capacities, is a handicapped child.

It was further agreed and emphasized that children who are not intrinsically handicapped, but whose environment tends to damage them, should not be classified as handicapped when it is their economic, social and educational deprivation that requires correction. The discussion group took strong exception to the tendency to mislabel low-income minority groups by referring to their children as handicapped. We urge that adequate resources be made available to prevent or correct these economic, social and educational deprivations and their effects. These resources and services are intended to prevent or correct environmental deprivation and its effects on those children subjected to it as compared to resources that are necessary for handicapped children. We propose that resources and services for deprived children be organized in collaboration with special services needed by handicapped children without confusing the differing problems of these two groups of children.

The discussion group then accepted the formulation of three dimensions of the needs of the exceptional child that would provide our Children's Lobby with a helping perspective:

(1) We should plan to overcome discrimination against the handicapped and gifted child in that we as a nation assign the priorities to their needs that would assure them and their families of the opportunities, expectations and resources that would enable each exceptional child to be able to maximize his potential in terms of fulfilling himself. Conversely, each exceptional child should find his self-esteem reflected by the way he is valued and respected in his community and society.

(2) We should plan and provide special services for the handicapped that are coordinated, sustained and integrated in the most desirable settings for the child and his family. This clearly implies that the family is the bedrock out of which normal and handicapped children grow. Each family should be supported and enabled to help their deviant or handicapped child. Our perspective requires a dynamic balance of normative and special settings in which to nurture, guide, educate, teach and provide all services for the handicapped child. This perspective assumes that the strong family, and the nursery school, day care center, public elementary and secondary schools, church and community center for healthy children can welcome and benefit from the acceptance of the handicapped child as a part of their microcosm. This conviction is based on the assumption that these institutions have sufficient services and resources to enable them to provide adequate learning and socializing experiences for all concerned. Specifically, the classroom teacher cannot be expected to do well by a heterogeneous classroom of non-handicapped, handicapped and gifted children unless she or he have the preparation and backup that is necessary for the exuberant development and expression of the learning and socializing interests of all these children.

Conversely there will always be the need for special facilities where certain handicapped children can receive the intense concentration of special assistance, education and treatment that will enable them to return to or re-enter the family and school at home when they are able to take advantage of the more usual and normative environment.

(3) The perspective of full rehabilitation refers to the ongoing, life-long opportunities, expectations and supports for the handicapped child that will enable him to develop skills, find work and select an appropriate social setting that provide him with satisfaction and opportunities to shape his world. This perspective assumes that there can be synchronized expressions of realistic, humanitarian and productive expectations by the individual and his society. This synchronization of the individual's capacities and society's expectations should enable the handicapped individual to earn his livelihood, to be active in forming and par-

ticipating in a family group and to be an encouraging example to a handicapped child of the next generation.

We recommend that the translation and transformation of these three future perspectives into viable and sustained realities, the rights of these children, become the long-term goals of The Children's Lobby in regard to exceptional children.

It follows logically and as a crucial first step toward these long-term goals that The Children's Lobby should work toward achieving major financial support from Federal sources for a wide array of services for handicapped children at the local and regional levels. In order to assume the effectiveness of such funding we recommend the following guidelines and criteria:

(1) All Federal bills that provide for the healthy development and sound education of children should have sufficient funds allocated to provide early identification, treatment and services for handicapped children who will live and grow up side-by-side with non-handicapped children.

(2) Systematic coordinated services for handicapped children require categorical funding from Federal sources in order to prevent the fragmenting of services and in order to achieve a level of funding adequate to assure * * *.

(3) The Children's Lobby should provide a structure that enables those with special interests to work in alliances with those who have other interests in the services of children. We deplore the tendency toward rivalry when our children, handicapped and non-handicapped, are in urgent need of our concerted interests and energies. When the adults compete or are in conflict because of special interests, the alliances necessary to avoid fragmentation of services will be weakened. This recommendation holds for the various professions as well as for the various professional organizations.

(4) Our efforts are unlikely to succeed if there are not appropriate advocacy energies and influences at the national, regional and local level that will safeguard children's priorities and the implementation of children's programs.

(5) Parents, as in The Children's Lobby, should be accorded a major role and responsibility in establishing priorities, in mobilizing and sustaining resources, in supporting and guiding legislative remedies and in creating influential expectations for judicial mandates to require that "mandatory" legislation become implemented.

(6) Our universal public institutions, especially the public schools, should be enabled to provide integrated and coordinated services for handicapped children by additional educational and clinical services and with proportionate back-up support by specialized facilities.

(7) The most important universal "institution" is the family unit. The early identification, prevention, treatment and rehabilitation of the handicapped child should take place through strengthening the family's ability to be crucially involved in services provided for handicapped children of these services and collaboration with families should respect and take advantage of the family's social, emotional, ethnic and cultural characteristics and resources.

(8) We must overcome deficits in services caused by a failure to coordinate existing services as well as newly created services for handicapped, non-handicapped and talented children.

Leader: William Geer, Executive Director, Council on Exceptional Children, Arlington, Virginia.

Recorder: Dr. Albert J. Solnit, President, Academy of Child Psychiatry and Professor of Pediatrics and Child Psychiatry, Yale University, New Haven, Connecticut.

GROUP VI: HUNGER AND MALNUTRITION WORKSHOP

Hunger threatens the lives and minds of millions of Americans.

In 1969 the White House Conference on Food, Nutrition and Health declared hunger a "national emergency." In 1971 the White House Follow-Up Conference repeated the cry. Yet, the crisis continues. Infants and young children are in the greatest danger.

All this is true under the existing programs and the current levels of income support. Conditions would be worsened under H.R. 1 and similar proposals. Therefore, we vigorously oppose H.R. 1. H.R. 1 in its entirety must be defeated!

Furthermore, any measures like H.R. 1 or the patchwork amendments which diminish already inadequate incomes must be defeated. Our primary recommendation is:

A guaranteed adequate income for all American families (at least at a level comparable to the BLS standard) so that *families* can feed their own children adequately. We urge immediate implementation of legislation ensuring every family an adequate income with fully humane and constitutional practices.

Secondly, we urge an immediate increase in the appropriations for all child nutrition programs, supplemental maternal and infants food programs and family food programs.

Americans remain hungry today, and malnutrition makes them vulnerable to disease and injury. Some groups, such as pregnant women, mothers and pre-school children, are at great risk because of inadequate diets. Children, depending on where they were born and where they live, may face greater nutritional risks than children who live in countries where food distribution and health care facilities are primitive. In census tracks of many inner cities of this country, over 100 children will die out of every 1,000 children before they reach age one.

The task force on hunger and malnutrition recognizes that the only solution to hunger in America is the provision of an adequate income, with all constitutional and humane safeguards for all families, to assure that families with children will be able to obtain an adequate diet to sustain the health of the child.

We believe that H.R. 1, the Family Assistance Plan, does not meet this basic standard, and we recommend that the Conference oppose H.R. 1 or any similar legislative proposals.

For the immediate nutritional needs of children in the 1973 fiscal year, we propose that action be taken through legislation and appropriations. We find the budget proposal of the Administration for fiscal year 1973 will bring all growth in nutrition programs to a halt, and we recommend that the Conference support higher appropriation levels for these programs, in these amounts:

[In millions]

Program	Administration requests	Programs need
Families:		
Food stamp	$2,266.0	$2,500
Commodities	270.0	305
Supplemental foods	14.7	40
Children:		
School lunch: Needy (sec. 11); general (sec. 4)	861.5	1,200
School breakfast	33.0	100
Equipment	16.1	80
Nonschool food service: summer; year-round	49.0	92

We believe that every child should have access to a nutritious and acceptable breakfast and lunch; and further, that family income should not be a barrier to participation. We recommend, and, the budget proposal provides, sufficient funds to enable a reimbursement of 25 cents for every breakfast served to needy children, with a 5c reimbursement for each breakfast served; and 50c for every lunch served to needy children, with a 10c reimbursement for each lunch served.

These reimbursement levels should prevail in all child nutrition programs, in school and out of school; further, the use of reduced price lunches should be restricted to a charge of no more than 10c, with a reimbursement level of 40c per lunch.

Eligibility for free or reduced price breakfast and lunch should be determined by a single national eligibility standard based on the poverty level income set by the Bureau of Labor Statistics, with local school districts free to set eligibility standards which are broader if local conditions warrant.

Finally, under no circumstances should the recommended levels become a ceiling on reimbursement for a child's meals. In those instances where the cost of preparing and serving the meal is higher, the school should be reimbursed at the higher level.

Food Service programs for summer and the year-round day care projects should be greatly expanded, inasmuch as children are in school for about 9 months; and the percentage of pre-school age children in educational or supervisory facilities has increased from about 25 per cent to nearly 50 percent in the past decade.

We recommend that all declared non-profit groups be encouraged to join these programs and to operate food service projects. In order to achieve the expansion that is needed, the cost of equipping these facilities should be paid fully from Federal funds.

Until an adequate family income program can be implemented, we recommend that the food stamp allotment be raised from the present inadequate level of $108 a month for a four person family to $146.00 a month. Since over half the people who need the benefits of the program do not get food stamps, the Federal government should reach out to find hungry and malnourished families and persons and assist them to participate in the food stamp program.

We also recommend that regulations be dropped which now force mothers to work, and which force scholarship funds of children to be included in calculating family resources; and we recommend to the Federal government the ruling of the Federal court which overturned the legislative prohibition that children who live with a family but are not related are ineligible for food stamps. We recommend that the Department of Justice accept the wisdom of the Court which enjoins this despicable practice.

We recommend that the Inspector General of the U.S. Department of Agriculture investigate and report on the ineffective and incompetent operation of the food and nutrition programs in the USDA, with particular attention to the inadequacies of the commodity distribution program.

We recommend that all families below the poverty level have access to a supplemental food program which provides additional nutrition for pregnant women to insure better pre-natal nutrition for the child, and to insure adequate nutrition for the child in the formative years before entering pre-school programs. The budget proposal will support a large scale expansion of the present program, which the Administration is presently attempting to kill.

We recommend the supplemental program be carried out in either a voucher form or through the provision of commodities in a clinical setting, and that all declared non-profit groups be assisted in establishing such programs on request.

Leader: Rodney E. Leonard, Community Nutrition Institute, Washington, D.C.

Recorder: Barbara Bode, Executive Vice-President, Children's Foundation, Washington, D.C.

GROUP VII: JUVENILE DELINQUENCY

In our group, after sharing our individual experiences and making our individual points we crystallised our report into three main areas. I have asked the participants to add, correct or completely refute what I present, for I experienced great difficulty in keeping my own special bias out of what we discussed. You see I am thoroughly against the fragmentation of the approaches to meeting human service needs and the labelling which is unavoidably associated with this. I am even more frustrated that we are not as aware as we should about the irrelevant handicaps of these fragmentations and that those of us who are aware do not see dealing with the disadvantages of labelling and fragmentations, as desiring our sustained and unequivocal first priority. I am hopeful that now we have moved from the various forms of mental illness, alcoholism, crime, drugs and violence to children, we could come to grips that it is futile to escape dealing with people as people. The three areas into which our discussion divided itself are:

A. Objectives of the Children's Lobby are:

1. Keep focus on the child's welfare and needs. There is a difference between funding for political expediency and funding to meet children's welfare and needs.

2. Developing and maintaining the thrust in community education and consumer participation.

a. The Children's Lobby should take on the responsibility for educating the public about the difference between legislation which meets their needs and those that do not. The existence of apathy and indifference as a national human characteristic that should be a continuous concern. For example, the Children's Lobby should begin now to look for ways to deal with the apathy which will threaten its existence—one month, one year or even five years from now.

b. In addition to developing the Children's Lobby at the National, State and local levels, the by-laws should articulate the tendency to loose enthusiasm and include the special steps to be taken to prevent or correct this.

3. Develop legislative proposals and push for legislation to realize our stated objectives.

4. Take active steps to have in depth representation by recipients of services who are generally restricted or unable because of Socio-economic restraints.

5. Maintaining sustained surveillance of needs for services and the effectiveness with which these needs are met. Here the effectiveness should be determined mainly by the consumer, the recipient of services.

In terms of surveillance, not only should we work for development and passage of appropriate legislation, but the Children's Lobby should see that there is appropriate funding to support the legislation, that the legislative goals are realized and that legislation is kept in line with changing demands.

It was felt that the Children's Lobby should be fully committed to doing away with the institution to meeting the problem of juvenile delinquency. In this regard, the State of Kentucky is taking an approach that is exemplary. The State of Massachusetts is also moving very decisively away from institutional management.

B. Legislation

There were two specific and one non-specific recommendation in this area.

(1) The Children's Lobby should take immediate steps to do away with H.R. 1. Specific reasons: It does not address itself to the needs of children. It perpetuates problems of juvenile delinquency. Mothers do not have a choice to care for their children if they wanted to, both the children and the parents are denied of a basic constitutional rights. A legislative structure which allows options with choice for providing child care services and meeting child care needs should be formulated and fought for.

(2) The Children's Lobby should actively push to establish an office for children at the executive level, nationally and each state. This office will be responsible for bringing together all the various fragments of services to children including those involving families and in time including mental health and public education. It was recognized that placing education and mental health for children under this umbrella would be cumbersome, difficult and impossible at this time. We felt, however, that The Children's Lobby should maintain a sustained thrust to include mental health and education under this umbrella. This may start with a coordination of effects at the local level.

(3) In addition, it was felt that the Children's Lobby should seek to enhance the abolition of institutional care systems by lobbying for and implementing appropriate supportive legislation at the federal and state levels.

It was the consensus that the concept of Juvenile Delinquency should be abolished or merged with and become a component of a major program for all youths including youths in distress.

Leader: John Martin, Ph. D., Institute for Social Research, Fordham University, New York, New York.

Recorder: Dr. George Phillips, Superintendent, Crownsville State Hospital, Crownsville, Maryland.

GROUP VIII: MATERNAL AND CHILD HEALTH

The discussion group evolved two short term or immediate recommendations to the Board of Directors, and two long range charges.

The immediate recommendations were:

1. Lobby now for continuation and extension of such existing maternal and child health projects (Title V) as (C. & Y. and M. & I.) these projects due to expire June 30, 1972.

2. Lobby now for the full implementation of child health legislation already enacted at the Federal and State level. (E. G. The EPSDT—Early and Periodic Screening and Diagnosis Program.)

The long term charges were:

1. It is recommended that the Board establish an effective mechanism to develop positions on all proposed National Health legislation to ensure that the specific needs of children are adequately recognized in such proposals and that such programs include adequate arrangements for accountabilities including accountability to the consumer.

2. It is recommended that the Board also attempt to influence the legislative process so that ultimately child health services are appropriately integrated with comprehensive child development services, education—especially meaningful health education and other human services.

Leader: Robert Clayton, M.D., Chief, Department of Pediatrics, Georgetown University Hospital, Washington, D.C.

Recorder: Dr. Morris Green, Professor and Chairman, Department of Pediatrics, University of Indiana, Indianapolis, Indiana.

GROUP IX: THE RIGHTS OF CHILDREN

The participants at this section discussed the following major principles:

1. Concern for the rights of children must permeate all of the systems discussed at this conference: health, education, mental health, corrections and the courts, the public welfare field, and the economy itself. In all these fields it is necessary to examine the status of the rights of children as they were enumerated, for example, in the White House Conference on Children and Youth.

2. The Bill of Rights should be examined so that the rights of children which are implicit can be made explicit.

3. There needs to be clarification of "what is a child"; when it is that a child is an accountable person. In some jurisdictions a seven year old child is adjudicated a delinquent.

4. We are concerned about the rights of *all* children, and issues of rights transcend differences of economic status, etc. Yet, certain groups of children are particularly vulnerable: mentally ill children, children before the courts, mentally retarded children, etc. We were led, accordingly, to a discussion of advocacy. While a wide variety of meanings have been assigned to that term and studies are now in progress about the shapes and goals of different kinds of advocacy programs, we wanted to stress that programs be child-focused and their emphasis be on the rights of children to the kinds of services and help they need in every societal system. There should also be provision for bringing children and young people into participation in the definition of their needs and rights.

5. The Children's Lobby should bring to attention the usefulness of litigation where rights of children have to be tested. The Lobby should have as part of its task the dissemination of information about test cases and technical assistance.

6. We recommend thorough reviews of child-abuse laws, concerned as we are about the non-effectiveness of many such laws and the limitations of punishing parents without solving the fundamental problems involved in such situations. Penalties of criminality are not sufficient as a legislative program even in regard to the reporting of cases; rather, problem-solving goals must be embodied in an adequate legislative program.

7. The laws of the Family Court and other juvenile courts throughout the country need thorough re-examination with regard to the protection of rights of children, and perhaps especially those children who are not delinquent but who are "ungovernable" or rejected by their parents. It was also recommended that the Gault decision be wisely and sensitively implemented.

8. Assumptions in the provision of services to children and their families should be re-examined, particularly with regard to the biases of professionalism. Certainly children and families should be able to exercise choice in the selection of services which they seek as help. Children and families should not be simply "allocated" to existing programs without their participation and choice.

9. Public and private agencies which serve children and their families must re-examine their respective roles as "protectors" of children, as there is the all too frequent occurrence of the abuse of rights by agencies which purport to be protectors. Particularly we must distinguish carefully between protection and control, and there must not be abuse of rights in the name of protection.

10. The Children's Lobby should support funding patterns which make possible the maintenance of children with their own families, and programs which are open and responsive to today's children and families. There is a need to break through the tyranny of rigid forms of service which are supported by public funding and professional prerogatives.

11. The participants of this discussion group looked forward to the following functions of the Children's Lobby in the future: (a) promotion of legislation which ensures the rights of children to those fundamental opportunities and securities which have been identified nation-wide and particularly at the White House Conference on Children and Youth; (b) the monitoring of litigation which pushes forward the cause of children in test cases of their rights; (c) the creation of public opinion and development of consensus regarding enlightened and effective

ways of caring for children and families, with such public opinion exerted to inform and influence administrative leaders and legislators; (d) stimulation of similarly functioning lobbying groups on state and local levels; and (e) dissemination of information on legislation, policy determinations, and funding patterns relating to the needs and rights of children.

GROUP X: YOUTH

The Committee decided to redefine Youth as the 12–21 age group rather than the age group from 14–24.

Recommendations of the Youth Committee:

1. A minimum of at least four (4) youth, with an equal number of high school and college age youth, on the Board of Directors of the Children's Lobby, with geographical, ethnic, and economic diversification, with a suggestion that the Board facilitate active participation of youth board members.

2. Youth representation of two (2) or more youth on the future Nominating Committees of the Children's Lobby with flexibility and equal consideration of nominations by youth groups as well as those nominations which are given by adult groups.

3. We suggest that all states ratify the vote at 18 to encourage full legal rights and responsibilities of majority at age 18.

4. That all states mandate a comprehensive health education program by qualified personnel as part of the overall school curriculum—kindergarten through college—which would include education on health, including the biological aspects of development and reproduction of the human body, prevention of disease and drug abuse.

5. We recommend that students have a birth right as citizens of the United States to implement in their school systems the freedoms listed in the Bill of Rights.

6. We ask a recognition by the school system that the student is a thinking individual who should have democratic participation in decisions within the school system which affect them such as curriculum organization, teacher selection and boards of education.

7. We ask the Board to recognize that a balanced emphasis should be given the youth needs to rural areas as well as those of urban and suburban areas.

8. We recommend that the National Children's Lobby ask the state groups to investigate current statutes in regard to self-consent for minors.

9. We urge youth representation in the decision making process throughout the entire youth service delivery system.

10. We urge investigation of the current legal status and various efforts on the subject of *runaways* and investigation of the proposed legislation by Senators Fred Harris and Mark Hatfield as stated on page 2 of today's position paper.

11. Finally, we recommend defeat of H.R. 1.

Discussion leader (absent due to family illness); Warren Gilmore, President, Youth Organizations United, Washington, D.C.

Recorder: Mary M. Kearedy.

GROUP XI. H.R. 1

1. This work group recommends to the Children's Lobby its opposition to H.R. 1 and the Children's Lobby should work actively for its defeat.

(By unanimous vote.)

2. It is recommended that the Children's Lobby adjourn tomorrow to visit the White House as a body to express its opposition to H.R. 1 and urge the President to exert his leadership to defeat it.

(Voted in the majority.)

Leader: Norman V. Lourie, Deputy Secretary for Public Welfare, State of Pennsylvania, Harrisburg, Pennsylvania.

Recorder: Naomi Hiatt, Illinois Committee on Children and Youth, Springfield, Illinois.

OPEN-ENDED SOCIAL SERVICES PROGRAM

Mr. ROTH. Mr. President, by now, I am sure all Senators are aware of my deep concern over the massive Federal spending which is resulting from the open-ended social services program.

Although the nature and extent of the program were relatively unknown until only a few weeks ago, more and more citizens are being made aware of the threat which the spending under this "back door revenue sharing plan" constitutes to not only the Federal budget, but the national economy. I personally hope that as the days and weeks pass, our citizens become even more aware of the program.

To help achieve that end, I would like to insert in the Record at this time yet another two articles on the program. As you know, the Washington Post has already commented editorially on the social services program and both the New York Times and the U.S. News & World Report, as well as the Post, have featured articles on social services. This week, the Wall Street Journal and the National Observer joined the ranks of newspapers which have opposed the program, and I would like to bring these articles to the attention of the Senate as well as to others who daily read the Record. I ask unanimous consent that the two articles be printed in the Record.

There being no objection, the articles were ordered to be printed in the Record, as follows:

States Discover an Unlocked Door at U.S. Treasury

(By Michael T. Malloy)

Imagine looking over the fine print on that contract you signed a couple of years ago and discovering that you unwittingly promised to give blank checks every year to more than 50 people; you sign them and they write in the amount. Bankruptcy lies just around the corner.

The U.S. Government has done something very much like that, and now those checks are flooding in for payment. The fine print in a five-year-old piece of welfare legislation has suddenly turned into a multibillion-dollar drain on a Federal budget already deep in deficit. Secretary Elliot Richardson of the Department of Health, Education, and Welfare described the situation last week with such phrases as "raiders on the Federal treasury . . . horrendous . . . hemorrhage of funds."

BILLING DOUBLES

Richardson was complaining about a passage in the Social Security Act that requires his department to reimburse the states for three-fourths of the funds they spend on vaguely defined "social services" to rehabilitate past, present, and potential welfare clients. This used to be a modest program, by Federal standards, with an annual cost of $230,000,000 five years ago. But now it has exploded out of control

The states presented the Federal government with bills for $746,000,000 under this program two years ago, and the billing doubled to $1.5 billion last year. Last May the states estimated this fiscal year's Federal payments at $2.2 billion, and by July they had doubled the estimate to $4.7 billion. "I've heard figures as high as $6 billion," says Richardson, trying to calculate the final blow to this year's budget.

Mississippi has boosted its demands for Federal reimbursement to $464,000,000 from $1,000,000 two years ago. Maryland has gone to $418,000,000 from $15,000,000 in the same period. Many states have only just discovered the bonanza. The accompanying chart shows how the states increased their expected demands on the program from May to June as word got around this spring about the HEW pot of gold.

BLAME FOR GOOSE KILLING

Richardson wants Congress to slap a ceiling on the amount of money his department has to pay out yearly under this program. But he has been unwilling to throw up all the bureaucratic hurdles that his own department could put in the way of many social-services payments. The problem, he conceded at a press conference last week, is that neither the Administration nor the Congress wants election-year blame for "killing the goose that lays the golden eggs."

Mayors and governors around the nation will certainly fight any drastic cut in the social services bonanza because they have learned how to use it as a substitute for the revenue sharing measures that became bogged down in congressional debate. By defining a lot of old programs as "social services," the states find they can get hundreds of millions of Federal dollars without raising an extra penny of their own.

Illinois was one of the first states to discover the gold buried in the Social Security Act. Thomas Corcoran, who directs the state's Washington, D.C., office, explains one way Illinois took advantage of the act:

The agency that runs Illinois' prisons also runs a forestry camp to rehabilitate teen-age offenders. The camp and many other projects were threatened in 1970 by a $300,000,000 upsurge in state welfare payments. The state didn't dare raise taxes by that much, so the projects seemed doomed.

But the troubled slum backgrounds of the boys in the camp certainly made them potential welfare clients, Illinois officials decided. And the camp's rehabilitation program was a "social service" like that mentioned in the Federal law. But the camp was ineligible under the law because it was run by the state's corrections system, while the Federal money was supposed to go only to the state welfare agency.

Illinois resolved this by having the state welfare agency "purchase" the camp's social service from the corrections system. The welfare agency paid the camp's operating costs and got three-fourths of its money back from the Federal Government. Illinois thus kept the camp going and had a pile of money left over to help relieve its financial troubles. Similar maneuvers made so many other state programs eligible for Federal funds that Illinois' social-service claims on HEW rose to $173,000,000 in fiscal 1973 from $28,000,000 two years earlier.

Other states are rushing to hop on the band wagon. Shelby Jean Roten, program co-ordinator of Mississippi's Department of Public Welfare, says she assisted in a "big push" earlier this year to get every local organization that provides social services to sign "purchase-of-service" agreements with her department before July 1.

The campaign identified almost $160,000,000 worth of eligible projects for which school districts, state health agencies, and similar organizations had already appropriated money. By technically shifting those projects to the Department of Public Welfare's budget for the year that started July 1, Mississippi could inform HEW that it had embarked on a $620,000,000 social-services program with HEW scheduled to pick up the required three-fourths of the cost. The Federal contribution would be larger than the entire state budget.

EXPANDING THE DOLLARS

"We're not actually spending any more state money," says James Womack, programs director of the state's welfare department. "What we're actually doing is taking the dollars we do have and expanding them with Federal money."

This may be sleight of hand, but it isn't dishonest. The states are doing what the financial incentives in the law were intended to encourage. They are saving, expanding, or creating programs to give the poor and disabled a better chance to stay off the welfare rolls.

"We are very proud of it," Corcoran says of Illinois' performance. "We've been doing what we think is a decent approach to the welfare problem. We're beginning to get results. And now we see we are under attack and we resent it."

"Mississippi has a high percentage of disadvantaged and disabled children," says Edwin Schulz, associate regional commissioner for community services in HEW's Atlanta office. "There is practically no kindergarten program in Mississippi. There are very few areas in Mississippi that wouldn't be classified as poverty areas."

By most measurements Mississippi is the poorest state in the nation. But Schulz says it already spends a greater percentage of its meager wealth on social services than do some more prosperous states. This means that without the Federal money Mississippi would have little chance to enjoy amenities, such as kindergartens, that more affluent areas take for granted. "It's through this means (the Federal program) that Mississippi has managed to establish a service program," says Schulz.

So any efforts to cut back the program or even to stunt its rapid growth will be attacked on two fronts. States that already have expanded programs with the Federal funds can't afford to lose the money. "What you are really talking about," says Illinois' Corcoran, "is denying to some people a service, like day care, and requiring them to pull out of whatever jobs they've got because someone has to watch their kids. And you're denying the kids the educational services they otherwise wouldn't receive. A cutback would affect thousands of people in our state."

"REVOLUTION IN OUR SCHOOLS"

But if states such as Illinois keep their benefits, then a ceiling on the program would destroy the hopes of states that finally see a chance to catch up with wealthier parts of the country. "It really means a kind of revolution in our schools," Miss Roten says of the Federal program. "We've needed this in the South for many years, and in Mississippi especially."

With so many states counting on the HEW program, political pressures to keep it going are enormous. A measure to put a $2.5 billion annual ceiling on the cost recently was killed in a Senate-House conference committee. Richardson said a conferee told him the issue generated more pressure from local politicians than anything else in recent years.

The measure that died in the conference committee may have been the last chance to put a congressional ceiling on the social-services program before the newly elected House and Senate meet next year. Some parliamentary opportunities remain, but there is little time before the session ends and some reluctance by congressmen to vote against the wishes of home-state mayors and governors.

ULTIMATE WEAPON: REDTAPE

Richardson and the Nixon Administration, however, don't want to take the blame either. The Secretary hinted at a press conference that he might unleash the bureaucratic mechanisms of delay, red tape, and stricter regulation, but that he wanted Congress to act first, pointing out that "the hemorrhage of funds is occurring under language adopted by Congress itself."

Even if Congress and the Administration can, in Richardson's words, "get their joint hands on the ax" and cut the program down to size without laying the blame at either door, social-services payments still are likely to remain far higher than anyone would have imagined a year or two ago. The problem is one of cutting the program without outraging the "haves" like Illinois, or the "have nots" like Mississippi. That involves so much horse trading that Richardson will not even divulge the height of the ceiling he would like to see imposed.

"The states and counties have seen in this legislation the opportunity to get a lot of Federal money," he says. "They are able to point to what a few states have been able to get by getting there first. Naturally, they want theirs."

[From the Wall Street Journal, Aug. 14, 1972]

COME AND GET IT

HEW Secretary Elliot Richardson thinks President Nixon will be "well justified" to veto the $30.5 billion appropriation for health, education, and welfare that Congress is about to send to the White House. We would go one better and suggest Mr. Nixon would be justified in writing the sternest veto message of his tenure on this legislation.

It's bad enough the bill contains $1.8 billion more than the administration requested for fiscal 1973. Congress doesn't seem at all concerned with estimates that the total deficit will range between $30 billion and $40 billion. But that extra $1.8 billion is hardly the whole story. In refusing to put a spending ceiling on HEW's "social services" program, which is nothing more than an invitation to the state governments to raid the U.S. Teasury, Congress is guaranteeing that it will have to appropriate at least another $3 billion later in the year.

The social services program is one of those open-ended matching schemes that exists independently of budget controls. The Treasury is simply required to pay all bills presented by the states that HEW deems legitimate under the terms of the program. The program has been around for a decade, but only recently have state offiicals discovered that Congress has been making the terms so broad that almost any expense remotely connected with welfare-support efforts are considered legitimate. In 1969, HEW doled out a mere $354 million under the program. Now, state officials are falling all over each other to cash in. HEW is currently sitting on applications for $4.8 billion that the states are claiming.

Only a fraction of this money is going toward new programs to aid the needy. For the most part the states have simply jiggered existing programs to make them fit the language of the federal program. The federal government then has to pay 75% of the costs, allowing the states to free their money for other purposes.

This has developed into a bizarre form of revenue-sharing. Instead of the Treasury spreading the wealth on a formula basis that reflects need, tax effort and population, this program is on a first-come, first-served basis. In the current year, for example, Alaska, with 302,000 people, will net almost $19 million. Texas, with 11 million people, will get $42 million. Mississippi, a late starter, drew only $1.7 million last year. Now, with every right to be cynical, it's asking $463 million for 1973, roughly two-thirds of its entire state budget.

For three years now the White House has been asking Congress to put a lid on this madness, but without success. The political problem for both the administration and for Congress is in getting things under control. The states that were first in getting their hands in the till will be furious if they're now forced to take smaller shares. And the states that were tardy in spotting the bonanza will be outraged if the program is frozen before they have a chance to get theirs.

The Senate Finance Committee has taken a stab at the problem, writing restrictive terms on social services into the revenue-sharing bill. It would limit the program to family planning and child care projects, give the states six months to find alternative sources to fund efforts other than these two, and add $1 billion to revenue sharing to be spread on a population basis for family planning and child care. The net effect would be to limit social services spending to about $2 billion a year.

The idea of spending more money to solve financial and political problems of its own making is typical of Congress. It's one we don't admire, although in this case it would be better than doing nothing at all. But if the President is going to have any success persuading anyone that he means to get the budget under control, he'll have to draw a firmer line than Congress seems interested in. A good place to do it would be in a veto message.

PROBLEM LAKES IN THE UNITED STATES

Mr. MOSS. Mr. President, I have just received a publication of the Office of Research and Monitoring, EPA, entitled "Problem Lakes in the United States."

Four bodies of water in Utah are included in the study as problem lakes: Bear Lake, Great Salt Lake, Hyrum Reservoir, and Utah Lake.

The study is a preliminary documentation of the magnitude of inland lake problems in the United States. Details of the study will, of course, follow; however, I think it is imperative that we begin now to recognize the potential problems and the source of these problems and begin constructive efforts as a joint endeavor of the States and Federal governments toward rehabilitation of these water bodies. A common problem for all four areas appears to be the inadequacies of sewage plants of communities surrounding these bodies of water, and a high potential for runoff from the increased use of fertilizers in farming, and agricultural pursuits such as cattle yards surrounding the lakes.

Utah Lake, as an example, figures in the future planning for the Central Utah Project and the Bureau of Reclamation and the State are involved in this preliminary study. Recommendations for EPA for Utah Lake are for a multidiscipline lake authority to develop a workable set of objectives and development and enforcement of urban, industrial and agricultural zoning ordinances. This is something we should consider in our overall planning for Utah Lake.

Further study will, I am sure, have the full cooperation of our universities. I am ready to assist the State in whatever way I can from the Federal level, and I look forward to the full report.

This is an area in which the oversight responsibilities of the Senate and the cooperation of all will be most effective.

SENATOR ALLEN J. ELLENDER, OF LOUISIANA—IN MEMORIAM

Mr. FANNIN. Mr. President, the death of Senator Allen J. Ellender was a great loss for the Senate, the Nation, and his home State of Louisiana. He served long and well in these Halls and we will miss the wisdom of his counsel and the guidance of his experience.

In newspaper stories he has been called a "relentless southerner," a phrase apparently intended as criticism of his position on some issues. It must be agreed that our colleague was indeed "relentless." He was "relentless" in his support of programs to help provide a better life for the farmers of America. He was "relentless" in questioning the wisdom of certain appropriations measures.

And, yes, he was a "relentless southerner" who did what we all want to do—represent the people of our States the best that we can. He did represent the people of Louisiana, and he did it superbly.

Senator Ellender was, indeed, a leader, and we can be thankful for his service as President pro tempore of the Senate, for his recent leadership as chairman of the Appropriations Committee, and for his 18 years as chairman of the Agriculture Committee. He was instrumental in the passage of such legislation as the school lunch program, farm supports, rural electrification, and food for peace.

He was a man who labored diligently to carry out the work of his office.

Senator Ellender was one of those men who provide us with a bridge between the achievement of yesterday and the promise of tomorrow. He would not compromise principle, but throughout his 3½ decades in the Senate he continued to explore possible new avenues of progress for our Nation and the world.

Mr. President, as we grieve at his passing we give thanks for his service to America.

DETERIORATING SITUATION IN CAMBODIA

Mr. MANSFIELD. Mr. President, articles have been appearing in the press of late on the deteriorating situation in Cambodia. Corruption, inflation, civilian demoralization, defeatism have come to characterize the capital of Phnom Penh where a military dictatorship holds forth and also the constricted territory which still remains in Government hands. All the while the Cambodian forces which are responsive to Prince Sihanouk's government-in-exile are gaining wider and wider acceptance among the Cambodian people.

I expect, Mr. President, that this news may set the drums beating for more U.S. military help for Cambodia which already has totaled in the hundreds of millions during the scarcely 2 years in which we have been involved. Rather than to throw more good money after bad and risk more American lives, alternatively, we would do well to consider closing out our entire shameful involvement in this ill-fated and bankrupt enterprise in Cambodia.

In any event, Mr. President, I ask unanimous consent that two press items on this situation be printed in the Record.

There being no objection, the articles were ordered to be printed in the Record, as follows:

[From the Wall Street Journal, Aug. 14, 1972]

Nation Seems Resigned To Fighting a Long War—And Also To Losing It

(By Peter R. Kann)

Phnom Penh, Cambodia.—In the summer of 1970, this was a country of high enthusiasm and great—if naive—expectations. The Cambodians seemed generally relieved to be rid of Prince Norodom Sihanouk and his paternalistic rule, and they appeared genuinely united in their antipathy to the North Vietnamese "invaders." The Cambodians were optimistic—and wildly so—about their chances of driving out the Vietnamese, of building the foundations of a new Khmer (Cambodian) Republic, of enjoying the manifold blessings of American aid.

By the summer of 1971, Cambodia was a truncated and embattled nation, losing a war but still trying to fight and hoping to win. Cambodians were suffering—but still somehow smiling. The war was no longer seen as a sport. Cambodians were learning that they would never be Prussians. But many still seemed to believe in themselves and in tomorrow. If initial enthusiasm was being replaced by a degree of resignation, this was considered a hopeful sign of "new realism" by some foreign observers.

THE SUMMER OF 1972

But the summer of 1972 finds Cambodia disillusioned, defeatist, despairing. If a year ago the Cambodians seemed resigned to fighting a long war, they now seemed resigned to losing. "The Cambodians," a veteran diplomat says, "are in a sad, desperate struggle to stay afloat, and their only hope is that peace will come before they sink."

This country's plight is all the more tragic because Cambodia remains a backwater of the Indochina war. Opinion is all but unanimous that if the North Vietnamese wanted to conquer Cambodia, they could do so with ease. They probably don't because their major objective is South Vietnam and because, being able to use much of Cambodia as sanctuary and being little bothered by the Cambodian army, they don't see any reason to assume the burdens of actually administering a conquered country.

Though the Cambodians have developed what one diplomat calls "an almost pathological desire for peace," peace still looks a long way off. A separate peace between Cambodia and North Vietnam seems highly unlikely, if only because there is little that Cambodia could offer the Communists that they don't already have. Moreover, if Cambodia reached some kind of accord with its North Vietnamese enemy, the Cambodians would probably find themselves threatened by their so-called allies—South Vietnam and Thailand.

A VAGUE COMMITMENT

If a cease-fire of some sort were finally arranged in Vietnam, it might extend to Cambodia—but then again it might not. The U.S. is deeply committed—with promises, lives and money—to South Vietnam. But the American commitment to Cambodia consists of much vaguer words, only a few hundred million dollars in military and economic aid, and an official presence of fewer than 200 Americans.

The current mood of Cambodia may be summed up by several snippets of conversation. A senior official of the government, encountered at an inaugural festivity for President Lon Nol, sighs and says: "You know, we are not up to it. We cannot cope." A young technocrat, who even a year ago was optimistic about Cambodia's future, says: "We technocrats now function only as brakes." Brakes? "Yes, to keep Cambodia from reaching the end of the road."

A middle-level official is seeking to leave the country to join an international organization. "The only hope for Cambodia is American colonialism," he says, "but America doesn't even want us." A young Cambodian journalist sips a beer and says: "Our government has gone to sleep." Why? "It ate too much money and then went to sleep."

Several of these conversations are repeated to a longtime Western ambassador. "The Cambodians by now suffer from a terrible inferiority complex," he says. "They believe they are no good at doing anything. And, of course, they are correct." The European ambassador may be something of a cynic, but even American officials are sharply (though not publicly) critical of the Cambodian government and the Cambodian army. Like most Western observers here, they remain sympathetic to the Cambodian people—but rather in the manner of adults whose patience with children is wearing thin.

A MULTIFACETED MALADY

Cambodia's malady is due to many things, and no doubt the primary one is the almost uninterrupted succession of military defeats the Cambodians have suffered since the spring of 1970. But other signs of sickness cannot be blamed completely on the North Vietnamese: political bumbling and divisiveness, widespread and debilitating corruption, economic imbalances, isolation and escapism at the highest levels of government, lethargy and incompetence at all levels and disillusionment among the people. To many observers here, Cambodia's tragedy is less that of a lost military cause than of a lost revolution.

If there was a military turning point in Cambodia, it was probably an operation last fall called Tchen La II. This isn't to say Cambodia was winning the war until last fall. But, until Tchen La, one could still see vestiges of the early elan that had Cambodians from all walks of life flocking to join the army, that saw housewives contributing gold earrings to the war effort and that propelled soldiers into battle on Pepsi-Cola trucks, cheering and waving their vintage weapons.

Tchen La was a disaster. Some 40 battalions—most of the army's "mobile reserve"—were sent up Route 6, north of Phnom Penh, to relieve a protracted siege of a provincial town called Kampong Thom. The North Vietnamese army let the Cambodians string themselves out along the road, then sliced through the column at several points. The Cambodian offensive ended with at least six battalions decimated, with the "mobile reserve" cut off from Phnom Penh and with Phnom Penh seriously threatened.

The operation, launched with great fanfare, displayed many of the basic faults of the Cambodian army: shortsighted and overly optimistic planning; inadequate logistics; an overreliance on roads; a shortage of heavy weapons and inability to effectively use those it had; and incompetent leadership.

Tchen La also proved that the Cambodian infantryman could be tenacious and courageous (a point that has been shown time and again), but these qualities alone weren't enough and thus somehow made the debacle even more tragic.

Since Tchen La, the Cambodian army seems to have sunk ever deeper into a defensive and even defeatist mentality. It is largely a garrison army, sitting in Phnom Penh and other population centers, its officers more and more involved in politics and business, the soldiers increasingly ill-disciplined and burdensome to the population.

THE FEE FOR REDEPLOYMENT

A Chinese merchant has a farm on the outskirts of Phnom Penh. He raises ducks, pigeons and fish. Several months ago, after a Communist attack near the city, Cambodian paratroopers bivouacked on the farm. They mowed down the ducks and pigeons with machine guns and blasted the fishponds with grenades. The merchant went to the paratroopers' commander in Phnom Penh to complain about the troops. The colonel offered to redeploy his men off the farm—for a fee of one million riels (about $5,000).

Such stories are common these days. Phnom Penh restaurants bolt their doors to prevent soldiers from wandering in and helping themselves to food—or cash. Stories of troops looting in the countryside are numerous. "How can Cambodian soldiers loot and steal from Cambodian people?" asks In Tam, leader of the political opposition to Lon Nol. "I cannot understand it."

If some soldiers are involved in petty thievery, some officers are wheeling and dealing on a larger scale. Diplomatic sources say certain officers are selling commodities—though not necessarily weapons—to the Communists. But a much more widespread business is collecting ghosts.

Ghosts (or phantoms) are dead or nonexistent soldiers whose names are still carried on the rolls and whose salaries can thus be pocketed by commanders. No one knows how many ghosts are in the army because no one knows how many soldiers are in the army. The official army strength is about 170,000, but some diplomats doubt that 100,000 soldiers exist. Some commanders may use ghost salaries to good purpose—to better equip the real troops or to pay pensions to dead soldiers' families. But such uses appear to be the exception rather than the rule. U.S. military men here have been talking for nearly two years of conducting a study to determine the actual size of the army—but so far no findings have been issued.

A VERY POLITE PEOPLE

"It's fair to say the Cambodian army lacks good personnel controls," a sympathetic Western officer says. In fact, many brigades are formed simply by Lon Nol or one of his entourage giving a trusted chum a franchise to form one. Promotions are even easier to come by. A colonel, who edits a newspaper, was promoted to general because his younger brother was a general and that state of affairs offended family seniority. Promotions are also passed out as compensations for defeats. "The Cambodians are very polite that way," one diplomat says.

Provincial governors, brigade commanders and other senior officers often operate as local warlords, receiving little support and taking few orders from Phnom Penh headquarters. "There are some good warlords and some bad ones, but all warlords—warlordism—pave the way to communism," a Western ambassador says.

Some observers say it is to Cambodia's considerable credit that after two years of punishing conflict, the army is still entirely volunteer. On the other hand, some analysts argue that the volunteer army is an amateur army and that conscription is the only way to bring some discipline and organization to the military effort.

ON THE WAY TO THE FORUM

This spring significant stretches of territory in southeast Cambodia were lost to the North Vietnamese. This wasn't a real offensive against Cambodia; the North Vietnamese simply wanted to ensure there wouldn't be any problems to their rear when they launched their big offensive against South Vietnam. "The North Vietnamese just wiped up the Cambodians on their way to the forum," a Western attache says.

The Cambodians still hold a few of the larger southeast towns and are trying to resecure some of the roads, but military analysts say that by now almost all of Eastern Cambodia—the territory east of the Mekong River—can be considered a North Vietnamese sanctuary. In general, about two-thirds of Cambodia's territory and about half its population can be considered beyond the control of the government.

It is no surprise to anyone that the Cambodians fare badly at the hands of the North Vietnamese. More distressing to many diplomatic observers is the gradual transformation of this war into a civil conflict. Two years ago the number of Cambodians fighting with the North Vietnamese (or at least against the government) was estimated at 3,000, an insignificant factor in a "simple" war that pitted Cambodians against Vietnamese.

But as more and more of the country slipped under North Vietnamese control or was abandoned by the Cambodian army and administration, more and more Cambodian villagers were persuaded—or forced—to enlist in the "liberation" cause. The number of so-called Cambodian Communists now stands at 30,000, by American estimate. Most of these are far from hard-core Communists—or even dedicated insurgents—and many of them are considered poor-quality combatants. (The North Vietnamese generally provide officers for the Cambodian units or mix Cambodians into Hanoi's units.) Still, the war here isn't any longer simply a struggle between two nations and two nationalities. "If it isn't a civil war already, it is certainly and rapidly taking on the characteristics of a civil war," one senior Western diplomat says.

PACIFICATION, NO

U.S. officials are anxious for the Cambodian government to focus its military and political energies on the problem of growing indigenous insurgency; they want Cambodia to attempt some kind of "pacification" program. But the Cambodian leadership appears to be supremely indifferent to the problem. President Lon Nol is said to believe that Cambodians couldn't possibly be turned into Communists.

A Cambodian friend, educated in America, is describing in considerable detail a recent battle in which two Cambodian army battalions were destroyed. I express surprise at the degree of detail the Cambodian has picked up about the fighting. "Oh, my uncle and my cousin were in the battle," he says. I am surprised that the relatives are still alive, because very few Cambodian soldiers survived the attack. "Oh, they weren't fighting with the government. They were fighting with the Communists," the friend says. I look perplexed. "My family lives in (a village about 30 miles from Phnom Penh, and it has been occupied by the Communists for two years," the Cambodian says. "So they fight with the Communists. Do you understand?"

Lon Nol has promulgated something called "general mobilization"—an essentially paper program involving scores of quasi-mystical decrees and interministerial committees on everything from building great rural reservoirs to expanding the tourist trade. In Phnom Penh and a few other large towns, general mobilization has involved a degree of population control and was used as a political apparatus in the recent presidential election. But nothing much has been mobilized—including general mobilization headquarters. A visit to the office at 11:30 a.m. finds everyone "out to lunch." A return visit at 3:30 p.m. finds the office still empty. The doorman explains that headquarters are closed "because of rain."

U.S. officials say that Cambodian leaders, having sensed the spreading malaise in the society, faced a choice late last year: whether, on the one hand, to tighten control, enforce discipline and austerity, mobilize the population and wage the war; or whether, on the other, to devote energies to laying the political foundations of the republic. Perhaps it wasn't much of a choice, because the same U S. officials concede that "authority, discipline and mobilization don't seem to be part of the Cambodian character." In any case, the last nine months or so have been largely devoted to politics, with negligible to negative results.

First, several months were spent wrangling over the writing a constitution. Lon Nol finally scrapped the constituent assembly and put his own version of a constitution up for public referendum. Then, in June, a presidential election was organized. Lon Nol, who has led the country under various titles since the revolution of 1970, ran against In Tam, leader of the defunct assembly. The election was blatantly fraudulent, diplomatic observers say. In Tam supporters were stricken from the voting lists. In Tam observers barred from the polling places and military units paraded from one polling booth to the next to cast multiple votes for Lon Nol. And yet, Lon Nol ended up with only 55% of the vote. "The Cambodians can't even be efficient about vote fraud," a Western diplomat says.

The meager majority is said to have come as a shock to Lon Nol. The president seems to conceive of himself as national father figure, universally beloved. Lon Nol was immensely popular after the revolution, but military defeats, inflation, corruption and all other problems have taken a toll on his popularity.

CAMBODIAN "CRONYISM"

Meanwhile, other leaders who could be making a contribution to a government of national unity are out of power and in opposition. They include both In Tam, who has considerable support as a tough and honest "man of the people," and former Prime Minister Sirik Matak, the man whom American officials consider the most able administrator in the country.

Because Lon Nol acts more like a Pope than a politician and because he remains partially paralyzed from a stroke, much power is being wielded by what is called "the entourage"—a group of trusted, though not necessarily trustworthy, cronies who have the president's ear. The most powerful of them is probably Lon Non, the president's younger brother. The president himself seems largely immune from charges of corruption, but this certainly isn't true of his brother and the other couriers.

The disillusionment and the cynicism about all this aren't confined to the educated upper stratum of Phnom Penh society. A common story among the common people has it that President Lon Nol and a group of his associates were holding an evening meeting when the president decided he would like a bowl of noodle soup. An aide was dispatched and returned with some soup from an outdoor stand. The president remarked on how few noodles there were in the broth and then asked how much the soup cost. The aide replied 25 riels. The president is said to have been astounded. But noodle soup used to cost only 10 riels, and it had more noodles, he is said to have declared. The aide explained that things have changed. "But I never knew, no one ever told me," the president is said to have replied.

Cambodians laugh when they tell the story but they don't really think it's funny.

[From the Baltimore (Md.) Sun, Aug. 17, 1972]

CAMBODIA MILITARY, POLITICAL SITUATIONS WORSEN

(By Arnold R. Isaacs)

PHNOM PENH, CAMBODIA.—After months of political turmoil and battlefield setbacks, Cambodians are losing confidence in their government, their Army, and themselves.

In recent weeks, the ramshackle Cambodian Army has suffered a series of defeats along the strategically vital Highway 1, which links Phnom Penh to Saigon, and in the militarily unimportant but psychologically meaningful region around the ancient Khmer city of Angkor.

The intensified warfare along the South Vietnamese border has generated scores of thousands of new refugees, virtually overwhelming a relief system that has never been adequate even in relatively quiet periods.

TANKS CREATE FEAR

The sudden appearance of North Vietnamese tanks, which went into action 10 days ago for the first time on Cambodian battlefields, has created widespread fear that Communist forces may be preparing a major offensive against the Mekong River route, over which Phnom Penh receives the great bulk of its military and civilian goods.

On the home front, the political structure is splintering. President Lon Nol, having lost the backing of most of his prominent collaborators in the overthrow of Prince Norodom Sihanouk in March, 1970, seems increasingly isolated and unpopular.

The government appears unwilling or unable to curb flagrant corruption, which many Cambodians believe is now worse than ever before. Nor has it been able to check a sudden spurt in the price of rice, which affects every Cambodian and has a devastating effect on national morale.

RICE PRICE ALMOST DOUBLES

In the last month, the price of a 15-kilogram sack has nearly doubled, from slightly under $1 to almost $2. Prices have risen even higher in areas encircled by the Communists, where the civilian population is swollen with refugees and supply is more difficult.

In Communist-controlled areas, which now includes most of the country east of the Mekong except for enclaves around the major towns, prices have been kept low—one reason why many, and perhaps most, Cambodian civilians are willing to remain in their villages even when they are occupied. They flee only when the fighting comes close, or if they fear air strikes near their homes.

Because much of the countryside is under Communist control, and because in large areas of the country the Cambodian Army is making no real effort to recapture lost territory or even to widen its enclaves, the Khmer Rouge, or Cambodian Communist force, has been able to recruit widely and has expanded to an estimated 30,000 men.

It is now regarded as a much more effective fighting force than it was two years ago, when the war broke out. At that time, North Vietnamese troops did almost all the fighting, using the Khmers as laborers and porters. Now, though the North Vietnamese are still very much the senior partners and remain in overall command, Khmer Rouge soldiers are carrying on more of the combat, especially in areas away from the infiltration routes to South Vietnam.

HIGHWAY LOST IN APRIL

On the war front, Cambodian efforts to reopen Highway 1 have fallen into what has become a discouragingly familiar pattern.

The highway was lost in late April. Government defenders at outposts along the road melted away, for the most part, offering little resistance. They left about 5,000 soldiers encircled in Svay Rieng, the last important town before the South Vietnamese border. Since then, the Communist forces, apparently interested primarily in securing their supply routes to South Vietnam, have made no serious effort to overrun Svay Rieng but have simply harassed it just enough to keep the troops there pinned down.

The government responded with agonizing slowness. During May and June, military operations came almost to a standstill, while Army trucks and jeeps and even aircraft were used to distribute campaign leaflets for Marshal Lon Nol in the June 4 presidential elections.

In late June, one attempted operation along the road ended in disaster, when two Khmer Khrom battalions—manned by ethnic Cambodians from South Vietnam and considered the best fighting units—were surrounded and wiped out.

Of an estimated 500 men, only 15 returned to government lines. According to foreign military observers, no serious attempt was ever made to relieve the trapped battalions. The news was suppressed by the Cambodian command for more than a week.

Finally, on July 4, the government launched operation Sorya, which pushed slowly up the road and reached Kompong Trabek, 23 miles west of Svay Rieng, on July 24. The recapture of Kompong Trabek was hailed as a major victory, and official celebration ceremonies were held in Phnom Penh. But on August 6, North Vietnamese forces swept in behind the advancing troops, trapping about 2,000 in Kompong Trabek and inflicting heavy casualties on the Cambodians. It was in that action that Soviet-built T–54 tanks were employed for the first time on Cambodian territory.

FEARED RED PUSH

Western observers tend to believe that the tanks were headed for South Vietnam, but alarmed Cambodians foresaw a possible Communist push through the weak government defenses to the east bank of the Mekong River.

"This is a new phase of the war," declared Maj. Chhang Song, the Army spokesman. "This is open aggression. . . . We think the enemy may want to occupy all of the route east of the Mekong."

Morale was temporarily lifted when the Cambodian command reported 24 tanks destroyed, most by American or South Vietnamese bombers. But spirits began to sink again as tank sightings continued and as efforts to relieve the trapped Kompong Trabek garrison faltered.

There was more bad news last week from the Angkor Wat front, where government troops were driven off Phnom Bakeng, a hilltop that was not only the key position for any operation to reoccupy the sacred site but also an important link in the defenses of the important northern town of Siem Reap.

AN INTERNATIONAL WHALING MORATORIUM

Mr. WILLIAMS. Mr. President, I wish to express my shock at the decision by the International Whaling Commission not to have a moratorium on the killing of whales. I was pleased to have had the opportunity to attend the United Nations Conference on the Human Environment in Stockholm with the American delegation. One of the few substantial agreements achieved by the conference was put to the test recently when the International Whaling Commission met in London. That test involved the Commission's action on the recommendation, adoption on a 53-to-0 vote at Stockholm, which calls for a 10-year moratorium on commercial whaling.

Considered in the total scheme of the global environment, this 10-year moratorium may not appear to be of very great importance. Whales are, after all, rather remote from the everyday environment of most men. Few people have ever seen one. And for most people, they exist as almost fictional creatures. But the resolution calling for the moratorium had a great significance in at least two important ways.

First, we have become more aware of the importance of the interdependence of the various elements that make up our natural environment. Our knowledge of the earth and our survival on it is endangered when we alter its delicate balance. The complete extinction of whales might not have a direct and significant effect on the lives of any of us. But to assume that is to miss the point that ecologists have found is so hard to make. That point is that whales, like any other part of our complex natural world, might possibly represent a vital link in the ecology chain. Enough research has been accomplished with other ocean mammals, such as porpoises and dolphins, to give weight to the proposition that whales are a potential for research. This research could show that they are vital for man's well-being. Their extinction would remove even that option for the future.

Whales are today an endangered species. There are no very accurate statistics of how many there are, but such information as we have gives us cause for alarm. The International Whaling Commission has acknowledged this to some extent, by its prohibition on the taking of some species, such as the blue whale, the humpbacks, and four species of right whales. But it has not protected others, such as the fin, Bryde's and sperm whales, and several other species. Even if the Commission's limited prohibitions are respected, authorities agree that it is already too late for some species. Populations of some species are extremely low at the present time, and whales reproduce very slowly. Moreover, as the Commission's limited prohibitions take effect, hunters kill ever-larger numbers of other species because quotas for the killing of whales are set in terms of the oil production of the very large blue whale.

A second important point regarding this proposal concerns the willingness and ability of the international community and its institutions to bring some order to the global environment. Whatever was achieved at Stockholm, one of the most hopeful accomplishments there lies in the indication that mankind is at last determined to protect this earth. It is tragic that the 14 nations representing the International Whaling Commission at London spurned the resolution on the moratorium.

Finally, I must admit to a very personal, sentimental aversion to the possibility that these magnificent animals become extinct.

As you know, the proposed moratorium was put before the U.N. Conference by the U.S. delegation. As adopted at the Stockholm meeting, it states the following:

> It is recommended that governments agree to strengthen the International Whaling Commission, to increase international research efforts, and as a matter of urgency to call for an international agreement under auspices of the International Whaling Commission, and involving all governments concerned for a ten-year moratorium on commercial whaling.

The resolution is similar to provisions contained in bills passed in the 92d Congress by both the House of Representatives and the Senate. Both Senate Joint Resolution 115 and House Concurrent Resolution 387 instruct the Secretary of State to call for an international moratorium of 10 years on the killing of all species of whales until more effective conservation methods can be studied and initiated. There has been intense interest shown by Congress over the past 2 years in measures designed to protect not only whales, but all sea mammals. In March of this year, the House of Representatives passed H.R. 10420, and the Senate has recently considered similar legislation, S. 2871, which I introduced, to provide for the protection and conservation of all species of sea mammals by regulating activities of U.S. citizens with regard to these animals and establishing a Marine Mammal Commission to review existing programs and research affecting marine mammals. A very important provision of this bill requires that our Government initiate negotiations for bilateral or multilateral agreements for the protection of specific ocean and land regions which are of special significance to marine mammals. In addition it urges that we initiate an international meeting on marine mammals before July 1, 1973, for, among other things, a binding international convention for the protection and conservation of all marine mammals. I am pleased that this approach was retained in the final term mammal protection legislation which passed the Senate.

Expressions of congressional and public interest in this matter have prompted the Secretary of the Interior to issue a ban on the importation of whale products, and the Department of Commerce to discontinue the issuing of licenses to fishermen to take whales on the endangered species list. The result is that the United States does not now permit its fishermen to kill whales. However, this falls far short of a binding international agreement for the protection and conservation of marine mammals.

One of the reasons for the rejection of this proposed moratorium by the Commission is because its membership is largely composed of countries that are, or have been, active in commercial whaling. Among these countries, Japan and the U.S.S.R., both of which operate huge factory-ship fleets, accounted for 35,000 of the total 42,000 whales killed last year. Neither Japan nor the U.S.S.R. was represented in the 53-to-0 vote that adopted the resolution at Stockholm. Japan abstained, after expressing itself in favor of restricting the resolution to "depleted whale stocks." And the U.S.S.R. was not represented at Stockholm.

I had hoped, of course, that other members of the Commission would heed the expression of worldwide support encompassed by the Stockholm vote on the resolution. I even dared to hope that the Commission would go further and attempt to provide some means by which it can enforce a moratorium on these endangered mammals. Previously, the Commission's members have not even bound themselves to observe the quotas set for each of them. It is important to note that the quotas have not been met for several years because whaling fleets are not able to find enough whales to fill them.

Finally, I also hoped that the Commission would see its role in the larger perspective that I believe the resolution implies. I sincerely wished that it would have acted responsibly to carry out the mandate expressed at the Stockholm meeting. One thing the Commission could have done was to open its meetings to the press, so that it may absolve itself of the charge that it has been captured by narrow commercial interests, and allow its deliberations to be examined by public opinion.

Mr. President, I hoped the meetings of the International Whaling Commission would mark a turning point in its inauspicious record, and that it would seize the opportunity to move the purpose of the historic Stockholm conference one step ahead, toward the goal of a livable earth. Regrettably, this first attempt to implement the recommendations made at the Stockholm conference was a failure.

The refusal of the Whaling Commission to act positively on the recommendation for a whaling moratorium points out the continuing struggle we will have in achieving environmental improvement. The Congress and the administration will have to take greater initiatives if the noble ideals expressed in Stockholm are to be fulfilled. The survival of whales and the survival of man may both depend on our rededication to preserving our world environment. We cannot escape the fact that we have only one earth whose fate determines ours.

DISPUTE BETWEEN SECRETARY ROMNEY AND GOVERNOR SHAPP

Mr. SCOTT. Mr. President, a guest editorial from the Miami Herald published in today's Philadelphia Inquirer hits the nail on the head in its report of the dispute between Secretary of Housing and Urban Development George Romney and Gov. Milton Shapp.

We, who have been directly or indirectly affected by the devastation which tropical storm Agnes left, are grieved at the additional suffering its victims have been forced to endure. However, we are making great inroads in getting Federal aid to Pennsylvania—especially the $1.6 billion bill which the President signed yesterday. The Miami Herald editorial, as printed in the Inquirer, seems to agree:

> Mr. Romney is not a hard-hearted man. He is trying to get as much Federal aid to the victims of Hurricane Agnes as is possible.

I ask unanimous consent that this excellent article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SECRETARY ROMNEY "LAID IT ON THE LINE"

George Romney is a rare bird among politicians. He tends to say what he thinks and what he says is usually right. What follows is often explosive.

Mr. Romney probably cost himself a good shot at the Presidency in 1968 when he admitted he had been brainwashed by American military and diplomatic officials in Saigon who told him how great the Vietnam War was going.

Now, in 1972, Mr. Romney is secretary of the Department of Housing and Urban Development and he has said what he thinks about people in Pennsylvania who didn't protect themselves by buying flood insurance at bargain rates under the federally subsidized program that was passed by Congress in 1968.

Mr. Romney is not a hardhearted man. He is trying to get as much federal aid to the victims of Hurricane Agnes as is possible. But the secretary is not accepting the demagoguery of Pennsylvania Gov. Milton Shapp, who is demanding that the Federal Government replace immediately all the housing lost in the flood and also pay off all the mortgages involved.

That is when Mr. Romney laid it on the line.

He told Gov. Shapp in front of a group of 25 flood victims, "I don't believe government should assume complete responsibility for the people. We must recognize that people have a responsibility too."

An elderly woman screamed at the secretary, "You don't give a damn whether we live or die."

Gov. Shapp is encouraging such scenes by his accusations that Washington is not doing enough. He is making a political issue of misery that could have been greatly alleviated if he and other Pennsylvania officials had put on a campaign to get the people of Pennsylvania to take advantage of the insurance program.

The Herald learned there are 91 communities in Pennsylvania eligible for flood insurance. But only 828 policies had been sold in the entire state before the rains came.

So whose fault is it that more than 75,000 homeowners in Pennsylvania can't now collect the $17,500 that would have been available to fix up their houses and the $5,000 to replace the contents of those houses?

There were 5,800 businesses wiped out by flood waters from Agnes. Those businessmen were eligible for protection up to $30,000 each.

Whose fault is it that they did not buy flood insurance for little more than $100 a year?

We don't think it is Secretary Romney's fault and we don't think Washington should be taking the heat from local politicians.

Today in the mail there are warning notices from Mr. Romney's department to 25 communities in Florida that have failed to comply with the flood program's guidelines on building codes and flood-plan criteria. That means those 25 communities refuse to stop builders from putting up housing in areas that are going to be flooded by a hurricane.

If those 25 communities in the state do not comply by Sept. 15, the people will be cut off on flood insurance.

Whose fault will it be?

WHO ARE THE NOMINEES?

Mr. METCALF. Mr. President, yesterday I introduced the Corporate Ownership Reporting Act, S. 3923, on behalf of the distinguished Senator from Wisconsin (Mr. Nelson), the Senator from Oklahoma (Mr. Harris), and myself. The objective of this bill is simply to identify the institutions or individuals empowered to vote principal blocks of stock in major corporations.

A list of key voters is important to stockholders, regulatory commissions, and Congress. The difficulty in determining this basic information, under present laws and procedures, was described recently by Irwin Becker of the Providence Journal.

His article entitled "Nominees Convenient to Companies, Bank, but Who Are They?" appeared in the July 31 issue of the Journal. I ask unanimous consent that the article be printed in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

Nominees Convenient to Companies, Bank, But Who Are They?

(By Irwin Becker)

Rowe and Co. is the biggest stockholder in Newport Electric.

Sigler and Co. holds the same prominence with Newport Gas Light.

Hank and Co. is the largest share owner of Eastern Utilities Associates, which owns Blackston Valley Electric.

Rowe, Sigler and Hank are hardly household corporate names. They are not listed in standard financial references. They do not have state corporate charters. They never hold stockholders' meetings.

But they do hold enormous power because they represent the brokerage firms, the investment houses and the trust departments of the country's major banking and financial institutions.

Until last year, these stock trading companies, which are called nominees, were known only to a small group of executives who had access to a secret list compiled by the relatively unknown American Society of Corporate Secretaries.

That list was published for the first time in the June 24, 1971, Congressional Record by Sen. Lee Metcalf of Montana, who is trying to get the Senate to form a special committee to investigate the concentration of economic power by large corporations and the banking community.

"The flaw is secrecy, the remedy disclosure," Senator Metcalf said in a recent Senate speech. He intends to introduce a Corporate Ownership Report Act this year requiring the identity of propriety owners—the voters of the stock.

Since the disclosure by Senator Metcalf, the society which publishes the annual nominee list has made it available to anyone for $20.

Despite the availability of the list, it is still difficult, except in a rare court action, to find out who owns the stocks of both private and public corporations. And in the case of the public utilities, their ownership is as mysterious to the power, gas and telephone companies as it is to the public.

Yet one of the major themes in the spate of rate cases in the last two years before the Rhode Island Public Utilities Commission was that higher income was needed to attract investors who would receive an adequate return for purchasing stocks and bonds.

The general argument usually was: The stockholders want a better return. The stockholders will not buy our securities if the rate of return (profit) is not increased. The stockholders will avoid our bonds because our income is not high enough.

The utilities were constantly invoking the stockholders' interests but often even utility executives are quick to admit they do not know who their major stock owners are. And if they did, they would not release the information.

"We normally don't feel at liberty to give out what people hold," said R. Leigh FitzGerald, financial vice president of New England Electric System, which owns Narragansett Electric.

"Eastern Utilities Associates does not make it a general policy of divulging names of stockholders," said a spokesman for the treasurer of the holding company that controls Blackstone Valley Electric.

Nominees are limited partnerships of bank officials. The nominees act as stock trustees for estates, pensions, trusts, brokers or individual stock owners. So when Brown University, for example, is buying stock, it moves through Brunonia and Co., a nominee of Rhode Island Hospital Trust National Bank.

And when Rhode Island Hospital is investing, it is handled by another Hospital Trust nominee, Gerry and Co., which was named after a late hospital president, Louis Gerry.

"It's really a convenience," explained an officer in the trust section of Industrial National Bank. "It's a simple way of effecting trades. It helps in timing. We legally own the stock as a trustee."

He said the advantage of a nominee is that daily trading will not be held up while the bank or a broker tries to get the stock holder's approval. And, the officer said, many banks will not accept stock accounts "unless a nominee is named."

Could a utility find out who owned the stock beyond the nominee?

"If they came to us and would like to know who owns shares, that is something we wouldn't tell management," the trust officer replied.

The officer said that if "something controversial" was being contemplated, the nominee would "break it out" and "send out the proxies." In either case, the proxies would be returned to the nominee, and the total vote of the share owners would go as one figure to the utility or private corporation.

Doesn't this give added power to banks which already have indirect control of corporations through loan policies? he was asked.

"Very few proxies are controversial," said the officer, who asked that his name not be used. "It is not in any way meant to be a secretive operation." He agreed, however, that nominees are used in some cases to try to take over a company by stock purchases that are not in the name of the individual or corporation attempting the take-over.

An officer in the trust section of Rhode Island Hospital Trust said nominees are used "essentially for convenience in making transfers. Most officers of the bank are in nominee partnerships. They're partnerships, not bank subsidiaries. They are limited to one function—hold securities for the benefit of others.

The officer claimed that because of "legal restraints" there is no connection between the operations of the nominees and the bank's commercial department, which may be lending money to companies the nominees are considering as investments.

The only way to reveal who actually owns the stocks is to take "legal action for good, and significant reasons, such as a proxy fight," the officer contended.

Thomas J. Corrigan, securities examiner in the state banking division, confirmed there is no state control of nominees. "There are no reporting requirements, no registration," he said. "You'll have a difficult time getting information without a court order. It is private information."

Major stockholers of utilities are listed in public reports to state and federal agencies, but most of the large holders are in nominee names. As a general rule, the larger the utility, the larger the number of nominees in the list of top owners.

The only clues to owners that the nominee list offers is the connection between the "street names" and the banks and investment houses. In a few instances, the groups which use the nominees are listed, such as pension and mutual funds.

But nowhere in the nearly 100-page list is the name of an individual owner found. And to make matters worse, many stocks held by brokers are listed in the name of their special nominee, Cede and Co.

Cede and Co. represents the Central Certificate Service of the Stock Clearing Corporation, a subsidiary of the New York Stock Exchange. It is a clearing house for broker exchanges, serving the same function as a check clearing house for banks.

For example, New England Telephone has 33.5 million shares of which 23.9 million, or 73 per cent, are owned by American Telephone & Telegraph. The largest stockholder outside of AT & T is Merrill Lynch, Pierce, Fenner and Smith, with 143,067 shares. The nominees used by Merrill Lynch are not listed.

The largest nominee, Sigler & Co., holds 34,321 shares. Sigler is the nominee for Manufacturers Hanover Trust Co. of New York, one of the nation's largest banks. Sigler is used as the bank's nominee for stocks purchased for U.S. and Foreign Securities Corp., Canadian International Growth Fund Inc., Channing Funds, General Public Service Corp., Institutional Growth Fund, Institutional Income Fund and Institutional Shares Ltd.

As New England Telephone conceded in its 1970 report to the Public Utilities Commission: "Principal or beneficial owners of shares in the names of nominees other than Cede and Co. cannot be determined from the respondents' records."

Since AT&T owns New England Telephone, who owns AT&T, the country's largest-held corporate stock? Nominees and brokers are in the list of the 30 top stockholders, according to the Federal Communications Commission.

Again, Merrill Lynch, combined with its Cede holdings, is the biggest owner, with 7,258,711 shares out of a total of 549,309,779 shares.

The second-largest owner is Kabo and Co., a nominee of Bankers Trust Co. of New York, with 3,972,927 shares. Third is Cudd and Co., a nominee of Chase Manhattan Bank of New York, with 2,142,905.

Cudd, in turn, is holding the stock for a series of investment funds including American Mutual Fund Inc., Chemical Fund Inc., Equity Fund Inc., International Resources Inc. and the Investment Company of America.

Utility holding companies, such as New England Electric and Eastern Utilities Associates, come under the Securities and Exchange Commission and must file the names of shareholders who own more than 1 per cent of their stock.

The only three listed under New England Electric are Merrill Lynch, 518,411 shares, or 3.3 per cent; Hold and Co., 209,800, or 1.3 percent, and Harvard and Co., 161,968, or 1.03 per cent.

Hold is the nominee for Riggs National Bank of Washington, D.C. Harvard is the nominee of New England Merchants National Bank when it is acting for Harvard College.

Mr. FitzGerald discounted the importance of the extent of ownership by nominees. "It doesn't mean much," he said. "We have a good guess but really don't know who they represent."

As for Eastern Utilities Associates, only two big owners are with the SEC—Hank and Co., a nominee of First National City Bank of New York, 68,250 shares, or 2.5 per cent, and Wru and Co., nominee for First National City Bank of Cleveland, 36,000 or 1.3 per cent.

The EUA spokesman was asked if it bothered him not knowing the largest stockholders in the utility.

"It would bother me if there was a stockholder out there who owned 50 per cent of the company. It's none of our business who the broker holds the stock for," he remarked.

Even a small firm such as Valley Gas has a broker and a nominee as its largest stockholders. Merrill Lynch holds 13,082 out of 400,000 outstanding shares. And Comfa and Co. has 10,000.

Comfa is the nominee for the U.S. National Bank of Portland, Ore. "It's a trust for a pension fund," explained Charles Vass, Valley's treasurer. "But what pension fund I don't know."

The largest stockholder in Newport Electric is Rowe and Co., a nominee of Industrial National Bank. It holds 7,116 out of 306,236 shares. But Eugene Rankin, Newport's president, sees no difficulty with the arrangement.

"We asked them one time who they were and they're not supposed to give out that information," he said. "I can't see any problem here at all. We know who 97 per cent of them are. Close to 60 per cent are in Rhode Island and close to 50 per cent are in our territory."

The following are the major stockholders in the larger utilities serving Rhode Island. When nominees are listed, the bank or financial institution which they represent are in parentheses. The number of shares is after each owner's name.

NEW ENGLAND TELEPHONE AND TELEGRAPH

American Telephone & Telegraph	23,900,000
Merrill Lynch, Pierce, Fenner & Smith	143,067
N. Y. Life Insurance	49,500
Sigler & Co. (Manufacturers Hanover Trust)	34,321
Abraham & Co	26,904
Franklin and Co. (Fidelity Bank of Philadelphia for University of Pennsylvania)	23,000

NEWPORT ELECTRIC

Rowe & Co. (Industrial National Bank)	7,116
Paul F. Murray	5,650
Merrill Lynch, Pierce, Fenner and Smith	5,423
Gage & Co. (Rhode Island Hospital Trust)	4,975
Savings Bank of Newport	3,000

PROVIDENCE GAS

James V. Medici, c/o L. E. Carpenter Co	5,919
Robert E. Boyle of Midland, Tex	4,943
Arthur and Elizabeth Newham Jr. of Patchogue, N.Y	4,792
Sam Gitlow of New York City	4,000
Elsie C. Emery of Edgewood	3,654

NEWPORT GAS LIGHT COMPANY

Sigler & Co. (Manufacturers Hanover Trust)	13,230
Estate of George V. McLaughlin of New York City	9,626
Walter M. Jeffords Jr. (president)	7,733
Martin Foundation of New York City	6,720
United Security Life of Des Moines, Iowa	5,880

NEW ENGLAND ELECTRIC SYSTEM

(Narragansett Electric)

Merrill Lynch, Pierce, Fenner and Smith	518,411
Hold & Co. (Riggs National Bank of Washington, D.C.)	209,300
Harvard & Co. (New England Merchants National Bank)	161,968

EASTERN UTILITIES ASSOCIATES

(Blackstone Valley Electric)

Hank & Co. (First National City Bank)	68,250
Wru & Co. (First National City of Cleveland)	36,000

VALLEY GAS COMPANY

Merrill Lynch, Pierce, Fenner and Smith	13,082
Comfa & Co. (U.S. National Bank of Portland, Ore.)	10,000
Dr. Jack Roth of The Bronx, N.Y.	3,780
Charles M. Tenney Jr. of Boston	3,096
Falmestock & Co. of New York	2,500

TIVERTON GAS COMPANY

Merill Hawkins, President	273
Newport Gas Light Co	225

The following are the nominees for Rhode Island firms listed in the 1971 and 1972 nominee lists published by the American Society of Corporate Secretaries Inc.:

Brown, Lisle and Marshal Inc., Bourne & Co.

Citizens Trust Co., Howard & Co.; Ress & Co.; Swing & Co.; Tanner & Co.; Victor & Co.

Cummings and Co. Inc., Carl & Co.

Diamond, Doorley, Douglas & Co., Robert & Co.

Industrial National Bank, Battey & Co.; Broadbent & McAlpine; C. B. & Co.; Dresser & Richardson; Rowe & Co.; Text & Co.; Provers & Co.

Michael Investment Co., Alron & Co.

Newport National Bank, Aquidneck & Co.

Providence Steamboat Co. and Maurania Corporation, India & Co.

Providence Investors Co., Intervale & Co.

Rhode Island Hospital Trust, Bates & Co.; Books & Co.; Brunonia & Co.; Claude & Co.; Field & Co.; Gage & Co.; Gerry & Co.; Graham & Co.; Gray & Co.; IIF & Co.; Kent & Co.; Letts & Co.; Newman & Co.; Potter & Co.; Regro & Co.; Ruth & Co.; Sell & Co.; Silver & Co.; Sweet & Co.

Santopietro, Katz, Volatile & Co., Jud Sankavo.

The Sixty Trust, Little & Company; Silver & Co.

G. H. Walker & Co., Mears & Co.

Washington Trust Co., Perry, Baker & Co.

Allen J. White & Co., Whico.

THE EXPORT-IMPORT BANK

Mr. JAVITS. Mr. President, on June 11, the chairman of the Joint Economic Committee, Senator WILLIAM PROXMIRE, released in a committee report a compendium of papers submitted to the Joint Economic Committee—JEC—on international subsidies. This JEC report reprinted three academic studies submitted to the committee by three professors of economics.

Today, I would like to record that the views put forward in these studies do not represent my views as the ranking Republican Senator on the Joint Economic Committee and to express my own views directly.

One of the studies published in the compendium is entitled "Export Credit Subsidies and U.S. Exports: An Analysis of the U.S. Eximbank," by Prof. Douglas R. Bohi of Southern Illinois University, and my remarks today are addressed to this study only.

One of the underlying premises of Professor Bohi's study seems to me to be without foundation. Professor Bohi states in his conclusion that the United States is currently using a combination of three major programs to improve its trade balance: flexible dollar exchange rate, export promotion, and import control. Earlier in the study Professor Bohi also states that if the recent decision to float the U.S. dollar in international markets is an indication of the willingness to adjust the balance of payments by this method in the future, the logical basis for most import control or export promotion programs will be eliminated.

But the United States has never floated the dollar, is prevented by the Bretton Woods Act from floating the U.S. dollar, and the float of other currencies against the dollar also does not seem in the cards. Since U.S. policymakers cannot and are not following this option, it logically follows that they must concern themselves with more conventional export promotion techniques if our serious balance of trade and balance of payments deficit position is to be ameliorated.

This, then, gets to the crux of the substantive arguments; namely, whether the U.S. Government subsidizes exports through the operation of the Eximbank and whether the Eximbank loans are an effective means of promoting U.S. exports.

The Bohi study contends that Eximbank loans are subsidized and raises doubts as to their effectiveness in promoting exports. Since these serious questions have been raised, I think that my colleagues would be interested in this regard in the evaluation of this study by an internationally respected economist, Dr. Howard Piquet, who is well known to the Congress through his work with the Legislative Reference Service for more than 20 years and who was commissioned by the Eximbank to evaluate the Professor Bohi study.

Regarding the subsidy allegation, Dr. Piquet concludes:

> Subsidies would be involved if the Eximbank operated at a loss. On the contrary, the Eximbank has been highly profitable. Professor Bank's arguments are misleading because they imply that American taxpayers are paying for large subsidies to foreigners to enable them to buy U.S. exports, most of which they would have bought even without subsidy. In those few instances where the Eximbank has had to borrow at unusually high rates, the amounts involved have been very small. Since 1945 the Eximbank lending

> rate has been consistently higher than its borrowing rate at the U.S. Treasury for equivalent, or even longer maturities, except only in late 1969 and early 1970.

Dr. Piquet, after presenting various tables goes on to note that:

> Even during 1966 and in 1968–70 the costs incurred on some current borrowing were more than offset by the profits accrued on outstanding balances and on other current borrowings at rates lower than the Eximbank lending rate, with the result that, on an overall basis, the Bank's operations showed a profit in these years alone.

Dr. Piquet then concludes:

> Thus, even under the definition of "subsidy" followed by the staff of the (Joint Economic) Committee, current operations of the Eximbank in most years have never entailed a subsidy cost. On a cumulative basis, the Eximbank's operations have never entailed a subsidy cost.

The second principal point of contention is whether the Eximbank's loan program provides a significant stimulus to American exports. Again, the conclusions of Professor Bohi and Dr. Piquet differ markedly. After Dr. Piquet points out that export credits and the terms under which such credits are available is one of the factors involved in determining competitive advantage, Dr. Piquet makes the following analysis:

> It is impossible to prove mathematically that the Eximbank has been ineffective in stimulating U.S. exports as it is to prove that it has been effective.
>
> Because of the nature of export financing, there is a strong presumption that the Eximbank has facilitated increased exports and that, in doing so, it has not impaired the foreign trade position of the United States, nor aggravated its balance of payments deficit.
>
> Exports just don't happen. For the most part, they are closely intertwined with financing. A salesman for U.S. industrial products abroad will have little success if he cannot assure potential buyers of adequate financing. It can be generalized that purchasers in the less-developed countries simply do not have enough cash with which to purchase imports, and that even in the developed countries cash for the purpose is scarce. For example, in Japan the electric power companies are private institutions, receiving payment in Japanese yen. They do not have access to non-Japanese currencies held by the Bank of Japan. Therefore, they require supplier financing if they buy imported equipment.
>
> Every important exporting country has an export-financing facility, which finances exports at fixed, rather than floating interest rates. In the United States the current practice of commercial banks usually is to finance exports at floating rates, which means that the rate of interest is subject to change as the prime borrowing rate changes within the United States. Were it not for the Eximbank, which provides long term loans at a fixed rate (for some time 6 percent), purchasers of U.S. exports might have to borrow exclusively at floating rates, which would place U.S. exporters at a disadvantage compared with exporters in other countries.

Dr. Piquet's analysis then goes on to make a careful economic analysis of the various points raised by Professor Bohi.

Since the United States is in a period of balance-of-payments difficulties, since it is in the national interest to review carefully the export promotion activities of the Federal Government to insure that they are giving all appropriate assistance to the promotion of U.S. exports, and since the study of Professor Bohi has received widespread press attention, I felt it proper to bring to the attention of my colleagues Dr. Piquet's challenge to certain assertions made by Professor Bohi. A copy of Dr. Piquet's study is available from the Eximbank just as a copy of Dr. Bohi's study is available from the Joint Economic Committee.

I ask unanimous consent that the full text of the concluding remarks of Dr. Howard S. Piquet's study, "Export Credit Subsidies and U.S. Exports: An Analysis of the U.S. Eximbank," by Douglas R. Bohi—A Reply be placed in the CONGRESSIONAL RECORD at this point.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

"EXPORT CREDIT SUBSIDIES AND U.S. EXPORTS: AN ANALYSIS OF THE U.S. EXIMBANK," BY DOUGLAS R. BOHI—A REPLY

(by Howard S. Piquet)

CONCLUDING REMARKS

It is incorrect to characterize the Eximbank as a subsidizing agency. Throughout its existence it has been borrowing funds from the U.S. Treasury and the private capital market at rates of interest lower than the rates which it charges its borrowers, except for brief periods over the past few years, when interest rates skyrocketed and it paid a slightly higher rate to the Treasury than its lending rate. This phenomenon resulted from the fact that the Eximbank has been following a policy of charging a standard rate of 6 percent on its loans. The average rates paid on its borrowings in the private capital market have always been lower than its lending rate.

Because of the differential between its borrowing rate and its lending rate the Eximbank is a highly profitable institution and it has been paying substantial dividends to the U.S. Treasury which, on behalf of the Government, holds all of its $1 billion of capital stock. It is misleading, therefore, to assert that American taxpayers are spending huge sums through the Eximbank to stimulate U.S. exports.

The Eximbank also provides a large and increasing volume of guarantees and insurance. It is a true bank which has been created for the purpose of facilitating exports with respect to credits, guarantees and insurance so as to place U.S. exports on a competitive footing with exports by other countries. International "credit wars" have been avoided through regular consultations held under the auspices of the Berne Union.

Efforts to prove that the activities of the Eximbank have not stimulated U.S. exports have been unsuccessful because there are too many variables of equal importance to isolate the effects of any one of them, including credit financing. Professor Bohi has demonstrated this impossibility by his mathematical equations. For the same reason, it is impossible to demonstrate mathematically that Eximbank activities have stimulated exports.

There is a strong presumption, however, that Eximbank activities have had the effect of expanding U.S. exports. Numerous banks, which according to Eximbank critics, are supposed to be competitors of the Eximbank, are on record to the effect that were it not for Eximbank credits and guarantees many exports would not have materialized.

As stated in my 1970 report:[1] "By the nature of the phenomena, a positive cause-effect relationship between Eximbank lending and increasing U.S. exports cannot be 'proved'. Correlations between the percentage increase in the Eximbank's lending, on a country-by-country basis, and U.S. exports to those countries are so intertwined in a maze of widely ranging variables that it is not possible to show any convincing relationship. The volume of exports is to strongly affected by the price relationships, relative degrees of inflation, rates of economic growth, etc., that the effects of Eximbank lending upon U.S. exports are hidden. Even with respect to some of the less developed countries in which there appears to be something approaching a positive correlation, so many variables are involved that any conclusion as to cause-and-effect relationships is rendered meaningless, if for no other reason than because the Eximbank is only one of the institutions which encourages exports to, and development in, those countries. Whether U.S. exports to any given country have expanded because of Eximbank loans or because of the operations of the Agency for International Development or of the World Bank cannot be determined.

"In the absence of statistical proof, almost all that can be done is to ask those who are in a position to know whether, in their judgment, the activities of the Eximbank and the FCIA have caused exports to be larger than they otherwise would have been.

"In the course of preparing the present report, the author talked and corresponded with a large number of bankers and exporters. In nearly every instance they have been fully cooperative in answering questions and in volunteering information and opinions regarding the Eximbank's procedures and attitudes."

Exporters and commercial bankers alike are enthusiastic in crediting the Eximbank for stimulating exports. The reply of a relatively small bank was typical in stating "We are extremely pleased with the many new provisions in the program . . . they should generate additional exports by making bank financing more flexible and providing banks with greater liquidity during periods of tight money. . . ."

Particularly enlightening was a letter recently received by the Eximbank from an important Danish importer stating that:

"As you may know, many of the major industrial countries such as the United Kingdom, Germany, Japan, Holland and others offer state-assisted financing when non-national clients such as ourselves order heavy equipment like ships, drilling rigs, cranes, machinery and so on.

"Accordingly, when we became aware of the availability of favorable financing as offered by the Export-Import Bank we gave more serious consideration to sourcing from the United States. The financing terms you make available have played a major role in our decision for the first time to order about $50 million worth of such equipment from the United States, whereas in the past we have typically sourced such equipment from other countries. Further, in the process, our staff is becoming aware of other procurement opportunities in the United States which we had not earlier had occasion to encounter. We frankly doubt that we would consider some of the U.S.A. procurement we have just made, and are now planning, if the financing you offer were not available."

To curtail the Eximbank's activities would run the risk of retarding U.S. exports. Simple logic says that if there is a presumption that the Eximbank has been doing a creditable job it should be allowed to continue to do so. If it is to do so during a period of economic expansion its powers should be enlarged.

---

[1] Piquet, H. S., *op. cit.*, pp. 34–39.

Mr. FONG. Mr. President, it is my pleasure to join the distinguished senior Senator from New York (Mr. Javits) in placing in the Record the concluding remarks of the excellent report by Dr. Piquet and to once again voice my strong support for the Export-Import Bank and its activities.

As the ranking member of the Subcommittee on Foreign Operations of the Appropriations Committee, I have had the opportunity over the past several years to become quite familiar with the policies of the Bank and to closely monitor its activities on a continuing basis.

Based on this experience and knowledge, it has been, and it continues to be, my very firm conviction that the Bank has pursued, now pursues, and will continue to pursue, policies and procedures which provide necessary financial assistance, but only necessary assistance, to the U.S. businessman in his endeavors to compete in the world's marketplace. I am further convinced beyond all doubt that Eximbank provides this assistance without supplanting, or even competing with, the financial assistance already available from the private sector. And, as Dr. Piquet points out, the Bank does so without any real subsidy on the part of the Government and, indeed, at a profit to the U.S. taxpayer.

Nothing in Professor Bohi's report changed my favorable opinion of Eximbank one bit. Not the least.

And now, I am pleased to find my views completely supported by this learned report of Dr. Piquet, a man of impeccable credentials and a man well—and favorably known to most of the Members of this Congress. Dr. Piquet's reply points out the falacies of Professor Bohi's report and clearly and logically refutes them one by one.

I wholeheartedly recommend Dr. Piquet's report to my colleagues in the Senate and I particularly urge anyone who has read Professor Bohi's report to conscientiously read and consider Dr. Piquet's reply.

In closing, I am compelled to point out that at a time when there are so many real problems to be solved, so many institutions not doing a good job, and so much important pending legislation which the Congress hasn't had time to complete, it can only be wasteful folly that we must spend even a small amount of time and energy defending a truly productive and effective institution such as the Export-Import Bank against spurious criticisms from uninformed sources.

Mr. SCOTT. Mr. President, on behalf of the distinguished Senator from Texas (Mr. Tower), who is necessarily absent I ask unanimous consent that his remarks on the Piquet report on the Export-Import Bank be printed in the Record.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Importance of the Export-Import Bank

(Statement by Senator Tower)

I would like to express my concurrence in the conclusions of the Piquet Report on the Export-Import Bank, summarized by the distinguished Senator from New York (Mr. Javits). The study analyzes the contribution of the Ex-Im Bank to our trade position. I have noted the paper by Douglas Bohi purporting to show that the Bank programs to stimulate exports are not worthwhile, and for my part I find the assumptions and conclusions of the paper to be faulty, as per the analysis by Howard Piquet. The Ex-Im Bank has in fact contributed a great deal to the expansion of our exports, and continues to merit the support of Congress.

I will note a few of the demonstrative cases for the Bank's contribution to our export activities, based simply on instances which I have observed of assistance from the Bank to the export activities of firms in my own State. Many requests from Texas for Ex-Im guarantees, insurance, and loan participations are processed and approved by the Bank in a routine fashion. In some instances, however, problems develop with regard to particular export situations which bring them to my attention. Some of these cases involve business firms which have little or no export experience or established business relationships with customers abroad. Foreign creditors seem reluctant to divert their frequently scarce resources toward their own importers in many of these situations, which frequently involve only incidental importers and/or small importers. The U.S. banks similarly have less risky domestic and larger, perhaps more profitable export and import financing to do, and due to their necessary adherence to principles of prudent financial management they do not feel in many instances that they can justify committing funds to these marginal situations.

This is an area where Ex-Im can be and is of critical assistance to the facilitation of our potential exports, with its loan guarantees, loan participations, and insurance. In these marginal instances, I have worked with the exporters, the Ex-Im Bank, and U.S. banks, to shape up an export financing package which will make the sale of U.S. goods to the foreign purchaser possible, while at the same time will give the U.S. Government adequate assurance of repayment of any funds or liability it may have on the line, and will satisfy the private financial institution that it is not taking risks beyond prudent levels. The net result is the sale of U.S. goods which would otherwise not have occurred with the benefits to the U.S. of increased employment, income, tax revenue, and a contribution toward our ability to pay for our imports and our defense and development expenses around the globe. The key factor in this whole process is the presence of a governmental back-up financing and guaranteeing operation, the Ex-Im Bank, which was able to bring together the elements of a marginal-export situation and make it an actual-export situation.

The other kind of problem export situation which normally comes to my attention is that where a Texas firm is facing competition from foreign firms on a major construction project or big-ticket product sale abroad, and the foreign firms are backed up by low-interest, favorable-terms financing from abroad. Our banks cannot normally meet this type of foreign governmental financing with totally private, market-governed resources. The world of foreign trade is a tough world, and many nations are pushing their products with subsidies of all types; their subsidized financing gives them a substantial competitive edge on us, and it is only the presence of the Export-Import Bank that gives us any chance of competing in many of these deals.

Our governmental assistance is much less heavy and much more market-justified than that of most foreign nations; we insist that our Bank be successful in making money on its operations, while the foreign government programs are usually nothing less than grants, at their taxpayers' expense, to generate export sales and employment. Many of the firms in my State have been enabled with the aid of the Ex-Im Bank to overcome the heavy foreign financial assistance edge of their competitors and to succeed in exporting their products and services where they could not otherwise have done so. These are *real* results of our supposedly "unproductive" Export-Import Bank programs—at least "unproductive" is what the Bohi paper analysis claims; I prefer to believe what I have seen and experienced to date with the Bank's programs, the concrete export sales which have helped my State's economy and which were only enabled to do so by virtue of the crucial and timely aid of the Ex-Im Bank.

The Piquet Report analyzes the operations of the Bank in some detail and counters very effectively the arguments that it is not contributive to our export activities. The Ex-Im Bank does successfully facilitate our exports, while earning a decent rate of return and paying dividends to the U.S. Government. Would that other government programs espoused by the critics of the Ex-Im Bank worked so successfully, and returned so much to the people of this country in jobs, income, tax revenue, and economic progress. I encourage my colleagues to review the material which the Senator from New York has included in the Record on this careful study of the Ex-Im Bank.

HEALTH MAINTENANCE ORGANIZATION AND RESOURCES DEVELOPMENT ACT OF 1972

Mr. KENNEDY. Mr. President, the Subcommittee on Health of the Committee on Labor and Public Welfare has held 21 days of hearings during a period spanning almost 1 year, and has heard from almost 100 witnesses concerning the subject of health maintenance organizations. This testimony, together with extensive oversight hearings in all parts of the United States and abroad contributed to much of the thinking embodied in the Health Maintenance Organization and Resources Development Act of 1972. Extensive hearings were conducted in the Health Subcommittee subsequent to the introduction of this bill on March 17, 1972.

The bill was ordered reported from the Health Subcommittee, with amendments, on June 15, 1972. On July 21, 1972, the bill was reported from the full Labor and Public Welfare Committee and, by prior agreement, referred to the Committee on Finance. On August 1, 1972, the chairman of the Committee on Finance asked that his committee be discharged from further consideration of the bill, since provisions which would have fallen within that committee's jurisdiction had been stricken from the bill prior to its referral.

This legislation, which would provide for the subsidization of health maintenance organizations, health service organizations, and area health education and service centers, has been on the Senate Calendar since August 1. Since it was reported from the Committee on Labor and Public Welfare, organized medicine has launched an intensive lobbying campaign with two goals in mind. First of all, the American Association of Foundations for Medical Care, a medical society sponsored organization, has had lobbyists visiting key Senators on the Labor and Public Welfare Committee and elsewhere. One of the representatives of the medical foundations is also a member of the house of delegates of the American Medical Association. The thrust of their lobbying effort is to support an amendment expected to be offered by Senator Dominick, which would broaden the provisions of the bill in such a way as to allow medical foundations to qualify for capital support. A justification for the action of the majority of the Committee on Labor and Public Welfare in restricting funds in title I of this legislation can be found in the committee's report. Senator Dominick has filed individual views which can also be found in the report.

The second purpose of organized medicine's lobbying effort is to delay Senate consideration of the bill for an indefinite period of time. Almost every Member of this body has received a communication from their State medical society, and representatives of the American Medical Association have approached the leadership of the Senate in an attempt to bottle the bill up.

PROHIBITION OF SEX DISCRIMINATION IN HEALTH RELATED PROGRAMS

Mr. MATHIAS. Mr. President, last year the distinguished senior Senator from Michigan (Mr. Hart) and I sponsored amendments to Health Manpower legislation designed to prohibit discrimination on the basis of sex in admissions to health-related training programs receiving Federal funds under titles VII and VIII of the Public Health Service Act. These amendments became law last November when President Nixon signed the Nurse Training Act of 1971 and the Comprehensive Health Manpower Training Act of 1971.

Under the amendments, an institution must provide satisfactory assurances to the Secretary of Health, Education, and Welfare that it is taking positive steps to assure nondiscrimination in its admission policies. The Office of Civil Rights within HEW has been delegated the difficult and often delicate task of obtaining these assurances and verifying compliance with the assurances on a continuing basis. Under the able direction of Mr. J. Stanley Pottinger, the Office of Civil Rights has been working diligently over the past several months to develop guidelines for administering the nondiscrimination provisions.

Mr. Pottinger has recently addressed the Federation of Schools of the Health Professions and discussed the steps taken by his office toward that end. Because of the numerous inquiries that I have received on the subject since enactment of this legislation, I commend to the attention of my colleagues Mr. Pottinger's remarks. While they may not obtain universal agreement, I think they will receive general respect for the honest and conscientious way in which they address a tough job. I ask unanimous consent that they be printed in the Record.

There being no objection, the remarks were ordered to be printed in the Record, as follows:

There's Someone at the Door

(By J. Stanley Pottinger)

I appreciate this timely opportunity to talk to you about HEW's enforcement role with regard to the sex discrimination provisions in the new Health Manpower Training Act and Nurse Training Act.

The thrust of the legislation is to say, simply, that sex discrimination has got to stop. Congress has spoken, and for the moment is quiet on the subject. The women who have spoken are not quiet, nor should they be. Their pulse is growing stronger, and we intend to see that their grievances are taken seriously. I hope that you will, too.

There are no uncertainties in the intent of the terms of the acts. They state:

"Discrimination on Basis of Sex Prohibited."

And that's just the caption. There's more:

"The Secretary may not make a grant, loan guarantee, or interest subsidy payment under this Title to, or for the benefit of, any school of medicine, osteopathy, dentistry, veterinary medicine, optometry, pharmacy, podiatry, or public health or any training center for allied health personnel unless the application for the grant, loan guarantee, or interest subsidy payment contains assurances satisfactory to the Secretary that the school or training center will not discriminate on the basis of sex in the admission of individuals to its training programs. The Secretary may not enter into a contract under this Title with any such school or training center unless the school or training center furnishes assurances satisfactory to the Secretary that it will not discriminate on the basis of sex in the admission of individuals to its training programs."

Enforcement authority for these provisions has been delegated by the Secretary to the Office for Civil Rights, perhaps primarily because of our involvement with institutions of higher education in the enforcement of Title VI of the Civil Rights Act and Executive Order 11246.

Under the Health Manpower and Nurse Training Acts—to give you some idea of the scope of health profession training—the National Institutes of Health administered funds for Fiscal Year 1972 totalling $616 million.

I'd like to talk to you today from the vantagepoint of our experience in the enforcement of civil rights law, to tell you as much as we now know about how this new law will affect you and what is expected of you as a result of it. To do that—and to keep it in perspective—we first need to answer some questions the health training professions are asking:

"Why me? Why did the Congress single out the Health Training professions?"

The reason, I believe, lies in the compelling arguments of advocates of laws prohibiting sex discrimination. They have documented their case with facts like these:

Only nine percent of American physicians are women.

Although the number of doctoral degrees for women in all fields doubled between 1956 and 1965, the increases for women earning degrees in medicine, osteopathy, and pharmacy increased only about one-third; in optometry, no improvement, and in dentistry, a decrease of about one-third. At one point, Congress was reminded that one book on medical school admission requirements openly stated a policy against admission of women in several institutions.

There was a clear conviction on the part of many that the health professions imposed unofficial but firm restrictive quotas on the admission of women, no matter how qualified they might be.

Congress also wanted to increase the number of persons in the health professions, and one way to accomplish this is to draw more fully on all our human resources.

The fact that these and similar arguments were persuasive to Congress is now history.

I know as well as you that the health professions did not invent and popularize sex discrimination. Much of it is cultural, drilled into almost all of us from childhood. Bias that becomes a way of life runs very deep. If all the years of the civil rights movement of blacks and other minorities tell us nothing else, they at least show that prejudice is not confined to geographical boundaries and it is not peculiar to one economic status. We are now obligated to overcome these patterns of discrimination.

Yet, all our experience in civil rights enforcement forewarns us that:

Too much time will be lost by recipients of Federal funds asking "Why pick on me?"

Too many hours will be lost in efforts on our part to convince those who are newly affected by Federal law that it means what it says, that it will be enforced—indeed that enforcement is not an option on our part, but a legal requirement.

Too many hours will be wasted in haggling over the admission of one more person who wants to walk through the door and take his or her best shot at life.

As sure as I'm standing here, I'll wind up across the negotiating table with some administrator who is demanding to know what change is expected of him, when what he really means is "What's the least we can get by with?"

I hope that what we have learned and what the country now knows about the effects of discrimination and some of the remedies for it can be turned to advantage in this new program.

In mid-April this year, we took our first major step toward enforcement by notifying 1400 colleges, universities, and hospitals of the prohibitions against sex discrimination. We informed these institutions they must provide formal written assurance of compliance and provided copies of the form for them to sign. We also sent along an explanation of the form. Hundreds of these signed assurances are already in our office and more are coming with every mail delivery.

Let's examine what the institution committed itself to in signing that assurance of compliance. There are several commitments involved. Chief among them:

First, that it will not discriminate on the basis of sex in the admission of individuals to any training program in the educational unit which provides the assurance.

Second, that each educational unit agrees that it will not operate any training program funded under Title VII or Title VIII of the Public Health Service Act for the benefit of, or in affiliation with, any other educational unit which discriminates in admissions.

Therefore, what one unit does may well have a bearing on the other.

Third, that each educational unit agrees to furnish information and to permit reasonable access to its records if requested by the Director of the Office for Civil Rights.

There is a lot more to an assurance of compliance than paperwork to be moved on to the next desk and promptly forgotten.

The enforcement of Title VI of the Civil Rights Act of 1964 began with a simple assurance of compliance. Before we reached the present stage of desegregation in the 17 Southern and Border states—imperfect though it may be—HEW had cited 600 school districts for hearing before a Federal examiner. Another 650 school districts are under court orders that for the most part remain in effect today. This litigation cost millions of dollars and it drags on for years. I hope that we do not encounter either the volume or intensity of resistance in the field of sex discrimination. My purpose in pointing to the history of the school desegregation program is simply to emphasize that the change is coming and the time to get on with it is now—not after complaints are made or compliance reviews are conducted.

Several weeks elapsed between enactment of the antidiscrimination provisions on sex and the issuance of the assurance of compliance forms. To assure that no delays in awards to institutions occurred on this account, we formulated our enforcement program in close cooperation with the National Institutes of Health. To our knowledge, no unwarranted delays occurred in awards.

Perhaps of greater importance is the element of time insofar as the impact of these new provisions on sex for the 1972–73 academic year.

An institution becomes subject to enforcement of the nondiscrimination provisions when an assurance of compliance is executed and an award is made to the institution under Title VII or Title VIII of the Public Health Service Act.

Since most student admissions for the 1972–73 academic year were made before these two steps could be taken, the full impact of the new law will not be felt until the 1973–74 academic year. In the interim, we will begin conducting compliance reviews. We are also now writing the Regulation which will formally govern the program.

In the explanation of the assurance forms that we provided each affected institution, there is a special section on the meaning of nondiscrimination. I would urge a close and careful reading of it. The explanation is important because a substantive part of the Regulation can be expected to be based upon it.

I will not attempt to recount here all the things that the explanation covers, but we can touch on a few of them:

An educational unit subject to the assurance may not treat one individual differently from another on the basis of sex, in determining whether he or she satisfies any condition for eligibility or admission.

The criteria for admissions must be free of bias. For example, applicants cannot be ranked separately according to their sex—nor can the standards for ranking applicants by use of grades or other means differ by sex.

Recruitment procedures must encourage potential applicants of both sexes. One way to accomplish this is to specify an unbiased policy in recruitment materials.

Nondiscriminatory admission to a training program includes all the rights, privileges and opportunities that go with admission.

Administrative criteria or methods which result in discrimination on the basis of sex would constitute a violation. This means that an institution will want to take a careful look at all its services, financial aid, and other benefits or facilities provided in the training program.

From all this you can see that the requirements regarding admission extend to the treatment of individuals after they have gained admission. This stems from the fact that students of a sex which is not accorded full equality would obviously be reluctant to apply to an institution which is known to discriminate after admission.

One other point—the law is clear that all institutions, including single-sex institutions, may not discriminate. While the law does not provide for a transitional period, we recognize that such a period may be required for some single-sex institutions if facilities such as dormitories or recreational facilities must be renovated or constructed.

Experience has shown, however, that conversions of this kind can take place in a relatively short period of time, and it will be our policy to insure that institutions faced with real problems of this kind act to solve them as promptly as possible.

Under Title VI of the Civil Rights Act, our office has conducted more than 700 on-site compliance reviews of institutions of higher education. These reviews, of course, focused on race, color, or national origin. We plan to administer the new provisions on sex discrimination in conjunction with the Title VI higher education program. In fact, we are creating a new higher education division in the office to give this area of enforcement greater effectiveness.

It is our sincere hope that institutions affected by this new law will move quickly to evaluate the extent to which they are serving both sexes, and develop plans of action to deal with the inequities that exist.

LABOR-HEW VETO

Mr. CRANSTON. Mr. President, once again the President has indicated his misdirected sense of priorities by vetoing legislation directed to meeting the social needs of the Nation.

His action in vetoing the Labor-HEW Appropriations Act for fiscal year 1973 once again plunges the Nation into uncertainty as the Nation's health and education institutions and State agencies are prevented from planning their programs for the fiscal year within the context of a firm budgetary figure.

His threat to veto any measure that appropriates any funds over the inadequate budget he proposed ignores the weeks of testimony from the public received by Members of Congress, and ignores the experience and judgment of the members of the Appropriations Committees in both Houses who devoted so much of their wisdom and energies to developing this act.

His arbitrary decision ignores the basic concept that the matter of governing is a shared responsibility, not an autocratic system where the legislative body merely rubber stamps the executive branch's decisions, as the President seems to believe.

The distinguished majority leader, the Senator from Montana (Mr. MANSFIELD), has stated very clearly that Congress has ordered its priorities by reducing funds for military procurement and refusing to accept the foreign military assistance authorization level recommended by the President. The amounts reduced from these programs—almost $2 billion—substantially exceed the amounts Congress recommended for social, education, and health programs—$1.8 billion—over the amount suggested by the President.

The President does not agree with Congress and threatens to prevent any appropriations act from becoming law unless Congress acquiesces in his priorities and his figures.

I believe Congress is much more atuned to what the public needs are than is the President.

In Congress, we are fortunate in having more opportunity for direct and meaningful contact with the individual citizen and his needs. The citizen also has easier accessibility to us. Mr. President, it is my firm conviction that Congress' view is representative of the people's view. We would be abdicating our responsibilities to the people and the Nation if we bowed before the President on this issue.

HEALTH

In the health area, the President's budget request presented litle more than a stand pat position in committing Federal resources to resolving the enormous problems facing the Nation. Congress has met the challenge of a stepped up national effort and has recommended realistic levels of funding which experience has demonstrated are vitally needed and can be effectively used.

The President's budget would result in severe deficiencies in programs for mental health, for the development of the critically short health manpower we so desperately need, for programs in basic and applied biomedical research, and for the development of improved systems for providing health care.

I was surprised to note the presidential claim of full credit for proposing the Comprehensive Health Manpower Training Act of 1971. As a member of the legislative committee which spent many months in first writing this act and then many weeks in conference with the House in refining it, I am surprised at his proprietary attitude toward the bill. In fact, the bill as finally agreed upon bears little resemblance to the proposal made by the administration.

The President's statement that his administration has consistently proposed and supported desirable programs in both the health research and health service areas is also difficult to square with reality.

Time after time we have sat at hearings listening to administration witnesses testifying in opposition to legislative initiatives taken by Congress, offering as an alternative only the statement that the administration is studying the problems and will come up with a positive proposal at some future date.

EDUCATION

Mr. President, in the area of education this veto is a cruel disappointment to America's educators, the children they serve, and America's parents. We are reminded endlessly by this administration of the desperate financial straits into which our schools have plunged. But when it comes to matching rhetoric with action, we find the President vetoing a major appropriations bill for education for the third time in his 4-year term. I find that record to be shocking.

Those school districts which depend upon Federal impact aid funds will be particularly hard hit. And so will those schools which serve high concentrations of disadvantaged children who depend upon title I funds for advancement of special programs. So will property tax payers, if local efforts are made to make up for the President's folly.

And what about our school libraries?

What about vocational education, to which this administration has expressed a strong verbal commitment?

What about bilingual education funds to serve the needs of Spanish-surnamed in this country, and other bilingual children?

What about education programs for the handicapped?

What about those programs this administration has termed "national priority programs," like drug abuse education, environmental education, elimination of illiteracy through the right-to-read program?

Mr. President, I would remind the Senate of the United States of a national commitment that was voiced in 1968:

> When we talk about cutting the expense of government—either Federal, state or local—the one area we can't shortchange is education. Education is the one area in which we must do everything that is necessary to achieve the American dream.

Those words, Mr. President, are the words of Richard Nixon. But what we find in the reality of 1972 is not a commitment to "the American dream" but rather the cold cynicism that will fuel the American nightmare.

MANPOWER

In the area of employment, the President frequently talks about his attention to full employment strategy—he did so while vetoing the 1970 Comprehensive Manpower Act. Yesterday, he further strained the credibility of his administration and its rhetoric by vetoing the $1.25 billion appropriated for Emergency Employment Act programs—a figure he himself submitted—within the Labor-HEW Appropriations Act. This is a program that in June employed over 169,000 Americans.

This means: 169,000 persons who now must continue to be uncertain whether their jobs will be there tomorrow; numerous administrators in numerous counties and cities who now have no firm data with which to plan their payrolls and programs; and unlimited numbers of individuals served, surely the real victims of Nixonomics, who now have no assurance that their teacher, policeman, aide, or program will continue.

In practical terms, this veto means that any expansion of the EEA public service employment program this fiscal year will be delayed for at least another month and probably longer in counties and cities all over the Nation who had submitted applications for expansions of their grants out of the additional $250 million which this act would have made available above the $1 billion expended in fiscal 1972. Now, expenditures can only continue temporarily and are frozen at that level.

Mr. President, continuation of the President's counterproductive approach to the urgent problems of unemployment in this country casts serious doubt on the ability of the present administration to address itself to the needs of working men and women in America—at a time when "real" unemployment is estimated at nearly 26 percent.

His expressed concern for fiscal responsibility strikes me as being in conflict with the actions of numerous Senators of a conservative fiscal philosophy—on both sides of the aisle—who voted to approve the conference committee report by an overwhelming margin of 62 to 22. Indeed, it appears that the consistent policy of the Nixon administration is not fiscal responsibility or even fiscal conservatism, but fiscal extremism.

SOCIAL SERVICES

The President makes repeated reference in his message to the necessity for a limitation on social services, without noting that the Federal revenue-sharing bill, just reported by the Senate Finance Committee, contains such a limitation. I share the concern about the ramifications of an unlimited social services program, with no established standards regarding who is eligible for the services, the quality of the services, which State moneys may comprise the 25-percent State share, and for what purposes and which priorities these funds are expended. I intend to work closely with other Members of the Senate in attempting to resolve this difficulty. However, totally depriving States and, more importantly, the individual recipients an appropriation to provide the basic benefits which this important program can offer is, in my view, an act of irresponsibility on the part of the President.

CONCLUSION

Mr. President, of the $1.8 billion by which the act exceeded the President's budget, more than $1.6 billion were for health and education programs. These should be and are for me a No. 1 priority. It is clear the President does not agree.

A YEAR OF ECONOMIC PROGRESS

Mr. BROOKE. Mr. President, it has been a year since President Nixon announced his new economic policy—a policy designed to curb inflation and expand employment.

On August 15, 1971, the President announced a 90-day freeze on wages and prices. This was followed by the current program of flexible wage and price controls.

I think it is important for us to assess the progress we have made in 1 year.

The record shows:

The Consumer Price Index—often called the "cost of living index"—has increased at an annual rate of 2.7 percent since last August, compared to 3.9 percent registered in the 7 months preceding the freeze, a rate of over 5 and 6 percent during 1969 and 1970. The annual rate of increase for the most recent 3 months is even better—2.2 percent.

On the wage scale, real spendable weekly earnings for the average American worker have increased at a rate of 4.5 percent during the entire economic stabilization program. When considering the 0.8 percent growth these earnings registered during 1970, and the period of virtual stagnation during the previous 6 years, the real growth becomes a remarkable achievement. It is not how much money a worker gets, but how much his family gets for its money that counts.

Several news articles and editorials have summarized the progress of the economic stabilization program. I ask unanimous consent that a representative sampling be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

[From the New York Times, Aug. 13, 1972]

ECONOMIC ANNIVERSARY

A year ago on a Sunday evening in mid-August, President Nixon went on television to loose three economic bombshells—the floating of the dollar, the freezing of wages and prices, and a big package of tax cuts in the face of a big budget deficit. This was his New Economic Policy, an about-face from the policies his Administration had pursued through its first two and a half years.

An alarming worsening in the balance of payments, signs that inflation—after a brief slowdown—was again accelerating, and the persistence of unemployment had combined to force adoption of policies similar to those the Administration's political opponents had long counseled—and which Mr. Nixon and his advisers had vociferously denounced.

Although the American economy still bears scars of the long delay in changing the original Nixon game plan, the N.E.P. appears to be on the way to success in most respects.

INDUSTRIAL RECOVERY

The economy is rising strongly. The total output of goods and services, corrected for inflation, rose at an annual rate of 8.9 per cent in the second quarter of this year. Even though so spectacular a rate of increase cannot be expected to continue, it still appears likely that real gross national product will climb by nearly 6 per cent in 1972 and that this increase will continue well into 1973.

The economy's recovery has been accompanied by a slowing of inflation—partly due to the delayed effect of the long recession and the wide gap it opened between the country's actual operating rate and its potential, partly to the increase of productivity, and partly to the impact of wage-price controls.

After rising at an annual rate of nearly 6 per cent in 1970 and the first half of 1971, the price index for the economy as a whole slowed to a 2.1 per cent rate in the second quarter of this year. It will almost certainly not stay so low for the year as a whole; yet the chances are good that 1972 will see a rise of only about 3.5 per cent for the over-all price index.

WORRISOME UNEMPLOYMENT

Unemployment has also come down from the 6 per cent plateau. However, five million workers, 5.5 per cent of the labor force, are still out of work, and the outlook is for unemployment to stay above 5 per cent for the rest of this year and 1973 as well. The Administration is unduly complacent about so high a level of joblessness.

Even granting that some structural changes in the labor force may make the attainment of full employment more difficult today than in earlier years, the White House deserves criticism for its failure to launch a more forceful direct attack on unemployment. It has depended too much on general fiscal and monetary policies to deal with idleness that result from social causes, imperfection in labor markets and shifts in job availabilities.

The Employment Act of 1946 did not imply a goal of "maximum employment" to mean whatever unemployment rate existed as long as business was in a boom or semi-boom. The time has come for the statutory pledge of full employment to be interpreted—by this or any future Administration—to mean that every American who wants a job can be assured of getting one—either in the private or the public sector.

DEVALUED DOLLAR

In the international area, the Administration warrants great credit for severing the link between the dollar and gold and for forcing a realignment of exchange rates. Sooner or later this will mean a strengthening of the American balance of payments, although the nation is far from out of the woods. Compared to the enormous monetary drain in 1971 there has already been much improvement. That is true even though the balance of trade has worsened, due to the initial effects of dollar devaluation.

While the Administration can be faulted for the rough bargaining tactics used by former Secretary of the Treasury Connally, the over-all international strategy of the Administration was correctly based on the conclusion that the United States dollar was overvalued. The net devaluation of the dollar by 12 per cent has reduced this country's cost and price structure relative to its foreign competitors. The White House has sought to pressure other countries into granting unilateral trade concessions to the United States. Thus far, the Administration has little to show on the trade front and it has raised doubts about its commitment to maintaining close economic and political relations with its allies. Indeed, the Administration's balance-of-power approach to economic policy—with this country playing a lone hand among the Western European countries, Japan and the Communist states—could split the Western world into antagonistic blocs.

Mr. Nixon, furthermore, remains too willing to yield to protectionist demands of some industries and labor unions, although it must be granted that those pressures have been intense. Full employment policies would do more than any other thing to contain protectionist demands.

One of the major pieces of unfinished business facing the Nixon Administration or its successor will be the negotiation of reforms in the international monetary system. The more cooperative attitude and actions the Federal Reserve and Treasury have displayed toward other nations in recent weeks have improved the outlook for the international monetary negotiations that begin in Washington next month.

POCKETBOOK CONTROLS

Short of embracing Marxism, no economic approach was more abhorrent to President Nixon in his first thirty months in the White House than the notion that an inflation-beset economy might benefit from mandatory controls on wages and prices. It was an item of dogma for him that such controls never had and never could work in a democracy except in periods of total war.

In the year since Mr. Nixon imposed a ninety-day freeze as Phase One of his embarkation on a regulated economy, his Administration has been giving a generally persuasive demonstration that, even in the face of hostility from most of organized labor, controls can moderate the wage-price spiral without stifling economic growth or building up a monstrous bureaucracy.

It is true, however, that the evidence remains inconclusive, both as to how fairly the program has been applied thus far and, even more, as to how adequate it is to meet the triple-barreled challenges just ahead of faster business expansion, mounting Federal deficits and a heavy 1973 calendar of union demands in major industries.

LOOPHOLE ON FOODS

Most observers give the Price Commission high marks for the vigor with which it has sought to achieve its goal of holding the over-all level of price increases to 2.5 per cent, but the exemption from controls of raw foods has proved a handicap so severe that the commission itself vainly appealed for White House action to put the whole family market-basket under ceilings.

The Administration response, born of reluctance to tangle with the farmers in an election year, was to settle for a much milder curb, a temporary lifting of meat import quotas. That hole in the price net makes it probable that 1972 will end with the price level a full percentage point above the anti-inflation target. On top of that, the high level of second-quarter corporate profits has brought a fresb deluge of labor complaints that the whole program is unfairly loaded in favor of big business.

The Pay Board, aided by a relatively light collective bargaining schedule, did an even more effective job than the Price Commission after an exceedingly rocky baptism. Despite the walkout of four of its five union members, the board has succeeded in trimming first-year pay increases in new contracts involving large unions from better than 11 per cent in the year before controls to just above 7 per cent now.

Even the rampaging construction unions, operating under a semi-autonomous stabilization mechanism of their own, have come way down. More important, the wage regulators faced up to such tough customers as the East and West Coast longshoremen on the need for shaving negotiated increases that would have torpedoed the whole control effort—and did it without touching off strike defiance of the kind British dock workers are currently directing against that country's new Industrial Relations Act.

WAGE GUIDEPOST

The combined average of increases approved for organized and unorganized workers is running at 4.9 per cent, well below the 5.5 per cent basic yardstick established by the Pay Board last November. It will meet this week to consider cutting the guidepost still lower, though there is no prospect it will come down to the old Kennedy-Johnson productivity standard of 3.2 per cent. Much more progress toward price stability will have to be made before that becomes a realistic guidepost for pay envelopes.

The real election test for both parties will be to tell the country what monitoring machinery they plan to hold the line of wages and prices. An abrupt termination of controls when the present Economic Stabilization Act runs out next April would almost certainly reactivate the senseless leapfrog which wiped out the purchasing power of higher wages before workers could get to the supermarket to spend them.

It is plain that the factors of monopoly power in big industry and big labor which prompted a conservative Administration to move from Adam Smith to John Maynard Keynes are only temporarily in check. The question now is how best to balance the imperatives of social responsibility and economic freedom when Phase Two ends.

[From the Baltimore Sun, Aug. 13, 1972]

Reviews Are Mixed: Controls on Economy End an Uncertain Year

(By Art Pine)

WASHINGTON.—President Nixon's new economic policy marks its first anniversary this week amid generally mixed assessments about its effectiveness in solving the nation's economic problems.

Twelve months after the dramatic beginning of the President's new program, there is widespread agreement that the policy has been "moderately" successful—with some gains, and a few setbacks as well.

However, serious problems still remain. And new pressures have appeared that economists warn could wipe out some of the progress made over the last few quarters.

In short, the battle is far from won.

It was last August 15 that Mr. Nixon announced to an unsuspecting world his sweeping new measures—a 90-day wage-price freeze, a series of tax cuts and suspension of convertibility of the dollar into gold.

His objectives were ambitious ones—to slow inflation, to spur the nation out of recession, to rescue the dollar in the world's currency markets and to defuze the economy as a political issue.

Now a year later, the tally shows some positive results:

The rate of inflation has slowed measurably, with the upward spiral effectively blunted. And both prices and wages are rising less rapidly now than they were before last year's freeze.

OUTPUT GROWING

The economy has begun a solid recovery from the 1969–1970 recession, with real output now growing at a sharp 8.9 per cent annual rate and employment increasing at a near-record pace.

The United States has succeeded in bringing about a major realignment of world currency exchange rates, including a needed devaluation of the dollar, paving the way for reversal of the balance of payments deficit.

The wage-price control that the President set up appears to have dampened inflationary expectations some, giving the administration an "activist" image that has helped mellow political criticism.

At the same time, however, the scoreboard contains some minuses as well, which some economists fear could upset some of the past 12 months' successes:

A runaway spurt in the federal budget deficit, along with anticipated jumps in wage-settlement levels and in food prices next spring, is threatening to revive inflationary pressures.

SLOW DROP IN UNEMPLOYMENT

Although the economy is recovering, the nation's unemployment rate has only recently begun to recede from the 6 per cent level, and analysts project a continued slow decline. The rate is now 5.5 per cent.

Despite the currency realignment, the dollar remains weak and the nation's trade any payments balances have not begun to improve. Moreover, uncertainty plagues the monetary system, with reform still far off.

While the wage-price controls appear to be functioning, polls show that voters view them as ineffective and unfairly administered. And some economists fear that a resurgence of demand may intensify the inequities.

As might be expected, the Nixon administration's appraisals view the new policy as a resounding success, even though White House economists were against the controls last year, and still see them as only temporary.

Democratic economists concede there has been progress, but complain that the controls are poorly structured. They also argue that the administration ought to be able to bring unemployment down more rapidly.

The debate is being heightened by two other questions that inevitably come up in any evaluation of the wage-price restraint program: Were the controls really necessary? And are they being administered fairly?

Those who oppose the controls argue that inflation would have slowed just as much without them as a result of the effects of the 1969–70 recession. Prices actually began slowing in late 1970, they point out.

And some critics, notably from organized labor, contend the restraints have been tougher on wages than on prices. They cite as evidence the fact that despite the controls profits are rising to record levels.

SOME HELP FROM CONTROLS

To be sure, no one can say with certainty just what the inflation rate would have been now if the controls had not been in place. Most economists feel they have been of some help, but are not sure how much.

However, administration officials contend—with support from most mainstream economists—that even so, the government almost certainly would not have been able to spur the recovery as fast had there been no controls.

"The presence of restraints," agrees a Democratic economist, "in effect forced businessmen to hold down prices while the economy was recovering. Without any controls, you couldn't have risked this sharp a rebound."

On the question of fairness, again the statistics can be used to back up either viewpoint. Wages have slowed a bit more than prices, but workers' real earnings, adjusted for inflation, are rising for the first time in years.

The view of most economists is that wages have indeed been checked more effectively than prices, if only because the guidelines are enforced automatically by employers. Whether the gap is unfair is open to debate.

The big question, however, both on the domestic and the international fronts, is what happens next? Will the new economic policy be able to cope with a second year of problems, or will new steps be necessary?

As administration officials have conceded, the new economic policy was launched at a time when conditions were conducive to success of the program—a slack domestic economy, and a world waiting for a U.S. initiative. Whether the policy can be effectively adjusted to cope with a prolonged expansion remains to be seen. Already there are some indications that the road ahead is likely to be rough.

NEW ROUND OF BARGAINING

On the domestic side, the relatively light pressure from wages will be intensified next year by a new round of collective bargaining settlements. And the spurt now in wholesale prices is expected to spur retail prices again.

There are serious questions on how well the controls system, which was designed for a slack economy, will be able to stand up as demand increases. Many economists expect the strain to produce intolerable distortions.

On the international front, the U.S. will be torn between conflicting forces—the need for prompt reform of the monetary system, and the desire for a grace period in which to bring its payments balance into surplus.

Although talks are formally beginning late next month, the delay so far already has strained relations with other nations and has brought on new capital controls. The spirit of last December's monetary pact has weakened somewhat.

Administration strategists believe a first step in coping with next year's inflationary pressures lies in tightening the present 5.5 per cent wage guideline—a move they have hinted at in the past three or four weeks.

Indeed, the Pay Board and the Price Commission have scheduled a rare joint meeting for tomorrow to discuss just such a step The odds are, however, that any firm decision will be put off until prices slow somewhat more.

In the longer run, however, the administration will have to face the more fundamental problem of how long to retain the wage and price controls, and of what to replace them with once it finally removes them.

Democratic economists have urged the administration to trim back its program next year to a voluntary "guidepost" system, applicable only to the large so-called "price leaders" in each industry

WILL NOT DISCUSS OPTIONS

But some analysis contend that more may be necessary—perhaps some mandatory controls on a permanent basis, and new "structural" changes in the economy to break up monopoly and make business more competitive

So far, administration officials have refused even to discuss any such options, arguing that to do so would "only undermine" the operation of the Phase 2 program.

But officials acknowledge that the President probably will have to announce some decision early next year, in time to let Congress know if he wants the authority for the program extended beyond its April 30 expiration

Speculation now is that the administration will begin phasing out the controls program—a job it already, in fact, has begun—immediately after the November election, with an eye to finishing the task next spring.

Observers also suspect there may be some "interim" extension of the program, for another six months or so, if inflation has reignited, or has not improved by then. But no decision appears to have been made.

[From Time magazine, Aug. 21, 1972]

Profits—A Controversial Comeback

Anyone who happened to overhear random conversations around the Price Commission last week probably decided that its next report will have to be issued in a plain brown wrapper. The commission's economists were talking about a plan with the multi-entendre name of "re-virgination." At first glance re-virgination would seem to promise a return to a state for which there is little nostalgia. The idea is that, at the commission's urging, corporations would roll back many of their recent price increases and make refunds to customers who had been forced to pay them. That is hardly an attractive proposition by itself, but managers of some big companies have expressed interest in re-virgination because it includes an enticing reward for such rollbacks: companies would no longer be subject to the commission's limits on profit margins. In effect they would be returned to a state of pre-controls innocence.

CRESCENDO

Under the commission's present limits, a company that has raised its prices during Phase II may not increase its margins—that is, profits as a percentage of sales—above what they were in a certain base period. The base is the average of the best two years between 1968 and 1970. Many a corporate chieftain deeply wants to be out from under those constraints because earnings are rolling in faster than they have in years.

New York's First National City Bank reports that a group of 1,368 big companies totted up 15% more earnings during the first half of 1972 than in the equivalent period a year ago, and profits in the second quarter were up 16%. Estimated profits after taxes for the whole economy rose to an annual rate of $53 billion, a record (*see chart*). Alan Greenspan of TIME's Board of Economists predicts that after-tax earnings in this year's fourth quarter will run 19% higher than those a year earlier. Says Raymond Jallow, senior vice president of United California Bank: "We see very much of a boom in profits in the second half of this year."

Nearly all industries are enjoying an earnings bonanza, which suggests that it is based on a solid, sustained expansion of the whole economy. Profits were up in 27 of the 32 industries in Citi-Bank's study, and the list of companies that have reported an after-tax earnings gain of 20% or more in the second quarter is impressive—General Motors, Ford, IBM, Sperry Rand, DuPont, Union Carbide, Caterpillar Tractor, International Paper, B.F. Goodrich, Eastman Kodak and Zenith, Small firms in the same fields are often doing even better, according to Michael K. Evans, president of Philadelphia's Chase Econometrics, "because they were hurt worse in the recession and so are starting from further back."

Though the strong surge is a healthy economic sign, it is stirring a controversy over whether earnings are growing too fast, especially for a controlled period in which wages are not expanding nearly as rapidly. The argument is bound to become louder as the election approaches and will probably reach a crescendo next year, when an exceptionally high number of contracts with important unions are due to be renegotiated, including those of the Teamsters and the United Auto Workers.

Labor leaders and some Democrats argue that current profits are steep enough. They point out that the recovery has been slow going for everyone, not just investors who relish high corporate earnings. Furthermore, thanks to tax breaks granted to business by the Nixon Administration, corporations have more money available for reinvestment and expansion than just the profits that they report to stockholders. By taking advantage of the accelerated-depreciation program, a firm can increase its cash flow with funds deferred from current taxation. Finally, there is a basic question of income equity. Profits are advancing at a much faster rate than personal income, which has barely managed to keep pace with inflation over the past few years.

THE ENGINE

On the other side, businessmen maintain that, far from being too steep, the rate of profit gain in the current economic recovery is low by past standards. Earnings have rebounded by only 18% in the past year and a half—the slowest comeback, by most measures, that has followed any recent U.S. recession. Average after-tax profit margins are today running at about 5% of sales, whereas they hit 7% during the boom years of the '60s.

Among other things, businessmen insist, higher earnings are really needed to help finance the building of new plants and the purchase of new machines. These capital investments create business growth, which would knock down the nation's persistent and demoralizing high unemployment rate. July's jobless rate at 5.5% remained unchanged from June.

John Maynard Keynes called profits "the engine which drives enterprise." Millions of Americans depend on that engine to a great degree not only for their jobs but also for financial growth through profit-sharing funds, pension funds and dividend payments. Profits are used to enrich not merely a relatively few corporate managers and big shareholders but also masses of wage earners. When profits are perking up, a company's management is more willing and able to grant wage and salary increases to its employees. High-profit companies can be expected to spend more than low-profit firms to invest in antipollution devices or to hire, train and promote the hard-core unemployed.

Still, many critics question whether the earnings of America's corporations should benefit as directly as they now do from Government tax policy, especially since money is so sorely needed to pay for progress in the public sector at a faster rate than private companies seem willing to finance it. No matter who wins the election in November, businessmen can probably expect their corporate treasuries to be hit in the next round of tax reform.

Nixon Team Touts Economic Success: Cabinet Members and Advisers Produce a Wealth of Figures To Demonstrate U.S. Recovery and Turn Democratic Hopefuls Pale

(By Harry B. Ellis)

WASHINGTON.—President Nixon is trotting out an economic success story, using a string of Cabinet officers to proclaim it, on the first anniversary of his new economic policy.

The favorable figures on unemployment, inflation, U.S. economic growth, and wage earners' purchasing power must make chilly reading for Sen. George McGovern and the Democrats.

Even allowing for an election year, which makes presentation of the figures rather slick and glossy—and discounting the fact that some degree of economic recovery was on its way anyhow—the record of the past year is impressive.

ACHIEVEMENTS LISTED

Consider this:

Unemployment is down from 6.1 percent in August, 1971, to 5.5 percent today, and in the same period 2.2 million new jobs were created.

Worker's real earnings—spendable income after taxes and the effects of inflation are deducted—are rising at an annual rate of 3.8 percent, after several years of stagnation.

Productivity, or output per man-hour, shot up at an annual rate of 6 percent during the second quarter of 1972, an increase over the 4.5 percent rate in the first quarter of the year.

A direct result of productivity growth was the lowering of the unit cost of labor, which weakened the pressure of cost-plus inflation.

"The rate of inflation," declared Treasury Secretary George P. Shultz, "after peaking at 6.1 percent in 1969, dropped to 5.5 in November, 1970, to 3.8 in August, 1971, to 2.7 percent after the wage-price freeze, and currently is running at less than 3 percent."

The real gross national product of the United States, added Mr. Shultz, grew at an annual rate of 8.9 percent in the second quarter of 1972, with the forecast being a trillion.

Strike activity was the lowest since 1964. "In May, 1972," said Mr. Shultz, "fewer people were on strike than in any May for 30 years."

WHY FEW STRIKES

"When the healthy increase in real earnings," comented Secretary of Labor James D. Hodgson, "is coupled with the slight reduction in unit labor costs and the rapid gains in productivity, it is easy to see why we have had this year of industrial peace.

"Both labor and business have witnessed satisfactory developments—labor in the form of higher real earnings and business in the form of higher productivity and an end to the rapid increase in unit costs.

"As a result, the period of the economic-stabilization program has been characterized by an eight-year record low in industrial work stoppages."

These were some of the views expressed by Mr. Nixon's top economic advisers, who met with the press for an all-day briefing on the results achieved by phases 1 and 2 of the wage-price program.

ADMINISTRATION SPOKESMEN

Taking part in the discussion, in addition to Mr. Shultz and Mr. Hodgson, were Treasury Undersecretary Paul Volcker; Caspar W. Weinberger, director of the Office of Management and Budget; Donald Rumsfeld, director of the Cost of Living Council; Secretary of Commerce Peter G. Peterson; and Herbert Stein, chairman of the Council of Economic Advisers.

All speakers carefully sidestepped questions about when, and under what conditions, wage and price controls might be lifted from the economy.

Dr. Stein stressed that the controls imposed last Aug. 15 were "temporary and self-limiting," because they were addressed to specific economic problems, now on the way to solution.

"But," he added, "no decision has yet been made as to when and how the control program will be lifted."

NOW FAVORS CONTROLS

Treasury Secretary Shultz acknowledged under questioning that he had been an early opponent of controls, because "there is no ducking" the fact that wage and price controls involve "a loss of freedom." But he had come to regard the control program as "essential to regain control over the economy."

All officials expressed anxiety lest Congress, currently "on a spending spree," as one put it, wipe out gains achieved by inducing a new round of inflation.

Mr. Weinberger saw a "very worrisome threat" to economic stability by the tendency of Congress to vote more funds for programs than the President requested.

He cited the House passage Aug. 9 of a $30.5 billion appropriation bill for education, health, and welfare programs—$1.8 billion more than Mr. Nixon had sought.

OVERSPENDING CRITICIZED

Such overspending, as the administration sees it, must be curbed through a rigid ceiling on federal spending, if future budgets are to be kept in rough balance. The President, Mr. Weinberger noted, has suggested a $250 billion ceiling on government spending.

Critics claim that adoption of an ironclad ceiling would force cutbacks in essential social programs, as unavoidable expenses in interest on the national debt, committed welfare and veterans' payments, and others—rise.

Administration sources agree that cutbacks would be required, but contend this would be better than "another round of inflation, high taxes, or both." The latter, said Mr. Weinberger, would result from the "dangerous spending path," now being pursued by Congress.

"Clearly, it seems to me," Mr. Weinberger declared, "a vote against our rigid spending ceiling is a vote for higher taxes."

DEMOCRATS TARGETED

Thus he signaled the administration's intention to pin a high-tax label on the Democrats during the coming election campaign.

A number of independent economists, including analysts of the Brookings Institution forecast that the expanding costs of existing federal programs will equal or outrun the growth of federal revenues over the next four years.

Thus, according to these analysts, federal initiatives to meet top-priority national need in coming years must be financed "by a tax increase, or by cutting back existing programs, or by a combination of both," as a Brookings report describes it.

Nixon administration strategy, as it emerged from the discussions, will be to focus voter attention on the statistics and improvement, and to stress a federal spending ceiling as the way to avoid higher taxes.

ESTIMATE OF DEFICIT

A $250 billion ceiling, Mr. Weinberger estimated, would result in a $3 to $4 billion deficit on a "full-employment budget."

The full-employment budget concept call for estimating both revenues and expenditures at the level they would reach under conditions of full employment as defined as 4 percent of the labor force out of work and a high degree of plant capacity being used.

Currently full-employment conditions do not exist. The economy is running at three-quarter capacity and 5.5 percent of workers are jobless. Thus the actual budget deficit for the fiscal year which ended June 30 now is estimated at about $23 billion.

Figured on a full-employment basis, this deficit shrinks to $3.6 billion. With the economy approaching conditions of full employment, this size deficit could be sustained in the immediate future, administration economists say.

FISCAL WARNING

"But," warned Mr. Weinberger, "if you run substantially over a full-employment balance for a number of years, you court the danger of inflation through too much fiscal stimulation."

Government officials admit it may be hard to persuade the individual housewife that the battery of statistics they unreel have meaning for her, when prices at her grocery continue to climb.

"All these figures are valid," said one official. "But inevitably there is a lag before they manifest themselves in retail stores, in enough volume for the housewife to feel the effect."

Nixon aides also are well aware that 1973 will be a major collective bargaining year, with the expiration of wage agreements covering 4.5 million workers, compared with 2.8 million this year.

POSSIBLE VULNERABILITY

The industrial peace to which Mr. Hodgson pointed proudly may prove more vulnerable next year than this, though he stressed the "healthy climate" that exists for the next round of collective bargaining.

Mid-August being the anniversary date of the President's economic-stabilization program, no doubt the review would have been held in any case. But the coincidence of an election year threw light on what Mr. Nixon and his advisers will emphasize over the next few months.

1. The turnaround on inflation and unemployment will rank high, though all officials stress that a 5.5 percent jobless rate is unacceptable and must be improved.

2. Mr. Nixon, it will be argued, should be given control over federal spending, if gains already achieved are not to be wiped out by top-heavy federal budgets.

[From the Christian Science Monitor, Aug. 14, 1972]

The Future of Nixonomics—An Analysis: Inflation Has Been Cut and Growth Boosted, But Longer-Range Effects Are Still in Doubt

(By Richard Nenneman)

Boston.—Did the New Economic Policy, one year old Aug. 15, really look to the future, or just to November, 1972?

That's an important question, because how one rates the policy's success depends partly on what kind of time line he puts it on.

But one year after the policy was announced, these things can be said about it:

Government has assumed a more activist role in the setting of wages and prices and it is unlikely that it will ever completely relinquish this role.

Some of the success claimed for the policy, such as in combating inflation, would probably have occurred anyhow.

Long-term problems remain in all three areas of the policy—jobs, inflation, and the foreign scene.

Although the wage and price controls have made the most indelible mark on the American public, the program as originally put forth also included an attempt to beef up the economy and to solve the problems of the dollar and U.S. trade abroad.

In August, 1971, after almost a year of recovery from the November, 1970, bottom of the recession, economic progress was still dangerously slow—particularly if one had in mind the elections coming up in November, 1972. Unemployment was still almost 6 percent of the labor force. President Nixon may have inherited a stacked deck of cards from his predecessor in the White House, but he knew he wouldn't have a chance to cry on the public's shoulder about that four years later.

Whether the measures of economic stimulation—such as repealing the auto excise and hurrying up a personal income tax exemption—made all the difference is debatable. But they helped. And combined with the appearance of a government that meant business about economic growth, and continued stimulus from the Federal Reserve Board in the form of monetary growth, the U.S. economy did begin to take off in 1972.

It appears that real growth (that is, growth after the effects of inflation are removed) will be about 6 percent this year. That will make 1972 an excellent year by anyone's yardstick. But what about 1973? There is increasing fear that the combination of fiscal and monetary stimulus has been too strong, that by

1973 a new administration will have to move to slow things down without getting the inflationary cycle started all over again.

Moreover, the administration—and indeed the national consciousness—has yet to move decisively enough to provide basic education, jobs, and an atmosphere of opportunity for its minorities. This gap in consciousness is largely responsible, many analysts feel, for the higher unemployment rate in the United States than in European countries, and for the fact that blacks, who compose slightly more than 10 percent of the population, still account for 30 percent of the hard-core poverty.

1973 SUCCESS UNCLEAR

Second, there is room to argue over the effects of the wage-price control program. It is generally agreed that such controls have a chance to be effective only when there is not too much pressure on the economy from monetary or fiscal policy. Such was the fortunate case in 1971.

It is less clear whether the apparent success of the program can continue much into 1973. If inflationary forces reemerge, this will increase pressures to retain the controls program. On the other hand, conservative critics maintain that the controls have only "appeared" to work, that much the same results would have been attained at this stage of the business cycle even without them.

No doubt about it, though, the inflation rate has been cut. This would help the Nixon administration even more if it were not for the present round of price increases in food, so visible to every housewife. The legitimate question that remains is whether the inflation rate has been cut only for 1972, which will be a big political help, or whether the controls program offers some kind of long-term gain in managing the economy and the price level.

TRADE TURMOIL

On point No. 3—the dollar and foreign trade—the jury is still out. Floating the dollar and breaking its link with gold have achieved certain limited ends: The gold flow was stanched, and after December the new exchange-rate parities gave the dollar a lower value abroad. This latter event will in time help the foreign trade balance, but probably not before 1973.

But the unilateral ending of the Bretton Woods monetary system has also put a good part of the world in turmoil. Will gold be reinstated or not? The world doesn't seem ready for huge amounts of an international paper currency, such as the International Monetary Fund's special drawing rights. But it doesn't want to be flooded with dollars any longer either.

The current situation may be remedied by the dollar becoming much more in demand abroad, which may well happen if U.S. inflation rates continue below those in Europe and Japan. Or it may be remedied by the growth of restrictive controls against the dollar abroad.

DOLLAR DOMINANCE ENDED

The events of last Aug. 15 ended an old international regime of dollar dominance. It was probably high time for that to happen. But neither Aug. 15 nor the December Washington agreement contained the solution needed for the next generation of international finance and trade.

To summarize, President Nixon acted boldly one year ago, when on both the domestic and international scene he broke with the past. The new approach will be of some help in 1972. Abroad, the basic solutions still have to be found. At home, we still can't say whether the controls will be effective if continued indefinitely.

[From the Philadelphia Inquirer, Aug. 13, 1972]

FIRST BIRTHDAY OF INCOMES POLICY FINDS ADMINISTRATION HOPEFUL

(By William K. Marimow)

WASHINGTON.—In his book "The Great Crash," John Kenneth Galbraith wrote, "Some years, like some poets and politicians and some lovely women, are singled out for fame far beyond the common lot, and 1929 was clearly such a year."

So too, 1971. It was a year when a Republican President—Richard M. Nixon—a devotee of the free market system who had promised he would never resort to wage-and-price controls, adopted the most comprehensive "incomes policy" in the peacetime history of the United States.

On this weekend one year ago, President Nixon and his key economic advisers huddled at his Camp David, Md., retreat.

Their purpose: To devise a plan that would cope simultaneously with a tenacious unemployment problem, an erratic economic recovery, a threat of reinvigorated inflation and a deepening foreign trade deficit.

The result: On Sunday night, Aug. 15, 1971, President Nixon startled the world by unveiling his New Economic Policy. And one year later this is what has been accomplished: A moderating rate of inflation, substantial gains in employment and an economic expansion cruising along at the fastest clip recorded since 1965.

Specifically "real" Gross National Product advanced at an 8.9 percent annual rate during the second quarter this year. Meanwhile, the Consumer Price Index (CPI) in June inched upward at a 1.2 percent annual pace, well within the parameters of the President's 2-to-3 percent year-end goal for the rate of inflation increases.

When these figures were released, Herbert Stein, chairman of the Council of Economic Advisers, was inspired to say, "This is the best combination of economic numbers released on any one day in this decade."

To celebrate the obviously good economic news of late, the administration trotted out its top economic officials to assess the President's economic plan on its first anniversary.

As everyone recalls, Mr. Nixon imposed last Aug. 15 a 90-day wage-price-rent freeze, tax reduction to help stimulate the economy, a 10 percent surcharge on imports and he closed the gold window, a move that shattered the fiction that the U.S. would convert dollars held by foreign central banks into gold.

The Thursday seminar of key Washington officials had obvious political overtones because of the upcoming election. For example, no official murmured a hint of current or impending problems in the economy, a fact sharply disputed by Sen. George McGovern and fellow Democrats.

The officials did issue the first mid-year economic report since President Harry S Truman left office, a report supporting their contention that things were moving along just fine.

The day-long seminar for business editors and writers from throughout the country was addressed by Treasury Secretary George P. Shultz, Commerce Secretary Peter G. Peterson, Labor Secretary James D. Hodgson and Herb Stein.

It was an opportunity for Stein to moderate his "best figures of the decade" enthusiasm by warning that "we don't expect to see another quarter like the one just passed nor a string of months in which the consumer price index increases at such a moderate rate."

"In fact," Stein went on, "we expect a quickened pace (for the CPI) reflecting increases in food price at the wholesale level."

The midyear economic report, which contained little fresh information, had clear political overtones. Stein remarked, for example, that he would not expect mid term reports in the future.

"I do not want my successors to have that albatross around their necks," he said.

President Nixon, in his three-page introduction to the midyear report, wrote, "We still have economic problems to solve. . . . We must firmly establish a lower rate of inflation—both in fact and in public expectations. We have to get the unemployment rate down much further. We have to improve U.S. competitiveness to strengthen our international economic position."

But Caspar W. Weinberger ("Cap the Knife"), director of the Office of Management and Budget, who has the chore of controlling the $250-billion U.S. budget, struck a theme that pervaded the seminar.

"At the risk of sounding like Scrooge at a birthday party, even as we stop for a few hours to examine our success, there are forces building in the Congress which could unleash inflation again," he said.

What Weinberger (indeed, the Nixon Administration) is advocating is a ceiling of $250 billion on federal expenditures. This, they believe, would avert additional budgetary stimulus at a time when it could threaten price stability.

Phase II, the program which followed the 90-day freeze, was not designed to cope with "demand pull inflation"—that is, too many dollars chasing too few goods. This is one reason why President Nixon has to be wary that the 21-month-old expansion doesn't mushroom out of control and rekindle the embers of excess demand.

That would obliterate economic gains forged by the New Economic Policy and almost certainly reignite the wage-price spiral that forced the President to embrace controls in the first place.

HOW PRICES ROSE: CONSUMER PRICE INDEX, PERCENT CHANGE

Here's how prices for key items i your budget have changed in the last three years:

Item	August 1969–August 1970	August 1970–August 1971	August 1971–June 1972
Homeowner costs	+10.5	+3.4	[1] +4.6
Women's apparel	4.0	3.4	4.5
Utility and public transport	6.6	7.8	4.1
Insurance and finance	13.0	2.3	3.9
Food (dining out)	7.6	5.0	3.6
Reading and recreation	4.6	4.8	3.2
Rent	4.1	4.8	3.1
Food (dining out)	4.0	3.1	2.9
Men's apparel	3.5	2.7	2.3
Medical care	6.4	6.6	2.2
New cars	2.4	3.6	2.2
Alcoholic beverages	4.7	4.2	1.7
Used cars	3.0	5.8	0.9
Gas and motor oil	−0.7	+2.7	−1.4
All items	+5.6	+4.4	+2.

[1] Annual rate.

FOURTH ANNIVERSARY OF SOVIET INVASION OF CZECHOSLOVAKIA

Mr. SCOTT, Mr President, the fourth anniversary of the Soviet invasion of Czechoslovakia occurs on August 21. The last 4 years have seen the heavy hand of persecution and suppression fall over the Czechoslovakian people. Recently, several Czechs have been sentenced to jail terms for trying to voice their opposition to the Communist government.

The case of these Czechs brings to mind a statement in the Primer of Intellectual Freedom by Howard Mumford Jones. He said:

> Persecution is the first law of society because it is always easier to suppress criticism than to meet it.

Thousands of Czechoslovakians have stood up to oppose the government through their words. But their words have been met with strong arm tactics.

The people of the United States stand with the courageous people of Czechoslovakia in their desire for liberty and justice. No amount of persecution will ever stop man's opposition to an unwanted government. We pray that the noble Czechoslovakian people who have endured so much will someday throw off that "first law of society" and live in everlasting freedom.

WAGE CONTROLS FOR THE POOR—RATE RELIEF FOR THE RICH

Mr. METCALF. Mr. President, we are all aware that the administration fought to impose wage controls on workers earning more than $1.90 an hour. At the other end of the economic scale, the administration is permitting highly profitable corporations to increase the utility rates paid by persons of modest means.

During a 3-months period this year, the Price Commission approved more than $2 billion in rate increases for 110 telephone, gas and electric utilities.

By category, the increases are as follows:

Utility	Number	Amount of increase
Bell Telephone companies	21	$584,910,694
Non-Bell phone companies	20	629,063,885
Gas companies	19	243,153,578
Combination gas-electric companies	32	313,441,979
Electric companies	18	288,057,760
Total	110	2,058,627,896

When the Price Commission guidelines for utility regulation were under review, some of us offered specific recommendations for referring unseemly rate requests back to State commissions, and including meaningful review of rate increases submitted by extraordinarily profitable medium-sized utilities. These recommendations were rejected by the Price Commission, which has simply put the Presidential seal of approval on increases previously approved by State commissions whose small staffs had been overwhelmed by the rate increase requests.

It is interesting to note that while the Price Commission quietly ratified dozens of increases around the country, it huffed and puffed at two utilities in the Washington area, Vepco and Pepco. Vepco's increase has now been approved; Pepco's is under review. As a result of these two local cases Members of Congress and other readers of Washington newspapers may have the impression that the Price Commission is regulating utility rates, which it certainly is not doing.

For example, the Commission approved a 15.5 percent increase for Indiana and Michigan Electric, a subsidiary of the giant New York holding company, American Electric Power, which had a net, after tax profit last year of 19.27 cents out of every revenue dollar.

The Price Commission whomped through $27 million in annual rate increases for Dallas Power and Light, Texas Electric Service and Texas Power and Light—subsidiaries all of Texas Utilities, a holding company which last year netted 19.2 cents out of every revenue dollar. They did not have to go first to a State utility commission, because Texas has none.

Pennsylvania Power and Light's net, after-tax profit amounted to 16.15 percent last year. The Price Commission awarded it a 10.6 percent rate increase, requiring additional customer payments of more than $30 million a year.

In 1968, net profits of the 100 largest electric utilities, which comprise the Nation's largest industrial group, increased 2.8 percent over the previous year. In 1969 they increased 3.4 percent over 1968. In 1970 the annual increase set a new record, 8.3 percent. Last year the utilities broke that record, increasing net profits by 11.6 percent. The industry trade magazine, Electric Light and Power, which is the source of these statistics, stated in its June 1972 issue:

> The top 100 electric utilities reported an 11.6% increase in net income in 1971, to a record $3.67 billion, up from $3.29 billion from 1970. In total, 78 companies reported income gains, while 21 companies reported lower net incomes in 1971 than in 1970.

The outlook this year is for an even more profitable year for the utilities, at the expense of millions of wage earners whose earning power dwindles. In my State, Montana Power kept as net profit 22.62 cents out of every revenue dollar it collected last year. Its net profit during the first 6 months of this year rose to 24.3 cents out of every revenue dollar. And it now has pending before the State public service commission a rate increase request amounting to 17 percent for its electric operations and 29 percent for its gas operations.

One thing, Mr. President, is perfectly clear. The Nixon administration is winning its fight to make the rich richer and the poor poorer.

Mr. President, I ask unanimous consent to have printed in the Record a table, prepared from data in the June 1972 issue of Electric Light and Power, which shows the net profit, as a percentage of revenue, of the 100 largest electric utilities, and the Price Commission's summary of final price increase submissions for utilities which were passed by its Review Committee, as of June 30, 1972.

There being no objection, the items were ordered to be printed in the Record, as follows:

NET PROFIT, AFTER TAXES, AS PERCENTAGE OF REVENUE THE TOP 100 ELECTRIC UTILITIES

Company	1971	1970
Idaho Power	23.72	22.43
Montana Power	22.62	22.67
Pacific Power & Light	21.63	19.36
Southwestern Public Service	21.42	21.77
Utah Power & Light	20.81	19.71
Duquesne Light	20.21	20.60
El Paso Electric	20.09	20.59
Florida Power	19.96	19.79
Virginia Electric & Power	19.84	19.25
American Electric Power	19.27	17.56
Texas Utilities	19.20	19.09
Oklahoma Gas & Electric	18.92	19.43
Houston Lighting & Power	18.72	19.05
Gulf States Utilities	18.55	20.04
Central Louisiana Electric	18.40	18.05
Allegheny Power System	18.31	15.26
Delmarva Power & Light	18.00	15.60
Public Service of New Mexico	17.98	17.81
Central & Southwest	17.94	17.51

THE VIETNAMIZATION PROGRAM IS WORKING

Mr. SCOTT. Mr. President, the Maui News, in Hawaii, in an informative article, carried a report from Samuel F. Pryor, a special adviser to the Federal Bureau of Narcotics and Dangerous Drugs, who has recently returned from the Vietnam war zones.

Pryor says our Vietnamization program is working and that he came away with a feeling of optimism. "Our whole program spells peace."

Mr. President, I ask unanimous consent that this enlightening editorial be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRYOR: "THEY'RE NOT TELLING IT LIKE IT IS"—MAUIAN REPORTS ON VIETNAM FACT-FINDING TRIP

(By Jeanne Booth Johnson)

Kipahulu Ranch on Maui is a long way from Quang Tri and Hue, Bien Hao and Saigon, and it's difficult for those of us here to visualize what's happening in Vietnam. It's equally hard for people in Greenwich, Connecticut, or London, Paris and Frankfurt.

All we know and all they know is what is published in the papers or seen on television. But are we getting all the facts?

Samuel F. Pryor, of Kipahulu and Greenwich, a world traveler who has just returned from a week-long visit to the advanced war zones in Vietnam, says—emphatically—"no."

"They're not telling it like it is," says Pryor, who decries what he terms "left-wing editorial thinking," and adds: "Many good reporters in the field do not recognize their own stories when they read them after the left-wing boys have rewritten them."

Pryor is well qualified to voice his opinions. He wrote his thesis on China in 1921, after visiting most of the provinces in China, and became well acquainted with Southeast Asia as a result of his top executive position and responsibilities with Pan American World Airways for 28 years as vice president, assistant to the president, and a director.

Since retiring from Pan American, he has been an advisor to the Federal Bureau of Narcotics and Dangerous Drugs, and—next month—will attend his ninth Interpol Assembly as a delegate representing the United States Treasury. It was this meeting, to be held September 19–27 in Frankfurt, Germany, which sparked his trip to South Vietnam late last month.

At the Interpol meetings, which are held once a year in various parts of the world, senior law enforcement officials from 107 countries gather to discuss international crime from 8 a.m. to 5 p.m. daily. When the business sessions are over they get together in the evenings and discuss world affairs.

"Last year, the Vietnam war was the main topic, and it will be again this year," Pryor said. "When asked a question on this, I want to speak from facts—particularly on the problem of drug abuse in South Vietnam."

He said he went to "see the facts and got facts."

It wasn't his first visit to the war zones. He had made two previous trips in the past years seeking information covering all of the war zones and countries in Southeast Asia—first with Major General Hunter Harris, who then was commander of the Pacific Air Force, and, two years later, with Lieutenant General Herman Nickerson, Jr., of the Marine Corps at Da-Nang, covering South Vietnam, Cambodia, Bangkok and Laos.

This trip was arranged by the White House and his itinerary was prepared by Ellsworth Bunker, U.S. Ambassador to South Vietnam and General Frederick Weyand, who had just replaced General Creighton W. Abrams, Jr., in the field and who, General William C. Westmoreland told Pryor, "is one of the best officers in my command."

The official purpose of Pryor's visit, as outlined by "CORDS/MACV" (which is Civil

Operations and Rural Development Services/Military Assistance Command, U. N.), was "General Observation."

He was met on his arrival in Saigon by Ambassador Bunker's car. With a jeep escort, he was taken to the embassy, where the ambassador assigned two aides, Donald Colin, embassy control officer and Lieutenant Colonel James Kirkpatrick.

In a five-day period, he flew to Bien Hoa, Nha Trang, DaNang, Hue and Quang Tri. At Hue he narrowly missed being killed in a sudden artillery onset.

A South Vietnamese colonel was shot down the following day, flying the same route Pryor had flown with Major General Cooksey to Quang Tri.

From Saigon he flew to DaNang, stopping on the way at Nha Trang.

"It had just been bombed, and we arrived right afterward," Pryor recalled. "But the people's spirits were excellent. I had luncheon there with Thomas Barnes, who is head of the Pacification (Vietnamization) program there. They are doing an excellent job. I rode around the town and met his aides, they are all able men."

Arriving at DaNang just before dark they were briefed at the consulate office on the drug abuse program by Air Force personnel.

"The program is excellent," commented Pryor, who also joined in discussions with officials of the Public Safety Division and "got a very good picture of the civilian activities. All were very optimistic."

DaNang, however, notwithstanding the optimism, was termed by Pryor as "the saddest sight I have ever seen in my life. There are several thousand refugees there. If we cut off our military aid—what happened in China will happen here. If we cut off our military aid the Viet Cong will come down and murder hundreds of thousands. It will be just like what they did where I went the next day."

The next day was a visit to Quang Tri, which he described as follows:

"I was with Major General Cooksey, U.S. Airborne Division Advisor, who kept cautioning his men to keep to the left side of a road we were following. Our helicopter flew three feet over the trees. He sent me back a note which said: 'We fly low-avoid SA-7 heat seeking missiles.'

"I've never seen anything like the devastation at Quang Tri. All the villages were burned out in the area, and about 15 miles from Quang Tri there were 200 trucks on the side of the road, all burned out. In those trucks had been some 400 women, children, even babies. They were all good citizens from Quang Tri, escaping from the city. The Viet Cong bombed them and shot them to pieces. Our bleeding, left-wing hearts write (with untruths) about our bombing the Viet Cong dams, why didn't they write about this sad sight?"

At Quang Tri, Pryor continued: "Lieutenant General Du Quoc Dong, a most able South Vietnamese officer in command of the Quang Tri sector, gave me many pictures of weapons captured that week, and pictures of the Viet Cong captured. His Air Force Colonel, Bao, whom we met, was killed the next day by a SAMs, while flying in his helicopter along the same route I had taken with Cooksey. It was then that I appreciated the latter's note."

Leaving Quang Tri they returned via Hue. There had been a note in Pryor's orders relative to whether it was advisable to go in. Hue hadn't been bombed in some time, so they landed and toured the area, lunching at the Huong Tra Hotel, which has four floors, all empty, with a restaurant on top which looks out over the Mekong.

"There was excellent Chinese food," Pryor reported. "We had just finished luncheon when an artillery shell went off right beyond the hotel, and I remarked I'm glad it's that far away, it sounded rather loud. When we got down to headquarters to take our car to the helicopter to fly us back to DaNang, one went off right where we were. I hit the ground, fortunately next to a trailer.

"I heard the shrapnel go over us, and I got up to go to where they were yelling at me to go—a sandbag bunker, and I heard the swish of another one. You get that swish first, and then this tremendous explosion and then you get the shrapnel. I hit the ground three times trying to get to the bunker. The fourth time I was half way from the trailer when another one came and killed a man just 30 feet from me. It hit three others. Two more went off while we were in the bunker. Then we took a chance and got to our helicopter and flew back to DaNang."

Commenting on this narrow escape, Pryor said: "I went to see facts and I got facts. How is it possible to see what's going on if you don't get shot at. You've got to make up your mind you're going to have to take a chance and get shot at, because that's what's going on."

He said he returned to DaNang "with great admiration for what the South Vietnamese are militarily accomplishing with our American Advisors."

He also said: "If Hanoi was not being supported by a segment of our own news media and by certain people in our government, the war would be over and we would have peace in South Vietnam, a country which is truly beautiful, with magnificent beaches, mountains and farmland that reminds you of Missouri or Kansas."

Pryor said he saw many prisoners.

"All were fine-looking Viet Cong boys," he said. "Our Intelligence Officer, who spoke excellent Vietnamese, mentioned one who was a college graduate, and said that the young man's first question had been 'Did President Nixon go to Russia?' Filled with propaganda against the United States, his idea of our country was unbelievable because of some of the Hanoi misinformation.

"I asked if I could talk to him through the interpreter. They brought him to me, and I told him that just by chance I had with me a personal letter from President Nixon. The interpreter read it to him. The kid listened, looked at the letter from the president, then leaned over and kissed my hand. He had thought that he was being brought to me to be killed, but when he saw the White House letter, with the President just signing it 'R.N.'—an informal letter to just somebody who doesn't hold any office, it made a tremendous impression.

"Nixon had said: 'In a very real sense, every American played a vital role in the success of the Moscow visit. For what was accomplished there reflected our people's abiding desire for enduring peace. With the agreements, we have unparalleled opportunity to build such a structure of lasting peace, and I know I can count on your support in this great undertaking.' "

Pryor said he came away "extremely optimistic, extremely appreciative of President Nixon's policies and a complete disgust for what certain people in these United States are doing to not only hurt our own country, but what would be complete death to Vietnam if we don't hold our position and don't carry out this program which means peace.

"Our whole program there spells peace, and it ought to be continued right to the very end," he continued. "It ought to have the support of the entire country—which I think it has, except that Hanoi gets great encouragement from some segments of our government.

"The Vietnamization program is working. We're not getting the truth. We are advancing every day on the Vietnamization Program. They are going to have an excellent government. And, as far as all of this corruptness you hear about, I don't think it is any more corrupt than some of our big cities.

"Nixon's bombing of North Vietnam is working. Here are pictures of tanks captured when I was there—Russian tanks—new, tires hardly worn, with Chinese insignia on them. So it shows they came through China. So you've got those two nations, and what has Nixon done? He's gone up to help stop that in China and to help stop it in Russia. We've bombed their fuel line and we're cutting off their supplies. I think the war will be over soon.

"I have great confidence in the future here and I have great confidence in the future there. This is based on talking with everybody who has anything to do with the Vietnamization program and the military program.

"From reading our newspapers you would think that every soldier out there was a narcotic addict. They have got it well under control, which is almost unbelievable because it's so accessible. We have excellent narcotic agents. The South Vietnamese themselves are advancing on that through their own police. So don't you believe what you read about these boys all being narcotic addicts. It's not true. There are only three to five percent and they're sent home right away.

"I came back with nothing but optimism in the future."

DANGERS CONNECTED WITH CONSUMER PRODUCTS

Mr. MAGNUSON. Mr. President, in June 1970, the National Commission on Product Safety concluded that 20 million Americans each year are injured in the home as a result of incidents connected with consumer products. The Commission further reported that 110,000 individuals are permanently disabled and 30,000 are killed annually.

It is no great secret that statistics can be deceptive. What is deceptive about the Product Safety Commission's statistics is that it translates the suffering and misery of human beings into cold, insensitive figures. Accounts appearing in newspapers daily often serve to refocus our attention from these clinical statistics to the human level.

An article published in the Seattle Post Intelligencer of August 10, 1972, is one such example. Gina Dawn Davis, a 12-year-old Seattle girl, died after inhaling the contents of a can of Pam, a vegetable coating that gives a no-stick surface to all cookware. Though the product may perform this function well, it also has the potential of paralyzing the respiratory muscles, resulting in death. Apparently, Gina is not the only child who has died from inhaling Pam; the Food and Drug Administration reports that it is implicated in other death cases when it has been inhaled.

An August 11 article from the Seattle Times states that FDA will require a warning label on all aerosol sprays. The can that Gina inhaled contained such a label, but it proved inadequate to save her life. A label is not enough.

The Senate passed S. 3419, the Food, Drug, and Consumer Product Safety Act of 1972 over a month ago. Among other things, that legislation would mandate a new independent agency to regulate the safety of consumer products used in and around the household. Such authority was originally contemplated as early as 1967 and had it been in effect a year ago, this tragedy may not have occurred. But yet, the political volleying continues and we are now faced with a stubborn House Rules Committee which has refused to allow the House version of the bill to go to the floor of the House.

How many more Americans will be injured? How many more will be permanently disabled? How many more Gina Davises will die?

Mr. President, I ask unanimous consent that the Seattle Post Intelligencer and Seattle Times articles be printed in the RECORD.

In addition, I ask unanimous consent that a letter from Mr. Victor Lygdman, a Seattle citizen who desperately tried to revive Gina, also be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

STRANGE DEATH OF A GIRL

(By Dick Clever)

"I worry about them drowning. I worry about everything. But, oh, God, not this."

Jimmie Davis rocked slowly back and forth in her chair, trying to contain a grief not yet a day old.

Her daughter, Gina Dawn, a blonde, blue-eyed 12-year-old, died Tuesday after inhaling from an aerosol can of Pam, a spray vegetable oil used to prevent food from sticking to pans.

Mrs. Davis excused herself to go to the telephone. It was a friend at the funeral parlor asking how they should dress Gina.

"Don't pick her out anything fancy," said Mrs. Davis, in the soft drawl of her native Tennessee. "She would have hated that."

The medical examiner concluded that Gina died of lung congestion.

A friend at Wallingford Playground gave her $1 and she went to a grocery store and bought a small can of Pam.

The Pam is wedged innocently between the Wesson Oil, the Planter's Peanut Oil and the olive oil. The difference is that a warning, in small print, on the Pam label read:

"Caution: Use only as directed. Intentional misuse by deliberately concentrating and inhaling the contents can be fatal. Keep out of reach of children."

Yet children can buy Pam. There's no law against it. And that's what Gina did. Furthermore, to use the language of the label, she deliberately concentrated and inhaled the contents.

And it was fatal.

Just below the warning on the label, printed in larger, bolder type is this testimonial:

"Pam is a clear, pure vegetable coating that will give a no-stick surface to all cookware."

At the bottom of the label the ingredients are listed.

"Made of lecithin, a pure vegetable product, with propellant," it says.

What it doesn't say is that the "propellant" is freon, a toxic gas that is capable of paralyzing the respiratory muscles.

Pam has been implicated in other death cases when it has been inhaled, according to a spokesman of the Food and Drug Administration. According to Dr. William Robertson, director of the Poison Control Center at Children's Orthopedic Hospital, freon, a propellant ingredient used in spray products, has been identified as the probable toxic ingredient in the can when misused.

Gina's sister, Angie, said that many of their friends have been inhaling Pam.

Witnesses say it was about 3:30 p.m. when Gina collapsed in the southeast corner of the playground.

Playground supervisor Brad Taft wasn't there. He said he had been given permission by his superiors to be absent from 2 to 4 p.m. on business.

A 16-year-old summer employe was left in charge of the wading pool during that time. Witnesses say the assistant appeared confused by what was going on at the other end of the park and failed to act.

One girl said Gina kept inhaling the Pam even after she became pale and dizzy. Gina had been running and her heart was pounding rapidly.

Victor Lydgman, a freelance photographer, was sitting at a table near the southeast corner of the park working out the chess moves in the Fischer-Spassky match.

"I heard some girls giggling," he said. "I looked over and saw the bunch of them standing there and decided it was just little girl-type games."

Lydgman said he saw Gina and he saw an older girl with the aerosol can.

"I was about to go after her and tell her to get rid of the can," he said, "but they all moved away."

The next time Lydgman looked up, he saw Gina laying on the ground.

Most of the other children had run away. Lydgman said he tried to apply mouth-to-mouth resuscitation.

"She gave a few spasmodic coughs, but that was all," he said.

"I don't know if I could have saved her if I had known what I was doing. I'm not trained in that."

Gina's mother believes there was a delay at the playground in calling for help. Police say the call came in at 3:39 p.m. Gina's sister, Angie, said the stricken girl lay on the ground for as long as 20 minutes before anyone moved to call for an aid car.

Mrs. Davis said her doctor told her that 15 minutes could have made the difference between life and death.

The manager of the store said he has ordered Pam removed from the shelves until he receives further word from his employers.

He said the aerosol product is displayed with the other cooking oils "because the company that sells it (Boyle-Midway, Inc., of New York) wants it displayed there."

Pam, he said, is a very high profit item. For example, he pointed out that the store gets five per cent profit on a can of Crisco, but 24 per cent on an aerosol can of Pam.

"We make as much from one can of Pam as we do on a half a case of Crisco," he said.

Ask any child, age 7 to 12, at the Wallingford Playfield what the kids there do to get "high." They'll tell you that Pam is the thing. One boy, about 11 years old, produced a crushed Pam can he had found on the street near the park.

"A lot of kids use the stuff," he said. "They spray it into the cup and sniff it from there."

"My little girl is gone," cried Mrs. Davis. "She didn't know it was dangerous. The night before last she was crying because she hadn't been baptized. She knew something was going to happen."

WOULD A REQUIRED WARNING STOP DEADLY SPRAY INHALING?

(By Susan Schwartz)

The federal Food and Drug Administration will propose that aerosol sprays be required to have labels warning that they can kill if they are deliberately inhaled, F.D.A. Commissioner Charles Edwards said.

No such warning is required now because the products are not meant to be inhaled, the F.D.A. explained.

But will warning labels stop the deaths of youngsters who deliberately inhale aerosol fumes to get "high"?

In the past year, three children in King County have died from inhaling aerosols, the medical examiner's office said. The latest, Gina Dawn Davis, died Tuesday.

Cans of PAM—a spray-on substitute for cooking-oil—were found near all three children. But PAM is no more poisonous than dozens of other spray products on sale in any grocery, the F.D.A. said.

PAM is one of the few aerosols that bears a label warning that its fumes may be poisonous.

The label, in capital letters, says: "Intentional misuse by deliberately concentrating the contents can be fatal."

Some observers think such warnings do little good.

"We have a warning on cigarets and I read that the consumption has gone up," said Dr. William Robertson, who deals with hundreds of child-poisoning cases as head of the Poison Control Center at Children's Orthopedic Hospital. "You have a population that's looking for a certain type of thrill. To blame the product I think is kidding ourselves. The critical ingredient is human behavior."

It is likely that more than 100 children have died of inhaling aerosols since the risky practice became the fashion among the young about four years ago. The F.D.A. said it now hears of about four deaths a month.

PAM is popular because it doesn't taste bad or clog the nostrils, as hair spray does, one F.D.A. official said. But hair spray, sprays used to frost glasses and other sprays have killed too, he said.

Should the killers be taken off the market?

There is no law against them, and the public would be hesitant to give up the 2.5 billion spray cans it uses each year, the F.D.A. pointed out.

Most of the sprays found in any supermarket, from imitation whipping cream to window cleaners, use the same family of propellants: fluorocarbons, commonly known under the DuPont Co.'s trade name, Freon.

A few other propellants are used, but almost any spray a child can buy has the same dangers: Mild anesthetics, they can suddenly produce fatal heart fluttering.

"A child may get away with it four times, and the fifth time, his heart goes. It's like Russian roulette," a DuPont spokesman said.

Freon has been accepted as safe for so long that its use in food was allowed to continue without its being subjected to safety tests used by the F.D.A. in the past decade.

Last year, the F.D.A. apparently became concerned about this omission. It held a conference with industry, which led to the naming of a committee. This committee in turn formed another committee, which is expected to report next fall on what research needs to be done to find out if long-term use of Freon is safe.

Clearly, though, Freon is not a cause of sudden death when used as directed.

"You can kill yourself with salt if you take enough of it. Are you going to stop selling it?" an F.D.A. spokesman said.

The F.D.A. and DuPont say they know of no cheap, safe substitute for fluorocarbons. Nor have they found a way to make the sprays unattractive to thrill-seekers.

The industry has turned to educating, distributing thousands of fact sheets to newspapers, police departments, church groups and other organizations. Its warning film strip for high schools and junior high schools has been sent to more than 20,000 schools.

But even understanding that the sprays are deadly may not keep youngsters from using them.

"We have some preliminary indication that stories in the newspaper about deaths from inhaling these things actually lead to more use," an F.D.A. spokesman said.

AUGUST 9, 1972.

DEAR SENATOR MAGNUSON: I hate to belabor you with letters, but I consider this quite important. Yesterday, at the Wallingford playground, a little girl died in my arms, a victim of "sniffing" a "bomb." An older girl (now in custody) persuaded her to try sniffing "Pam," a spray-and-bake preparation available in most food stores.

I did what I could, but my untrained attempt at mouth-to-mouth resuscitation failed. Our fire Department first-aid men, though responding quickly and efficiently, also failed.

It was an afternoon of irony as well. I knew the girl's aunt and her two children. And, when I saw the older girl with the spray bomb, I tried warning her and her friends. The older girl ran off, and for a couple of minutes I explained to the girls that *nothing* gives you a "high" without some harm . . . and in that two to five minutes, the little girl received a fatal dose.

Senator, we *must outlaw all spray cans on the retail market* whether the product dispensed is harmful or not. (In this case I'm told it was freon gas that killed the girl.) When products kill, they cannot be justified. The counter arguments that "even asprin can kill you" just won't work . . . or the feeble defense that the spay bombs are labeled . . . or that "the public wants it."

In God's name, Senator, how can these manufacturers and retailers—how can *you and I* see a child on the street without cringing inside, knowing what dangers *we allow* to be placed in their path? . . . and placed there by unscrupulous men who care only for profit.

And they are unscrupulous. They are accessories to murder and deserve the same treatment we give *any* criminal . . . for they cannot be in business without knowing what their products *do*. All talk of "percentages" of abuse, or warning labels are so much garbage. When you've held a dying child in your arms, arguments become irrelevant.

I know you have done much more than most in Congress toward product safety, and I know you face heavy, wealthy opposition—for which I heartily commend you. (And *please* call on me for door-belling or any help I can give you in the future. I am glad I gave you some help in the past, too.)

But you must rise once more, Senator—and make an end to murder sold off the shelves of retail stores!

Yours truly,

VICTOR LYGDMAN.

TRIBUTE TO DR. J. GRAHAM SULLIVAN

Mr. CRANSTON. Mr. President, a distinguished educator of international repute will retire from his current post as deputy superintendent of the Los Angeles city schools on September 9. He is Dr. J. Graham Sullivan, a former Deputy U.S. Commissioner of Education, who has been working in education for 37 years. I rise to pay him tribute, and to wish him well.

For the past 4 years, Dr. Sullivan has directed kindergarten programs for the Los Angeles schools and programs for adults in the city's community adult schools. Thus, he has helped create programs for those just beginning a formal education as well as programs for senior citizens who are seeking ways to upgrade skills or simply broaden their leisure horizons.

Decentralization has become a reality in Los Angeles under Dr. Sullivan's leadership, and citizens have come closer to their schools. Advisory councils composed of interested citizens, community leaders, and parents now meet with school principals to help improve the education of young people.

Dr. Sullivan first became a teacher at San Francisco City College in 1935 and remained at the school until 1940. During his years there, he also served as assistant to the president of the college.

In 1949, Dr. Sullivan took a position with the San Diego city schools. His duties there included serving as assistant superintendent in charge of the city's junior colleges, vocational and adult education programs. He also supervised the industrial arts and homemaking programs for the city's secondary schools, and he administered and supervised all of the University of California programs in the San Diego area.

Dr. Sullivan then became assistant superintendent of the Contra Costa County College district. His duties there included administration of the instructional programs for two separate institutions with approximately 3,000 full-time and 8,000 part-time students.

Mr. TUNNEY. Mr. President, my colleague has told us some of Dr. Sullivan's accomplishments on the local level of education. I would like to tell you of the influence he has had on the State and national level.

For 8 years—1958 to 1966—Dr. Sullivan served the California State Department of Education. His first assignment was as administrator of the bureau responsible for National Defense Education Act administration. He organized the bureau and served as its chief administrator for the State. Then Dr. Sullivan was made associate superintendent and served as chief of the division of instruction for the State. As a member of the State superintendent's cabinet he was responsible for the State Curriculum Commission.

Following his State service, Dr. Sullivan came to Washington as Deputy Commissioner of Education in the U.S. Office of Education, a part of the Department of Health, Education, and Welfare. In this post he shared with the Commissioner responsibility for the administration of Federal funds appropriated by the Congress. He also provided national leadership in planning and promoting education programs related to the national welfare and education standards of the States and local governments. In addition, he counseled Members of Congress and heads of Federal and international agencies.

Mr. CRANSTON. Mr. President, Dr. Sullivan's distinguished career has been international in scope. He served in Peru for the U.S. Government from 1944 to 1946 where he assisted that South American country in developing a program of public education. He headed an eight-man professional team, and for his work he was awarded the "El Orden del Sol" by the President of Peru.

In another mission for the United States, Dr. Sullivan went to Korea with a three-man team to assist in that country's program in public education.

His alma mater, Stanford University, called on him for a foreign mission in 1956. Dr. Sullivan went to the Philippines as head of a 23-man team of Stanford professors who worked in five Philippine state colleges.

In yet another foreign assignment, Dr. Sullivan went to Chile for the University of California in 1961. He returned to that country in 1963 as education representative for California's Governor, Edmund G. Brown, as part of a technical task force for a Chile-California AID program.

Dr. Sullivan's contributions to the field of education have truly been outstanding. His colleagues will miss his wise counsel. Both young people and adults will miss his leadership.

Not only is Los Angeles losing an outstanding educator when Dr. Sullivan retires in September, but the Nation will lose a man who has been an innovator and leader in this country's most important undertaking—education.

We wish Dr. Sullivan well in his retirement.

THE WORLD CONFERENCE ON THE ENVIRONMENT

Mr. WILLIAMS. Mr. President, it was my privilege to attend the United Nations Conference on the Human Environment in Stockholm this June as a member of the American delegation.

The American delegation under the very able leadership of Chairman Russell Train played a major role in the Conference. The American delegation was very well prepared and advanced several constructive proposals to improve and strengthen the matters before the Conference.

Perhaps the most notable document of the 2-week session was the Declaration on the Environment that represented the first international consensus on ways of preserving and improving man's habitat. It is most significant because it reflects a community of environmental interest among nations regardless of ideology, geography, or different stages of economic development. Among the most important principles set forth in this document is the one which affirms the responsibility of nations to avoid damaging the environment of other nations or of the international realm.

I believe that the other—more important—achievements at the Stockholm Conference should include:

The creation in the U.N. of a permanent high level environmental unit to coordinate U.N. environmental activities, and a U.N. environment fund expected to be funded at $100 million over the first 5 years;

The recommended completion this year of a global convention to restrict ocean dumping;

Steps to minimize release of dangerous pollutants such as heavy metals and organochlorines into the world environment;

A global "Earthwatch" program to be coordinated by the U.N., to monitor and assess environmental trends in the atmosphere, ocean, land and human health;

The recommended completion of conservation conventions, including the World Heritage Trust for natural and cultural treasures and a convention restricting international trade in endangered species;

World programs to collect and safeguard the world's immense variety of plant and animal genetic resources on which stability of ecosystem and future breeding stocks depend;

The proposed strengthening of the International Whaling Convention and a 10-year moratorium on commercial whaling;

Creation of an Environmental Referral Service to speed exchange of environmental know-how among all countries;

The recommendation that national environmental actions should not create trade barriers against exports of developing countries;

A greater emphasis on environmental values in international development assistance, more emphasis on conservation, land use planning, and quality of human settlements; and

A greater emphasis on population policy and accelerated aid to family planning in countries where population growth threatens environment and development goals.

Although the United States made a significant contribution to these recommendations, I am disappointed at some of the positions which the American delegation took. One of the most regrettable official U.S. positions was the adamant refusal to assist the lesser developed nations in paying for the additional costs inherent in controlling internal pollution. The United States took the position that the developed nations should not assume the costs of pollution abatement for the lesser developed countries. While I realize that this Nation or any developed country would be reluctant to assume an open ended obligation to pay for environmental protection in other countries, our opposition to this concept should not have been as total as it was. At least, the United States should have been willing to investigate the feasibility of the industrialized nations giving some additional assistance for environmental protection. The need to offer proposals to assist the developing nations in avoiding pollution problems was expressed in a resolution I introduced, with over 30 cosponsors, as Senate Concurrent Resolution 53. That resolution called for the American delegation at the conference to recommend mechanisms to assist the developing nations in meeting international standards of environmental protection. I deeply regret the American delegation's position which precluded further study of means to achieve this goal.

When proposals similar in intent to Senate Concurrent Resolution 53 were before the conference, the United States often opposed them. In effect, the United States took the position that the lesser developed countries could not expect the developed nations to assist them in meeting the costs of pollution abatement.

The effect of postponing international cooperation in this important area could encourage pollution havens in nations developing without large enough capital reserves to acquire pollution abatement technology. As one deeply concerned with international environmental protection, I believe the best and least costly approach to achieving environmental protection is in preventing these disruptions from occurring before they become a menace to every component of the ecosystem and the well-being of man.

It is also easily conceivable that in the absence of international environmental accords, some nations would seek to benefit from cheaper exports produced without adequate environmental protection standards. Other nations would then tend to lower their own domestic environmental standards or at least not upgrade them to the degree necessary to enable their industry to compete effectively.

It is unrealistic for our own Government to impose rigid environmental quality standards on American industry thereby causing the cost of American goods to rise, and then to ignore the need to negotiate international environmental quality standards. Until international accords are reached which provide for similar standards for the industrialized nations of the world, and until developing nations receive assistance in achieving pollution abatement, the United States will be risking a serious trade disadvantage and will not be taking sufficient initiatives to protect the world environment.

I feel that the U.S. position on this issue was shortsighted and did not acknowledge the extent to which all men share one environment. Pollution in Africa, Asia, or Latin America can eventually be as deleterious to Americans as environmental degradation currently is in Newark, Washington, or Los Angeles. As the wealthiest nation on earth and one of the nations most aware of the dangers inherent in degrading the environment, we must commit ourselves to the most effective approach to world environmental protection that we can devise. I hope that future official positions taken by the United States will show more flexibility on this vital problem. My resolution, Senate Concurrent Resolution 53, was directed toward solving these issues before they became critical. I still believe that we should reevaluate our international environmental policy in the context of the approaches suggested there.

The official U.S. position also opposed any increased financial assistance to the specialized agencies of the United Nations for pollution control. Again, I believe that this opposition was shortsighted, and we should have chosen a more flexible approach.

I also regret the fact that several recommendations made by Senator BAKER's Advisory Committee to the Secretary of State were not accepted by the U.S. delegation. The advisory committee recommended the creation of a United Nations environmental organization at a high level with maximum independence. The U.S. position which prevailed with modifications at the conference placed the environmental organization as a unit in the Economic and Social Council of the United Nations. I hope tha' the new environmental unit will be effective, although I believe we could have done more to improve the chances of this new organization's success.

Therefore, although some impressive initial progress was made at the United Nations Conference on the Environment, much more is needed to preserve our global environment. The United States should take a much stronger role of leadership on this important issue, and Congress must take new initiatives to encourage the administration in this direction. Additional funding for international environmental protection measures and formalized procedures for the transfer of pollution abatement technology should receive our prompt attention.

Our goal must be to control pollution on a global level and to restore the environment where it has been degraded. As the world's greatest consumer of resources, that goal demands a particularly deep commitment from us if it is to be reached. Self-preservation and an improved quality of life require that we reach it.

I urge our renewed efforts to achieve a more livable world. We have only one earth and, at the next conference on the environment in 1977, I hope that we can point to the progress man has made rather than to the imminent disaster which he faces.

A NATIONAL GROWTH POLICY

Mr. HARTKE. Mr. President, in the face of the growth of population and technology the Nation today faces a crisis of survival. Although this crisis of survival is man-made, the chances of survival and the achievement of a balance between man and nature are also in man's hands.

Uncontrolled growth and the spiral of governmental inefficiency have been the trademark of our lust for profit and uncontrolled development; but in recent years, there have been signs—slight to be sure—that we can reverse these ominous trends toward national ecocide.

In 1970, Congress adopted title VII of the Housing and Urban Development Act providing for an urban National growth policy to encourage the orderly growth of our metropolitan areas and communities in predominantly rural areas. In a complementary action, title IX of the Agriculture Act of 1970 committed the Congress to a sound balance between rural and urban America and declared that the highest priority must be given to the revitalization of rural areas. Recently, legislation to establish a National land-use policy has received the consideration of the Congress. Last week, the Senate passed the Full Opportunity and National Goals and Priorities Act. However, more comprehensive and far-reaching legislation is needed to provide for adequate planning, research, coordination, and guidance of the way the country will grow.

In May of this year, I introduced the Hartke National Growth Policy Planning Act of 1972 (S. 3600) as a means of airing the need for such comprehensive legislation. I have received since that time a substantial number of letters regarding the act.

Mr. President, I ask unanimous con-

sent that several of these letters be printed in the Record.

There being no objection, the letters were ordered to be printed in the Record, as follows:

Norfolk, Va., *June 27, 1972.*

Hon. Vance Hartke,
U.S. Senator, Senate Office Building, Washington, D.C.

Dear Senator Hartke: Thank you for bringing S. 3600 to our attention and for seeking the viewpoint of city government on its provisions.

The idea of a National Growth Policy with explicit goals and objectives is an admirable one and we compliment you for your foresightedness. However, we are disturbed by several aspects of the proposed legislation.

1. Section 108(b) is so vague that the immediate fiscal impact on the State of Virginia, the Southeastern Virginia region, or Norfolk is difficult to assess. Furthermore, the effect that this grant program would have on the maintenance of other Federal planning and management grant programs is not clear.

2. Although we agree that Federal and State actions should be evaluated for their growth implications, we do not conclude that growth policy planning should therefore be only in the hands of State and Federal agencies. We believe that growth policy planning without the active involvement of localities would be unrealistic.

3. The City of Norfolk is on record in support of the concept of revenue sharing. It appears, however, that Section 112 of S. 3600 conflicts with the very essence of revenue sharing in that it would add new strings to all Federal and State spending.

4. S. 3600 does not appear to be well integrated with either Title VII of the HUD Act of 1969 or Section 102 of the National Environmental Policy Act of 1969. How are the efforts induced by these other acts to be related to the new thrusts proposed in S. 3600?

5. The proposed legislation and your letter of May 26, 1972, appear to be biased against urban development and against industrial development in areas such as the South. We are not convinced that these biases are justified. Also, we are skeptical of any attempt to create such a powerful body as the National Growth Planning Board without providing strong checks on its authority. We are not sure that Section 112(b) provides an adequate check.

In conclusion, our overall impression is that the general approach taken in S. 3600 might be too sweeping, and could remove planning further from local participation, both citizen and governmental. We do feel, however, that there is a need for some form of overall growth policy planning and improved program coordination at the Federal and State levels. Our main concern is that this be done in a way that adequately reflects local needs.

Sincerely,

Roy B. Martin, Jr.,
Mayor.

University of North Carolina
at Charlotte,
Charlotte, N.C., July 18, 1972.

Hon. Vance Hartke,
Senate Office Building,
Washington, D.C.

Dear Senator Hartke: I have read with interest your statement and the text of "National Growth Policy Planning Act" as published in Congressional Record of May 11, 1972.

It is my opinion that the time has come in our country when it is essential that more attention be given to planning for our future. While I might want to argue that some parts of the declaration of policy should await the studies growing out of the national, regional, and state activities proposed, I think the bill is so important that most, if not all, of its provisions should be enacted.

In recent months, Governor Robert W. Scott has created a Council on State Goals and Policy which is directing its attention to some of the objectives set forth in S–3600. It is apparent to me, however, that ways must be found to focus public attention on planning for the future, and that involvement of the federal government could help to arouse our citizens and avoid the cycles of enthusiasm which may rise and fall with changes in governors.

My hope is that the Congress will look with favor upon the enactment of legislation along the lines proposed in S–3600.

With kind regards, I am

Sincerely yours,

D. W. Colvard,
Chancellor.

Madison, Wis., *June 16, 1972.*

Hon. Vance Hartke,
U.S. Senate,
Senate Office Building,
Washington, D.C.

Dear Senator Hartke: I am delighted with your introduction into the Congress of the National Growth Policy Act, S. 3600. Delighted because of the degree to which the purposes of this initiative parallel my own thoughts and efforts for a state growth policy and planning effort in Wisconsin.

Early this week, I announced a major new program in Wisconsin, a program that will form Wisconsin's first state growth policy and aimed at balanced development of urban-rural opportunities. It is my intention that this policy should guide both governmental and private investments throughout Wisconsin so that their coordination will yield a better return on our investments. I believe our efforts will give us more resolute direction—clear basis for reordering our state priorities. And it is my intent to develop the policies gradually and publicly and in a manner that is readily understood by citizens, so that there will be support for the actions necessary to carry out the policies.

As I indicated to the Senate Interior and Insular Affairs Committee when I testified on the National Land Use Policy bill, the states need to have an explicit national-level policy framework for state growth policy. I believe your bill provides the capacity for that national framework.

To date we have had much time and effort spent in making plans which have had little impact on state and local public decisions. I support your bill's intention to link the management of policy implementation with the planning of policy. And the growth policy planning and implementing responsibilities are placed right where they belong—with state government.

Because I view state growth policy so seriously, I have a deep concern that such policy planning is understood by citizens so necessary implementing actions will be supported I also have a fundamental interest in seeing that such growth policy planning is closely integrated with all the rest of the state policy decisions of my office and of the Legislature. I believe growth policy is too vital to be resolved between the staffs of a state agency and a national planning board. State elected officials must endorse such growth policy as the official policy of the state before submission to a national planning board. It is a serious matter for policy to be proposed through a process which by-passes the state's highest elected officials, and then binds those officials to the execution of that policy.

Your initiative in introducing this bill is very timely to Wisconsin, and to our Nation, and I look forward to the opportunity to testify on your bill.

Sincerely,

Patrick J. Lucy,
Governor.

Housing Advisory Council, Ltd.,
New York, N.Y., August 1, 1972.

Hon. Vance Hartke,
U.S. Senate, Washington, D.C.

Dear Senator Hartke: I greatly appreciated the opportunity you gave me, through your letter of July 27, 1972 to me, to comment on S. 3600, your bill to establish a National Growth Policy.

I could not agree more that we sorely need in this country policies that have some meaning as to our national and urban growth. I believe that in certain aspects your legislation parallels that of various land-use legislative proposals that have been introduced in the Congress in the last year and a half.

I think you will find that many people in the private sector agree that we need more rational growth policies in this country, and I think they would also point out that we have no such policies for either land use or national growth now in this country at the Federal level.

My area of expertise is essentially housing and urban growth, and I note that every department in the Executive branch of the Federal Government affects the production of new housing in one way or another. Future urban growth policies will be effected by every department in the Federal Government, and it is felt strongly by many of us in the private sector that without such policies as you contemplate in your legislation, this Nation's urban centers will continue to deteriorate even as they are aided by various Federal programs in unco-ordinated and piecemeal fashion.

You refer, in your introductory statement to the legislation, to Title VII of the Housing and Urban Development Act of 1970, a title which establishes on a self-sustaining basis a Community Development Corporation. I think there is a good lesson to be drawn from that Title VII, a lesson which might help in the establishment of a national growth policy.

That lesson is this: Title VII was made up out of whole cloth, on the basis of almost no experience and drawn up on an initial input which used numbers drawn from out of the thin air. In my judgment Title VII will eventually have the Federal government holding the bag on millions of dollars worth of bonds which it has guaranteed. The only new town in the United States which can be said to be successful, outside of those new towns where there was no debt in the land, is that of Columbia, Maryland. There is some question as to the continued success of Columbia, in my mind if not in others. It is a good example and one worth taking many measurements of, but it is only one and we have no others that have really proven anything, where the developers, whether they were public or private, going in had to take large debt to get ownership of the land. My point here is that we should continue to experiment and we should try to develop policies, but our inputs should be of a much more weighty nature than the inputs were for the creation of Title VII.

If a national growth policy would slow down or control urban sprawl as we have known it in the past 20 to 25 years, then that policy would have to remove the yield factor from urban sprawl as we know it. Urban sprawl is quite simply the result of developers and consumers pursuing the greatest yield and appreciation on their investment. It is that greatest yield and appreciation which has left so many center cities decaying areas. Obviously, in my judgment, any national growth policy which would change that pattern of the post-World War II years would have to change the rules on how the developer and the consumer got his yield or his appreciation on real estate.

Let me point out, rather gratuitously, that we are the only developed nation on earth that permits portions of its center cities to die simply because there is no return for the private sector, or sufficient return, on any investments it might otherwise make in those areas.

If I can be of any assistance to you or your office, please do not hesitate to call on me.

Yours very sincerely,

RICHARD W. O'NEILL.

GOLDMARK COMMUNICATIONS CORP.,
Stamford, Conn., June 27, 1972.
Hon. VANCE HARTKE,
U.S. Senator,
Old Senate Office Building,
Washington, D.C.

DEAR SENATOR HARTKE: It is most complimentary of you to ask me to review your National Growth Policy Planning Act of 1972, S. 3600 and to request any comments I might have toward developing a workable program to assist all levels of the government to meet our nation's environmental and rural emergency.

I have read the bill very carefully, and I want you to know that I feel your proposed legislation represents extremely exhaustive research. It is reflective of the extensive thought and study you have devoted to a solution for this national problem.

Your emphasis to establish a control at the Federal level to help overcome the imbalance existing between urban and rural population norms is, in my opinion, one of the most essential tasks ahead for this nation. We are not going to be able to stave off the physical and psychological disasters which are inevitable by the end of this century unless definitive and intelligent action, such as you have proposed, is taken on a national scale.

The National Growth Policy Planning Act provides an essential partnership between the Federal government and state, local and interstate bodies engaged in efforts to develop local areas in a constructive manner. It is extremely important that S. 3600 recognizes this need for cooperation between states in their planning and, at the same time, recognizes that only through the establishment of a consistent growth policy applicable to all areas can needless conflicts over areas of authority be avoided.

There is one essential phase of an overall national growth policy which I believe might be emphasized in your bill for such implementation. That is a clearcut program for the establishment in carefully selected, strategic areas of closer interaction between larger cities and smaller ones. I reference the kind of program which will enable smaller communities to provide facilities for large corporations to establish complete segments of their general operations in them, and through carefully conceived and meticulously executed systems of communications, enable people to live and work within the immediate vicinity of their places of employment.

Such a rural planning program, coordinated under the aegis of the National Growth Planning Board, could prevent innumerable false starts or no-starts as well as duplication of effort. The grant-in-aid program of S. 3600 could well be used for studies of this kind of activity and the essential periodic audit which the bill stipulates could make it certain that a common goal is established wherever such action is underway.

Another thought which comes to mind is that a rural planning arm of the National Growth Planning Board could establish criteria for this type of operation and cooperate with local, state, and interstate planning bodies in making certain that no possibilities are overlooked.

Since studies of this concept of meeting the urban/rural population imbalance problem have been underway for some years, it would not be difficult to develop a code of action based upon factual data already available.

Essential to such a phase of the National Growth Planning Policy would be the creation of statewide and interstate broadband communications links for business purposes, education services, health care, and all public services required for the effective operation of a community in the best interests of its citizens—both corporate and private.

The technology needed to establish an efficient communications network within a town, between towns, within a state, and between states is available and is practicable on a nationwide basis. All this technology needs are tailored innovations to provide this country with a way of living that it has not had, but must have, if our inevitable environmental problems are to be met and overcome.

There is one other point to which I would like to refer. The National Growth Planning Board as described in Title II calls for a body of seven members appointed by the President "from among individuals with special qualifications to carry out the functions of the Board."

Would the Board not be stronger and more effective if Title II specified the "special qualifications" which the members should possess? We know, of course, that the President would be most selective in his choice of the Board membership, but, for guidance, it would be helpful if there were definitions of the kind of experience members should have if their services are to be valuable in this extremely important forward thrust for the nation's well-being.

I do not presume to set myself up as an expert on selecting personnel for a body such as this. I would like to strongly suggest, however, that among the members of such a Board would be individuals with backgrounds in public communications, education, health services, community planning, finance, and other specialties in social involvements—all of which I am sure you have already considered in your detailed research for the presentation of the National Growth Policy Planning Act of 1972.

I wish that I were able to expand much further my suggestions to you in regard to S. 3600, but you have done such a complete thoughtful job in your presentation that the activation of your ideas would go far in meeting this nation's pressing need to rescue our people from what could be inevitable disaster.

May I thank you once more for requesting my comments on this tremendous undertaking and express my compliments once again in the highest possible terms for the extensive thought and effort reflected in this proposal. I am sure that it is needless for me to say that I stand ready to offer you any assistance I might be able to lend in bringing the National Growth Planning Policy to reality and in implementing it when the Policy is placed in action under the kind of leadership exemplified by national legislative leaders like yourself.

With expression of highest esteem,

Cordially,

PETER C. GOLDMARK.

U.S. SMALL BUSINESS ADMINISTRATION,
Washington, D.C., June 22, 1972.
Hon. VANCE HARTKE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR HARTKE: Thank you for your recent letter and a copy of your National Growth Policy Planning Act of 1972, which was addressed to Dr. Wilfred J. Garvin, the former Assistant Administrator of the Office of Planning, Research and Analysis. We are pleased to have the opportunity to offer comments on your legislative proposal.

The major features of your bill are the establishing of a comprehensive National Growth Policy and a National Growth Policy Board to administer it. We have closely examined each portion of this bill and have yet to emerge with a well-defined, clear-cut perception of the extent of this proposal. For example, Section 102(b) states:

"The Congress further declares that it is the National Growth Policy to—

"(1) favor patterns of growth planning, management, and development which are in accord with sound ecological principles and which encourage intelligent and balanced use of the Nation's resources."

In its role of administering this policy the authority and scope of the Policy Board is hazy relative to the sphere of influence of existing governmental bodies. Is it not the role of the Environmental Protection Agency to see that the policy stated above is adhered to? A number of other agencies also are charged with planning for the efficient use of scarce resources.

The growth of an area is dependent upon the contribution made by each component of the growth structure. In our complex society the Federal Government has established individual institutions whose primary purpose is to be involved in all phases of the subject area to which they owe their creation. Within this context national policy is continuously being established and evolving. It appears that establishing a single national policy for growth and having it administered by a single National Growth Policy Board is attempting to simplify a very complex and many-faceted concept.

It appears to us that many of the proposals in your bill already are being carried out under the aegis of other Federal groups. Regional commissions are addressing themselves to similar problems. There also are planning and coordinating organizations who conduct studies and compile planning documents. They have liaisons with Federal, State, and local representatives and have access to numerous studies of the local areas. Many of these plans pinpoint the problems of an area, devise strategy to overcome them and skillfully coordinate the activities of all levels of government and the private sector. The implementation stage remains, which in most cases is slow in getting underway because of funding difficulties.

Initially, the Appalachian Regional Commission was set up to serve an area having economic problems more severe than those of the rest of the Nation. It is questionable whether some of the regional commissions established subsequently could meet these same criteria. Presently there are six regional commissions for the areas of Appalachia, New England, Great Lakes, Four Corners, Coastal Plains and the Ozarks. It appears that the proposed legislation is moving toward a planned economy for the entire Nation. This does not seem desirable at this time; however, if pursued, it would probably be judicious to build on the present regional commissions and establish additional commissions to cover the rest of the Nation. This would allow existing commissions to continue moving in the direction they are now going without requiring them to go through the preliminary stages again.

In our opinion the approach to national growth that is proposed leans heavily in the direction of additional government control. A single board to oversee planning for the States is not consistent with the decentralization theme presently advocated.

Sincerely,

E. W. SANDBERG,
Assistant Administrator for Planning, Research and Analysis.

SECRETARY OF HEALTH, EDUCATION, AND WELFARE,
Washington, D.C., June 28, 1972.
Hon. VANCE HARTKE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR HARTKE: First let me thank you for the opportunity to comment on your proposed National Growth Policy Planning Act of 1972, Senate Bill 3600. It is always pleasing to learn of attempts to deal with the most difficult areas of public policy.

While I would not feel comfortable making general comments on an issue of such enormous complexity, I am glad to comment on several specific features of the proposed legislation:

Sec. 104(b)(10)—specifies utilizing existing review and comment mechanisms to determine the consistence with State or Regional growth policies of Federally assisted projects. This would require additional highly competent staff on these coordinative bodies. Provision must be made for financial support for these persons' salaries, and even then the supply of competent professionals may be too inelastic to meet the added demand.

Sec. 105(a)(1)—does not make clear whether an interstate region may be composed of parts of States rather than entire States. It would seem desirable, particularly but not only in the case of a State which shares metropolitan areas with more than one neighboring State, to allow regions smaller than entire States for purposes of growth policy planning.

Sec. 105(c)(2)(A)—in light of the previous comment, this provision appears to be a compromise avoiding the questions involved in sub-State regional governance.

Sec. 105(e)(4)—presumably refers only to Federal funds assigned for growth policy planning purposes. Otherwise the line of responsibility to the Board would be circumventing the lines of responsibility to units of State and local governments established under current coordinating mechanisms.

Sec. 106(a)(3)(c)—assume it is currently possible to design a plan for more than trivial purposes which does not conflict with the objectives of *some* Federal legislation. The identification of the present maze of conflicting legislative objectives may be one of the most beneficial outcomes of any attempt to develop an explicit national growth policy.

Sec. 302(3)—this wording *constitutes* a growth policy, albeit a rather general one. It is not a definition of the term "growth policy," and seems inappropriate when a stated objective of your bill is to begin work toward developing a growth policy.

Sec. 307 and Sec. 308—the preparation of the first National Urban Growth Report revealed an enormous lack of expertise within Federal agencies with regard to the concept and techniques of growth policy planning. Where will be the expertise required for the Board and Federal agencies to provide technical assistance in this area?

I hope these comments will be helpful to you, and trust that discussion of your proposed bill will lead to increased knowledge about growth policy issues. If I can be of further assistance in this or a related matter, do not hesitate to contact me.

Sincerely,

PAUL L. NIEBANCK,
Deputy Assistant Secretary,
Policy Development.

STATE OF NORTH DAKOTA,
Bismarck, N. Dak., May 31, 1972.

Hon. VANCE HARTKE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR HARTKE: The National Growth Policy Planning Act, S. 3600, could well be one of the most important pieces of legislation introduced in this country. I have reviewed the material you sent to me and I find it to be consistent with my thinking on the subject.

I have been trying to advance the cause of distribution of opportunity and hence the voluntary distribution of people in the United States for several years. The National Governors' Conference, for the past three years, has recognized the urgency of distribution of population in this century.

I have proposed that a Cabinet-level Department of National Planning be established with divisions of environmental protection, management, and budgeting. Such a department would also be the repository of centralized electronic data banking to be used in planning and projecting for both the Executive Branch and Congress.

Your proposal is very broad and very far reaching. I congratulate you for it. I think it is the most urgently needed legislation that could be considered by Congress at this time. I would be pleased to support it in any way I can.

Sincerely yours,

WILLIAM L. GUY,
Governor.

ECONOMIC DEVELOPMENT
ADMINISTRATION,
Washington, D.C., July 6, 1972.

Hon. VANCE HARTKE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR HARTKE: Thank you for the opportunity to review and comment on your recently introduced Bill S. 3600, The National Growth Policy Planning Act of 1972. The topics that the proposed legislation covers, and the Bill itself, are so complex that I have been unable to give them the thorough study that they require. I am confident, however, that the legislative process, including public hearings on the Bill, will provide for a full exploration of the issues involved.

The proposed program of Growth Policy Planning Grants is extremely ambitious, and in some cases it seems to assume too much knowledge and expertise. I am struck, in particular, by Section 104(b)(2)(F) which suggests a projection of various public and private needs *"for at least 100 years."* I wonder if we really have the requisite skill to do this. Might it not be more useful in guiding our actions now to look a shorter distance into the future—say a decade or two?

Like most citizens, I share your interest in providing for more orderly growth and change. I am also convinced that some kind of planning is essential at Federal, regional, State, and sub-State levels if we are to achieve this desired goal, and coordination of these various planning efforts is clearly essential. The National Growth Planning Board proposed in S. 3600 may be an answer to this need for a coordination mechanism.

Whatever the shape of the program that is finally adopted to achieve the goal of planned development, I am sure that your Bill will play an important role in stimulating our Nation's thinking on this important subject. Clearly much thinking needs to be done before we can reach a concensus on a topic as important as the National Growth Policy.

Sincerely,

KENNETH L. DEAVERS,
Director,
Office of Planning and Program Support.

NEW YORK, N.Y.,
June 13, 1972.

Hon. VANCE HARTKE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR HARTKE: Thank you for sending me the material on your proposed National Growth Policy Planning Act of 1972, S. 3600.

I think the fact that you have designed and introduced this legislation is to be commended. I consider this an important step forward and welcome the discussion it will arouse. It seems to me unlikely that this legislation will, in fact, ever be passed in its present form, but I recognize the educational utility of introducing it. Unless we begin somewhere, we can never advance to more sophisticated understanding of these problems.

In the paragraphs that follow I shall be quite critical of the proposed act and will word my criticisms strongly, but I speak as a friend of the legislation rather than as an enemy inasmuch as I believe the questions touched on by it are absolutely vital to our future.

The weaknesses of the proposed act, as I see it, flow from the same technocratic bias which is present in the Club of Rome report "The Limits to Growth." In the last chapter of my book, *Future Shock*, I discuss the characteristics of technocratic planning and argue that this type of planning is no longer effective in a fast-moving society of great diversity. I believe that centralized planning from the top down, short-range planning and econocentric planning all run the risk of producing boomerang effects. I suggest that what is needed is a wholly new approach to planning in the future and outline some of the principles upon which I think this new planning might be premised. May I respectfully urge that your staff take a look at these few pages in my book because they will outline quite sharply the differences in my approach and those implicit in "The Limits to Growth" report. My more specific criticisms of the National Growth Policy Planning Act of 1972 fall into five categories:

A. LACK OF PARTICIPATION

The only references made to public participation are to public hearings and the right of appeal. There is not a word in the legislation about grass-roots goal formulation. The bill shows no awareness of some of the exciting experiments in long-range planning and goal formulation that are now taking place around the United States, for example: the Hawaii 2000 Conference sponsored by Governor Burns two summers ago; the recent decision of the Iowa legislature to survey the future of Iowa; and a project in New York City by the Regional Plan Association aimed at involving millions of New Yorkers in decisions about the long-range future of the metropolitan region. Similarly, the act shows no awareness of recent experiments with what is coming to be known as "participatory technology"—the use of new communications media to involve large numbers of ordinary citizens in the planning process.

It seems to me that the bill further centralizes power at the federal level, despite the use of the states and the regions as intermediaries. It also suffers from the same fundamental defect present in most federal legislation—i.e., the assumption that the states are the right or appropriate units or that units larger than the states (multi-state regions) are the appropriate entities. It ignores the possibility that much smaller entities might be the appropriate units for planning, although it refers rather vaguely to the right of the states to delegate certain powers downward. In my view, it is going to be extremely important to diffuse decision making and participation in goal formulation very widely through the society and that any further centralization is, or could be, dangerous.

B. INADEQUATE CONCEPT OF RESOURCES

The bill assumes that it is possible to "inventory" resources, but resources are not well defined. Implicit in this assumption is the idea that resources are static—that certain materials or substances are "resources" and that these are resources for all time to come. This is a weakness implicit in the Club of Rome report as well. In my view, the term resources is a relative term and materials that are of no value at one stage of human development become of enormous value at another stage when the level of technology has shifted.

It is therefore very difficult to arrive at a neat inventory of resources without some more careful definition of what they are. It might be less ambitious but more worthwhile to discuss inventorying ten or 25 or one hundred key resources rather than attempting the impossible, which is to survey "all" resources. The imprecision with which the term resources is used is even more marked with respect to "human resources." The concept human resources is a fuzzy and controversial one which requires a great deal more attention than it apparently has received in the formulation of this legislation.

C. ECONOCENTRIC BIAS

As is the case in technocratic planning, the legislation here heavily overemphasizes the "hard" dimensions of population, resources, economic development, etc. It is extremely light on the "soft" or human side of the ledger. Its references to human resources are largely rhetorical as, for example, in Sec. 102(a).

In Sec. 104(b) which outlines the purposes to which federal grants will be applied, there is a list of subjects requiring state research or investigation. These include such matters as land, population, economic characteristics, public works and ecological characteristics (in the sense of physical ecology). What is missing here, it seems to me, is the realization that the problems arising from growth are not just hard quantifiable economic, demographic, and technological ones. They are also social, institutional and cultural. The problems we are facing are not just those of potential resource depletion (about which there is a great deal of controversy, in any event). They are not just questions revolving around crowding and/or population. They are not just questions of existing technology and productivity. Nor are they simply questions about pollution and ecology. They have to do with such questions as the effect of labor mobility on family structure; the nature and size of organization and our ability (or lack thereof) to manage extremely large-scale organizations, such as companies, government agencies or municipalities; they have to do with the degrees of diversity or uniformity in our communities and organizations; they have to do with the character of work and the degree of monotony or surprise in the lives of the citizen; they have to do with the values of the society and the character of the political machinery by which we attempt to hold the society together; they have to do with the nature of the communications media and their impact on the society.

Growth policy which ignores these factors will, in my opinion, find itself to be ineffective and will simply boomerang as have so many well-intentioned federal programs. We are relatively good at dealing with the "hard" side of these questions, but we are extremely poor at dealing with the "soft" side. Our failures, in my view, are very largely a consequence of our ignorance about these kinds of non-economic questions. To create a growth policy or a machinery for executing it based on this inherently technocratic bias would, quite likely, turn out to be a mistake and perhaps a dangerous one.

The attempt to deal with these questions, for example in Sec. 104(b)(2)(F), is weak. It attempts to "get a handle" on the soft or sociocultural questions but refers only to "recreation . . . housing . . . open space. . . ." It ignores, for example, the question of time which, in many ways, is becoming more important than that of space. Unless we understand how growth affects the disposition of time in the society, both in the sense of individual and organizational time, we may fundamentally misunderstand the impact of growth. There are, in short, a great many dimensions to the growth question which are either ignored entirely or only alluded to in the vaguest and most rhetorical of terms.

This weakness and overemphasis on the eco-technological factors is reflected in Sec. 302(4) in which the term "resources" is defined. There follows a long list which includes water, air, land, agriculture, fish and wildlife, etc., with only a single fleeting reference to aesthetics and human resources weighing in on the other side of the scale. It is quite clear that a great deal more attention and intelligence has been devoted to the more familiar and admittedly easier-to-work-with variables that most social scientists, planners and politicians are accustomed to working with, than have been devoted to the much more difficult and perhaps even more important socio-cultural factors.

D. NOT SUFFICIENTLY ANTICIPATORY

Despite a single reference to one-hundred-year projections, the entire thrust of the legislation seems to me to be insufficiently long-range. Most planning, as we know, is based on extremely short-range or intermediate time horizons. The function of any federal agency ought to be to encourage much longer-range horizons in the planning activities of regions, states and small political entities.

A particularly important weakness in this respect is the absence of any discussion of the need for technology assessment on the part of regions, states and municipalities. Any attempts to do long-range planning with respect to growth policy (or anything else) will fail unless a very systematic effort is made to examine scientific and technological breakthroughs that are not yet present. Thus, it could well be that certain biological developments, such as cloning or genetic manipulation of the embryo, could have shattering impacts on the family structure in this country, upsetting all our conventional economic and political forecasts. The development of a network of breeder reactors in the United States could have an enormous impact even on the economic growth patterns of the country. The development of cable and cassette television could have important effects on reducing the power of centralized communication services in this country which, in turn, could have an important effect on the scale of political and corporate organization and on other factors bearing directly on economic growth. One could list many potential technologies that could have enormous impact on the entire growth pattern but which are not yet present. A sensible legislation for the control of growth, therefore, must in my view include a very carefully developed program for the creation of technology assessment agencies throughout the public sector, not to mention the private sector. The absence of this one element could very well invalidate the rest of the legislation, in my view.

E. PREMATURE POLICY FORMULATION

I'm troubled by the fact that the legislation attempts to set a growth policy even though we are still lacking adequate definitions of growth, resources, and other operating terms. Thus, for example, Sec. 102(a) calls for "the development" of a policy but Sec. 302(3) articulates one. It may be that it is much too early for us to attempt the specification of an appropriate growth policy. The nation and Congress both need a great deal more discussion of these matters before an attempt should be made to formulate a specific attitude toward growth. I am by no means convinced of the rightness of the forecasts implied in the Club of Rome report. It would be a mistake, in my view, to rush in with a policy aimed at curtailing growth even if such a policy is masked, as is perhaps the case in this legislation, under the guise of a program for *encouraging* growth. We simply do not yet know enough about the implications of growth to establish a federal policy toward it, without far reaching public discussions of the matter at the grass-roots level.

Let me give you an example. Sec. 302(3) would make it federal policy to discourage "migrations and physical growth which reinforce disparities among states, regions, and cities." Yet I could easily foresee circumstances in which we might specifically want to encourage certain disparities in order to preserve or create diversity within the national system.

A further severe difficulty which I think is present in this legislation is that it assumes it is possible to articulate and effectuate a growth policy within the confines of a national framework. At a time when more and more ecological and economic problems are osmoting through national boundaries, it seems to me that the failure to recognize this within the proposed legislation is a severe weakness. What impact will a federal growth policy have on the neighboring regions of Canada or Mexico? Even more important, what effect will a national growth policy have on our relationships with the developing nations generally? Such issues cannot be ignored and I think it is a serious weakness that the proposed legislation does, in fact, ignore them.

These, then, are some of my immediate reactions to Senate bill S. 3600, the National Growth Policy Planning Act. As I mentioned earlier, I hope these rather severe criticisms will be taken into consideration but that they will be regarded as constructive, rather than destructive criticism. I look forward to the emergence of Mach 2, 3, and 10 versions of this legislation and, eventually, the widest public discussion of the issues raised in it. It is important not to rush into a premature, naive, lopsided policy. But it *is* important to begin the discussion and this, I think, you are helping to do.

Sincerely,

ALVIN TOFFLER.

SIGHTS AND SOUNDS OF THE DEMOCRATIC CONVENTION

Mr. CHURCH. Mr. President, newsman Dwight Wm. Jensen, of the Intermountain Observer, has recorded some of the sights and sounds of the Democratic National Convention held in Miami last month, especially those experienced by the Idaho delegation led by Gov. Cecil Andrus.

This well-written and interesting article preserves the flavor of that historical gathering. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SIGHTS AND SOUNDS OF THE CONVENTION—DELEGATES PRACTICED WHAT MCGOVERN PREACHED

(By Dwight Wm. Jensen)

For some reason, my favorite story from this year's Democratic National Convention is a small occurrence that happened just after it concluded. Dick Murphy, the convention director, picked up the huge gavel with which Larry O'Brien had so often tried to summon order, and turned to Rocco Pomerantz, the Miami Beach Chief of Police, who had spent much of his time on the rostrum,

Murphy said, "Rocky, you're the greatest cop in the world."

Pomerantz said, "Fine, but you're stealing the gavel."

Pomerantz's police spent most of the convention cooling their heels under thatched canopies on the convention grounds, drinking Gator-Aid and thinking up ways to annoy convention visitors. Their favorite seemed to be to send them from one gate to another seeking admittance, always making sure never to send them to a gate where they would actually be admitted.

Security was uncoordinated. One would encounter city police, state police, troops, and at least three kinds of plainclothesmen, none of whom knew what any of the others were doing. For instance, one group of security people forced reporters to give up Badge A in order to obtain Badge B. Another group of security people demanded that the reporters wear both Badge A and Badge B. So on and so on.

But—like the convention itself—we are putting security in the first place when in actual fact the most important thing was what happened politically. That kind of mixup in priorities has become much too common in the past eight years. The whole idea of this year's Democratic National Convention was to change that

George McGovern, preaching that Democrats need not take orders from the old guard or submit to the discipline of traditional Democratic leaders, issue his own orders and imposed his own discipline, and thus won the nomination. But some of the delegates practiced what McGovern preached and, before the last of them had left town, the grass roots finally did actually have something to say about what went on.

The tight discipline was evident everywhere. There were no serious demonstrations in the street. There were no very rousing demonstrations in the convention hall until Edward Kennedy and McGovern himself delivered the final, unifying speeches. His delegates voted down the line in favor of McGovern's position on credentials, platform, and procedural matters, varying only rarely and slightly and not on any issues that were of basic importance to the candidate.

But the discipline began to wear thin when McGovern, like the old guard he had replaced, sent forth instructions on who should become the vice presidential nominee. Delegates who had come to Miami Beach thinking they had been elected to make up their own minds, made an effort at independent judgment, and thus Thomas Eagleton had to contend with a long list of foes, from Eleanor McGovern to Mao Tse Tung. That hint of rebellion kept McGovern's acceptance speech off of prime time—thus kept him from speaking to the millions of East-Coast wage-earners whose votes he needs and for whom large chunks of his speech were intended.

The next day, the rebellion finally broke through. McGovern nominated Pierre Salinger to be vice-chairman of the party. The Democratic National Committee turned thumbs down on Salinger, electing their own man instead. McGovern's dogma had finally become the Democratic Party's fighting words: they had become independent of party leaders in fact as well as in doctrine.

There were scenes to be remembered from this convention. Frank Church, sitting in his chair along one aisle, working on a speech to be used in case of a major challenge to the foreign policy plank. His speech was not needed. In all, he wrote three speeches at the convention that were never given.

The Idaho delegation digging into A & P grocery sacks and hauling out bread, cheese, bologna, wine, for supper the first night of the convention. All hands turning to on Kentucky Fried Chicken, compliments of the Colonel, the second night. These were only two of the ways delegates from many states tried to beat the outrageous restaurant prices in Miami Beach. The McGovern staff arranged a 69 cent a day breakfast for his delegates. The press had it easier—the American Association of Railroads set up a press room with ample supplies of ham and beef sandwiches loaded with meat, along with soda pop, beer, and coffee. Some of the "working press" never left that room while it was open. "Non-stop eating," one storyless reporter called it.

The persistent cries of O'Brien to "clear the aisles." Actually, most of the delegates were in their seats. O'Brien also pleaded with "media" to clear the aisles. There were perhaps 400 reporters on the floor at a time. The aisles were usually passable, even when O'Brien was pounding his gavel—it was the noise, not the traffic, that was disrupting. But the traffic itself was caused not so much by seated delegates nor 400 reporters as by upwards of 1,500 others—workers for candidates, lobbyists, ushers, security men, visiting politicians, wives and children of delegates, and so on—who were given passes to be on the floor but were not given any place to sit. The aisle was their only home.

Press passes were, as usual, given mostly to the local Washington, D.C., and New York press, who work for networks, wire services, and big newspapers and could use their favored position to focus national attention on their chosen favorites. The reporters trying to get the story about home delegations back to local people had to stand in line for as long as an hour and a quarter in order to get a pass good for 30 minutes on the floor. Part of that 30 minutes was always spent arguing with Security men who couldn't cooperate with each other about rules.

And other scenes.

The Idaho delegation in its most serious fight, the one about whether to announce support of the lettuce boycott. "If we're going to do that, we'd better be ready to take the next step and support a potato boycott," said Gov. Andrus. "I am not ready to do that." Ralph Harding saying, "If you think announcing on national TV that we support the lettuce boycott is going to help a McGovern ticket in Idaho, you're kidding yourselves." The vote was 8½–7½ against making the announcement—after Andrus ruled that only delegates, not alternates and visitors, could vote on the question.

Andrus himself, flushed and nervous as the time to cast Idaho's vote drew near. The national television shot, the lettuce squabble, some last-minute question about how Shawn Miller would vote, and the fact that he was Idaho's first Democratic governor since Hector was a pup to cast Idaho's vote at a Democratic convention, all combining to cause the nervousness.

Robert Lenaghen, stony-faced as usual, standing beside the governor's chair, observing, commenting, helping the delegation.

Ray Brandt, the Humphrey delegate, taking his whipping in good spirits and, when he voted for Eagleton, saying, "It's nice to be on the winning side for a change."

Angie Neitzel, deciding party unity was more important than a token vote for a woman, and going to Eagleton instead of Sissy Farenthold.

Miller, the most colorful member of the delegation in dress, and apparently taking the outcome in good spirit and going home ready to work for McGovern, although wondering if his candidate had not made too many compromises with the Establishment.

Willis Ludlow, standing thoughtfully next to Bella Abzug while their picture was taken together, and not knowing until later that he had been standing next to Bella Abzug.

Jesse Jackson, aloof and cold as a feudal lord, ignoring some offers of help being made to his "Operation Breadbasket," basking in his defeat of Mayor Daley.

Wyoming's delegation, priding itself on its non-commitment, watching the tactical value of non-commitment drain away as McGovern's forces rolled to a win. Wyoming's—and perhaps the convention's—most beautiful delegate, Mariko Miller, earnestly talking about the victory of independence over "squalid politics," saying, "I can be proud to be a Democrat again."

Dan Rather looking serious and making all the wrong predictions, Mike Wallace looking to his image, Virginia Sherwood looking fashionable, Harry Reasoner looking calm and a little above it all, while in the backrooms and trailers of the networks the teletype girls and internal wire editors and technicians provided the effort and information that were the guts of their broadcasts.

And finally—The pleased and surprised reaction to Eagleton. The man really can speak.

The exuberant, foot-stamping response to Kennedy as he told how other Democrats had achieved greatness, "And so will George McGovern."

And the hearty, rousing response to McGovern's own speech as, with the nation long since gone to bed, he said jobs will come before welfare, national strength will be maintained, but America must come home from its foreign adventures and set its own house in order.

The feeling of triumph and delight that swept the hall at the convention's end.

And then walking through the humid, sweltering early morning with old-time Democrats who, with those cheers still ringing in their ears, said, "It's really too bad McGovern was nominated."

After that, the Idaho delegation putting on swim suits and going to the beach to swim until sunrise.

One Idahoan trying desperately to get the hotel people to open their switchboard so he could call a taxi and get to his plane on time.

The network parties, with stars and messengers eating and drinking and dancing together.

The crowds in the Fontainebleu, jamming against the elevators, trying to get in.

The security guards in McGovern's hotel, trying to find safety without stopping celebration.

The magnificent sunrise over the Atlantic, and the satisfying thought that, so far, not even the thieves who operate Miami Beach have figured out a way to charge extra for that.

FOREIGN TRADE AND INVESTMENT ACT

Mr. HARTKE. Mr. President, much of the Washington press, particularly Hobart Rowan, of the Washington Post, has attempted to play up an alleged split in the labor community on my Foreign Trade and Investment Act of 1972.

In fact, labor stands united on the need to meet the challenge of imports and the excesses of the transnational firms.

Two excellent articles—one from the Christian Science Monitor and one from Business Week—go a long way toward clarifying this situation.

Mr. President, I ask unanimous consent that these articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

UNIONS EYE IMPORTS

(By Ed Townsend)

NEW YORK.—A special task force from AFL–CIO will mount a vigorous campaign nationally this year for passage of the Burke-Hartke bill. The bill is said to provide "immediate remedies and long-term answers" to the rising flow of imports and the exportation of capital and technology. According to the federation, too many jobs are being lost.

Nobody in the AFL-CIO expects the legislation to be voted on this year. Action is considered to be a year off. However, the federation wants to inject the "exportation of jobs" issue into this year's congressional campaign. AFL-CIO is hoping for commitments from members of the new Congress on Burke-Hartke, the Foreign Trade Investment Act.

The federation's executive council announced that the task force, to be directed by Howard P. Chester, will be strongly financed, adequately staffed, and fully supported by the AFL-CIO's headquarters and field staffs. Mr. Chester, a 33-year veteran of the union movement, is from the Stone, Glass & Clay Coordinating Committee, a union group that has suffered from a flood of imports from low-wage countries.

A top-echelon advisory body lists presidents of unions in steel, rubber, shipping, electrical manufacturing, glass, textile and apparel, machinery, and theatrical industries.

The AFL-CIO action coincided with moves by the United Automobile Workers (UAW) in Atlantic City, N.J., to shift its formal position from a "free trade" stand—traditional for the UAW—to a "fair trade" position, to join organized labor's campaign to fight the loss of jobs due to imports. The change in UAW is expected to lead to a unified voice in labor for protectionism.

The auto union approach is somewhat different from that of the AFL–CIO, but clearly positions of major factions of American labor are being reconciled. Labor is tightening ranks—and this could pose problems for U.S. business and industry. If the union efforts succeed, multinational operations could be much more difficult and costly.

Ironically, the drawing together of labor forces to give the unions stronger chances on Capitol Hill next year could jeopardize the outside support labor needs to put Burke-Hartke across. The legislation now has broad quota and tariff provisions that have interested many businessmen. The United Steelworkers, the federation's largest union, and the steel industry insist that mandated quotas are needed despite present voluntary agreements to limit steel exports to the U.S. Many others of the AFL–CIO unions and their employers similarly feel that limits, by law, are necessary.

QUOTAS OPPOSED

However, the free trade or fair trade bloc—most importantly the United Auto Workers—opposes quotas, although its new trade position does accept the possibility of "phased tariffs."

When it first came out for Burke-Hartke, the AFL–CIO said its support should be considered a starting point for bargaining on a foreign-trade bill to protect U.S. jobs. Now the bargaining is under way. If, as it now appears, it increases the stress on U.S. industrial operations overseas but soft-pedals quotas and tariffs, those in business and industry who have tended to side with labor on Burke-Hartke can be expected to back away quickly. It happened in a labor drive for protective legislation in 1969, and it could happen again.

The Chamber of Commerce of the United States and other organizations and individual employers—the latest General Electric—contend that organized labor's complaints that firms are "exporting jobs" at the expense of U.S. workers cannot be corroborated. The chamber recently answered what it called "labor's myth of exported jobs" with a study showing that in 158 multinational companies, employing more than 17 percent of all manufacturing workers in 1970, jobs in the U.S. climbed more than 31 percent in the decade of the 1960's, while the national growth average was just over 12 percent. GE has reported that its domestic employment rose by 17 percent from 1965 to 1971, compared with a 6.7 percent domestic rise for all American manufacturers in the same period. It said its studies show the same trend for other U.S. multinationals—a faster rate of increase in domestic jobs than the average for the country's manufacturers as a whole.

While labor may not challenge such total growth figures, it cites others that it says show that 500,000 U.S. jobs have been lost because U.S. production has been shifted abroad or because of the toll of imports from countries with low wages and possibly government subsidies for production for export.

AFL–CIO says that 9 out of 10 radios sold in the U.S. are made abroad, that one of every six new cars are imported, that 19 of 20 motorcycles are brought in from overseas, along with 7 out of 10 sweaters, half of all nails and staples, and 9 out of 10 baseball mitts. It says further that America now imports 100 percent of all 35mm still cameras, 96 percent of its magnetic type recorders, 70 percent of portable typewriters, and 50 percent of all black-and-white television sets. It contends the roll-call of decimated, high- and low-technology industries is almost endless.

The federation says it is not isolationist—but that it must be realistic.

"We believe that there is no such thing as 'free trade' in the world today," AFL–CIO's George Meany said recently. "We insist there must be fair trade. . . . Burke-Hartke would meet that need."

The legislative proposal would end tax-free treatment for U.S. income from licensing and transferring patents to foreign corporations; reorganize the U.S. Tariff Commission into a Foreign Trade and Investment Commission with power to regulate all imports; permit strict quotas "in areas adversely affected by foreign trade"; give the President authority to regulate capital outflows for private investment abroad; end tax exemptions for U.S. employees of foreign subsidiaries of U.S. corporations; restrict the use of U.S. patents abroad, and deal harshly with multinational corporations by repealing tax credits for foreign earnings and taxing earnings and profits controlled by foreign corporations.

These are somewhat broader provisions than those in UAW's new blueprint for new trade legislation. UAW would require U.S. licensing of U.S. investments abroad—and allow licenses "only when the investment can be shown to be in the interests of the people of the U.S." It would require U.S. companies operating abroad to meet a "code of good behavior" toward their foreign employees and to guarantee "full job protection" for employees in the U.S. who might be adversely affected by foreign investments.

It would tax profits of foreign subsidiaries of U.S. corporations, whether or not the money is repatriated, and "close other tax loopholes favoring production in foreign countries at the expense of the U.S."; impose a "competitive promotion tax" on firms that make "excessive" profits in the face of substantial invasion of the domestic market by imports in their lines of production—as a penalty for failing to compete with imports; make it a crime for U.S.-based international corporations to engage in speculation against the dollar, with jail sentences for officers responsible, and increase government aid to U.S. workers hurt by imports, adopt "phased tariffs" to curb market disruptions, strengthen present antidumping laws, and crack down on U.S. trade treaties that fail to remove barriers to U.S. exports.

A CAMPAIGN FOR PROTECTIONIST TRADE ACTION

Turning to the tactical arena it knows best—political campaigning—organized labor is mounting a major "educational and lobbying campaign." Its purpose: to gain grass-roots voter support in next year's Congressional battle for stronger protectionist trade legislation.

"We think trade is going to be an issue in the campaign this fall," one AFL–CIO official said recently as the federation announced creation of a "Task Force for Burke-Hartke." The task force will try to use organized labor's powerful local political campaign apparatus to force Congressional candidates to commit themselves in favor of the controversial trade bill. The bill would set up strict import quotas on all industries, tightly regulate operations of multinational companies, and give the President broader authority to cope with foreign trade problems.

"We intend to conduct a campaign of fact to counter the Administration's campaign of fiction," the AFL–CIO spokesman said. Just how much money and effort labor plans to expend is unknown. But AFL–CIO President George Meany, in the official announcement of the campaign, said: "It will be adequately financed, adequately staffed, and have the complete support of the AFL–CIO headquarters and field staffs, as well as the full-scale cooperation of the staffs of major affiliated unions both in Washington and in the field."

ORGANIZING

Named to the task force by the AFL–CIO's ruling Executive Council were the presidents of some of the unions hardest hit by import-related job losses: United Steelworkers of America, United Rubber Workers, National Maritime Union, Seafarer's International Union, International Union of Electrical Workers, Glass Bottle Blowers Assn., International Brotherhood of Electrical Workers, Textile Workers of America, International Ladies Garment Workers' Union, and the International Alliance of Theatrical, Stage Employees.

The details on how the task force will operate and the exact shape of the campaign are uncertain, primarily because of disagreement among the unions as to how the money and effort should be spent. But as things now stand, the unions hope to conduct advertising campaigns, teach-ins, and mass meetings throughout the nation between now and the elections. The major focus, however, will be in Congressional districts where the job loss from imports has been the severest.

The task force idea has been under consideration since the February meeting of the AFL–CIO Executive Council, when it became clear to labor that there was no real hope of Congressional action on a trade restriction measure this year. At that time, ranking AFL–CIO officials indicated that labor would spend its time this year trying to educate voters on the merits of the Burke-Hart bill.

Creation of the task force also comes at a time when organized labor has its first real hope of going to Congress next year with anything close to a unified vote on trade. At its recent convention in Atlantic City, the United Auto Workers moved into the protectionist trade camp for the first time in its history. Long the strongest voice for "free trade" among the major American unions, the UAW is now demanding what it euphemistically calls "fair trade"—a 180-degree shift from past policies.

UAW President Leonard Woodcock has repeatedly insisted that the union still stands for free trade. But the trade resolution approved by the UAW convention is, if anything, more protectionist than the AFL–CIO backed Burke-Hartke bill.

BALANCING ACT

For Woodcock and the UAW leadership, the trade issue is a political tight-rope. In the auto industry, hard hit by imports, the rank-and-file sentiment is for protective legislation to save jobs in domestic plants. But in the defense and agricultural equipment industries, where jobs are often dependent on export sales, the pressure is against the stiff quota regulations proposed under the Hartke-Burke bill. Both of these industries are heavily organized by the UAW. Consequently, the major thrust of the UAW trade position is an attack on the multinational corportaions. But the effect of the position would clearly force a "buy America" policy on the U.S. economy.

When it talks of its trade policy, the UAW decries isolationism and protectionism. "History teaches us that economic isolationism is the wrong answer," the union said. "The trade wars of the 1930s made a major contribution to bringing on a worldwide depression, to the rise of Hitler, and the outbreak of World War II."

But the action called for by the UAW convention erases the rhetoric. Under the UAW trade position, legislation would be enacted to:

"Require licenses for foreign investments proposed to be made by U.S. corporations, including reinvestment of profits made in foreign operations."

"Tax on a current basis, whether or not repatriated, profits made by foreign subsidiaries of U.S. corporations and close the tax loopholes favoring production in foreign countries at the expense of the U.S."

"Impose upon corporations making excessive profits in the face of substantial invasion of the domestic market by imports in their line of production a competitive promotion tax which will penalize them heavily for refusal to compete with imports."

"Make it a crime for U.S.-based international corporations to engage in speculation against the dollar."

The union also called for "phased tariffs," an amendment to the GATT agreement to force "international fair labor standards," tougher antidumping laws, and greater trade adjustment assistance benefits.

The common denominator between the AFL–CIO and UAW positions is the strong attacks they have made on the multinational corporations and the tax benefits they enjoy under existing U.S. law. It is in this area that the AFL–CIO and UAW could easily reach agreement in any of the upcoming Congressional trade battles.

BAN ON USE OF DIETHYLSTILBESTROL IN CATTLE FEEDS

Mr. HANSEN. Mr. President, at the request of the distinguished Senator from Nebraska (Mr. Curtis) I ask unanimous consent to have printed in the Record a statement by him and an insertion on the ban on use of diethylstilbestrol in cattle feeds.

There being no objection, the items were ordered to be printed in the Record, as follows:

Statement by Senator Curtis

The Federal government has taken administrative action to ban the use of Diethylstilbestrol (DES) in cattle feeds effective next January 1, and the Labor and Public Welfare Committee of the Senate has recommended legislative action to effect the ban immediately.

I do not believe the Senate or the Congress should take hasty action on a matter on which scientists with broad training and experience disagree as widely as they do on this question.

Furthermore, we have indications that the proposed ban will force the price of beef to go up by three to 10 or 12 cents a pound at retail, at a very time when many persons including some politicians are trying to convince the American people that the price of food already is high enough to justify some kind of consumer revolt.

I wish to place in the Record an appraisal of the DES controversy by a native Nebraskan who received his advanced academic training at the University of Minnesota. This appraisal of the problem is the most learned one I have received on the subject, and I wish to share it with the members of the Senate so they will better understand the positions of opponents of an outright ban including prominent spokesmen for the cattle industry.

August 8, 1972.

Senator Carl Curtis,
Senate Office Building,
Washington, D.C.

Dear Senator Curtis: I am writing to you with regard to the recent Food & Drug Administration act in banning Diethylstilbestrol from use in feeds for finishing cattle and sheep.

I earned a Ph.D degree at the University of Minnesota in 1960. I am a native of Nebraska and am now employed by a Nebraska firm. Since earning the doctorate degree in Animal Nutrition, I have been associated with various firms in the feed and drug industries. It has been my great pleasure to work with cattlemen in all areas of the country. During this period of time, I have found it necessary to continue studying many of the feed additives and other materials which are used to enhance rate of gain and efficiency of feed utilization. I feel that by virtue of my scientific training and experience in the feed industry that I am qualified to make some observations with regard to this recent action.

Diethylstilbestrol was first synthesized in 1939. Upon various screening tests it was found to have estrogenic activity very similar to that of the estrogens produced in the female animal. One of the first uses for Diethylstilbestrol was in the treatment of certain types of breast cancer in human females and in the treatment of prostatic cancer in human males. In fact, it was used for this purpose long before its activity in promoting increased rates of gain and efficiency of feed utilization in beef cattle and sheep was observed. Diethylstilbestrol has long been used for estrogen replacement therapy in human females who have gone through the menopause. It has also been used to maintain pregnancy in human females. According to the Physicians Desk Reference, Diethylstilbestrol is administered at rates of from .5 milligrams to 5 milligrams a day depending upon the condition to be treated. In some cases Diethylstilbestrol has been used at rates as high as 125 milligrams per day to maintain pregnancy in human females.

Dr. Charles Edwards and Dr. C. D. Van Houweling have given ample testimony before various congressional committees to the use of Diethylstilbestrol in humans. They have also pointed out that the amounts found in beef livers is far below that which is commonly prescribed.

The greatest amount of Diethylstilbestrol reported in beef liver has been 100 parts per billion. If we assume that a person had liver known to contain 100 parts per billion of Diethylstilbestrol, it would require a daily intake of 10 lbs. of liver to equal a therapeutic dose of 5 milligrams per day. To further complicate the picture, the Diethylstilbestrol residues in liver are in a conjugated form and there is considerable question as to whether or not this conjugate is biologically active.

I have discussed this matter with many others equally as well or better qualified than myself to judge on its merits. One friend of mine has conducted an extensive review of all the literature pertaining to Diethylstilbestrol. He has been unable to find the reports of experiments in which it was observed that Diethylstilbestrol administered to strains of mice bred for cancer susceptibility actually produced cancer when DES was administered to them. I feel that those who have condemned DES carcinogenic should be required to produce the experimental evidence upon which statements have been based. This should be done in public hearings under questioning by qualified experts. Such experts should be from the field of toxicology and not necessarily from the medical profession.

There have been a number of studies and statements released to the press regarding the impact of a ban on the use of DES in cattle and sheep feeding on prices of meat to the consumer. This cost has been estimated at 3½c to 5c per lb., which is minimal. However, it is extremely difficult if not almost impossible to accurately assess the economic impact of such a ban. If we assume that the figure of an additional 500 lbs. of feed per animal will be required, we can calculate the increase in the amount of grain required to finish cattle. In 1971 there were approximately 26.3 million fed cattle slaughtered in the United States. Numbers on feed have increased markedly this year.

An additional 500 lbs. of feed of which at least 80% will be grain means an increase of at least 200 million bushels of grain required for the cattle feed industry alone. An increased requirement of this type would have the effect of increasing prices of feed grain. This would increase cost of production, not only on beef cattle, but also on broilers and pork. It would also result in an increase in feed costs for dairy farmers. Thus the implications of the ban on the feeding of DES will have an effect on the consumer not only in hopefully increasing beef prices, but also other foods of the animal origin. These statements apply if production of foods of animal origin remain at present levels. It further assumes that any increase in the cost of production will be passed along to the consumer. This certainly has not occurred during the past 25 or 30 years. Food production has remained profitable only because those in basic food production have been able to increase efficiency enough to offset increases in production costs.

It is more than likely that any increased cost of production will not be passed on to the consumer. Rather, cattle feeders and other producers of foods of animal origin will be forced into an even greater cost price squeeze. If the production of meat, milk and eggs becomes unprofitable more producers will discontinue and there will be less available. Costs can be expected to increase as a result of reduced supplies. Who is being protected? The consumer has not objected nor reacted to the adverse publicity given with regard to DES and the very few numbers of reported instances of DES residues. Beef consumption is at an all time high, and with prices for live animals about equal to what they were 20 years ago. Are consumers really concerned? Or is it certain vociferous groups who are trying to dictate to the rest of the American public?

I would encourage your support of the pending legislation to modify the Delaney clause on the Food and Drug act.

In the age of rapidly improving analytical techniques for all types of chemicals we could very quickly find ourselves without any of the chemical adjuncts presently used in food production. A balance is needed and a determination is needed to determine whether or not a chemically detectable residue of any substance has any biological significance. In many cases I am sure that the minute residues detected in foodstuffs have no biological significance. I fear that the ban on DES may only be the first such substance banned, and that many other valuable tools for production of basic foods will follow. We could be regulated into a food shortage in this country which has always boasted of plentiful, high-quality food supplies.

If I can be of assistance to you in providing further factual information regarding DES or other feed additives, I would welcome the opportunity to do so.

Sincerely yours,

William S. Teter, Ph. D.

THE SYPHILIS STUDY

Mr. ALLEN. Mr. President, I ask unanimous consent to have printed in the Record an Associated Press dispatch of today, written by Jean Heller, concerning the syphilis study.

There being no objection, the dispatch was ordered to be printed in the Record, as follows:

Syphilis Study

(By Jean Heller)

New York (AP).—U.S. Public Health Service doctors had the knowledge and the medication as early as 1936 to successfully treat black men participating in a Federal syphilis experiment in Alabama, but the doctors withheld the treatment, a national medical magazine has reported.

Quoting from PHS' own reports on the progress of the experiment, known as the Tuskegee study, Medical World News reported that only 25 per cent of the untreated syphilitics were normal after several years of study while all syphilitics treated with the best remedy known at the time were free of the disease.

The Associated Press disclosed last month that doctors at the PHS' Center for Disease Control in Atlanta, which oversees the experiment, deliberately had denied treatment to participants in the Tuskegee study, even after the discovery of penicillin, so that autopsies could be performed on those who died.

The treatment of syphilis in the 1930s and early 1940s consisted of weekly doses of mercury and bismuth followed by doses of arsenic. The treatment lasted between 18 months and two years.

CDC doctors have said the doctors who ran the study in the early years chose not to treat some 400 syphilitics with the arsenicals because the treatment could be worse than the disease and sometimes was fatal.

However, Medical World News quoted the CDC report, which indicated early treatment was better than no treatment at all.

"Adequate antisyphilitic treatment prevented all forms of clinical relapse . . . whereas only one-fourth of the Negroes with untreated syphilis were normal," the report said.

Present and past CDC doctors say that Tuskegee and surrounding Macon County, Ala., were picked for the experiment because the area had the highest syphilis rate in the Nation in 1932, when the study was undertaken.

Dr. Donald R. Printz, CDC's chief of clinical research, had said that of the men tested in the area in 1932, 80 per cent had postive blood tests for syphilis.

When CDC was asked to recheck that figure, officials conceded they had misread the area's population breakdown. "Instead of being 80 per cent syphilitic and 20 per cent uninfected, Macon County in the 1930s was 80 per cent black and 20 per cent white," the medical magazine reported.

The magazine also quoted from a 1953 report written as a tribute to the Tuskegee study. The report noted that the participants received treatment for ailments other than syphilis and got annual medical examinations.

"The excellent care given these patients was important in creating in the family a favorable attitude which would eventually lead to permission to perform an autopsy," the report said.

"In spite of these attractions, there were some who refused their (physical) examination. This attitude sometimes appeared to the examining physician as rank ingratitude."

STUDENTS COMBAT MULTIPLE SCLEROSIS

Mr. BAYH. Mr. President, multiple sclerosis is a neurological disease of the central nervous system—the brain and the spinal cord—which afflicts an estimated 500,000 people in this country. Tragically, the symptoms appear most often in adults between 20 and 35, but there is as yet no known cure. Thus, many of our young citizens become victims without warning of an unexplained disease which is sometimes fatal and other times relatively stable. In most patients, however, the symptoms multiply throughout the nervous system over time. The average life expectancy after the onset of symptoms is more than 25 years, but for many patients those years are spent with incomplete motor control or sight.

In 1946, the National Multiple Sclerosis Society was founded as a result of widespread response to a public notice in the New York Times which read:

> Multiple Sclerosis: Will anyone recovered from it please communicate with patient. T272 Times.

Since then, the society has joined with 17 nations to combat the disease. In the United States, research has been conducted in closest consultation with the National Institute of Neurological Disease and Blindness. By 1967, nearly $7 million had been made cumulatively available in research grants from the National Multiple Sclerosis Society. Since 1968, Congress has appropriated approximately $3 million a year. However, a cure has not yet been found.

At a time like this, when there is some promise of new breakthroughs in the field, requests for research grants have greatly increased.

In response to this need for more money, Circle K International, the largest collegiate organization in North America, has designed a fundraising program for multiple sclerosis as one of its five major projects this year. Circle K, an offshoot of Kiwanis Club, will be making an effort to involve the entire Kiwanis family—Kiwanis, Circle K, and Key Club—in the drive against multiple sclerosis. These three groups, representing all ages, have already raised $25,000 this year, and are hoping to raise $39,000 more. At the same time, they are alerting countless citizens to the dangers of multiple sclerosis.

As one local example of this ambitious program, the Indiana University Club in my own State is hoping to raise $5,000 during 1972. Multiplied by the efforts of the 800 other Circle K Clubs, realization of this goal could symbolize one of the most successful years in the fight against multiple sclerosis.

It is with deep respect and appreciation for their tireless work that I salute the Circle K Clubs for this selfless effort which so clearly exemplifies the finest traditions of public service.

THE PENTAGON PAPERS: A DISCUSSION

Mr. CHURCH. Mr. President, Political Science Quarterly for June 1972, contains two provocative reviews of the Pentagon papers: One by Senator George McGovern and one by John Roche. I believe Senators will find them stimulating reading. I ask unanimous consent that they be printed in the Record.

There being no objection, the reviews were ordered to be printed in the Record as follows:

The Pentagon Papers—A Discussion

The publication of "confidential" materials has inevitably given rise to a debate concerning a number of different but related problems: To what extent do the revelations contained in the documents throw light on events or policy decisions with which they deal? To what extent, if at all, does the publication of the information contained in the documents jeopardize the processes of executive decisionmaking? How can the conflict between the public's right to know and the executive's need for confidentiality be reconciled? The editors of the *Political Science Quarterly* have in the past published a number of articles dealing with the issue of access to governmental information and the terms on which that access is made available, notably, Adolf A. Berle's and Malcolm Moos' reviews of Emmet John Hughes, *The Ordeal of Power* (*PSQ*, LXXIX, June 1964) and Theodore Draper's review of Jerome Slater, *Intervention and Negotiations: The United States and the Dominican Revolution* (*PSQ*, LXXXVI, March 1971). The recent publication of the *Pentagon Papers* has given the controversy new urgency. U.S. Senator George McGovern of South Dakota, candidate for the Democratic party nomination for president, and Professor John P. Roche, from 1966–68 special consultant to President Lyndon Johnson, were asked by the editors of the *Political Science Quarterly* to review the *Pentagon Papers* and to debate in print the political and legal issues to which their publication has given rise.

I

Publication of the *Pentagon Papers* has raised a storm concerning the right of the press to publish classified government documents. But the contents of the papers are so sweeping in their disclosures of official suppression of the realities in Vietnam, so revealing of the disastrous, secretly conceived policies and practices which led us into this tragic war, that it is impossible—in fact it misses their true significance—to discuss them in such abstract terms.

The integrity of our democracy is profoundly involved, not only in the constitutional sense with respect to the warmaking power, but in the basic sense of the reality of government by popular rule. It is axiomatic with us that a free people can remain free only if it is enlightened and informed. It is axiomatic with us, as well, that a free press is essential to the creation and maintenance of an enlightened and informed people. A press which obtains access to a record revealing so massive a gap between what our executive leadership knew and what it led the nation to believe on so vital a matter as war and peace would be subversive of our democracy if it did not bring that record to public attention.

The question of whether the press was justified in publishing the *Pentagon Papers*, then, cannot be separated from their substance. I will summarize, in brief, what I consider to be some essential aspects of the Pentagon account's disclosures and indicate what I believe to be their significance for our political society.

Much has been made, properly I think, of President Johnson's suppression of vital information in presenting the Tonkin Gulf resolution to Congress in August 1964, and of his lack of candor concerning the war in his election campaign that year. The *Pentagon Papers* confirm much of what had already been revealed about the administration's deception on Tonkin Gulf. They tell us that long before the August 7 congressional resolution, the president had initiated a covert war against North Vietnam with South Vietnamese torpedo boats and had authorized air attacks over Laos, under our command;

that on July 30 and August 3, just before the two Tonkin Gulf incidents which were the presumed reason for the resolution, torpedo boats had attacked North Vietnamese coasts and on August 1 and 2, T–28 planes had apparently strafed North Vietnamese villages; that the North Vietnamese boats that encountered the *Maddox* and *Turner Joy* were looking for the attacking vessels, and that the *Maddox*, at least, was on an espionage mission associated with these attacks on North Vietnam (pp. 258–61).*

Neither Congress nor the country knew anything about the covert war against the North, which was waged without congressional authority, nor did we have any hint that the U.S. vessels attacked were involved in that war. In fact, as the Pentagon account relates, any such association was explicitly denied (pp. 265–67). We were told only that those ships were the victims of an unprovoked assault. We were presented with a resolution presumably drawn up as a result of this assault but actually prepared six weeks earlier in the hope of just such an incident (p. 286). In short, the papers confirm that the Congress of the United States was deceived and manipulated by the executive branch in a carefully prepared plan to gain congressional sanction for a war already under way.

But the deception revealed by the Pentagon account is vastly more pervasive than that of a particular incident. It goes to the heart of the war itself, the way it was presented throughout to the American people, the Congress, and the world. In the case of the Tonkin Gulf attacks, we learn that the decision to bring the war to the North had nothing to do with aggression from the North; it was prompted by the virtual disintegration of our client Saigon regime, which was incapable of rallying popular support against the increasing strength of the Vietcong (pp. 243, 257, 269). Unable to establish a regime which could win politically in the South, we carried the war to the North explicitly in the hope of terrorizing Hanoi into calling off the Vietcong insurgency (pp. 235, 244, 324, 390), (a rather frightening example of the manner in which our policy makers often fell victim to their own propaganda myths; intelligence reports were telling them throughout that the insurrection in the South was not Hanoi's creation). The Pentagon account discloses that this process of military escalation to cover political failure in Saigon operated throughout our involvement, and the evidence is persuasive that it is still operating—with indefinite air and naval bombardment as the military means. What is revealed here is that we, the defenders of democracy and champions of law and order, explicitly resorted to bloody, ruthless war because the political decision in a distant land was not going our way.

The argument of administration defenders that President Johnson did not practice deception in the 1964 campaign because only contingency planning of bombing the North was involved is clearly specious in the light of the papers' disclosure that the determination to bomb was made in September, though timed for a later date (p. 323). The contingency argument is wholly irrelevant for the Tonkin Gulf incident, and even more so for the broader deception concerning the source and nature of the war. The contention that the papers, as published in the *New York Times*, represent only a fragment of the total record does not negate what they do tell us.

The central theme of successive administrations has been that we entered Vietnam to help defend it against Communist aggression from North Vietnam, just as we were told in 1950–54 that we were aiding France against Soviet-inspired aggression in the Indochina War. The Pentagon account not only confirms that this explanation is pervasively untrue, but it reveals that our policy makers were continuously informed by our intelligence services that it was untrue. Their private argumentation confirms that administration spokesmen knew their explanation was untrue when they used it. Further, the papers disclose that our policy makers often sought to justify military escalation by promoting the false explanation even while admitting that they had no evidence of the nature or extent of North Vietnamese aid to the Vietcong (p. 246).

While the papers do not deal extensively with the actual reasons for our involvement in Indochina, they do tell us enough to indicate that neither defense against external aggression (from Russia or China or North Vietnam) nor self-determination for the South Vietnamese was among them. Our policy makers were concerned with the consequences for our power of the spread of Communism in Southeast Asia, but it is repeatedly emphasized that they were concerned with this spread "by whatever means" it occurred. Clearly, not "aggression" but Communist influence was the target, even if that influence was achieved indigenously by political means. Since intervention against an indigenous revolutionary movement is illegal, a violation of the UN Charter, it was necessary to link local Communist movements with "external aggression" by the world Communist conspiracy. In the Indochinese War, this was done directly. In the Vetnamese War, it was done by charging Hanoi with aggressively engaging in a Moscow-inspired "war of national liberation."

A 1952 National Security Council memorandum reproduced in the papers lists the major reasons for our initial involvement in Indochina: (1) the loss of any country in Southeast Asia to Communist control "by whatever means" would swiftly lead to the loss of all the rest, thereby threatening our military security in the Far East; (2) Southeast Asia, especially Malaya and Indonesia, "is the principal world source of natural rubber and tin, and a producer of petroleum and other strategically important commodities"; (3) the rice exports of Burma and Thailand are essential to "important areas of Free Asia"; (4) the loss of Southeast Asia would "make it extremely difficult to prevent Japan's eventual accommodation to Communism" (pp. 27–28). At that early stage in our intervention, then, we had our own narrow interests for using our vast military power to prevent the Indochinese from establishing independence under Ho Chi Minh's leadership, even though it was universally known that this was the desire of the vast majority of the Indochinese people. While some of these reasons faded later in the struggle, we continued to stress the military strategic aim and concern for our prestige which, it was and is believed, would be damaged by defeat. In the end, the Pentagon account declares, we had to demonstrate that the United States, as "the most powerful nation in the world," had the will and capacity "to have its way in world affairs" (p. 255). President Nixon has given ample evidence that this Machiavellian, essentially xenophobic and imperial attitude still prevails.

Obviously, none of the above reasons can be squared with our UN obligation not to intervene in the internal affairs of other nations, Communist-controlled or not, or with what we had come to believe as our commitment to moral international relations. The Pentagon account tells us how our policy makers sought to obscure our departure from our legal obligations and moral commitment by suppressing or ignoring the information at their disposal. I can only summarize briefly.

We initially justified our intervention on the side of the French in Indochina in late 1949 on the grounds that Ho Chi Minh was the agent of the Moscow-led world Communist conspiracy. But a 1948 State Department intelligence report concluded that it could find "no hard evidence" that Ho Chi Minh took orders from Moscow (p. 8). Before we threw our support to France, Secretary of State Acheson characterized the French client Bao Dai regime as a puppet without popular support and entirely dependent on French arms for existence (p. 9). After our decision to back France, we recognized this puppet, isolated regime as the "legal" government of Indochina and expended vast sums to help keep it in power.

At Geneva, as we now know, Vietnam was defined as a single independent nation, temporarily divided for military armistice purposes, with a single government to be elected for the entire country in July 1956. Though not a signatory, we pledged—explicitly in the name of our UN obligation to respect independence and territorial integrity—not to disturb the agreements. But, the Pentagon account tells us, within days, the National Security Council decided the agreements were a "disaster" and took steps to nullify them. Specifically, the NSC set as its objectives "to maintain a friendly non-Communist South Vietnam" and "to prevent a Communist victory through all-Vietnam elections" (p. 1). The account also tells us that even before the Geneva Conference was over, the Eisenhower administration had taken steps to impose the Diem government on the South and to launch secret missions of sabotage and subversion in the North (pp. 15–19). The missions did not desist with the signing of the accords and our pledge not to disturb them. Tracing the steps taken to carry out the NSC's policy, the Pentagon account concludes that "South Vietnam was essentially the creation of the United States" (p. 25). When one recalls the lengths to which Secretary Rusk went to obscure the actual nature of the Geneva accords and to prove that it was Hanoi which undermined them, these disclosures are shocking indeed.

It is rather difficult to understand how the North Vietnamese can be labeled aggressors even if, as we charged, they had acted to prevent us from dividing their country in what we considered to be our interest.

But, as the Pentagon account reveals, for years after the conference they did very little. The insurrection in the South arose out of the oppressive policies of the Diem regime, which by 1955 had placed 50,000 to 100,000 people in detention camps, returned to ex-landlords the lands given to the peasants by Ho's Vietminh during the war against France, and replaced traditionally elected village councils with Catholic appointees loyal to Diem. Though under orders not to fight back, the Vietnam rank and file, out of sheer "fear and anger," resorted to insurrection. Not until 1959, some years after the insurrection began, did Hanoi render even moral and political support (pp. 67–75). By then, the CIA was reporting to Washington that Diem "had alienated all elements of the population by his oppressive policies" (p. 69). Throughout the early 1960s, while we were escalating our aid on the grounds of aggression from North Vietnam, the intelligence services were reporting that the Vietcong had no need of infiltration of men or materials from the North (p. 242). that it was increasing its control of the country and growing in popular strength, and that the Saigon regime was isolated and crumbling (pp. 257, 279, 314). Since these reports estimated that the bulk of the Vietcong was locally recruited and that the first individual Northern soldiers were not seen in the South until late 1964 (p. 338), the inviability of the successive Saigon regimes could scarcely be attributed to Northern aggression, even with a well stretched imagination.

---

*The page numbers in the text refer to *The Pentagon Papers: The Defense Department History of United States Decisionmaking on Vietnam*. The Senator Gravel Edition (4 vols.; Boston: Beacon Press, 1971).

When in mid-July 1965, we sent combat troops openly into South Vietnam, we already had 62,000 troops there. The Pentagon account tells us that our intelligence reported a single North Vietnamese regiment at the time (p. 465). Throughout the remainder of the Pentagon account, until early 1968, our military leaders repeatedly pleaded for escalation in the face of reports of the Vietcong's continued strength and its hold on the population and the continued weakness of successive Saigon regimes. As late as 1968, the Pentagon apparatus reported that despite the terrible expenditure of lives and material, "our" control of the countryside and urban areas was at pre-August 1965 levels (p. 601).

As indicated earlier, the continuous bombing of the North was undertaken early in 1965, not because of alleged infiltration of supplies and mean—the Pentagon account indicates the administration did not then know the extent of this infiltration—but in an effort to compel the North to call off the Souhern insurrection. This, obviously, demonstrates awareness that the insurrection was indigenous and that it could not be defeated in the South, as indeed several members of the administration confessed in memorandums included among the papers. Months before the systematic bombing of the North began, the administration was seeking ways to provoke the North into attacking because it could not marshal a case for involvement in the South (p. 280) and was fearful that expansion of the war without such a case would disturb key allies (p. 281).

In short, both the Congress and the American people were told, and are still being told, that we are fighting in Vietnam to defend it against North Vietnamese aggression and to gain independence and self-determination for the Vietnamese people. The *Pentagon Papers* tell us that South Vietnam is our creation for our power purposes; that the war began as an indigenous Southern insurrection against the intolerable oppression and corruption of a government which we imposed on the South; that our own intelligence services were telling our policy makers that the source of Vietcong strength was indigenous, arising out of its revolutionary social aims and identification with the independence struggle against France (p. 242); that we bombed the North and sent our troops into the South because our successive client regimes in Saigon were incapable of winning indigenous popular support; and that we resorted to charges of North Vietnamese aggression as a cover for our illegitimate military intervention.

The significance of this deception for our constitutional processes, for the democratic character and moral climate of our society, is obvious; it debases them. But the question of the war's legitimacy extends beyond our frontiers. Presumably, we are committed to the United Nations Charter and the principles of international law embodied in it, a commitment we clearly do not put on a par with that to Chiang Kai-shek or Marshal Thieu. I have referred to our flouting of our UN obligation not to disturb territorial integrity and independence. At no time do the papers indicate that our policy makers had the slightest qualms about the legal (or human) aspects of their decisions to block Vietnamese unification or to impose regimes upon the South by military force.

The Charter also requires that disputes be settled peacefully, by negotiation. The *Pentagon Papers* are replete with our opposition to, indeed our dread of, negotiations. We attempted to block the Geneva Conference on the grounds that any negotiation of the Indochinese War would necessarily mean concessions to the Vietminh, and we insisted on a war to the finish, even though we were not a combatant (pp. 10–11). Throughout the 1960s, we opposed negotiations because, as the papers disclose, we know that in any political contest consequent upon a settlement of the war the Vietcong would win (pp. 243, 317, 326, 387–88). For tactical reasons, however, we had to pretend we were for negotiations and so we offered them in terms which were "tantamount to unconditional surrender for the other side" (pp. 249).

From all this it appears clear that our institutional arrangements for controlling the warmaking powers of the president are faulty. Our system of checks and balances was devised because the founders of our system knew that power corrupts. The system broke down because our executive leaders, having assumed exclusive power in the making of decisions about the war, sought to maintain that power by systematic deception, thus proving the founders' adage.

The executive assumed this exclusive power because in the post-war system of international law many of the practices in which we engage are illegal and must be performed clandestinely. I have referred to the *Pentagon Papers'* account of the CIA-directed efforts to subvert and sabotage the Ho Chi Minh government in the North during and after the Geneva Conference. This kind of enterprise, of course, was neither new nor unique. In the same month that it was initiated, a CIA-organized and directed military coup overthrew the popular, democratically elected government of Guatemala which had effected modern radical reforms in a land that had been essentially feudal. The coup plunged that little country into decades of terror, misery, and ferocious oppression, and it intensified hatred for us throughout Latin America. A year earlier, the CIA had similarly organized the overthrow of the Mossadegh regime in Iran, which had sought to free that land from the control of foreign oil syndicates. Activity of this sort, conducted around the globe, requires a secrecy which permits the executive unlimited powers over war and peace. It is criminal in the light of international law, morally abhorrent, and incompatible with our open society. It needs to be eliminated and prohibited.

It is also clear that by virtue of its monopoly of official intelligence services, the executive was able to build a wall of secrecy behind which it could exercise absolute power. If it had been subjected more quickly and more closely to the scrutiny of informed public and congressional opinion, and if the executive were required to account regularly to the Congress as in Britain, it may not have fallen prey to its own delusions and fantasies. We need to devise procedures for such an accounting and for making available to Congress, and to the public, intelligence reports and other informative documents essential to intelligent shaping of decision and opinion. This includes more objective and responsible procedures for document classification and declassification. For these reasons, it appears to me that a searching investigation by the Senate Foreign Relations Committee into the origin and conduct of the war can play an essential role in reshaping the crucial institutional relations for avoiding future Vietnams.

But beyond institutional procedures, there is the far more profound problem of the direction of our foreign policy in the post-war era, which such a searching investigation can help to transform. We tell ourselves that we are dedicated to independence and self-determination for all peoples, but in fact we have based our policy on maintaining our dominant power position in an increasingly pluralistic, nationalistic world. To reconcile the two, we say that maintenance of our power is essential to the defense of independence and self-determination. But, in fact, we are no less self-centered, no less concerned with self-interest, than any other nation. Under the guise of protecting independence and self-determination, we use our great power to try to preserve our world dominance by interfering with independence and self-determination when we deem it necessary. We can do this only through the massive use of deceit.

It is time that we begin to appreciate that policies based on such narrowly conceived definitions of national interest must inevitably lead to major wars and that in this nuclear age such wars are no longer tolerable. Surely, if our national interests are involved in Vietnam, those of China or Russia are even more so since they are far closer. And do not the North Vietnamese plainly have a prior interest in the conflict in the South? It is the collision of such "national interests" which gives rise to modern wars. This Machiavellian system is precisely what the UN was devised to replace. Our foreign policy needs to be reshaped from one which seeks to maintain a world-power dominance to one which recognizes that we are part of a community of nations guided by international law and that our true national interest is in making this law operative.

Where does all this leave us with respect to the continuing war in Indochina? With today's knowledge we should be able to understand what most could not at the time, simply that our initial involvement was both morally and legally indefensible. Yet that basic lesson still seems unable to penetrate, certainly not into the policy councils of the Nixon administration. Now the game is to salvage at least something from a sacrifice that should have never been made, playing as close as possible to public willingness to tolerate continued American involvement in an election year. The same litany of "self-determination," the same attempts to impose our own visions and institutions on Indochina, make up the foundation of our policy today, just as they did some five painful years in the past. And we continue to pound and punish the people of Indochina in pursuit of those fraudulant objectives.

The single way to guarantee the futility of all we have done in Indochina is to ignore its lessons. My greatest fear is that we will regard it as an aberration, as a noble venture somehow gone bad because of faulty tactics. It is that mistaken judgment which has thus far made it impossible for us to let go of this debacle. If it persists, the same judgment will doom us to repeat the Indochina travesty elsewhere.

It is against this perception that current postures, and current negotiating positions, must be judged. We do have the option of completely ending our involvement in Vietnamese affairs, of achieving the release of our prisoners of war, and of leaving the ultimate political fate of that country to the people who live there. Few would argue today, with the experience behind us and the *Pentagon Papers'* revelations before us, that such a course at the beginning of the decade would have been light years better than the one we pursued. Further attempts to have a hand in writing Vietnam's political future are not only hopeless endeavors, they also guarantee a prolonged U.S. involvement and continued torture of the people of Indochina. Worst of all, considering the implications for our own constitutional system and our international posture, they signal a persisting refusal to learn anything at all from all the brutality and bloodshed of the Vietnam War.

GEORGE MCGOVERN,
U.S. Senator.

II

Roughly twenty years ago, a law journal sent me a two-volume work in American constitutional history for review in 2,000 words. The study was bizarre, to say the least, and after inch-by-inch annotation, I was confronted with an impossible mission. I wrote the editors and told them that I would submit either a one-sentence review ("This is a fantasy: American constitutional history through the looking glass") or a 25,000-word analytical essay, taking the study apart section by section. I received no reply.

The *Pentagon Papers* falls into precisely the same category. An adequate one-sentence review would state: "While occasionally interesting and enlightening, the *Pentagon Papers* is fundamentally a historical junkpile which provides neither proof nor disproof for any hypotheses about the origins and character of the war in Vietnam." This proposition is one that I can document in 25,000 words, and fully intend to do so on another occasion. For our purposes, however, I shall take a different tack which will hopefully both confine me to the requested 2,000 words and prove useful to the profession. Instead of arguing the merits of the *Pentagon Papers*, I will raise certain questions for the benefit of those masochists who are prepared actually to read the mass of material. The intrepid few who last the course can respond to these questions in terms of their own application of the laws of evidence.

Certain issues of a marginal character can be eliminated, by *obiter dictum*, at the outset; they have only served to muddy the historical waters. There is, for example, no logical connection between the substantive merits of the *Pentagon Papers* and the question of censorship or the character of Dr. Daniel Ellsberg. In my judgment, the attorney general was unwise to move against the *New York Times:* inevitably, in the courtroom the parade of horribles began and before long the logical escalator put one in the position of either denying or affirming the right of the government to impose *any* sort of official secrecy. "Hard case," as Justice Holmes put it, "make bad law"—a generalization which was validated by the murky holdings in the *New York Times case.*

Indeed, a cynic might suggest that most of the public interest in the *Pentagon Papers*, as well as the response of many reviewers, was based on the proposition that unless the documents were really vital, the United States would never have gone to such lengths to suppress them. As usual, cynic overestimate the rationality of the decisionmaking process.

Let us now turn to the questions that the hardy reader should keep in mind as he plows his way into the thicket. First, how authoritative are the *Pentagon Papers?* To put it another way, how accurate a reflection do they present of the decisionmaking process within the government of the United States? Presumably a well trained undergraduate who had survived a course in American government and perhaps one on the presidency, should be equipped to answer this. Leaving aside the material in the papers pertaining to the period before 1961 (which is fundamentally of antiquarian interest only), what questions would our paradigmatic undergraduate ask himself?

"Where is the president?" is the obvious answer—and beyond that, "Where is the secretary of state?" We all know that the United States either enjoys or suffers under "presidential government" (the verb usage depending on one's attitude towards the incumbent president). Do the papers reflect this?

Not only are the president and the secretary of state ghostly figures, but the papers rarely include even their written contributions to statecraft. What we find are drafts prepared by assistant secretaries for submission to secretaries for eventual consideration by the National Security Council and the president. Secretary of Defense Robert S. McNamara is represented in person from time to time, particularly in 1966–67, but his memos to the president do not include presidential replies nor the critiques of others, such as Secretary Rusk, Clark Clifford, or Abe Fortas, to whom the president may have sent them for comment.

To take a case in point, the *Times* commentator indicates that the papers show there was a "consensus" to bomb North Vietnam within the administration before the 1964 presidential election (p. 318). But what do the papers document? Agreed, there were bombing scenarios on various drawing boards (indeed, the possibility of bombing the North had been raised in the 1961 Taylor-Rostow Report to President Kennedy), but what proof is there of a "consensus"? Unless one believes there can be a policy consensus in the executive branch without the agreement of the president, he is confronted with an analytical *cul-de-sac.*

In this same context, the *Times* commentator notes earlier that in May 1964, Johnson was presented with a scenario that included bombing. The documentation is a draft prepared by Assistant Secretary of State for the Far East William P. Bundy and Assistant Secretary of Defense for International Security Affairs John McNaughton for *submission* to the Executive Committee of the National Security Council. The commentator implies that the president received this recommendation but "delayed another nine months the scenario's denouement in an air war" (p. 255).

This clearly suggests a conscious decision—in context, a deceptive act. But what evidence is there that this recommendation was actually put before the president for decision one way or the other? None. In fact, as I know from my research on the presidential papers, it was deleted at the EXCOM level. But my personal knowledge is irrelevant to the point, namely, the evidential merit of the papers. All we know on this point from the documentation is that Bundy, McNaughton, *et al.* in May 1964 submitted to their principals a scenario that included bombing the North. (Parenthetically it might be noted that the president did not monitor the brisk chit-chat among assistant secretaries. Lyndon Johnson saw most of these documents for the first time when they appeared in the press.)

Space limitations require that we move to the next question that our well trained undergraduate will hopefully formulate: "What new information emerges from the papers?" What do they tell us about American policy in Vietnam that was not in substance already in the public domain? Obviously they provide cables, memos, and other bureaucratic mementos that have never been revealed, but what do we learn that was not contemporaneously available in books, newspapers, columns to anyone who wanted to utilize it?

In other words, were key decisions hidden? Or did contemporary commentators simply not focus on the things we are concerned about today? Recall that in January 1966, the chairman of the Senate Foreign Relations Committee, Senator J. W. Fulbright, said to Secretary Dean Rusk: "I confess I was scarcely conscious about problems of any significance [in Vietnam] until the last few years because our attention was directed largely in Europe."[2] What was true of Fulbright was, a *fortiori*, even more true for the rest of us.

Let us take two examples from the papers. First, there was great dismay expressed last year when it "came to light" that the United States had instigated the coup that overthrow Ngo Dinh Diem on November 1, 1963. It is conceivable that most Americans believed that Tolkien's "Hobbits" had done the job, but anyone who read the New Yorker in 1964 or The Last Revolution in 1965 knew from Robert Shaplen's account precisely what occurred in Saigon in the fall of 1963[3] (Conceded: Shaplen did not name Colonel Lucien Conein as the Central Intelligence Agency's key man.) Indeed, if one read Morris West's jejeune novel *The Ambassador*, he came out with a pretty clear idea of the anti-Diem operation.[4]

Because of the Washington habit of "backgrounding" columnists and top newsmen, I submit that very little occurred inside the bureaucarcy that was not reflected in the press, usually quite accurately. (An important exception involved President Johnson's frank discussions with a tight circle of personal advisers.) Ironically, one of the conspiracies unearthed by the compilers of the papers probably reflects a failure in backgrounding, namely the allegation that National Security Action Memorandum No. 328 (April 6, 1965) included an authorization to change the mission of the Marine battalions at Danang from "defense" to "offense" (p. 410).

Those unfamiliar with military usage may find a shift from a static to an active defensive posture a "change in mission," but what concerns us here is the alleged secrecy of the whole affair. The papers imply that the State Department only confirmed on June 8 that the Marines had allegedly changed their mission, and that this was done in such a way as to camouflage a quantum jump in strategy. Against this background, let me put two queries to the serious student: (1) when in fact did the Marines inaugurate active patrols? and (2) when was the fact that the Marines had inaugurated active patrolling announced at a Military Assistance Command, Vietnam (MACV) briefing in Saigon? A third question for those who do the necessary research: why do you suppose the Saigon press corps did not feature this "change in mission"? Perhaps because the experienced war correspondents in Saigon did not recognize it as a "change in mission"? Could they have been correct?

Richard Harwood of the *Washington Post* has written in this connection:

> The *Post* and the *Times* and other large news organizations published thousands of stories, editorials and essays in 1964 describing the deteriorating military situation in Vietnam—just as it was described in the official memoranda and cables in the Pentagon papers. The various options and contingency plans being put before the President at that time were reported repeatedly and accurately—as they are now reported in the official papers . . . the public was simply not interested. Nor were most members of Congress.[5]

But again my role here is to ask questions, not to answer them. Let me conclude this section by challenging readers of the papers to uncover one significant policy issue that was not contemporaneously debated and explored in the media. They may find it useful to begin with the writings of I. F. Stone: whatever one may think of his political views, he knew how to read.

Having looked into, first, the question of how authoritative are the papers as a source and, second, how much new information about policy issues does the volume provide, the reader might finally ask "What significant questions of policy do the papers ignore?" To put it another way, he should ask: "How coherent a history of our involvement emerges from the papers?" Drawing a figure of speech from Sherlock Holmes, let us search for some dogs that did not bark.

Beginning, as before, with 1961, a serious analyst of American policy toward Southeast Asia is immediately confronted with a serious gap in the narrative as found in the papers: there is no examination of the "neutralization" option, which flourished in the aftermath of the 1962 Geneva Agreement on Laos. In retrospect, the notion of the neutralization of all Indochina under great power auspices was doubtless a fantasy—Hanoi simply would not cooperate. But at the time a number of serious men, both inside and outside the government, took the possibility seriously.

Nor do we find any discussion of the decision inside the Kennedy administration that

---

Footnotes at end of article.

President Ngo Dinh Diem (and his brother Ngo Dinh Nhu) must not be permitted to make a private deal with Ho Chi Minh. Mieczyslaw Maneli, the Polish chairman of the International Control Commission in 1963–64, has recently presented serious evidence[6] that Diem and Ho were discussing a "political solution" (Maneli was the intermediary) which would, in essence, have led to South Vietnamese neutrality in the cold war—and an American departure from the premises. Washington, as some memos by Roger Hilsman, then assistant secretary of state for the Far East document[7] found the prospect unthinkable: South Vietnam could not be permitted to desert the "Free World." Why did the compilers of the papers ignore this whole sequence? (They had the Hilsman memorandums at their disposal.)[8]

As it stands, the only significant mention of neutralization in the papers is a cable from President Johnson in March 1964 to Ambassador Henry Cabot Lodge stating that he was intent on "knocking down the idea of neutralization wherever it rears its ugly head . . ." (p. 252). Without indulging in historical paranoia, one may legitimately inquire why the compilers dumped this body on Johnson's doorstep.

This sort of inquiry can be continued almost indefinitely, but without further help from me—at least on this occasion. What the conscientious analyst must do is to go through existing commentaries on our Vietnam policy, particularly Lyndon B. Johnson's *The Vantage Point* with its careful documentation of what occurred in the president's inner circle, and to compare the results with the narrative found in the papers.[9]

Let me confess, in conclusion, that I have done just this. In fact, I have gone through the full version of the papers—a cruel and unusual punishment if ever one existed. It would be both improper and impossible for me to render my verdict on our policy at this time. Improper because the precise point of this essay is that scholars must reach their own judgments on the evidence; impossible because I have been unable to conclude on the basis of all the evidence at my disposal whether certain critical decisions could have been averted given the political environment of the times—for example, would the American people, politicians, and press have permitted the presidents to liquidate our commitment in 1963, 1964, or 1965?

Finally, one ultimate caveat: anyone who wants to attempt the job can try to mold a conspiracy theory from these materials, but I hereby issue a formal warning. Go to it! But I will be waiting at the pass—with footnotes. To say that I am not prepared to offer a synoptic interpretation of our policy is not to imply that I am unprepared or unwilling to demolish alternative interpretations based on bad logic, bad evidence, or both.

JOHN ROCHE,
Brandeis University.

[8] In Dec. 1967, I provided Dr. Leslie Gelb, coordinator of "The McNamara History" (as it was then called), with my full dossier on the Diem coup, including the Hilsman memorandums cited above. None of this material appeared in the *Pentagon Papers*.

[9] Lyndon Johnson, *The Vantage Point* (New York, 1971). The Johnson memoirs indicate, for example, that the president began "rethinking" our strategic options long before Tet. To my personal knowledge, he was secretly dismayed with the military's "More of the Same" policy as early as May 1967. Before Christmas 1967, he had resolved not to give MACV any more troops and was awaiting the installation of Clark Clifford as secretary of defense to initiate a total review of our options. Tet intervened and forced the pace.

CONCLUSION OF MORNING BUSINESS

Mr. MANSFIELD. Mr. President, is there further morning business?

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

UNFINISHED BUSINESS (S.J. RES. 241) TEMPORARILY LAID ASIDE

The PRESIDING OFFICER. Under the previous order the unfinished business will now be laid aside and stay laid aside for the remainder of the day or until House Joint Resolution 1278 and S. 32 have been passed, whichever comes earlier.

FURTHER CONTINUING APPROPRIATIONS, 1973

The PRESIDING OFFICER (Mr. TALMADGE). Under the previous order the Senate will now proceed to the consideration of House Joint Resolution 1278, which the clerk will report.

The joint resolution was stated by title as follows:

> A joint resolution (H.J. Res. 1278) making further continuing appropriations for the fiscal year 1973, and for other purposes.

Mr. MANSFIELD. Mr. President, if the distinguished Senator from Arkansas, chairman of the Committee on Appropriations, will yield, I suggest the absence of a quorum without his losing his right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. McCLELLAN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senator from Arkansas is recognized.

Mr. McCLELLAN. Mr. President, before we proceed to the consideration of this joint resolution, I would like to call attention to a typographical error in the printing of the resolution. On line 6, after the words "1972 or" there appears the word "in", which is an inadvertence of the Printing Office, I am sure, and is not a part of the joint resolution as reported.

I ask unanimous consent that the word "in" be stricken from the joint resolution before it is considered.

The PRESIDING OFFICER. (Mr. HARRY F. BYRD, JR.). Without objection, it is so ordered.

Mr. McCLELLAN. Mr. President, the Committee on Appropriations, at its meeting Wednesday, August 16, approved the continuing resolution without amendment and ordered it reported to the Senate.

As Members are aware, the present resolution contains an expiration date of August 18, 1972. The purpose of this resolution is to extend this date to September 30, 1972, or the sine die adjournment of the second session of the 92d Congress, whichever occurs first.

As of this date, 10 of the 13 regular annual appropriation bills have passed both the House of Representatives and the Senate. The remaining three bills—the appropriations bills for the Department of Defense, Foreign Operations, and Military Construction—are scheduled now to be processed in September. These three bills have been held up because of lack of necessary annual authorizations. One of the 10 regular annual appropriation bills remains in conference—the State, Justice, Commerce, and the Judiciary appropriation bill. The other nine bills have been sent to the President.

However, Mr. President, we should note that, in addition to the three bills that I have referred to that have not yet passed Congress and the one that is in conference, on yesterday the President vetoed one of the bills that had been sent to him, the Labor-HEW appropriation bill. In view of that veto—which has been sustained by the House of Representatives—there will be four bills yet to be passed by Congress.

Since it is clear that these three regular annual appropriation bills and the State, Justice, Commerce, and the Judiciary appropriation bill, as well as the HEW-Labor appropriation bill, cannot be enacted before the termination date of the present continuing resolution, an extension is required in order to assure the continuation of programs and activities funded in these bills.

In the case of the defense approriation bill, the foreign-aid appropriation bill, and the military construction appropriation bill scheduled to be processed in September, appropriations are provided for continuing projects or activities conducted during fiscal year 1972 at the current rate, or the rate provided in the budget estimate for fiscal year 1973, whichever is lower, and under the more restrictive authority. In addition, if there is no budget estimate for a specific item but it is a continuing program from fiscal year 1972, special provision is made in the resolution for minimum continuation until the matter is resolved in the processing of the regular appropriation bill.

In the case of the vetoed Labor-HEW appropriation bill, activities and programs are continued at the rate provided in the House or Senate bills, whichever is lower.

As in all other such resolutions, any obligations or expenditures incurred pursuant to the authority granted in this resolution will be charged against the applicable appropriation when the bill in which such funds or authority are contained is enacted into law.

Mr. President, it is clear that these three regular annual appropriation bills, as well as the HEW-Labor appropriation bill, together with the State, Justice, Commerce, and the Judiciary appropriation bill, cannot be enacted before the termination date of the present continuing resolution. Therefore, this resolution is necessary to assure the continuation of programs and activities funded in these bills, and I respectfully urge its adoption.

Mr. YOUNG. Mr. President, I support the position taken by the distinguished chairman of the Committee on Appropriations that the continuing resolution should pass. It is very necessary that it pass, and in my opinion without amendments.

It is unfortunate that some programs will not be financed as fully as they might be under this continuing resolution. Health, Education, and Welfare is one. That appropriation bill was vetoed, and the veto was sustained by the House. Under this continuing resolution programs and activities will have to be at the level of the House or Senate versions of the vetoed bill whichever is lower. Some very good programs were added in the HEW appropriation bill, but those will have to wait until a new Health, Education, and Welfare appropriation bill is sent to the Senate by the House. I hope the House will take action in sending us a new Health, Education, and Welfare appropriation bill soon after the recess.

Other programs, I think, will fare quite well, as good as could be expected under this continuing resolution.

I would have hoped that there could be a later, more realistic date of October 14, but the leadership insisted on September 30, and, of course, there is some possibility we can adjourn by then.

I do support the passage of the joint resolution.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. HANSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HANSEN. Mr. President, earlier in the year, when the Labor-HEW appropriation bill was before this body, the Senator from Nebraska (Mr. CURTIS) and a number of other Senators, including myself, discussed a problem that results from instructions promulgated by the Department of Labor which implemented the earlier law passed by Congress dealing with the health and safety of workmen, oftentimes referred to as the Occupational Safety and Health Act, or OSHA.

During the 91st Congress, hearings were held on that measure, and legislation was passed. There were a number of Members of this body who felt that the measure finally passed was too severe in its application, and an effort was made to substitute the so-called Dominick proposal for the measure as passed. A motion was made to lay on the table the Dominick substitute, as I recall, and by a vote of 41 to 39, if memory serves, a motion to lay the Dominick proposal on the table prevailed. As a consequence, a tougher, more unrealistic bill—at least in my judgment—was passed, and in due course became law. Since that time, in observing the mandate given it by Congress, the Department of Labor has promulgated very voluminous rules and regulations seeking to implement the law.

When the Senator from Nebraska (Mr. CURTIS) presented an amendment restricting the administration of the OSHA legislation that he and I and many other Senators had sponsored, as an addition to the Labor-HEW appropriation bill, Senator CURTIS displayed on his desk several piles of material that I suspected aggregated a stack 2½ feet high. At that time he pointed out that all of those materials were incorporated by reference into the law, but that that was only a part of what was actually in the law, and that if all the publications and all the pertinent data which have by reference become a part of that law were to be placed one on top of another, a member of the staff of the Library of Congress had estimated they would add up to a pile exceeding 17 feet in height, and that there was really no one place in the country where an employer could find out what was in the law except by going to the Library of Congress.

The Senator from Nebraska and I, as well as other Members of this body, have had a great many questions put to us by our constituents wanting to know specifically what the law says. These questions arose because officials of the Department of Labor, seeking to implement the law, were expressly denied by the act the opportunity of going to a man's place of business to explain what was in the law and how it would be applied and administered. While these administrators of the law could talk in general terms about the act, they could not talk specifically, nor could they go on the premises of a man's business and explain the law to him. Nevertheless, in accordance with rules promulgated by the Department of Labor, these inspectors could fine the employer if, in the judgment of the inspector, that employer was in violation of any part of this very vague body of law.

What the Senator from Nebraska was seeking to accomplish by having the material piled on his desk was to dramatize the problem that faces typical American businessmen, both large and small. We pointed out, in support of our amendment, that the bigger corporations, the bigger employers, had a better opportunity of researching the appropriate rules and regulations which may have applied to those particular businesses than would a small businessman. The dilemma that the typical employer found himself in was that there was no way that he could go to any one place and find precisely what the law said.

I think, if I recall correctly, some 11 or 12 pages were published in the Federal Register alone on the subject of stepladders—six or seven pages dealing with only stepladders.

This sort of law, implemented as it was by the Department of Labor with the promulgation of the rules and regulations that they put together, has brought about a totally intolerable situation. What has resulted is that no one man knows what he is supposed to do in order to comply with the law.

I told the Secretary of Labor that I would defy him—and I repeat this challenge—to pick out two administrators of the OSHA law; choose them wherever he wants to in any part of the United States; and if they had not gotten together previously and by connivance agreed on what they are going to find at variance with the law, I do not think there are two administrators in the United States who could go into a place of business that I will pick out in Nebraska, Wyoming, or Arkansas, or anyplace else, and who will come up with the same list of violations of the OSHA Act, rules and regulations.

So, really, what we are talking about in holding that changes need be made in this law is to point out that any time this sort of situation results, it places a totally impossible burden on an employer; it gives far too much authority to administrators and Federal inspectors.

These persons administering the law go in, they make the examination, and they determine on their own judgment if a person is in compliance with the law.

I know from personal knowledge that some of the people sent to my State of Wyoming, when asked about the law, said they did not know if there was a violation. They would have to go back to their room where they had the materials and look it up. That is the response that has been given employers in my State to very legitimate questions put by them to the administrators of the OSHA law.

All I can say, Mr. President, is that if the persons charged with administering these laws, if the persons who are cloaked with the authority to go in to follow up on a complaint or, on their own volition, to go in and make an examination, to determine if an employer is in or out of compliance and to levy fines on him for violations of which the employer could not be possibly aware, then I say things have come to a pretty pass in the United States.

There is a consequence. Because of the very serious concern that is felt by a majority of the Members of this body, which was expressed in like measure by Members of the House of Representatives, the House denied the use of funds under the appropriations made to Labor and HEW to administer the law with respect to those employers who had no more than 25 employees.

When the bill came to this end of the Capitol, we tried to attach the same sort of amendment. We failed by just a few votes on the 25 or fewer employee cutoff of funds for the administration of the law. We next tried for a cutoff for those employers employing not more than 15 employees. That carried.

This continuing resolution, as I understand it, despite the fact that the conference report, having the stamp of approval of conferees from both the House and the Senate, would have denied to the Department of Labor funds to administer the OSHA law with respect to employers having not more than 15 employees, takes into account no such feeling on the part of either of the bodies of Congress.

So, Mr. President, what I would like to do would be to call up an amendment that would restrict the funds made available by this continuing resolution, insofar as the OSHA law is concerned, to those cases involving employers with not more than 15 employees. This would be in full conformity with what was expressed by the House of Representatives and by the Senate, and which was further agreed upon by the conferees.

I have discussed this situation with the distinguished chairman of the Appropriations Committee and with the ranking member of the Appropriations Committee, the distinguished Senator from North Dakota.

I realize that time is short. I am fully aware that a number of Senators are not here today and I would think it might be difficult to get an accurate reflection of the sentiment of all of the people in the United States, as would be disclosed by a vote taken here today.

I know when I was discussing this amendment, the distinguished Senator from Rhode Island (Mr. PASTORE), my good friend, was on the floor; and though he voted against the amendment we proposed, I am certain that a rereading of the record will disclose quite fully that he shared our feeling of frustration and annoyance with the manner in which the Department of Labor was implementing a law that gave them such great, broad discretionary authority; in writing rules and regulations and by reference incorporating other material, and then not even having those rules and regulations printed. I know that the Senator from Rhode Island was concerned; and I, too, am concerned.

I am not going to press for a vote on the amendment that I would like to propose to this continuing resolution, because, for the reasons earlier stated, it seems to me that it would not really afford the Senate of the United States an opportunity fully to reflect the sentiment around the country.

Mr. President, if I may, I would like to call up amendment No. 1446 previously submitted by Senator CURTIS for himself and other Senators which I shall later withdraw. Nevertheless, I would like to ask for its immediate consideration and ask that it be read.

The PRESIDING OFFICER. The amendment will be stated.

The amendment was read, as follows:

At the end of the joint resolution add the following new section:

SEC. . Such joint resolution is further amended by adding at the end thereof the following new section:

"SEC. 107. No appropriation or fund made available under this joint resolution shall be obligated after August 18, 1972, to pay the salaries of any employees of the Federal Government who inspect firms employing fifteen persons or less for compliance with the Occupational Safety and Health Act of 1970."

Mr. HANSEN. Mr. President, the number of the measure offered by Senator CURTIS and others, including me, if I recall corectly, was amendment No. 1446.

Mr. President, and I will not belabor the matter much longer, but I think we are being unfair to the employers of this country at a time when every effort is being made further to expand job opportunities in this country, to permit the sort of rulemaking authority that was exercised by the Department of Labor so as to place very real and severe burdens on small employers.

No one wants to condone unsafe or unhealthy working conditions. I voted, despite my earlier expressed misgivings, for the Occupatonal Safety and Health Act. I must say, I had no idea that the Department of Labor would, by reference, incorporate all the voluminous material that it did into that law.

It is not asking too much that the people of this country, if they are expected to obey the law, should have the opportunity to know what the law is; yet that opportunity has not been given them. I have writen and I have talked to the Department of Labor and tried to get spelled out specifically what the law says and regulations but we cannot get that because the law says so much and incorporates by reference other statutes and publications, other material, other studies, other books, some of which the Library of Congress told us it believed could be found with certainty only in the Library of Congress.

When Senator CURTIS was debating this amenment he asked if he could get all the materials that, by reference, are incorporated into the law. The Library of Congress said that some of the material was in such short supply it could not permit its being removed from the Library of Congress. That is exactly what the situation is.

I would hope that when this continuing resolution, which I am certain will pass and which I shall support, expires on September 30, the Senate would be afforded the opportunity to reconsider its earlier stated position and we might go along with the House action exempting businesses with 25 or fewer employees.

But, nevertheless, I think most Americans are law-abiding. Most Americans want to see that working conditions are safe and healthy. I share that feeling, but it does not make any sense to tell a small businessman in Casper, Wyo., say, who may have one or two employees, that one bathroom is not enough and he has got to put in two, that he has got to have split toilet seats on both, and if he has one female employee he has got to put a couch in the bathroom so that that employee, if she so desires, may lie down.

This touches on another point. In legislation I have cosponsored to amend the basic law, if a regulation promulgated by the Department of Labor later on is abandoned, and this has happened, then we say in our amendment that an employer who in compliance with the law by having spent money only to find a week later that the Department of Labor had decided it was going to kick out that particular regulation, the Government of the United States should repay him for the expense he was put to, because many times this can represent the difference between a man staying in business and going out of business.

I have received letters from employees—not employers, but employees who have said that their jobs were in jeopardy because their employer was a small businessman and if he had to go to the expense that was indicated by the regulations as they were spelled out by the administrators of the Occupational Safety and Health Act, those employers would not be able to make enough money to stay in business; shops would close down, and their jobs would be placed in great jeopardy as a consequence.

So I would hope very much that the Senate by September 30, when it acts specifically on the Labor, Health, Education, and Welfare budget, will keep in mind the problems we have placed on employers through the delegation of this authority to the Department of Labor.

Mr. McCLELLAN. Mr. President, I ask unanimous consent that Mr. James Calloway, chief counsel, of the Government Operations Committee, be permitted the privilege of the floor during the consideration of this continuing resolution.

The PRESIDING OFFICER (Mr. MOSS). Without objection, it is so ordered.

Mr. YOUNG. Mr. President, the Senator from Wyoming has made a strong case for his amendment, which would exempt employers hiring 15 workers or less from the operation of the health and safety act program. There is nationwide support for the amendment. I do not believe any law was ever written during my service here more unreasonable and more unrealistic than this one, in the way it affects small businessmen all over the country.

I believe that the Senator from Wyoming is using good judgment in not offering it to the continuing resolution because the House just will not take it.

There will be another HEW bill. There has to be, because many provisions in the HEW bill which were vetoed are vitally necessary. That will offer another opportunity, next month, when I am sure the Senator will get the same strong support for his amendment as has now. There will be another supplemental appropriations bill to which this amendment would be germane.

I am really very pleased that the Senator is not urging a vote on the amendment now. He is using good judgment, because I believe it does not have any chance of being passed at this time and in this manner.

Mr. PASTORE. Mr. President, I rise only because the distinguished Senator from Wyoming is a very dear friend. He paid me a compliment in using my name. He has rendered a valuable service this morning. I do not think the fault is with the law as much as the fault is with the administration of the law.

I take this occasion to say that when we had debate on this subject, the reason why I voted against the Curtis amendment was that I did not want to be placed in the position of having it said I cared less about the safety of people who happen to work in a group of 15 in a shop, as against workers who happen to work in a group of more than 15. That could be easily misunderstood. But there is a distinction to be drawn. There is no question about that.

If, on a national level, we are really trying to make small business extinct, we are well on the road to doing it. The one grievance I have is that sometimes bureaucracy becomes so arrogant, so indifferent, so inconsiderate that it begins to push people around. I do not think that should be the way it should be done.

We in Rhode Island are proud of our safety provisions. In Rhode Island I do not think we need this law at all. When I was Governor, I was chosen to come down here to Washington because our State was foremost among the many States—and this goes back more than 25 years—in industrial safety.

We were as much concerned about the safety of our workers in Rhode Island as someone in Washington, whether it be at 1600 Pennsylvania Avenue or in the Labor Department; but I applaud the Senator for not pushing this at this time. I think there has got to be an answer to this. I would hope those responsible for formulating guidelines will read the Record. This idea that if one employs two or three people he has to subject himself to all this additional expense, he might as well tell his workers, "Look, put the key in the door and close up the shop." We have got to be reasonable about this. We have got to be sensible about this. I would hope, therefore, that this could be left to the States. I hope that much of it will be left to the States, but the law has passed, and I hope that the administration will improve it. I repeat, I do not think this continuing resolution should be a Christmas tree for a lot of the grievances we have, for the simple reason that this is an extension only until September 30 And if we adopt one amendment, we will have to adopt 15 or 20. That will defeat the purpose of the continuing resolution.

I thank the Senator from Wyoming for his assurance that he will withdraw the amendment.

Mr. HANSEN. Mr. President, I thank my distinguished friend, the senior Senator from Rhode Island. May I say that the great admiration and respect in which he is held has certainly always gone far beyond party lines. I have been an admirer of his for a long time, as have many people all over the United States.

I think the Senator has put his finger pretty squarely on the point. There is a difference. While certainly safety should not be equated with numbers of employees, I would not agree more with what we were trying to say in putting a restriction on the appropriations of money under this bill. The reason is that we have strong misgivings about some of the rules and regulations promulgated by the Department of Labor.

Pending such time as we will be afforded an opportunity to review and amend that law and more precisely set out the principles within which the Department of Labor shall promulgate rules and regulations, we think that it should not be administered with reference to businesses employing 15 or fewer employees.

There is validity to that position. We are trying to encourage the going into business of individuals. In this country, we recognize that the great virtue and great strength of the free enterprise system in part is assured by the readiness and the ease with which a person can go into business. We want to encourage people to start up in business.

The history of the country has been that most employers start in a very small way. When the job gets too big for the individual and the members of his family, he may start with one or two employees and then build up from that point.

The idea is that the operation should not include the hiring of a battery of lawyers to try to explain what might be encompassed in over 12,000 pages of rules and regulations. And that is what we are talking about this morning.

There has been reason to shut off funds for the administration of the law as it applies to businessmen with a certain number of employees.

I appreciate what the Senator has said. I appreciate as well what my great and good friend, the Senator from Arkansas (Mr. McClellan) has said, and the advice that he has given me.

Mr. DOMINICK. Mr. President, I strongly support this amendment which would give small employers a 1-year respite from harassment by Occupational Safety and Health Administration inspectors.

When the Occupational Safety and Health Act was debated in the Senate several of my colleagues and I warned that its noble purpose would be subverted by its unrealistically broad and vague mandate to the Labor Department. The events since the act was implemented a little over a year ago bear this out. Rather than an instrument for the noble purpose of providing a safe and healthy environment for American workers, the act has been a device for the harassment of thousands of already harried small businessmen and farmers.

Those who would disagree should read their mail more carefully. I have received several hundred letters from small businessmen complaining about inadequate notice of new regulations, vague standards, highhanded and arbitrary enforcement officials, and the lack of cooperation by the Occupational Safety and Health Administration in providing guidance as to compliance with the act. One constituent, a small businessman, related how he delayed opening his new paint shop for weeks because he could not get advice from the Occupational Safety and Health Administration regarding the minimum-size fan necessary to meet ventilation standards. Their only advice was:

> Use your best judgment. We can't certify you. We will decide whether you are in compliance if and when we inspect you.

If such an inspection took place, the inspector could say, "You guessed wrong," disapprove the fan, and without notice or hearing, levy an immediate fine.

No wonder small businessmen are losing faith in Government. They pay taxes to establish a large bureaucracy which sets and enforces safety standards, and then they cannot get advice from the very employees whose salaries they are paying as to how they can comply with the standards promulgated. And they struggle under redtape and paper work imposed by the OSHA bureaucracy. They wonder, and I do, too, whether the money to establish and enforce against 2- or 3-employee firms, regulations on everything from prohibiting ice in drinking water to requiring separate restrooms and split toilet seats could not be better spent.

I think it could. That is why I urge my colleagues to support this amendment which would prohibit during fiscal year 1973, the use of Labor Department appropriations for enforcement of occupational safety and health regulations against firms with 25 or fewer employees. This amendment passed the House by a vote of 213 to 154.

The appropriations for OHSA last year was $35.9 million. The budget request this year was $69.2 million, and the House recommends that amount. The Senate Committee recommends $80 million. OHSA now has 400 and some inspectors. The Senate committee recommendation would be sufficient to more than double the number of inspectors.

I am a cosponsor of Senator Curtis' bill, S. 3262, which would, like the Equal Employment Opportunities Act, exempt firms with no more than 25 employees, and would give the Secretary more flexibility in enforcing the act. In spite of the tremendous interest expressed by constituents, we have been unable to get hearings on S. 3262. Passage of the pending amendment to the Labor-HEW appropriations bill would give small employers a 1-year moratorium, and would put the Labor and Public Welfare Committee on notice that hearings on S. 3262 are warranted.

Mr. President, I ask unanimous consent to have printed in the Record an article entitled "Where the Safety Law Goes Haywire," published in the June issue of Nation's Business; my statement before the Subcommittee on Labor; and a letter to me, dated July 26, 1972, from Frank Hedger.

There being no objection, the items were ordered to be printed in the Record, as follows:

STATEMENT OF SENATOR PETER H. DOMINICK

Mr. Chairman, I appreciate this opportunity to appear before the Subcommittee and express my views regarding the Occupational Safety and Health Act. I am pleased that you have taken time out of a busy schedule to hold oversight hearings on this important legislation.

I do not need to remind you, I am sure, that I was actively involved in the debate on this legislation when it was before the Senate almost two years ago. I introduced a separate bill, and later offered it as a substitute for the Committee bill. I felt it offered a more balanced approach, particularly with regard to the establishment of safety standards. It provides for an independent National Occupational Safety and Health Board which would have promulgated standards to be enforced by the Labor Department. The effect would have been to separate the rule-making, enforcement and adjudicatory powers which the present law consolidates in the Labor Department.

But that's water under the bridge. Where we are now is that, after a little over a year of enforcement of OSHA standards promulgated under the Labor Department's broad, vague mandate to assure "safe and healthful working conditions" to all workers, it is apparent that extensive changes in the law are needed. I have received hundreds of letters from small businessmen and farmers registering a variety of complaints about enforcement of the Act. I am sure every other Senator has too.

One of the most frequently recurring objections is that OSHA standards are inflexible. They fail to take into account variations in working conditions in different industries, the size of the firms affected, or the cost impact of compliance. The recent action of the House and Senate in amending the Labor-HEW appropriations bill to flatly prohibit expenditure of Labor Department funds for enforcement of OSHA against small employers is a clear signal that some changes are needed in this area.

Another frequently expressed complaint is with respect to the overbroad delegation of authority to OSHA inspectors who have the power to make on the spot decisions to issue citations and levy immediate fines against employers for seemingly trivial violations. Employers wonder, if this legislation was intended to promote compliance with safety standards, why they aren't entitled to a reasonable period to comply before fines are levied. The way it is now, they are fined immediately for violations, and additionally if they don't comply within a specified period of time. They are, in short, treated like criminals.

Employers, particularly small ones who cannot afford to retain full time legal counsel, are unable to understand complex and vague OSHA regulations. Moreover, once they do understand what the regulations require, they frequently are unable to see any relationship with better working conditions or improved safety. They are reluctant to seek advice from OSHA officials for fear that an inspection will be triggered before they are able to determine what action is necessary to comply. My best information is that Occupational Safety and Health Administration officials have been uniformly uncooperative when employers do seek advice as to what is required from them.

One of my constituents, a small businessman, delayed opening his new paint shop for weeks because he couldn't get advice from OSHA officials regarding the minimum size fan necessary to meet ventilation standards. Their inflexible position was that they had no specific regulation as to fan size, and that he should use his best judgment. They would determine whether he was in compliance if and when an inspection was made. At such an inspection, the inspector could, of course, disapprove the fan, and without prior notice or hearing, levy an immediate fine, in effect punishing him for guessing wrong.

The administration of OSHA, due to the police-oriented approach which permeates the legislation, has gotten crosswise with Congress' original purpose—to improve working conditions for all the workers in this country. Employers are *punished* for noncompliance with standards they know little about, rather than *assisted* in complying. For example, the Act makes it a crime to give an employer advance notice of an inspection. It should be just the opposite. Employers should be notified in advance, told where they are in violation, and offered assistance in complying. Only then should fines for noncompliance be levied. OSHA is not a criminal statute, and administration of it as if it were simply is not going to work. Unfair regulatory procedures will only alienate employers from State and Federal officials who ought to be guiding employers toward compliance. The President's Report on Occupational Safety and Health recognizes this problem. In summarizing the progress made so far in implementing the Act, the report states:

"However, the program's first year of operation has produced the following conclusions:

"1. It will not be easy to attain the goal of assuring a safe and healthful workplace for the Nations workers, and it cannot be done quickly. Effective enforcement of the Act will be critical, but it alone will not do the job. Cooperation among all levels of government and the voluntary compliance of both employers and employees are essential ingredients for success."

Several proposals pending before this Committee would improve the Act. I am a cosponsor of Senator Curtis' bill, S. 3262, which would, like the Equal Employment Opportunities Act, exempt firms with fewer than 25 employees, as well as small farms, and would give the Secretary more flexibility in enforcing the Act. The Secretary would be required to review the so-called "national consensus standards" now in effect, and determine how they can be made responsive to varying conditions in different industries. It would also specifically require the Labor Department to provide technical advice to employers of 100 or fewer employees in order to assist them in complying with the Act.

I am also a cosponsor of S. 3630, introduced by Senator Tower. It would require that OSHA safety standards for the construction industry take into account the different working conditions in the light and heavy construction industries. I share his view that enforcement of uniform standards designed to protect employees in hazardous heavy construction industries would work against federally assisted housing programs by unnecessarily driving up costs in the relatively unhazardous light construction industry.

After these oversight hearings, I feel confident the Committee will conclude that improvements in the law are needed. At that time I hope these two bills will be carefully considered. Thank you again, Mr. Chairman, for giving me the opportunity to be here this morning.

Where the Safety Law Goes Haywire

"It was a red-letter day for us," says Robert J. Starr, president, Safety and Industrial Net Co., Colebrook, Conn.

His firm makes a patented heavy duty net used on bridge and high-rise building construction.

Mr. Starr, 67, founded his company about nine years ago, and it prospered.

But it was after April 28, 1971, that sales really took off.

That was when the federal Occupational Safety and Health Act went into effect. It spells out a whole raft of regulations affecting every business and industry.

Its greatest impact, perhaps, has been on the construction industry. It specifies, in minute detail, how a construction job must be run—from dispensing of paper drinking cups to operation of laser beams.

One requirement is for safety nets on high-rise, skeleton steel construction, where planking or scaffolding isn't practical.

"Since then," Mr. Starr says, "our safety net sales have shot up 50 per cent."

His firm's heavy-duty, small-mesh net costs 40 cents a square foot. On a big job, that runs into money.

"Our nets are being used on the Gold Star Bridge at New London, Conn.," he says. "The bridge is about 3,000 feet long. They're using about 250,000 square feet of nets."

Or, $100,000 worth.

"His sales will go up a lot more," says Keith Nystrom, assistant safety director, Brown & Root, Inc., a big Houston, Texas, construction firm.

"Many builders still don't know that, in many cases, they must use nets.

"The nets' use on high-rise steel erection—like boiler structures for power plants—may hike costs 100 per cent or more for that part of the operation. They're expensive to buy and install. And they make it much more difficult, and costly, to hoist up building materials."

Brown & Root, he points out, is all for safety and health. So are other members of the Associated General Contractors, a group which acts as an industry spokesman.

Says AGC President James D. McClary, who is senior vice president, Morrison-Knudson Co., Inc., Boise, Idaho:

"We can't buck the objectives of the safety law. We're for one."

THE RECORD IS GOOD

But how badly does the building industry need the eagle-eyed surveillance of the new Occupational Safety and Health Administration?

Well, its safety record is pretty good.

National Safety Council statistics show it is less dangerous than these industries—coal mining, other mining, meat packing, air transport, transit, lumbering, leather, quarrying, wood products and marine transport. Its accident rate, per million man-hours of exposure, is 13.48.

Mr. McClary says a prime irritant in the many OSHA standards is that they do not fit a construction site, but are more appropriate for industrial plants.

Another prime irritant is what the Act does to costs.

"I've heard estimates that the law will boost construction costs anywhere from 10 to 35 per cent," Mr. McClary says. "Personally, I don't think it will be as high as 35 per cent.

"But if the standards are applied as they are now, and as the OSHA agency plans to apply them, they could hike building costs 10 to 20 per cent."

Construction is a $100-billion-a-year industry.

A 10 per cent hike would add $10 billion to the price Americans pay for homes, highways, subways, office buildings, high-rise apartments and other construction.

Waterloo, Iowa, the county seat of Black Hawk County (pop. 76,000) recently discovered what that means.

"We took bids last December on a lift station," says Mayor Lloyd Turner. "It was part of a $3.8 million sewer project. HUD paid half the cost; we paid the rest.

"Our engineer's estimate for the job was $270,000.

"It was made before OSHA became the law of the land.

"When the bids came in, they were staggering—the lowest was $485,000. We held them up several weeks for evaluation. It turned out that the lowest bid was realistic, even though far higher than we expected.

"There were other factors, but about 15 per cent of the cost was attributed to OSHA by all the contractors.

"We had to sell another $100,000 worth of bonds this April to pay for the added costs."

HOW'S THAT AGAIN?

Vernie Lindstrom Jr., executive vice president, Kitchell Contractors, Inc., Phoenix, Ariz., explains why OSHA increases construction costs. "Some standards are impractical, costly and complex," he says.

As examples, contractors cite rules like these:

"A fire extinguisher, rated not less than 2A, shall be provided for each 3,000 square feet . . . or major fraction thereof"—even on a steel skyscraper with poured concrete floors. And "travel distance from any point of the protected area to the nearest fire extinguisher shall not exceed 100 feet."

What's a 2A fire extinguisher?

Is a 1A better—or worse? How about a 3A or a 2B?

The 70-page rule book, "Safety and Health Regulations for Construction," doesn't say.

That's spelled out in National Fire Protection Association manuals.

"To understand the ratings, you really should have two NFPA booklets," an NFPA spokesman says: "They're 'Standards for the Installation of Portable Fire Extinguishers,' 36 pages, price $1. And 'Standard on Recommended Good Practices for the Maintenance and Use of Portable Fire Extinguishers,' 33 pages, also, $1."

If a builder writes NFPA, gets the booklets and reads them, he'll learn that a fire extinguisher tagged Class 1A isn't as good as one with a Class 2A rating.

But a 3A is better.

And a 2B is for a different kind of fire altogether—one involving flammable liquids and greases.

That 2A extinguisher, required even on a steel and concrete skyscraper, is for wood, paper and cloth fires. Or, OSHA says, you can substitute for it a 55-gallon drum of water with two fire pails.

"Wall openings, from which there is a drop of more than four feet, and the bottom of the opening is less than three feet above the working surface" shall be protected with a guard rail.

What does this mean in plain English? It means, contractors say, that a window with a sill less than three feet off the floor must have a railing or other barrier across it. Apparently even after glass has been installed, including thermopane glass that's hard to fall through.

And many modern office buildings have sills lower than three feet.

No detail is too minute for OSHA's attention.

Take drinking water, for example. You can't put ice in it. It's not sanitary.

"That means," a contractor says, "that to give workmen a cool drink of water, you must have a jacketed water cooler. One that plugs into an electrical socket.

"But you don't always find those utilities everywhere on a half-built building."

A LOT OF READING MATTER

To comply with the law, a builder really needs more than the 70-page "Safety and Health Regulations for Construction," which is issued by the Labor Department. For starters, he needs the Department's 248-page "Occupational Safety and Health Standards," plus the two NFPA pamphlets cited above—and hundreds of other pamphlets.

When OSHA became the law of the land, it blanketed into its code a long list of guidelines drawn up earlier by private organizations like NFPA and the American National Standards Institute, and by some government agencies. For example, the list includes:

"Standards for Protection Against Radiation (10 CFR Part 20)," published by the Atomic Energy Commission.

"Threshold Limit Values of Airborne Radiation Contaminants for 1970" of the American Conference of Governmental Industrial Hygienists.

"Z89.1–1969, Safety Requirements for Industrial Head Protection," drawn up by the American National Standards Institute.

The list could go on and on.

Sen. Carl T. Curtis (R.-Neb.) is sharply critical of the blanketing. He says:

"The Act Congress passed, in effect, made these rules the law of the land without a prior specific review . . . to see what they do, how they should be applied, or whether or not they are adequate."

Sen. Curtis has introduced one of a number of bills now on Capitol Hill to modify OSHA. Among other things, his would exempt businesses with 25 or fewer employees from the Act.

A similar bill has been introduced in the House by Rep. Joe Skubitz (R-Kans.).

The Associated General Contractors gives some idea of the size of the thicket of guidelines, standards and cross-references.

"To get all he needs to be fully informed," an AGC spokesman says, "a building contractor would have to spend about $6,000. And he'd wind up with a stack of documents 17 feet high."

Obviously, few if any builders are familiar with all these binding regulations.

"I think it's true to say they are so complicated and lengthy," says the safety director of a large Eastern construction firm, "that you can find a violation of them on almost any job."

The Occupational Safety and Health Administration's own statistics bear him out. In the first nine months of this fiscal year, its inspectors visited 20,688 places of business. Nearly eight out of 10 were found in violation of the safety law.

BATTLE OF THE BOATYARD

The inspector's word is final—unless the alleged lawbreaker requests a formal hearing. Few win the appeal. One who did was a West Coast boatyard owner.

Arsene (Blackie) Gadarian has been in the business, at Newport Beach, Calif., a dozen years.

He says his firm, Blackie's Boat Yard, Inc., is "a mom and pop operation."

Actually, it's a little bigger than that—he and his wife have a half-dozen employees. But it's pint-sized, as boatyards go—the smallest of six in Newport Beach.

Mostly, it overhauls yachts owned by wealthy residents of the seaside spa.

So the proprietor was quite surprised last fall when a federal inspector drove up, put on a hard hat and began to tour the yard.

Blackie felt he hardly rated this personal attention from Washington.

The inspector strolled down the pier to a small boat under repair not far from shore. He pointed to a worker crouched in the cramped bilge and asked. "Why doesn't he have a life jacket on?"

"Because," Blackie replied, "he couldn't move if he did."

"What would he do," the inspector persisted, "if he fell into the water?"

"He'd stand up," Blackie said. "The water's only two or three feet deep there."

The inspector went on inspecting.

A $1,000 FINE?

A few weeks later, the Gadarians were notified they had violated OSHA regulations—Section 1501 84, (c) (4). Offenders are subject to fines of up to $1,000.

"They said the rules were that we had to have a ladder nailed to that dock," Mrs. Gadarian says, "so an employee could climb out of the water if he fell into it.

"We wanted to comply with safety standards, and we always have. We have a good safety record. Our workmen's compensation inspector has testified to it.

"But we didn't know what the OSHA regulations were.

"We asked the OSHA inspector for a copy. He said he didn't have one on him. We asked the local area office. The director said he didn't have one for us—but was working night and day to get some out.

"So we denied the violation, and asked for a hearing, partly in hope of getting a copy of the law we were accused of breaking."

After the Gadarians said they'd fight, the occupation safety agency proposed a penalty of $16—eventually reduced to $15.

Two weeks later, a 248-page document arrived covering—among other things—safety regulations for ship repairing, shipbuilding, breaking up of ships and longshoring.

"We read practically everything in it," Mrs. Gadarian says. "But it said nothing about ladders on the dock."

The Gadarians again asked the OSHA agency office for a copy of the regulation they allegedly had violated.

"About a month after we were cited," Blackie says, "it arrived." It was a 48-page booklet, a supplement to the 248-page publication they received earlier.

"We found the part about ladders in that," Mrs. Gadarian says. "But it said nothing about one being nailed to the dock. Only that you had to have one near the boat under repair."

THE FULL MAJESTY OF OSHA

Last November, the OSHA hearing was held.

"They rented a meeting room at the Newporter Inn," says Mrs. Gadarian, "a very posh hotel."

President Nixon often uses it for press conferences and other meetings. It's about 20 miles from the West Coast White House at San Clemente. Japan's Premier Sato stayed there when he met with the President before Mr. Nixon went to Peking.

Seven federal officials were on hand for the hearing, which took four hours. As the Gadarians pointed out, all the OSHA regulation stipulated was that:

"In the vicinity of each vessel afloat in which work is being performed there shall be at least one portable or permanent ladder of sufficient length to assist employees to reach safety in the event they fall into the water."

The Gadarians said they had a ladder "in the vicinity" of the boat being repaired, and produced witnesses.

The OSHA inspector contradicted them. The closest ladder, he said, was 400 feet away.

The Gadarians showed that the boat yard was only 200 feet long, including their 66-foot dock. The Occupational Safety and Health Review Commission ruled for the Gadarians.

So they didn't have to pay the $15.

Why did the Gadarians fight a fine the size of a parking penalty?

"That's what a lot of people ask," Blackie says.

"They figure, if all it takes is 15 bucks to get them off your back, let's pay it. But I don't feel that way, if I'm not in the wrong.

"Besides, what about the next time?"

Mrs. Gadarian has carefully hoarded all the citations, summonses and reports, including the 19-page decision that dismissed the charges.

"Some day," she says, "I have to show them to my grandchildren so they can see how 1984 came early to our country."

JULY 26, 1972.

Senator PETER H. DOMINICK,
U.S. Senate,
Washington, D.C.

DEAR SENATOR DOMINICK: I wish to strongly protest the present O.S.H.A. law. This is another case of big brotherism that we don't need.

What gives you congressmen the idea that you can legislate a law that tells us how to do our jobs safely when the most strenuous thing most of you do is hoist a martini. It appears that you sit on your duffs posing for each other and try to figure out a new way to put more power in the hands of the federal government thru laws such as O.S.H.A. Remember this—we run you, you don't run us!

The O.S.H.A. law smacks of the socialist thinking which the over educated idiots in Washington have been trying to cram down our throats for years now.

I had earned a living as an aircraft mechanic for 22 years until your last manipulated recessions finished that. Now I repair automobiles and find that I can not wear the required safety equipment that O.S.H.A. says I must, and do my job properly and efficiently. (Ever try working under a car with a hard hat on?) If I am found in violation by one of O.S.H.A.'s inspectors then my employer is fined and so am I, and I lose my job.

Surely you don't believe that you can legislate safety, or morals, or equality for that matter. If you think that you can then it is obvious that you have your heads firmly lodged in your posteriors.

Most workmen work in such a way as to avoid the hazards which are present on the job, they know what they are doing and they don't have accidents. The small minority that do have accidents on the job are going to continue to have accidents on the job in spite of O.S.H.A. I know there will be much gnashing of teeth in Washington over this fact, but that's the way it is.

If O.S.H.A. is the best Congress can do then I suggest you congressmen spend your time more constructively by sharpening pencils, flying paper airplanes or picking lint out of your navels, but whatever you lawmakers do, stop harassing the people because we are getting damn tired of you.

One other thing. I notice some of the mental midgets in congress are trying to ram thru H.R. 8828 which will further restrict our freedom and give Uncle more power and control over us. I strongly urge you to stop this foolishness. Like I say, we are getting damn well fed up.

FRANK HEDGER.

Mr. HANSEN. Mr. President, I withdraw my amendment.

The PRESIDING OFFICER. The amendment is withdrawn.

Mr. HANSEN. Mr. President, I appreciate the opportunity to express the very real concern I have about harassment of the small businessman as can be demonstrated by the results we receive from the type of administration that has been given us by the Department of Labor.

Mr. President, I express my appreciation to the distinguished chairman of the Appropriations Committee. I yield the floor.

The PRESIDING OFFICER. The joint resolution is open to further amendment.

Mr. McCLELLAN. Mr. President, I extend my appreciation to the Senator from Wyoming and approve of his suggesting the amendment and discussing it at this time. It is an issue, it is a problem that Congress has dealt with and on which it has expressed its will. We think that it should be somewhat in line with the amendment that the Senator has offered and withdrawn.

The continuing resolution, in my judgment, is not a proper vehicle for amendments, other than amendments dealing with the specific subject of continuing the funding of programs that would not be funded except for the continuing resolution.

In the handling of these appropriations and these continuing resolutions, I think upon reflection that it is apparent to all of us that if we load down or undertake to offer more or less extraneous amendments to a continuing resolution, the continuing resolution would bog down in conference or the amendments would all go out in conference. They would have to, particularly when we have only 24 hours remaining before this would expire. If an amendment were agreed to, it would require a conference. And I have no illusions about what the conferees would do.

I am confident that we would be confronted with adamant resistance to the amendment. As to the merits of the amendment and as to the substance of the amendment, I am in accord with what my distinguished friend, the Senator from Wyoming, has said about it. When the amendment was offered to the Labor-HEW appropriations bill on the Senate floor—the bill which was vetoed yesterday by the President—I supported it then. I would be hopeful that the Senator from Wyoming and the other sponsors of the measure will, when that appropriation bill comes back before the Senate, reoffer the amendment. It will be my intention to support it then, as I did when the Labor-HEW appropriations bill was passed here on June 27.

I do appreciate the cooperative spirit and action of my distinguished friend, the Senator from Wyoming, in withdrawing the amendment at this time so that we may proceed with the consideration of the continuing resolution and get it passed and enacted today. That is imperative.

There will be another day. This is only a postponement for awhile, and there will be another day. I hope that the amendment, or its equivalent, will be finally enacted into law.

Mr. HANSEN. Mr. President, will the Senator yield?

Mr. McCLELLAN. I am happy to yield to the Senator from Wyoming.

Mr. HANSEN. Mr. President, I thank the distinguished chairman of the Appropriations Committee for his very generous remarks.

Mr. McCLELLAN. Mr. President, I understand that another Senator is probably interested in this resolution and does want to be heard. I further understand that he is on his way to the Chamber at the present time. Mr. President, I suggest the absence of a quorum.

Mr. HANSEN. Mr. President, will the Senator withhold that request?

Mr. McCLELLAN. Mr. President, I withhold the request.

Mr. HANSEN. Mr. President, may I say that the distinguished Senator from Nebraska (Mr. CURTIS) shares my feelings. He has really taken the leadership in bringing this matter to the attention of the Senate. Were he here today—and I regret that he is necessarily absent—I know that he would have been leading this discussion, as I have attempted to do.

Mr. President, I just want to apprise all Senators that the interest of the Senator from Nebraska has not waned one bit. He did regret very much that it was necessary that he be absent. I have tried to call the attention of the Senate to some of those matters that I know are of particular concern to him.

Mr. McCLELLAN. Mr. President, I yield to the distinguished Senator from Washington.

Mr. MAGNUSON. Mr. President, in connection with the continuing resolution which directly affects the appropriations contained in the Labor-HEW appropriations bill, which was vetoed yesterday, the House sustained the veto. Now the question is before the Committee on Appropriations as to when we should again proceed with the Labor-HEW appropriations. Therefore, the significance of the September 30 deadline is very important.

I understand from the Members of the House that they will not attempt in the Committee on Appropriations to pursue this matter in the nature of another Labor-HEW appropriations bill until after the Labor Day recess.

Therefore, I want to make this announcement to give interested Senators this notice that, of course, we cannot act on it and we shall not act on it in the Committee on Appropriations until the House has acted. Therefore, the matter of the new Labor-HEW appropriation will be delayed until after the Labor Day recess. Of course, we will have sufficient time between then and September 30, which is the termination of this resolution date, to get at the matter.

Mr. JAVITS. Mr. President, if I may have the attention of the chairman of the Committee on Appropriations, I would like to ask a question.

Section 101(a)(3) of the pending joint resolution deals with spending authority which will continue under this joint resolution and it relates to the question of the vetoed bill for HEW appropriations bill and the ceiling on social services written into the Senate bill but not in the final bill.

I wish to be sure that the question is not concluded and that we have an opportunity to consider recommendations on the ceiling whatever the recommendation may be, and that the Senate may then act on it, but that the ceiling question raised by the Senate bill is not concluded by this resolution.

This resolution has two provisions which could be applicable. The section to which I referred, section 101(a)(3), relates to an authority as passed by the House, which is different from that which would be available or granted under such act as passed by the Senate. The language in the section states:

> Whenever the amount which would be available or the authority which would be granted under an Act listed in this subsection as passed by the House is different from that which would be available or granted under such an Act as passed by the Senate, the pertinent project or activity shall be continued under the lesser amount or the more restrictive authority.

So the question that raises is whether a vetoed bill comes within that definition. As I understand it, a vetoed bill is dead, as if nothing had passed either House; that is the end, unless Congress overrides it, and one House has already refused to override.

Then we come to another provision, the proviso under (4), which states:

> No provision which is included in an appropriation act enumerated in this subsection but which was not included in the applicable appropriation act for 1972, and which by its terms is applicable to more than one appropriation, fund, or authority, shall be applicable to any appropriation, fund, or authority provided in this joint resolution unless such provision shall have been in-

cluded in identical form in such bill as enacted by both the House and the Senate.

Obviously, the provision to which I refer was not included in the identical form in both the House and Senate bills. So my question is: Is it not a fact that after we pass this joint resolution the question of the ceiling relating to social services, remains as it was after we dealt with the HEW conference report here in the Senate—that is, there is no ceiling, or does this joint resolution make some change legally in that situation?

Mr. McCLELLAN. As I understand it, there is no ceiling on that fund. The bill was vetoed. Whatever limitation was placed in the bill is not law, irrespective of what the intent of Congress was.

Mr. JAVITS. I thank the Senator.

Mr. McCLELLAN. It is my understanding that this continuing resolution makes no change; it does not deal with that. That is the situation as I understand it.

Mr. JAVITS. The Senator understands me correctly, and he has given me the answer which I understand to be the law.

Mr. MAGNUSON. I concur that the continuing resolution will not affect the open-ended provision of social services.

Mr. JAVITS. I thank the Senator.

Mr. MAGNUSON. Undoubtedly, after the House acts on another bill, I am sure they will discuss the matter of the limitation we have tried to put on. I think I can say, not speaking for all Members, that the members of the full Committee on Appropriations are vitally concerned, and surely when we consider the second Labor-HEW bill that matter will come up, but the way it is now it is open ended.

Mr. JAVITS. I thank the Senator.

Mr. MAGNUSON. But there will be a chance for the Senate to discuss the matter again, because in the revenue-sharing bill there is—I think I am correct—a $1 billion limitation, but they exempted child care and family planning programs from the limitation and left them intact, which will add up to close to $1.5 billion or more.

Mr. JAVITS. But that is in another bill.

Mr. MAGNUSON. That is in another bill. I understand it will be discussed.

I deplored the veto, but I understand the President, and I will check on this, feels that despite the argument over the veto, this matter of the ceiling should be considered not in the revenue-sharing bill, but in the Labor-HEW appropriation bill when we get on the bill again.

Mr. JAVITS. I thank the Senator.

Mr. McCLELLAN. The proper place to deal with it would be in the appropriation bill.

Mr. MAGNUSON. Yes, rather than in the revenue-sharing bill.

Mr. McCLELLAN. I think that is correct. It is authorized now and it is subject to being appropriated. It is a matter under the jurisdiction of the Committee on Appropriations.

Mr. MAGNUSON. There will be many Senators who feel that the situation by the time we get back, or even now is so critical we may want to do something in the revenue-sharing bill, but that is not the proper place because the Labor-HEW bill, in which this will be considered will come along about the time we finish revenue sharing, so time is not important.

Mr. JAVITS. I am satisfied with the answer.

Mr. McCLELLAN. My guess is the appropriation bill will be enacted into law possibly before you have a revenue-sharing bill.

Mr. MAGNUSON. That is right.

Mr. McCLELLAN. Because that bill will have to go to conference.

Mr. MAGNUSON. And it would be a long time, I think.

Mr. McCLELLAN. So the appropriation bill would come along first.

Mr. YOUNG. I think the revenue sharing bill has been rather inappropriately named It is also an appropriation bill.

Mr. McCLELLAN. I beg the Senator's pardon.

Mr. YOUNG. I think the revenue sharing bill may well be referred to as an appropriation bill; it both authorizes and appropriates—against the rules of the Senate.

Mr. McCLELLAN. We are hopeful that may be corrected by a proposal that will do justice to all parties, and in no way impede or impair the progress of that measure being enacted into law. We hope that can be done.

The PRESIDING OFFICER. The question is on the third reading and passage of the joint resolution.

The joint resolution (H.J. Res. 1278) was ordered to a third reading, was read the third time, and passed.

Mr. McCLELLAN. Mr. President, I move to reconsider the vote by which the joint resolution was passed.

Mr. MAGNUSON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

NATIONAL SCIENCE POLICY AND PRIORITIES ACT OF 1972

The PRESIDING OFFICER. Under the previous order, the Senate will now proceed to the consideration of S. 32, which will be stated by title.

The legislative clerk read as follows:

A bill (S. 32) to authorize the National Science Foundation to conduct research, education, and assistance programs to prepare the country for conversion from defense to civilian, socially oriented research and development activities, and for other purposes.

The Senate proceeded to consider the bill, which has been reported from the Committee on Labor and Public Welfare, with an amendment, to strike out all after the enacting clause and insert:

That this Act may be cited as the "National Science Policy and Priorities Act of 1972".

DECLARATION OF POLICY

Sec. 2. (a) The Congress hereby finds that—

(1) Federal funding for science and technology represents an investment in the future, which is indispensable to sustained national progress;

(2) the manpower pool of scientists and engineers constitutes an invaluable national resource which should be utilized to the maximum extent possible at all times;

(3) the Nation's scientific resources can contribute significantly to meeting America's human needs in such priority problem areas as health care, poverty, public safety, pollution, unemployment, productivity, housing, education, transportation, nutrition, communications, and energy resources; and

(4) at this time of maximum need, much of the Nation's technical talent is being wasted or misapplied because of inadequate programs of civilian science and technology.

(b) The Congress declares that it is the continuing policy and responsibility of the Federal Government to take appropriate measures directed toward achieving the following goals—

(1) the total Federal investment in science and technology must be raised to an expenditure level which is adequate to the needs of the Nation, and then continue to increase annually in proportion to the growth in the gross national product, or at a rate which is greater than such growth;

(2) scientists, engineers, and technicians must have continuing opportunities for socially useful employment in positions commensurate with their professional, technical capabilities;

(3) Federal obligations for civilian research and engineering activities must be increased so as to reach a level of parity with Federal obligations for defense research and engineering activities, whereupon the level of parity must be maintained or exceeded, except when inconsistent with overriding considerations of national security; and

(4) Federal programs for civilian research and engineering must be focused on meeting the human needs of the Nation in such priority problem areas as health care, poverty, public safety, pollution, unemployment, productivity, housing, education, transportation, nutrition, communications, and energy resources.

TITLE I—SCIENCE POLICY AND PRIORITIES FOR CIVILIAN RESEARCH AND ENGINEERING

SHORT TITLE

Sec. 101. This title may be cited as the "Science Policy Act".

AUTHORITY OF THE NATIONAL SCIENCE FOUNDATION

Sec. 102. Section 3 of the National Science Foundation Act of 1950 is amended by striking out subsection (d) and inserting in lieu thereof the following:

"(d) The Foundation shall recommend and encourage the pursuit of national policies designed to foster research and education in science and engineering, and the application of scientific and technical knowledge to the solution of national problems."

RESEARCH AND ENGINEERING PRIORITIES

Sec. 103. (a) The Foundation shall identify priority areas of civilian research and engineering likely to contribute to the resolution of national problems in areas such as health care, poverty, public safety, pollution, unemployment, housing, education, transportation, nutrition, communications, and energy resources. In making such identifications, the Foundation shall—

(1) take account of the results of its programs conducted or assisted under section 207;

(2) consult with appropriate scientific and technical organizations such as the National Academy of Sciences, the National Academy of Engineering, and the National Institute of Medicine; and

(3) coordinate and correlate its activities with respect to such identification with other agencies of the Federal Government undertaking programs relevant to these problems.

(b) From funds available pursuant to section 107, the Foundation may employ by grant or contract such consulting services as it deems necessary to carry out the functions assigned to the Foundation under this section.

RESEARCH PROGRAM

SEC. 104. From funds available pursuant to section 107, the Foundation is authorized to make grants to, or enter into contracts with, appropriate organizations for the conduct of basic and applied research and engineering designed to advance the scientific and technical state-of-the-art in such priority areas as are identified under section 103.

NATIONAL SCIENCE BOARD

SEC. 105. Section 4 of the National Science Foundation Act of 1950 is amended—

(1) by inserting before the period at the end of subsection (a) a comma and the following: "within the framework of applicable national policies as set forth by the President and the Congress" and

(2) by striking out subsection (c) and inserting in lieu thereof the following:

"(c) The persons nominated for appointment as members of the Board (1) shall be eminent in the fields of science, social science, engineering, agriculture, industry, education, or public affairs; (2) shall be selected solely on the basis of established records of distinguished service, and (3) shall be so selected as to provide representation of the views of leaders from a diversity of fields from all areas of the Nation. The President is requested, in the making of nominations of persons for appointment as members, to give due consideration to any recommendations for nomination which may be submitted to him by the National Academy of Sciences, the National Academy of Engineering, the National Association of State Universities and Land-Grant Colleges, the Association of American Universities, the Association of American Colleges, the Association of State Colleges and Universities, or by other scientific, technical, or educational associations."

POLICY APPRAISAL AND REPORTING

SEC. 106. In order to carry out the purposes of this Act, the National Science Foundation shall—

(1) analyze information regarding Federal expenditures for research and engineering activities, and the employment and availability of scientific, engineering, and technical manpower, which the Foundation has assembled pursuant to paragraphs (1), (5), (6), and (7) of section 3(a) of the National Science Foundation Act of 1950 in order to appraise the implementation of the policies set forth in section 2 of the Act;

(2) develop and recommend to the President and the Congress programs and activities which will contribute to carrying out the policies set forth in section 2 of this Act; and

(3) prepare and submit to the President for transmittal to the Congress not later than January 31 of each calendar year, a report on its activities under this Act and an appraisal of the extent to which the policies set forth in section 2 are being successfully implemented, together with such recommendations, including recommendations for additional legislation, as it deems appropriate.

AUTHORIZATION OF APPROPRIATIONS

SEC. 107. (a) To carry out the provisions of sections 103 and 104 of this title, there are authorized to be appropriated $10,000,000 for the fiscal year ending June 30, 1973, $15,000,000 for the fiscal year ending June 30, 1974, and $25,000,000 for the fiscal year ending June 30, 1975.

(b) Funds appropriated pursuant to subsection (a) of this section shall remain available for obligation, for expenditure, or for obligation and expenditure, for such period or periods as may be specified in Acts making such appropriations.

TITLE II—DESIGN AND DEMONSTRATION OF CIVIL SCIENCE SYSTEMS

SHORT TITLE

SEC. 201. This title may be cited as the "Civil Science Systems Act".

AUTHORITY OF THE NATIONAL SCIENCE FOUNDATION

SEC. 202. (a)(1) The Foundation is authorized to initiate and support programs which use science, technology, and advanced analytical techniques, such as systems analysis, to design civil science systems which are capable of providing improved public services in such areas as health care delivery, public safety, public sanitation, pollution control, housing, transportation, public utilities, communications, and education.

(2) The Foundation, insofar as is practicable, is authorized and directed to develop alternative civil science systems in order to promote a wider range of choice for the application of such systems.

(b) The Foundation is authorized to initiate and support the public demonstration of civil science systems which have been designed under this title.

(c) Section 5(e) of the National Science Foundation Act of 1950 is amended by adding at the end thereof the following new sentence: "The provisions of this subsection shall not apply to the authority granted to the Director under title II of the National Science Policy and Priorities Act of 1972."

PROGRAMS AUTHORIZED

SEC. 203. In order to carry out the purposes of this title, the Foundation is authorized and directed to—

(a) initiate and support programs of applied research and experimentation, in order to design civil science systems capable of providing improved public services;

(c) test and evaluate the alternative civil science systems designed under this title, and appraise the results of such tests in terms of applicable technical, environmental, economic, social, and esthetic factors;

(c) disseminate and demonstrate the results of programs conducted or assisted under this title so that such civil science systems may be effectively utilized in the development of new communities, and in the improvement of living conditions in existing communities; and

(d) assure that the programs conducted or assisted under this title make maximum effective use of the Nation's scientists, engineers, and technicians, including those who are unemployed.

ESTABLISHMENT OF THE CIVIL SCIENCE SYSTEMS ADMINISTRATION

SEC. 204. There is hereby established within the National Science Foundation, the Civil Science Systems Administration to administer Federal programs carried out under this title.

ADMINISTRATION OFFICERS

SEC. 205. (a) The Administration shall be headed by an Associate Director for Civil Science Systems who shall be appointed by the President by and with the advice and consent of the Senate.

(b) The functions of the Director under this title and any other functions of the Civil Science Systems Administration shall be carried out through the Administration by the Associate Director, who shall be responsible to and report to the Director.

(c) There shall be a Deputy Associate Director for Civil Science Systems who shall be appointed by the President, by and with the advice and consent of the Senate, and shall perform such duties and exercise such powers as the Associate Director may prescribe. The Deputy Associate Director shall act for, and exercise the powers of, the Associate Director during the absence or disability of the Associate Director or in the event of a vacancy in the office of Associate Director.

(d) There shall be two Assistant Directors for Civil Science Systems who shall be appointed by the President, by and with the advice and consent of the Senate, and shall perform such duties and exercise such powers as the Associate Director shall prescribe, with the stipulation that one Assistant Director shall be responsible for advising and assisting the Associate Director with respect to the engineering and technical aspects of the Administration's programs, and the other Assistant Director shall be responsible for advising and assisting the Associate Director with respect to the behavioral and social science aspects of the Administration's programs.

(e)(1) Section 5314 of title 5, United States Code, is amended by adding at the end thereof the following new paragraph:

"(58) The Associate Director for Civil Science Systems of the National Science Foundation."

(2) Section 5315 of title 5, United States Code, is amended by adding at the end thereof the following new paragraph:

"(95) The Deputy Associate Director for Civil Science Systems of the National Science Foundations."

(3) Section 5316 of title 5, United States Code, is amended by adding at the end thereof the following new paragraph:

"(131) Assistant Directors for Civil Science Systems of the National Science Foundation."

(f) Section 14 of the National Science Foundation Act of 1950 is amended by striking out subsection (b) and inserting in lieu thereof the following:

"(b) Neither the Director, the Deputy Director, the Associate Director, the Deputy Associate Director, nor any Assistant Director shall engage in any other business, vocation, or employment while serving in such position; nor shall the Director, the Deputy Director, the Associate Director, the Deputy Associate Director, or any Assistant Director, except with the approval of the Board, hold any office in, or act in any capacity for, any organization, agency, or institution with which the Foundation makes any grant, contract, or other arrangement under this Act."

CIVIL SCIENCE SYSTEMS ADVISORY COUNCIL

SEC. 206. (a) There is hereby established a Civil Science Systems Advisory Council to be composed of thirty-one members, of whom eighteen members shall be appointed by the Director for terms of three years, and thirteen shall be ex officio members designated in subsection (c) of this section. Appointed members shall be chosen from among persons who have, by reason of experience or accomplishments, demonstrated their qualifications to serve on the Council, in equal numbers from among the following categories—

1. business;
2. labor;
3. engineers, design professionals, and natural scientists;
4. social and behavioral scientists;
5. environmental and other community groups; and
6. consumers.

(b)(1) Of the members first appointed, six shall be appointed for a term of one year, six shall be appointed for a term of two years, and six shall be appointed for a term of three years, as designated by the Director at the time of appointment.

(2) Any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed only for the re-

mainder of such term. Members shall be eligible for reappointment and may serve after the expiration of their terms until their successors have taken office.

(3) Any vacancy on the Council shall not affect its powers, but shall be filled in the same manner by which the original appointment was made.

(4) Each appointed member of the Council shall, while serving on business of the Council, be entitled to receive compensation at a rate not to exceed the daily rate prescribed for GS-18 of the General Schedule under section 5332 of title 5, United States Code, including traveltime, and while so serving away from their homes or regular places of business, they may be allowed travel expenses, including per diem in lieu of subsistence, in the same manner as the expenses authorized by section 5703(b) of title 5, United States Code, for person in the Government service employed intermittently.

(5) The Council shall annually elect one of its members to serve as Chairman until the next election. The Council shall meet at the call of the Chairman, but not less often than four times a year.

(6) Eleven of the voting members of the Council shall constitute a quorum necessary for the transaction of official business.

(c) The Associate Director for Civil Science Systems; the Assistant Secretary of Commerce for Science and Technology; the Assistant Secretary of Health, Education, and Welfare for Health and Scientific Affairs; the Assistant Secretary of Housing and Urban Development for Research and Technology; the Administrator of the National Aeronautics and Space Administration; the Chairman of the Atomic Energy Commission; the Assistant Secretary of Transportation for Systems Development and Technology; the Administrator of the Environmental Protection Agency; the Director of the Office of Economic Opportunity; and the Chairman of the Council on Environmental Quality shall be nonvoting ex officio members of the Council.

(d) A representative designated by the National Governors Conference; a representative designated by the National Association of Counties; and a representative jointly designated by the National League of Cities and the United States Conference of Mayors shall be voting ex officio members of the Council.

(e) The Council shall—

(1) advise the Director with respect to the discharge of his responsibilities under this title;

(2) review and evaluate the effectiveness of Federal programs under this title;

(3) prepare and submit to the Director and the National Science Board such interim reports as it deems advisable, and an annual report of its findings and recommendations, together with any recommendations for changes in the provisions of this title; and

(4) disseminate its findings and recommendations to such extent and in such manner as it deems effective and advisable.

(f) The Director shall make available to the Council such staff, information, and other assistance as it may require to carry out its activities.

PLANNING FOR CIVIL SCIENCE SYSTEMS

SEC. 207. (a) From funds available pursuant to section 214, the Director is authorized to conduct planning studies, to transfer funds to other departments and agencies of the Federal Government, and to make grants to, or to enter into contracts with, academic institutions, nonprofit institutes and organizations, State, regional, and local governmental agencies, and private business firms, for the conduct of planning studies for the design and demonstration of civil science systems capable of providing improved public services. Such studies will—

(1) be directed toward the objective of designing, testing, evaluating, and demonstrating civil science systems for subsequent incorporation in new communities, and for subsequent use, with appropriate adaptations, in existing communities;

(2) include long-range planning studies as well as intermediate and short-range studies;

(3) make maximum use of the results of activities undertaken under sections 103 and 104 and the scientific and technical information provided under section 211;

(4) encompass studies of a wide range of public service areas, including but not limited to health care, public safety, public sanitation, pollution control, housing, transportation, public utilities, communications, and education;

(5) include specific studies of the economic, sociological, psychological, legal, administrative, and political factors which affect the design, development, and implementation of civil systems to provide public services;

(6) include total civil systems studies which integrate the specific studies carried out under paragraphs (4) and (5) of this subsection.

(b) In delineating the goals and establishing the priorities for such planning studies as are conducted under subsection (a) of this section, the Director shall consult with the Civil Science Systems Advisory Council.

APPLIED SOCIAL RESEARCH

SEC. 208. (a) From funds available pursuant to section 214, the Director is authorized to transfer funds to other departments and agencies of the Federal Government, and to make grants to, and to enter into contracts with academic institutions, nonprofit institutes and organizations, public agencies, and private business firms, for the conduct of applied social research into the economic, sociological, political, legal, administrative, and psychological aspects of the design, development, and implementation of civil science systems capable of providing improved public services.

(b) The scientific information which is currently available in these areas and which is generated as a result of the research undertaken under this section shall be fully taken into account by the Foundation in the development of programs and the design and evaluation of civil science systems under this title.

(c) In making grants or entering into contracts under this section, the Director shall take appropriate account of the results of the planning studies conducted or assisted under section 207.

CIVIL SCIENCE SYSTEM RESEARCH AND DESIGN

SEC. 209. (a) From funds available pursuant to section 214, the Director is authorized to transfer funds to other departments and agencies of the Federal Government, and to make grants to, and to enter into contracts with, academic institutions, nonprofit institutes and organizations, public agencies, and private business firms, for research with respect to, and design of, civil service systems capable of providing improved public services in areas such as health care, public safety, public sanitation, pollution control, housing, transportation, public utilities, communications, and education.

(b) In making grants or entering into contracts under this section, the Director shall take appropriate account of the results of the planning studies conducted or assisted under section 207, and the applied social research studies conducted or assisted under section 208.

(c) Each contract awarded under this section shall contain provisions which assure that specific performance objectives, and any applicable physical, environmental, economic, social, and esthetic constraints are specified with particularity for each project conducted under said contract.

(d) To assure that civil science systems designed under this section are responsive to public needs and desires, the Director shall obtain community and public views in his determination of the performance objectives and priorities to be met by such systems.

TESTING AND EVALUATION

SEC. 210. (a) (1) From funds available pursuant to section 214, the Director is authorized to transfer funds to other departments and agencies of the Federal Government, and to make grants to, and to enter into contracts with, academic institutions, nonprofit institutes and organizations, State, regional, and local governmental agencies, and private business firms for testing and evaluating civil science systems which make use of advanced science and technology.

(2) Such testing and evaluation shall utilize all available, applicable analytical techniques, such as computer simulation, systems analysis, and technology assessment, to test and appraise such systems in terms of their conformance to performance objectives; adherence to stipulated constraints; costs and ancillary consequences; impact on the environment; impact on esthetic values; responsiveness to public needs and desires; and their comparison with alternative civil science systems which may provide similar public services.

(b) From funds available pursuant to section 214, the Director is authorized and directed to carry out final evaluations of civil science systems which make use of advanced science and technology, taking appropriate account of the results of the tests conducted or assisted under subsection (a) of this section, and the results of the applied social research conducted or assisted under section 208.

(c) In making grants or entering into contracts under this section, the Director shall take account of the results of the planning studies conducted or assisted under section 207.

INFORMATION DISSEMINATION

SEC. 211. From funds available pursuant to section 214, the Director is authorized to establish a computerized Civil Science Systems Information Service, which shall collect and integrate the scientific, technical, and social information pertaining to civil science systems resulting from programs under this title, and shall provide such information to interested organizations in Federal, State, and local government, industry, academic institutions, and the nonprofit sector, upon request from such organizations, in accordance with such administrative procedures as are established by the Director.

SYSTEMS DEMONSTRATION

SEC. 212. (a) From funds available pursuant to section 214, the Director is authorized to transfer funds to other departments and agencies of the Federal Government, and to make grants to, and to enter into contracts with, academic institutions, nonprofit institutes and organizations, State, regional, and local governmental agencies, and private business firms, for the construction and public exhibition of civil science systems demonstration projects, which illustrate the functioning and associated benefits of alternative, effective civil science systems resulting from research and design activities conducted or assisted under this title.

(b) Such grants or contracts shall contain provisions which assure that such demonstration projects include—

(1) accurate and complete representations of the civil science systems involved in the demonstration, indicating the improved public services which they are capable of providing; and

(2) public exhibitions which are announced in advance and are open for inspection by any interested organization or individual in accordance with such administrative procedures as are prescribed by the Foundation.

(c) Prior to entering into any demonstration project grant or contract, the Director will consult with all State and local governments in whose jurisdictions such demonstration may occur, and will take account of the views of such governments in determining to award such a grant or contract.

COORDINATION WITH OTHER GOVERNMENT AGENCIES

SEC. 213. In planning and conducting or assisting programs under this title, the Director shall maintain continuing consultation and coordination with appropriate Federal, State, regional, and local governmental agencies, including, but not limited to, the Departments of Commerce; Health, Education, and Welfare; Housing and Urban Development; and Transportation; the Council on Environmental Quality; the National Aeronautics and Space Administration; the Atomic Energy Commission; the Office of Economic Opportunity; the Environmental Protection Agency; the National Governors Conference; the National Association of Counties; the United States Conference of Mayors; and the National League of Cities. Such consultation and coordination shall be carried out through the Council established under section 206, and through appropriate staff contacts at other levels of the agencies involved.

AUTHORIZATION OF APPROPRIATIONS

SEC. 214. (a) To carry out the provisions of this title, there are authorized to be appropriated $200,000,000 for the fiscal year ending June 30, 1973, of which $25,000,000 shall be available to carry out the provisions of section 207, $30,000,000 shall be available to carry out the provisions of section 208, $120,000,000 shall be available to carry out the provisions of section 209, $15,000,000 shall be available to carry out the provisions of section 210, $5,000,000 shall be available to carry out the provisions of section 211, and $5,000,000 shall be available to carry out the provisions of section 212; $400,000,000 for the fiscal year ending June 30, 1974, of which $20,000,000 shall be available to carry out the provisions of section 207, $50,000,000 shall be available to carry out the provisions of section 208, $270,000,000 shall be available to carry out the provisions of section 209, $30,000,000 shall be available to carry out the provisions of section 210, $10,000,000 shall be available to carry out the provisions of section 211, and $20,000,000 shall be available to carry out the provisions of section 212; and $600,000,000 for the fiscal year ending June 30, 1975, of which $10,000,000 shall be available to carry out the provisions of section 207, $60,000,000 shall be available to carry out the provisions of section 208, $400,000,000 shall be available to carry out the provisions of section 209, $60,000,000 shall be available to carry out the provisions of section 210, $15,000,000 shall be available to carry out the provisions of section 211, and $55,000,000 shall be available to carry out the provisions of section 212.

(b) Funds appropriated pursuant to subsection (a) of this section shall remain available for obligation, for expenditure, or for obligation and expenditure, for such period or periods as may be specified in Acts making such appropriations.

TITLE III—TRANSITION OF TECHNICAL MANPOWER TO CIVILIAN PROGRAMS

SHORT TITLE

SEC. 301. This title may be cited as the "Technical Manpower Transition Act".

AUTHORITY OF THE NATIONAL SCIENCE FOUNDATION

SEC. 302. The Foundation is authorized to plan and assist in the transition of scientific and technical manpower from research and engineering programs which have been terminated or significantly reduced to other civilian-oriented research and engineering activities.

ADVISORY PANEL ON TRANSITION OF SCIENTIFIC AND TECHNICAL MANPOWER TO CIVILIAN PROGRAMS

SEC. 303. (a) There is hereby established an Advisory Panel on Transition of Scientific and Technical Manpower to Civilian Programs to be composed of thirty-one members, of whom eighteen members shall be appointed by the Director for terms of three years, and of thirteen ex officio members designated in subsection (c) of this section. Appointed members shall be chosen from among persons who have, by reason of experience or accomplishments, demonstrated their qualifications to serve on the Panel, in equal numbers from the following categories:

(1) Engineering and natural sciences, including the environmental sciences;

(2) Economics and social sciences;

(3) Industry;

(4) Labor;

(5) Public affairs, education, and manpower training; and

(6) Unemployed or underemployed scientists, engineers, and technicians.

(b)(1) Of the members first appointed, six shall be appointed for a term of one year, six shall be appointed for a term of two years, and six shall be appointed for a term of three years, as designated by the Director at the time of appointment.

(2) Any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed only for the remainder of such term. Members shall be eligible for reappointment and may serve after the expiration of their terms until their successors have taken office.

(3) Any vacancy on the Panel shall not affect its powers, but shall be filled in the same manner by which the original appointment was made.

(4) Each appointed member of the Panel shall, while serving on business of the Panel, be entitled to receive compensation at a rate not to exceed the daily rate prescribed for GS-18 of the General Schedule under section 5332 of title 5, United States Code, including traveltime, and while so serving away from their homes or regular places of business, they may be allowed travel expenses, including per diem in lieu of subsistence, in the same manner as the expenses authorized by section 5703(b) of title 5, United States Code, for persons in the Government service employed intermittently.

(5) Eleven of the voting members of the Panel shall constitute a quorum necessary for the transaction of official business.

(c) The Panel shall annually elect one of its appointed members to serve as chairman until the next election. The Panel shall meet at the call of the chairman, but not less often than four times a year. The Associate Director for Civil Science Systems; the Chairman of the Council of Economic Advisers; the Assistant Secretary of Commerce for Science and Technology; the Assistant Secretary of Labor for Manpower; the Assistant Director for Economic Affairs of the United States Arms Control and Disarmament Agency; the Administrator of the National Aeronautics and Space Administration; the Director of Defense Research and Engineering; the Chairman of the Atomic Energy Commission; the Commissioner of Education; and the Assistant Secretary of Health, Education, and Welfare for Health and Scientific Affairs shall be ex officio nonvoting members of the Panel.

(d) A representative designated by the National Governors Conference; a representative designated by the National Association of Counties; and a representative jointly designated by the National League of Cities and the United States Conference of Mayors shall be voting ex officio members of the Panel.

(e) The Panel shall—

(1) advise the Director, with respect to the discharge of his responsibilities under this title;

(2) review and evaluate the effectiveness of Federal programs under this title;

(3) prepare and submit such interim reports as it deems advisable, and an annual report of its findings and recommendations, together with any recommendation for changes in the provisions of this title; and

(4) disseminate its findings and recommendations to such extent and in such manner as it deems effective and advisable.

(f) The Director shall make available to the Panel such staff, information, and other assistance as it may require to carry out its activities.

RESEARCH ON TRANSITION TO CIVILIAN PROGRAMS

SEC. 304. From funds available pursuant to section 313, the Foundation is authorized to—

(1) make grants to, or to enter into contracts with, academic institutions, nonprofit institutes and organizations, public agencies, and private business firms, for the conduct of research designed to study and appraise the social, economic, and managerial aspects of transition from defense research and engineering activities to civilian-oriented research and engineering activities; and

(2) disseminate publicly, or enter into contracts with academic institutions, nonprofit institutes and organizations, public agencies, and private business firms for the public dissemination of, the significant results of such research conducted under subsection (1) of this section, as appear likely to aid in the transition from defense research and engineering activities to civilian-oriented research and engineering activities, particularly those directed toward the resolution of priority national problems, as identified under section 103.

ASSISTANCE TO STATE AND LOCAL GOVERNMENTS

SEC. 305. (a) From funds available pursuant to section 313, the Foundation is authorized to make grants to State and local governments and regional governmental agencies for—

(1) the conduct of programs at the State, local, or regional level, which are designed to facilitate the transition of scientific and technical activities to civilian programs within the particular State, local, or regional areas; and

(2) the hiring of currently unemployed or underemployed scientists, engineers, and technicians to work within State, local, or regional governmental agencies in positions which utilize their technical skills.

(b) The Director shall prescribe applicable salary rates for different types of technical positions in different areas of the country, none of which shall exceed the rate paid a person occupying grade GS-13, step 1.

(c) No one hired by a State, local, or regional governmental agency under this section may—

(1) receive compensation from Federal funds at a rate which exceeds the applicable rate as set by the Director; or

(2) remain in a position compensated under this section for a period in excess of two years.

TRAINING GOVERNMENT OFFICIALS

SEC. 306. (a) From funds available pursuant to section 313, the Foundation is authorized to make grants to, and to enter into contracts with, academic institutions, nonprofit institutes and organizations, and private business firms, for the purpose of their planning, developing, strengthening, or operating training programs for officers and employees of Federal, State, and local government who will be responsible for, or participate in, determining or administering government-assisted or conducted programs for civilian, socially oriented research and engineering activities.

(b) Such training programs will be directed at (1) acquainting the program participants with the potential contributions of science and technology to the resolution of public problems in such priority areas as are identified pursuant to this Act; and (2) teaching such participants how to utilize scientific and technical talent in an effective and economical manner.

(c) Organizations conducting such training programs may not charge any fee to a participant or participant's agency, which is not permitted by such regulations as the Foundation may prescribe.

(d) Participants in such training programs will be selected by the grantee or contractor from nominations made by interested government agencies, in accordance with such criteria and regulations as the Foundation may prescribe.

GOVERNMENT EMPLOYEE PARTICIPATION

SEC. 307. (a) From funds available pursuant to section 313, the Foundation is authorized to transfer funds to other departments and agencies of the Federal Government, and to make grants to, and to enter into contracts with, State, regional, and local government agencies for the purpose of paying the travel and subsistence expenses of government employees incurred in connection with their participation in training programs carried out under section 306.

(b) Executive agencies of Federal, State, and local government are encouraged, to the extent consistent with efficient administration, to provide opportunities for appropriate officers and employees of such agencies to participate in training programs carried out under section 306.

COMMUNITY CONVERSION CORPORATIONS

SEC. 308. (a) From funds available pursuant to section 313, the Foundation is authorized to make grants to, or enter into contracts with, local governments or nonprofit corporations for the establishment and operation of community conversion corporations, which—

(1) function as nonprofit corporations;

(2) operate under the direction of a Board of Directors which is representative of a wide range of community interests, including citizen group and consumer participation, selected in accordance with such criteria as may be prescribed by the Foundation;

(3) conduct, contract for, or stimulate the conduct of civilian-oriented research and development activities which focus on the particular problems, or draw on the particular resources, of the community within which the corporation is located; and

(4) give preference in personnel recruitment to unemployed or underemployed scientists, engineers, and technicians, provided that they meet necessary qualifications for effective job performance.

(b) Existing nonprofit corporations are eligible to apply as community conversion corporations for financial assistance under this section, if such corporations meet the qualifications set forth under subsection (a) of this section.

(c) Each community conversion corporation receiving a grant or contract from the National Science Foundation is encouraged to seek additional financial support and payment for services from other agencies of Federal, State, or local government, private foundations, community organizations, and private business firms; and the National Science Foundation will give preference in awarding such community conversion grants or contracts to those corporations which show a likelihood of being able to obtain such additional financial support.

(d) The receipt by a community conversion corporation of a grant or contract from the National Science Foundation under this section does not make said corporation ineligible to receive other categories of grants and contracts from the Foundation.

(e) In awarding grants or contracts to community conversion corporations for specific research and development projects, the Foundation will give preference to those projects which offer the most promise of aiding in the resolution of national problems in priority areas as identified under section 103.

JOB TRANSITION PROGRAMS

SEC. 309. (a) From funds available pursuant to section 313, the Foundation is authorized, upon application, to make job transition grants to nonprofit institutes and organizations and to private business firms in order to enable them to hire scientists, engineers, and technicians for work on projects for which they are not yet fully qualified. Each such application shall contain provision to assure that—

(1) such projects shall consist of civilian-oriented research and engineering activities;

(2) the personnel participating in such job transition programs shall be selected from unemployed or underemployed applicants by the grantees, in accordance with such criteria and regulations as shall be prescribed by the Foundation, including the requirement that the participants shall have a reasonable prospect of achieving full job qualification within a stipulated period of time;

(3) the personnel participating in such programs shall be afforded a reasonable opportunity to attend specialized training courses when such courses are deemed by the grantee to be necessary to supplement the on-the-job training of the participant; and

(4) no one may continue, or be selected, to participate in a job transition program under this section after such time that he receives a career transition fellowship under section 310.

(b) All significant scientific and technical information which is generated by the personnel participating in such programs shall be made available for public use, in accordance with such procedures as shall be prescribed by the Foundation.

CAREER TRANSITION FELLOWSHIPS

SEC. 310. (a) From funds available pursuant to section 313, the Foundation is authorized to award career transition fellowships to unemployed or underemployed scientists, engineers, and technicians to enable them to pursue a course of study through which they can acquire specialized technical knowledge and skills in fields other than the ones in which they are already proficient.

(b) The Foundation shall allocate fellowships under this section in such manner, insofar as practicable, as will—

(1) attract highly qualified applicants; and

(2) provide an equitable distribution of such fellowships throughout those areas of the United States which are experiencing a higher than average level of technical unemployment.

For the purpose of this section, the Foundation shall consult with the Secretary of Labor to establish for each region in the United States the average level of technical unemployment.

(c) The Foundation shall award at least 10 per centum but not to exceed 20 per centum of the fellowships awarded under this section to scientists, engineers, and technicians who have completed their formal academic education within a five-year period prior to award of the fellowship, as certified in accordance with such regulations as the Foundation may prescribe.

(d) The Foundation shall pay to persons awarded fellowships under this section such stipends (including such allowances for subsistence, health insurance, relocation expenses, job placement expenses, and other expenses for such persons and their dependents) as it may prescribe by regulation.

(e) Fellowships shall be awarded under this section upon application made at such times and containing such information as the Foundation shall by regulation require.

PLACEMENT ASSISTANCE

SEC. 311. (a) From funds available pursuant to section 313, the Foundation is authorized to transfer funds to other departments and agencies of the Federal Government, and to make grants to, and to enter into contracts with scientific, professional, technical, and business associations, and labor unions in order to establish and operate placement programs for unemployed or underemployed scientists, engineers, and technicians.

(b) Such grants and contracts may include provision for relocation expenses of the individual participant and his family when necessary, in accordance with such regulations as the Foundation shall prescribe.

(c) Grantees and contractors shall select applicants for such placement assistance in accordance with such criteria and regulations as the Foundation shall prescribe.

(d) No one shall be eligible for placement assistance under this section when he is—

(1) a participant in a job transition program under section 309; or

(2) a recipient of a career transition fellowship under section 310.

EDUCATION PROGRAM

SEC. 312. From funds available pursuant to section 313, the Foundation is authorized to make grants to, and to enter into contracts with, academic institutions, nonprofit institutes and organizations, and private business firms, for the purpose of their planning, developing, strengthening, or carrying out education programs which design courses and curriculums intended to prepare students for careers in civilian, socially oriented research and engineering activities, in areas such as pollution control, mass transit, solid waste disposal systems, public utilities, public safety systems, and health care technology.

AUTHORIZATION OF APPROPRIATIONS

SEC. 313. (a) There are authorized to be appropriated $152,000,000 for the fiscal year ending June 30, 1973, of which $5,000,000 shall be available to carry out the provisions of section 304, $15,000,000 shall be available to carry out the provisions of section 305, $4,500,000 shall be available to carry out the provisions of section 306, $500,000 shall be available to carry out the provisions of section 307, $30,000,000 shall be available to carry out the provisions of section 308, $75,000,000 shall be available to carry out the provisions of section 309, $15,000,000 shall be available to carry out the provisions of section 310, $5,000,000 shall be available to carry out the provisions of section 311, and $2,000,000 shall be available to carry out the provisions of section 312; $203,000,000 for the fiscal year ending June 30, 1974, of which $5,000,000 shall be available to carry out the provisions of section 304, $25,000,000 shall be available to carry out the provisions of section 305, $9,000,000 shall be available to carry out the provisions of section 306, $1,000,000 shall be available to carry out the provisions of section 307, $30,000,000 shall be available to carry out the provisions of section 308, $100,000,000 shall be available to carry out the provisions of section 309, $20,000,000 shall be available to carry out the provisions of section 310, $10,000,000 shall be available to carry out the provisions of section 311, $3,000,000 shall be available to carry out the provisions of section 312; $205,000,000 for the fiscal year ending June 30, 1975, of which $5,000,000 shall be available to carry out the provisions of section 304, $35,000,000 shall be available to carry out the provisions of section 305, $4,500,000 shall be available to carry out the provisions of section 306, $500,000 shall be available to carry out the provisions of section 307, $30,000,000 shall be available to carry out the provisions of section 308, $100,000,000 shall be available to carry out the provisions of section 309, $20,000,000 shall be available to carry out the provisions of section 310, $5,000,000 shall be available to carry out the provisions of section 311, and $5,000,000 shall be available to carry out the provisions of section 312.

(b) Funds appropriated pursuant to subsection (a) of this section shall remain available for obligation, for expenditure, or for obligation and expenditure, for such period or periods as may be specified in Acts making such appropriations.

TITLE IV—PROTECTION OF PENSION RIGHTS OF SCIENTISTS AND ENGINEERS

SEC. 401. The Congress finds that because of rapid and frequent changes in Federal procurement objectives and policies, engineering and scientific personnel suffer a uniquely high rate of forfeiture of pension benefits under private pension plans, as such employees tend to change employment more frequently than other workers. The Congress declares that it is the policy of the United States to seek to protect scientists and engineers from such forfeitures by making protection against forfeiture of pension credits, otherwise provided, a condition of compliance with Federal procurement regulations.

SEC. 402. The Director shall develop, in consultation with appropriate professional societies and heads of interested Federal departments and procurement agencies, recommendations for modifications of Federal procurement regulations to insure that scientists, engineers, and others working in associated occupations employed under Federal procurement, construction, or research contracts or grants shall, to the extent feasible, be protected against forfeitures of pension or retirement rights or benefits, otherwise provided, as a consequence of job transfers or loss of employment resulting from terminations or modifications of Federal contracts or procurement policies.

SEC. 403. Recommended changes in procurement regulations shall be developed by the Director, as required by section 402, within six months after enactment of this Act, and shall be published in the Federal Register within fifteen days thereafter as proposed regulations subject to comment by interested parties.

SEC. 404. After publication under section 403, receipt of comments, and such modification of the published proposals as the Director deems appropriate, the recommended changes in procurement regulations developed under this title shall be adopted by each Federal department and procurement agency within sixty days thereafter unless the head of such department or agency determines that such changes would not be in the national interest or would not be consistent with the primary objectives of such department or agency.

TITLE V—GENERAL PROVISIONS

DEFINITIONS

SEC. 501. As used in this Act:

(1) The term "academic institution" means any United States institution of higher education as defined in sections 491 and 1201 of the Higher Education Act of 1965.

(2) The term "Administration" means the Civil Science Systems Administration.

(3) The term "Assistant Director" means an Assistant Director of the National Science Foundation.

(4) The term "Associate Director" means the Associate Director for Civil Science Systems of the National Science Foundation.

(5) The term "civil science system" means any set of interrelated technological applications which are designed to perform certain public services, as defined in subsection (11) of this section.

(6) The term "civilian research and engineering activities" means all nondefense research and engineering activities as determined pursuant to regulations of the Director of the Foundation after consultation with the Directors of the Office of Management and Budget and the Office of Science and Technology.

(7) The term "Council" means the Civil Science Systems Advisory Council.

(8) The term "defense research and engineering activities" means any activity which involves—

(i) research, development, or engineering, including necessary supporting services, performed under grant from, or contract with, the Department of Defense or under subcontract to such a grant or contract; or

(ii) the construction, reconstruction, repair, or installation of any building, plant, structure, facility, or equipment connected or necessary to such research, development, engineering, or supporting services.

(9) The term "Deputy Associate Director" means the Deputy Associate Director for Civil Science Systems of the National Science Foundation.

(10) The term "Director" means the Director of the National Science Foundation.

(11) The term "Federal executive agency" means any department, agency, or independent establishment in the executive branch of the Government, including any wholly owned Government corporation.

(12) The term "Foundation" means the National Science Foundation.

(13) The term "Panel" means the Advisory Panel on Transition of Scientific and Technical and Manpower to Civilian Programs.

(14) The term "public service" means any set of interrelated organizations and activities which collectively perform certain related functions normally associated with life in our society, including but not limited to such public services as health care, public safety, public sanitation, pollution control, housing, transportation, public utilities, communications, and education.

(15) The term "State" includes each of the several States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Trust Territory of the Pacific Islands.

ADMINISTRATIVE PROVISIONS

SEC. 502. (a) The Director of the Foundation is authorized, in furtherance of the purposes and provisions of this Act, to—

(1) appoint such additional personnel as he deems necessary to carry out this Act;

(2) appoint such advisory committees as he deems advisable;

(3) procure the services of experts and consultants in accordance with section 3109 of title 5, United States Code; and

(4) use the services, personnel, facilities, and information of any other Federal department or agency, any agency of a State, or political subdivision thereof, or any private research agency with the consent of such agencies, with or without reimbursement therefor.

(b) Upon request by the Director, each Federal department or agency is authorized to make its services, personnel, facilities, and information, including suggestions, estimates, and statistics, available to the greatest practicable extent to the Director, or his designee, in the performance of his functions under this Act.

(c) The Director shall establish such additional divisions or offices within the Foundation as he deems necessary to carry out his functions under this Act.

PAYMENTS AND WITHHOLDING

SEC. 503. (a) Payments under this Act may be made in installments, in advance, or by way of reimbursement, with necessary adjustments on account of underpayment or overpayment.

(b) Whenever the Director, after giving reasonable notice and opportunity for hearing to a grantee or contractor under this Act, finds—

(1) that the program or project for which such grant or contract was made has been so changed that it no longer complies with the provisions of this Act; or

(2) that, in the operation of the program or project, there is failure to comply substantially with any such provision—

the Director shall notify such grantee or contractor of his findings and no further payments may be made to such grantee or contractor by him until he is satisfied that such noncompliance has been, or will promptly be, corrected. The Director may authorize the continuance of payments with respect to any projects pursuant to this Act which are being carried out by such grantee or contractor and which are not involved in the noncompliance.

RECORDS AND AUDIT

SEC. 504. (a) Each recipient of assistance under this Act pursuant to grants received, agreements entered into, or contracts entered into under other than competitive bidding procedures shall keep such records as the Director shall prescribe, including records which fully disclose the amount and disposition of the proceeds of such assistance, the total cost of the project or undertaking in connection with which such assistance is given or used, and the amount of that portion of the cost of the project or undertaking supplied by other sources, and such other records as will facilitate an effective audit.

(b) The Director and the Comptroller General of the United States, or any of their duly authorized representatives, shall have access for the purpose of audit and examination to any books, documents, papers, and records of the recipients that are pertinent to the assistance received under this Act.

PATENT RIGHTS

SEC. 505. (a) Each grant, contract, or other arrangement executed pursuant to this Act which relates to scientific research or engineering shall contain provisions governing the disposition of inventions produced thereunder in a manner calculated to protect the public interest and the equities of the individual or organization with which the grant, contract, or other arrangement is executed. Nothing in this Act shall be construed to authorize the Foundation to enter into any contractual or other arrangement inconsistent with any provision of law affecting the issuance or use of patents.

(b) No officer or employee of the Foundation shall acquire, retain, or transfer any rights, under the patent laws of the United States or otherwise, in any invention which he may make or produce in connection with performing his assigned activities and which is directly related to the subject matter thereof. This subsection shall not be construed to prevent any officer or employee of the Foundation from executing any application for patent on any such invention for the purpose of assigning the same to the Government or its nominee in accordance with such rules and regulations as the Director may establish.

The PRESIDING OFFICER. On this bill there is a time limitation previously agreed to of 2 hours on the bill and 1 hour on any amendment in the first degree and one-half hour on any amendment in the second degree.

Mr. McCLELLAN. Mr. President, I suggest the absence of a quorum. I ask unanimous consent that the time consumed not be charged to either side.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered. The time will not begin to run until after the quorum call, and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, what is the pending business?

The PRESIDING OFFICER. The pending business is S. 32, the National Science Policy and Priorities Act, which has been reported and is now before the Senate.

Who yields time?

Mr. KENNEDY. Mr. President, as I understand, there is a time limitation on the bill and on each amendment; is that correct?

The PRESIDING OFFICER. The Senator is correct.

Mr. KENNEDY. How much is it?

The PRESIDING OFFICER. A 2-hour time limit on the bill, and 1 hour on each amendment.

Mr. KENNEDY. Mr. President, I yield myself such time as I may require on the bill.

I ask unanimous consent that Mr. Ellis Mottur of my staff be accorded the privilege of the floor during the debate and the vote, as well as Mr. Roy Millenson of the minority staff. If I may have the attention of the Senator from Colorado, does he have anyone else in mind?

Mr. DOMINICK. Yes; I ask unanimous consent that Mr. Tom D'Alonzo of my staff be accorded the privilege of the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KENNEDY. Mr. President, I rise to speak in support of S. 32, the National Science Policy and Priorities Act. This bill is aimed at putting science and technology to work on the problems of our society. It provides a 3-year authorization of $1.8 billion for civilian research and engineering programs directed at these problems.

I am pleased to note that 45 other Senators from both sides of the aisle have joined me in sponsoring this legislation. The bill as printed shows 44 cosponsors but, since the last printing, I point out that the name of the Senator from Texas (Mr. TOWER) has been added as a cosponsor.

If there is one overriding lesson I have learned in my 4 years as chairman of the Subcommittee on National Science, it is that the potential of science is nowhere being matched by its performance.

Engineers can propel nuclear ships around the globe with the energy from a bucketful of fuel—yet our cities are increasingly beset with power blackouts and brownouts.

We can cruise on the moon's surface—yet we cannot commute from suburb to city without traffic jams, air pollution, and no parking at our destination. We can build beautiful, enclosed shopping malls in the suburbs—yet we cannot begin to cope with the housing crisis in the cities. We can design high-speed computers to process billions of bits of data instantly—yet we cannot teach all our children to read effectively.

Why is it that earlier this week metropolitan Washington had to be put on a pollution alert, so that mothers had to be concerned about their children playing out of doors? Why is it that household appliances continually break down and that their repair is not only costly, but often unreliable?

Why is it that thousands of American children burn to death each year because they wear highly flammable fabrics? Why is it that decent housing is increasingly out of reach of more and more of our citizens? Why is it that millions of Americans are undernourished in an age of affluence? Why is it that there are kidney dialysis facilities for only 2,000 of our citizens when 50,000 need such care? Why is it that we have not been able to use modern technology to reduce the mounting costs of educating our children?

We know that computer aided diagnosis, computer monitoring of serious hospital cases, and technological aids to emergency medical care can save thousands of lives each year—yet why is it that we do not make wider use of these devices?

The list is endless, but the lesson is clear: We have the scientific knowledge, but we have not made the concerted effort necessary to put it to use for the benefit of all our people.

As Shakespeare so aptly put it:

> The fault lies not in our stars, but in ourselves."

The Nation's scientists and engineers have the skills, the imagination, and the inventive ability to tackle and solve these problems. But we have let them down. We have not given them the go-ahead; we have not provided them with the support and resources to do the job.

We are all aware that productivity in American industry has been lagging in recent years, especially in comparison to Japan and Western Europe. Yet how many realize that part of the answer for this lies in American underinvestment in civilian research and technology? A Department of Commerce study shows that Western Europe, when its gross national product is only one-third of the United States GNP, has a third more technical personnel employed in civilian research. And Japan, with only half the population of the United States and one-seventh of our GNP, had 70 percent as many scientists and technical personnel employed in civilian research and development.

If we make the necessary national commitment to tackle these problems, if we provide the Nation's scientists and engineers with the wherewithal to do the job, I am confident they can solve many of these problems and make a giant step forward on earth toward making this the kind of society we want for our children, and their children to come.

Yet at this time of maximum need—when the Nation's problems with the environment, with health, with economic productivity, and with the quality of life in our society—when these problems need to be tackled with all the talent we can muster, we find technical unemployment higher than it has ever been in history. Although the Government has not been able to provide precise figures on the extent of technical unemployment, our best estimate—based on membership surveys by the technical societies and what Government figures are available—is that several hundred thousand scientists, engineers, and technicians are either unemployed or underemployed—by working at jobs well below their skill levels. Thus, of the Nation's approximately 3 million scientists, engineers, and technicians, from 5 to 10 percent are either unemployed or seriously underemployed.

This situation is intolerable. America's strength springs from the skill of its people. Scientists and engineers have a major share of those skills. The Nation must assure them the opportunity to use their skills for the benefit of all of us.

This is the purpose of S. 32, the National Science Policy and Priorities Act. It establishes a framework of national science policy and focuses the Nation's scientific talent and resources on its priority problems.

A summary of the principal provisions of the bill is as follows:

This bill establishes national science policy and programs to focus the Nation's scientific talent and resources on its civilian priority problems. It authorizes $1.8 billion over a 3-year period—$50 million to advance the state-of-the-art in priority research areas; $1.2 billion to design and demonstrate civil science systems which can provide improved public services; and $560 million to aid States, communities, companies, and individual scientists, engineers, and technicians in making the transition to civilian research and engineering programs. In addition, the bill creates a mechanism to establish Federal procurement policies and regulations which would foster portable pensions for scientists and engineers to protect their pension credits as they shift from one job to another.

The bill declares as national policy that: First, Federal funds for science will grow in proportion to the gross national product; second, scientific and technical manpower must have continuing employment opportunities at their professional skill levels; third, Federal funds for civilian research and development must be maintained at parity with military R. & D.; and fourth, Federal programs for civilian R. & D. must be focused on meeting national needs in priority areas.

TITLE I—SCIENCE POLICY

This title gives explicit authority to the National Science Foundation to develop national policies for applying science to national problems. This title also broadens the composition of the National Science Board—the Foundation's governing board—to include more technical and industrial representation. The $50 million is authorized to the Foundation in order to advance the state of the art in those areas.

TITLE II—DESIGN AND DEMONSTRATION OF CIVIL SCIENCE SYSTEMS

This title establishes a Civil Science Systems Administration within the National Science Foundation and authorizes $1.2 billion to do research, design, testing, and evaluation, and demonstration of civil science systems capable of providing improved public services in areas such as health care, public safety, public sanitation, pollution control, housing transportation, public utilities, communications, and education.

Programs would be carried out through contract with industry, universities, nonprofit organizations, and public agencies, and would include provision for transfer of funds to other Government agencies. Over fiscal years 1973, 1974, and 1975, the Administration would be authorized—$55 million for planning civil science systems; $140 million for applied social research necessary to designing such systems; $790 million for research and design of civil science systems, $105 million for testing and evaluation of such systems; $30 million for dissemination of technical information on such systems; and $80 million for public demonstration of civil science systems.

TITLE III—TRANSITION OF TECHNICAL MANPOWER TO CIVILIAN PROGRAMS

This title authorizes the National Science Foundation to plan and assist in the transition of scientific and technical manpower from research and engineering programs which have been terminated or significantly reduced, to other civilian-oriented research and engineering activities. Thus, $560 million over fiscal year 1973, 1974, and 1975 is authorized to aid States, communities, companies, and individual scientists, engineers, and technicians in making the transition. Programs include $15 million for research on economic conversion; $95 million to State, regional, and local governments for training of Government officials, operating conversion programs, and for hiring unemployed technical personnel to work in Government positions; $90 million for community conversion corporations to channel research and engineering programs in hard-hit communities; $275 million for job transition programs to enable companies to hire technical personnel to work on civilian projects for which they are not yet fully qualified—on-the-job training subsidies; $55 million for career transition fellowships to unemployed or underemployed technical personnel to acquire skills in other fields; $20 million for placement assistance to technical personnel who are unemployed or underemployed; and $10 million for developing university courses and curricula oriented toward civilian engineering projects.

TITLE IV—PROTECTION OF PENSION RIGHTS OF SCIENTISTS AND ENGINEERS

This title declares as national policy that scientists and engineers be protected, to the extent feasible, against forfeiture of pension rights or benefits as a consequence of job transfers or loss of employment resulting from terminations or modifications of federal contracts or procurement policies. The bill provides for the development and implementation of Federal procurement regulations designed to achieve that policy.

Let us now turn to a more detailed consideration of the key provisions of the bill:

The policy statement in section 2 of the bill is perhaps the most significant section of the bill. This section recognizes that Federal funding for science and technology represents an investment in the future, and declares that that investment must be raised to an expenditure level which is adquate to the needs of the Nation.

Federal funds for research and development as a percentage of the gross national product have been dropping steadily over the past decade. In 1963, Federal funds for research and development were 2.6 percent of the gross national product—GNP. By 1971, they had dropped to 1.6 percent of the gross national product. This decline of 1 percent represents about $10 billion on the base of the present gross national product. This means that if Federal funds for research and development in 1971 had been the same percentage of the GNP as they had been in 1963, they would total about 10 billion more than they do now. When one takes into account the fact that there has been a considerable inflation in R. & D. costs during that period, one realizes that the decline in relative resources allocated to R. & D. has been more substantial during that time.

But just as each major industrial corporation tends to allocate a portion of its funds each year as a long-term investment in the future development of the firm, so must the Nation make an annual investment in its future through research and development. This is especially true because there are certain types of R. & D. of great potential benefit to the Nation, which are too extensive for any individual firm to undertake; and other types of R. & D. which are not likely to prove profitable to a particular firm, but which nevertheless can provide great benefits for the Nation as a whole.

So Federal funds for R. & D. must be seen as a continuing investment in the Nation's future. Their precipitate decline over the past 8 years, as a percentage of the GNP, which parallels a period of low productivity in the economy, indicates that they should be restored to a higher level, and that the Nation would benefit from such a restoration.

Once they have been increased to an appropriate level, they should grow from year to year in proportion to the growth in the GNP. In this way the Nation can assure to the generations to come the benefits which can only flow from research which we are farsighted enough to undertake today.

This section also establishes as national policy that there should be continuing employment opportunities for scientists and engineers in positions commensurate with their capabilities. This emphasizes the recognition that our technical manpower pool is a national resource which must be utilized to the fullest.

This section also stipulates that Federal funds for civilian research and engineering should be maintained at or above a level of parity with Federal funds for military research and engineering, except when inconsistent with overriding considerations of national security.

Finally this section establishes as national policy that Federal funds for civilian research and engineering should be focused on meeting human needs in priority to problem areas such as health care, public safety, pollution, productivity, education, transportation, and energy resources.

Title I is intended to provide the National Science Foundation with the broad authority needed for it to exercise a leadership role in determining national science priorities and in developing national policies which foster the application of scientific and technical knowledge to the solution of national problems. In addition, this title clarifies the policy-making role of the National Science Board and broadens the composition of the board which has traditionally been oriented toward academic, basic science, to include increased representation of people with an industrial or technical background.

Over a 3-year period, $50 million is authorized for the programs carried out under sections 103 and 104. These would involve approximately 100 research projects at an average cost of about $500,000 each; and would provide jobs in the peak third year directly for about 1,600 scientists, engineers, technicians, and research assistants.

Title II for which $1.2 billion is authorized over a 3-year period is intended to be a NASA-like organization which would channel technical talent and resources toward the problems of our society in much the same way the National Aeronautics and Space Administration has focused such efforts on the problems of outer space. The Civil Science Systems Administration would function primarily through the award of contracts to industry, universities, and other research organizations. It would also be empowered to transfer some funds to other agencies when it was more appropriate for particular program components to be carried out by some other agency. The contracting approach would be similar to the NASA model in that there would be considerable reliance on systems contracts, with the prime contractors in turn subcontracting specific portions of the task to other contractors. Federal procurement regulations would, of course, prevail for these contracts, so that most contracts would be awarded on a competitive basis.

It is expected that the $55 million authorized over a 3-year period for planning for civil science systems would provide for about 110 planning projects at an average cost of about $500,000 per project. In its peak first year, this program would provide jobs directly for about 2,000 scientists, engineers, technicians, and research assistants.

It is expected that the $140 million authorized for applied social research over a 3-year period would provide for about 233 applied social research projects at an average cost of about $600,000 per project. In its peak third year this program would provide jobs directly for about 2,500 scientists and research assistants.

Over a 3-year period $790 million is authorized for civil science systems research and design, which is the major component of the overall civil science systems program. It is expected that this authorization would permit funding for research and design in about 12 major areas, such as: health care services; public safety—crime control; public safety—fire prevention and control; power supply—gas and electric utilities; innovative mass transit, innovative construction technology, education systems; water pollution control; air pollution; solid waste disposal systems; communication systems; et cetera. It is expected that over the 3-year period, the program could mount in each such area about 40 research projects at about $1 million each and about five major design projects at about $5 million each. Thus, for all areas of activity over the 3-year period, it is roughly estimated that there might be about 480 research projects and about 60 design projects. It is expected that in the peak third year, this program would directly employ about 15,000 scientists, engineers, and technicians.

It is estimated that the $105 million authorized for testing and evaluation over the 3-year period would provide for about 60 testing and evaluation projects at about $1.75 million each. And it is expected that this program would employ about 2,000 scientists, engineers, and technicians in the peak third year.

Over the 3-year period, $110 million is allocated for the information dissemination and systems demonstration programs, which are essential to the overall success of the Civil Service Systems Administration.

For it is essential that the results of the civil science systems programs be widely disseminated and demonstrated so that they can be put into practical use throughout the Nation. Only through a concerted program of information dissemination and demonstration of the systems which have been developed will it be possible to assure maximum benefit to society from these programs. The information dissemination program is similar to the NASA technology utilization program, but is of more critical importance to the civil science systems activity. For technology utilization of the innovations resulting from the space program is a by-product of the main effort to explore outer space; it is an added benefit, not a central output. But in the civil science systems program, the major purpose is to develop technical knowledge which can be of direct benefit to society. Through the information dissemination and systems demonstration programs, the new knowledge developed through this effort will be made widely available throughout the economy and its benefits will accrue to society at large.

It is estimated that the $80 million authorized for the systems demonstration program over the 3-year period would permit the initiation of about 40 systems demonstration projects at about $2 million each. It is expected that the information dissemination program would directly provide about 2,000 jobs for engineers and technicians.

The scientific and technical community has experienced significant dislocations over the past few years as major Government programs have been terminated or significantly reduced, and programs of comparable magnitude have not emerged to absorb the manpower resources which have been released. It is essential that the Government aid in the transition of technical personnel to civilian research and engineering programs. This is the objective of title III, transition of technical manpower to civilian programs.

It is estimated that the $15 million authorized for research on transition to civilian programs over the 3 year period would provide for about 30 research projects at about $500,000 each; and would directly provide jobs for about 200 scientists and research assistants.

In arranging for the orderly transition of technical manpower into civilian research and engineering programs, it is imperative that State and local governments and regional governmental agencies play a key role in the planning and implementation of programs which will impinge on their jurisdictions. It is for this reason that the Civil Science Systems Advisory Council and the Advisory Panel on Transition of Scientific and Technical Manpower to Civilian programs include representatives of the National Governors Conference, the National Association of Counties, and the National League of Cities and the U.S. Conference of Mayors.

In addition the bill includes a 3-year authorization of $95 million which would go to State and local governments and regional governmental agencies. These funds would enable such governments to hire unemployed technical personnel on their staff and to conduct programs designed to facilitate the transition of scientific and technical activities to civilian programs within their particular jurisdiction.

In addition, these funds would permit government officials at the State, local, and regional level to receive specialized training which would acquaint them with the potential contributions of science and technology to the resolution of public problems in priority areas, and teach them how to utilize scientific and technical talent in an effective and economical manner. For the most part, officials at these levels of government have not had the experience in dealing with research and engineering programs which officials of the Defense Department or Space Agency have had.

Since planning, contracting for, and monitoring such programs take specialized understanding and skills, it is desirable that officials at State, local, and regional levels have the opportunity for such training, in order to maximize the results which society will receive from these programs. It is estimated that the $75 million authorized for section 305 over a 3-year period would provide directly for about 2,000 jobs per year for technical professionals; and that sections 306 and 307 would provide training for about 6,000 State, regional, and local governmental officials throughout the Nation, or about an average of 120 per State.

The purpose of the Community Conversion Corporation program is to provide a mechanism for enabling communities which have been substantially affected by cutbacks in research and engineering programs to help themselves. Under this program—for which $90 million is authorized over a 3-year period—such communities could charter a Community Conversion Corporation, which meets the criteria of subsection a. of section 308.

This corporation could be an existing non-profit corporation which meets those criteria; a subsidiary of an existing corporation specially designed to meet those criteria; a nonprofit corporation set up under the auspices of a local or regional governmental agency; or an entirely new nonprofit entity with no ties to any existing organizations.

The Community Conversion Corporation would, if it qualified, be eligible to receive a grant from the National Science Foundation to fund its overall operations, while it sought specific grants and contracts from other government agencies, private foundations, community organizations, and private business firms. Since "the National Science Foundation will give preference in awarding such community conversion grants or contracts to those corporations which show a likelihood of being able to obtain such additional financial support," existing organizations which qualified as community conversion corporations would have a certain competitive advantage over entirely new organizations established for this purpose.

On the other hand, a newly established community conversion corporation of high caliber, with imaginative leadership would still be able to compete effectively with community conversion corporations which were tied to existing organizations.

The Community Conversion Corporation could "conduct, contract for, or stimulate the conduct of civilian-oriented research and development activities which focus on the particular problems, or draw on the particular resources, of the community within which the corporation is located." Thus it would have a catalyzing effect in generating research and engineering activity throughout the community and stimulating other economic activity as a consequence.

It is estimated that the $90 million authorized for community conversion corporations over the 3-year period would provide for the launching and 3-year funding of about 20 community conversion corporations throughout the country at about $1.5 million each per year. It is expected that this program would directly provide about 1,000 jobs per year for scientists, engineers, and technicians.

The job transition program—for which $275 million is authorized over a 3-year period—is the major program in title III. The $275 million provided under this section would be awarded as job transition grants to industrial firms and research organizations "to enable them to hire scientists, engineers, and technicians for work on projects for which they are not yet fully qualified."

In other words, firms undertaking civilian research and engineering projects could hire unemployed or underemployed technical personnel whose experience had been in defense and aerospace programs and who were not yet fully qualified for the particular project on which they would work. The job transition grants would subsidize all or a portion of their salary, within stipulated limits, while they, in effect, received on-the-job training—that is, learned by doing.

The same kind of subsidization process occurred in the early years of the space program and in the research and development of various defense systems; only in those instances it occurred in the form of cost overruns. In this situation, it would be clearly recognized that there is an on-the-job learning process which must occur in new kinds of research and engineering activity, and that the country should openly and honestly budget for it.

This program would, of course, be of great benefit to industrial firms seeking to enter new civilian research and engineering markets. But it would also be of considerable benefit to the unemployed scientists and engineers who would be able to find jobs because of it.

It is estimated that the $275 million authorized for this program over the 3-year period would directly involve about 100 firms and provide partial employment subsidies for about 10,000 scientists and engineers in each of the peak—second and third—years.

Although the testimony and views received on this bill indicated that the vast bulk of displaced technical personnel did not need extensive academic retraining, it was the consensus that some smaller segment of that group would require or strongly desire academic retraining, to prepare them for more substantial shifts in their special fields of expertise.

The career transition fellowship program has been developed with this group in mind. It is estimated that the $55 million authorized for this program over the 3-year period would provide for about 2,000 fellowships in each of the second and third years.

Because of frequent, rapid changes in Federal contracting for research and development, scientists and engineers suffer an unusually high rate of forfeiture of the pension benefits they have accumulated under private pension plans. It is unfair that these individuals suffer loss of their hard-earned pension rights because of Government procurement decisions over which they have no influence. Accordingly, title IV is aimed at the modification of Federal procurement policies to protect the equities of these individuals, to the extent which is feasible.

The National Science Foundation is directed to study this problem—in consultation with other Government agencies, business organizations, labor unions, associations of technical personnel, and other interested parties; and to develop recommendations for appropriate changes in Federal procurement policies. The bill in no way gives the National Science Foundation authority over the regulation of pension programs, but merely directs the Foundation to use its expertise in the area of scientific manpower to study this problem and to make recommendations for any appropriate changes in Federal procurement of research and engineering projects which appear feasible.

The recommendations would be published in the Federal Register so that interested groups could comment on them, and the foundation could make any necessary revisions in its recommendations. The final recommendations would be subject to veto by any government agency which deemed them inappropriate for its programs.

These are the programs contained in S. 32. A great deal of thought and effort has gone into the development of this legislation. The Committee on Labor and Public Welfare began serious consideration of these issues in the 91st Congress, holding hearings on postwar economic conversion in Lexington and Framingham, Mass., in March and April of 1970. The testimony and statements received at these hearings provided the committee with a comprehensive background on the problems of economic conversion and a realization that legislation was required to assure the Nation a strong base of civilian science and technology.

Accordingly, as chairman of the Subcommittee on the National Science Foundation, I began developing specific legislation to meet the needs in this area. In August 1970, I introduced S. 4241, the predecessor to S. 32. S. 4241 was studied by leading experts in this field, and on the basis of their suggestions was revised and reintroduced in January 1971 as S. 32, the Conversion Research, Education, and Assistance Act.

At the same time a companion bill was introduced in the House in January 1971, as H.R. 34 by Congressmen JOHN W. DAVIS and ROBERT N. GIAIMO, along with more than 100 bipartisan cosponsors. Since H.R. 34 was virtually identical to S. 32, the 8 days of hearings before the House Committee on Science and Astronautics in June and July 1971 proved extremely helpful to our subcommittee in its deliberations on this bill.

Based on the many comments and suggestions which were received regarding S. 32, I filed a major amendment to the bill, amendment 469, in the fall of 1971. The subcommittee then held hearings on the bill in late October 1971, including consideration of this amendment. Following the hearings many additional statements were received from interested individuals and organizations with expertise in this area. And the bill was substantially revised and strengthened, taking into account all of the recommendations which were received.

The subcommittee held executive meetings on the bill on April 5 and May 30, 1972, and favorably reported the bill, as amended, without opposition to the full Committee on Labor and Public Welfare. The Full Labor Committee held executive meetings on the bill on June 21 and June 28, 1972, and ordered the bill reported favorably to the Senate, with an amendment in the nature of a substitute and with a title amendment, to reflect more accurately the revised thrust of the bill. The full committee vote on the bill was unanimous, with all 17 members voting to report the bill favorably.

I should also point out that there is widespread support for this bill throughout all areas of the Nation, and among a broad coalition of groups and organizations. The 45 Senators who have joined with me as cosponsors of this bill come from both sides of the aisle and from all areas of the Nation. The outside groups and organizations which have indicated support for this bill include scientific and technical associations, labor unions, business organizations, urban groups, educational associations, church groups, and many others. A list of some of these groups conveys the broad span of support which this measure has received. Among the organizations whose officials have indicated support for S. 32 are: Air Pollution Control Association; American Federation of State, County, & Municipal Employees; American Federation of Teachers; American Institute of Architects; American Society of Mechanical Engineers; American Society of Metals; Association of Technical Professionals; Boeing Corp.; Coalition on National Priorities; Council of Engineering & Scientific Organizations; Council of AFL–CIO Unions for Scientific, Professional & Cultural Employees; Federation of American Scientists; Institute of Electrical & Electronics Engineers; International Association of Machinists & Aerospace Workers; International Conference of Police Associations; International Union of Electrical, Radio, and Machine Workers; National Education Association; National Society of Professional Engineers; National Student Lobby; Political Action Committee of Engineers & Scientists; Service Employees International Union; Smaller Business Association of New England; Scientific Manpower Commission; the United Auto Workers; and the U.S. Conference of Mayors.

To summarize my remarks, enactment of S. 32 would directly provide positions for about 41,000 scientists, engineers, and other technical personnel in its peak year. Since each professionally active scientist or engineer creates jobs for 6 to 10 other workers throughout the economy, enactment of this measure would create a total of about 290,000 to 450,000 jobs throughout the economy.

But creating jobs would only be one aspect of its economic impact. The bill would also create a host of new products, services, industries, and markets; it would help increase productivity; and it would have a strong revitalizing effect on the entire civilian economy. Moreover, it would greatly assist the Nation in strengthening its international economic competitive position: Through technical innovations which could be used to advantage in international trade and in U.S. business operations abroad.

In addition to its direct impact on the economy, enactment of S. 32 would have a powerful impact on the shape of our society for years to come. For it could bring to our domestic problems and social issues the same reservoir of talent, the same dedication of purpose, the same dramatic imagination which have characterized our space program over the past decade. And in strengthening our economy and helping to solve our social problems, S. 32 could also serve as a catalyst for recapturing the commitment of the Nation's youth.

In the words of one of the authorities who submitted a statement on S. 32—John P. Eberhard, dean of the School of Architecture and Environmental Design, State University of New York at Buffalo and former Director of the Institute of Applied Technology in the Department of Commerce:

> I think that your proposed legislation could open the door to a new period of scientific and engineering exploration that was as exciting as any we have engaged in during the past twenty years. It could make it possible for us to do something substantial about the quality of life in our urban centers. It could give many of our young people who are disenchanted with previous value systems . . . a new kind of hope and enthusiasm to do something about our environment. It could give us all an opportunity to make an investment in the future cities which our children and our children's children will inherit from us.

Or in the words of our former colleague, Senator Joseph S. Clark, who is now chairman of the Coalition on National Priorities:

> S. 32, the National Science Policy and Priorities Act is a noble beginning. It will help get our most able brains about the real needs of the global village. By setting our thinking people on an enlightened course, our civilization will prosper.

I believe the civil science systems program can become the dramatic focus for science in the decade of the seventies, in much the same way as the space program did in the sixties. But the results will be of direct benefit to all our citizens here and now—not at some future date.

In the spring of 1961, President Kennedy challenged the technical community to place a man on the moon within a decade. The Nation's engineers responded magnificently, and the race was won.

But now, 11 years later, the team is marking time while we search for a new target. The target I propose is a community which really serves its citizens. Before this decade is up, let the Nation's architects and engineers design and demonstrate a totally new community—a citizens' community—which shows us what is possible for all Americans in all communities. Clean air and clean water—rapid, reliable, and even comfortable mass transit—computerized health services and educational systems available to all hospitals, clinics, and schools—underground utilities which can be repaired and expanded without ripping up the streets—public safety systems which use modern technology to assure safe streets and safe homes.

This is the goal for technology in our time. This is the way to create jobs, revitalize the economy, and help revive the national spirit.

I urge each Member of the Senate to support this measure.

I ask unanimous consent that a portion of the text of the committee report be printed in the RECORD.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

SUMMARY

GENERAL

This bill establishes national science policy and programs to focus the Nation's scientific talent and resources on its civilian priority problems. It authorizes $1.81 billion over a three-year period—$50 million to advance the state-of-the-art in priority research areas; $1.2 billion to design and demonstrate civil science systems which can provide improved public services; and $560 million to aid States, communities, companies, and individual scientists, engineers, and technicians in making the transition to civilian research and engineering programs. In addition, the bill creates a mechanism to establish Federal procurement policies and regulations which would foster portable pensions for scientists and engineers to protect their pension credits as they shift from one job to another.

NATIONAL POLICY PROVISIONS

The bill declares as national policy that: (1) Federal funds for science will grow in proportion to the Gross National Product; (2) scientific and technical manpower must have continuing employment opportunties at their professional skill levels; (3) Federal funds for civilian research and development (R & D) must be maintained at parity with military R & D; and (4) Federal programs for civilian R & D must be focused on meeting national needs in priority areas.

TITLE I—SCIENCE POLICY

This title gives explicit authority to the National Science Foundation to develop national policies for applying science to national problems. The bill also broadens the composition of the National Science Board (the Foundation's governing board) to include more technical and industrial representation. The $50 million is authorized to the Foundation in order to advance the state-of-art in those areas.

TITLE II—DESIGN AND DEMONSTRATION OF CIVIL SCIENCE SYSTEMS

This title establishes a Civil Science Systems Administration within the National Science Foundation and authorizes $1.2 billion to do research, design, testing and evaluation, and demonstration of civil science systems capable of providing improved public services in areas such as: health care, public safety, public sanitation, pollution control, housing, transportation, public utilities, communications, and education.

Programs would be carried out through contract with industry, universities, nonprofit organizations and public agencies, and would include provision for transfer of funds to other government agencies. Over FY '73, '74, and '75, the Administration would be authorized—$55 million for planning civil science systems; $140 million for applied social research necessary to design such systems; $790 million for research and design of civil science systems; $105 million for testing and evaluation of such systems; $30 million for dissemination of technical information on such systems; and $80 million for public demonstration of civil science systems.

TITLE III—TRANSITION OF TECHNICAL MANPOWER TO CIVILIAN PROGRAMS

This title authorizes the National Science Foundation to plan and assist in the transition of scientific and technical manpower from research and engineering programs which have been terminated or significantly reduced, to other civilian-oriented research and engineering activities. Thus $560 million over FY '73, '74, and '75 is authorized to aid States, communities, companies, and individual scientists, engineers, and technicians in making the transition. Programs include: $15 million for research on economic conversion; $95 million to State, regional and local governments for training of government officials, operating conversion programs, and for hiring unemployed technical personnel to work in government positions; $90 million for Community Conversion Corporations to channel research and engineering programs in hard-hit communities; $275 million for Job Transition Programs to enable companies to hire technical personnel to work on civilian projects for which they are not yet fully qualified (on-the-job training subsidies); $55 million for Career Transition Fellowships to unemployed or underemployed technical personnel to acquire skills in other fields; $20 million for placement assistance to technical personnel who are unemployed or underemployed; and $10 million for developing university courses and curricula oriented toward civilian engineering projects.

TITLE IV—PROTECTION OF PENSION RIGHTS OF SCIENTISTS AND ENGINEERS

This title declares as national policy that scientists and engineers be protected, to the extent feasible, against forfeiture of pension rights or benefits as a consequence of job transfers or loss of employment resulting from terminations or modifications of Federal contracts or procurement policies. The bill provides for the development and implementation of Federal procurement regulations designed to achieve that policy.

TITLE V—GENERAL PROVISIONS

This title contains definitions of terms used in this Act, administrative provisions which are necessary to implement this Act, and provisions to protect the public interest and the equities of grantees and contractors in disposition of patent rights.

SECTION-BY-SECTION ANALYSIS

Section 1.—This section states that this Act may be cited as the "National Science Policy and Priorities Act of 1972".

DECLARATION OF POLICY

Section 2. This section declares as national policy that: (1) Federal funds for science and technology must be raised to an adequate level and then continue to grow in proportion to the growth in the GNP; (2) there must be continuing employment opportunities for scientists, engineers, and technicians in positions commensurate with their capabilities; (3) Federal funds for civilian research and engineering must be maintained at least at a level of parity with Federal funds for defense research and engineering; and (4) Federal funds for civilian research and engineering must be focused on meeting human needs in national priority problem areas.

Title I—Science policy and priorities for civilian research and engineering

Short Title

Section 101. This section states that this title may be cited as the "Science Policy Act."

Authority of the National Science Foundation

Section 102. This section amends section 3 of the National Science Foundation Act of 1950 to require that the Foundation develop national policies to foster the application of scientific and technical knowledge to the solution of national problems.

Research and Engineering Priorities

Section 103. This section requires that the Foundation identify priority areas of civilian research and engineering likely to contribute to the resolution of national problems.

Research Program

Section 104. This section authorizes the Foundation to contract for basic and applied research to advance the state-of-the-art in priority research areas.

National Science Board

Section 105. This section clarifies the policy-making role of the National Science Board and broadens the membership of the National Science Board to emphasize more industrial and technical representation.

Policy Appraisal and Reporting

Section 106. This section requires that the Foundation report to the President and the Congress with respect to the implementation of policies set forth in section 2 of this Act.

Authorization of Appropriations

Section 107. This section authorizes $50 million to the National Science Foundation over fiscal years 1973, 1974, and 1975 to carry out the provisions of sections 103 and 104.

Title II—Design and demonstration of civil science systems

Short Title

Section 201. This section states that this title may be cited as the "Civil Science Systems Act."

Authority of the National Science Foundation

Section 202. This section authorizes the Foundation to design and demonstrate civil science systems which are capable of providing improved public services in areas such as health care delivery, public safety, public sanitation, pollution control, and public utilities. This section also exempts the Director of the National Science Foundation from having to obtain the approval of the National Science Board in all contracts of $2 million or more, with respect to the programs authorized under this title.

Programs Authorized

Section 203. This section authorizes the Foundation to support programs of applied research and experimentation to design civil science systems, to test and evaluate such systems, and to disseminate and demonstrate the results of such programs; and to assure that these programs make maximum effective use of the Nation's technical manpower, including those who are unemployed.

Establishment of the Civil Science Systems Administration

Section 204. This section establishes a Civil Science Systems Administration within the National Science Foundation to carry out the programs under this title.

Administration Officers

Section 205. This section establishes the positions of Associate Director for Civil Science Systems, Deputy Associate Director for Civil Science Systems, and two Assistant Directors for Civil Science Systems to administer the programs of the Civil Science Systems Administration.

Civil Science Systems Advisory Council

Section 206. This section establishes a Civil Science Systems Advisory Council to advise the Director of the National Science Foundation with respect to his responsibilities under this title.

Planning for Civil Science Systems

Section 207. This section authorizes the Foundation to support a program of planning studies for the design and demonstration of civil science systems capable of providing improved public services.

Applied Social Research

Section 208. This section authorizes the Foundation to support a program of applied social research into the economic, sociological, political, legal, administrative, and psychological aspects of the design, development, and implementation of civil science systems capable of providing improved public services.

Civil Science System Research and Design

Section 209. This section provides the Foundation with specific authorization to support a program of research and design of civil science systems capable of providing improved public services; requires that performance objectives and applicable physical, environmental, economic, social, and esthetic constraints are included in each contract awarded under this section; and requires that the Foundation obtain community and public views in its determination of the performance objectives and priorities to be met by such systems.

Testing and Evaluation

Section 210. This section provides the Foundation with specific authorization to support programs of testing and evaluation of civil science systems.

Information Dissemination

Section 211. This section authorizes the Foundation to establish and operate a computerized Civil Science Systems Information Service for the benefit of Federal, State, and local governmental agencies, industry, academic institutions, and nonprofit organizations.

Systems Demonstration

Section 212. This section provides specific authorization to the Foundation for the support of systems demonstration projects which publicly demonstrate the benefit of alternative civil science systems; and assures that the Foundation will consult with all State and local governments in whose jurisdictions such demonstrations may occur, prior to awarding contracts for such demonstrations.

Coordination With Other Government Agencies

Section 213. This section requires that the Foundation maintain continuing consultation and coordination with appropriate Federal, State, regional, and local government agencies in planning and conducting or assisting programs under this title.

Authorization of Appropriations

Section 214. This section authorizes $1.2 billion to the National Science Foundation over fiscal year 1973, 1974, and 1975 to carry out the provisions of this title.

Title III—Transition of technical manpower to civilian programs

Short Title

Section 301. This section states that this title may be cited as the "Technical Manpower Transition Act".

Authority of the National Science Foundation

Section 302. This section authorizes the Foundation to assist in the transition of scientific and technical manpower from programs which have been terminated or significantly reduced to other civilian-oriented research and engineering activities.

Advisory Panel on Transition of Scientific and Technical Manpower to Civilian Programs

Section 303. This section establishes an Advisory Panel on Transition of Scientific and Technical Manpower to Civilian Programs to advise the Director of the National Science Foundation with respect to his responsibilities under this title.

Research on Transition to Civilian Programs

Section 304. This section authorizes the Foundation to support research on the social, economic, and managerial aspects of transition from defense research and engineering activities to civilian-oriented research and engineering activities; and to disseminate the significant results of such research.

Assistance to State and Local Governments

Section 305. This section authorizes the Foundation to make grants to State and local governments and regional governmental agencies for programs to facilitate the transition of scientific and technical activities to civilian programs within the particular area; and for the hiring of currently unemployed scientists, engineers, and technicians to use their technical skills in government positions.

Training Government Officials

Section 306. This section authorizes the Foundation to support training programs for Federal, State, and local government employees who will determine or administer programs for civilian research and engineering activities.

Government Employee Participation

Section 307. This section authorizes the Foundation to transfer funds to other government agencies to pay for the travel and subsistence expense of government employees incurred in connection with their participation in training programs carried out under section 306.

Community Conversion Corporations

Section 308. This section authorizes the Foundation to contract with local governments or nonprofit corporations for the establishment and operation of Community Conversion Corporations which would stimulate civilian-oriented research and development activities which focus on the particular problems, or draw on the particular resources, of the community within which the corporation is located.

Job Transition Programs

Section 309. This section authorizes the Foundation to make job transition grants to industry and nonprofit organizations to enable them to hire unemployed technical personnel to work on civilian research and engineering projects for which they are not yet fully qualified; i.e., to subsidize their on-the-job learning process as they make the transition to civilian research and engineering work.

Career Transition Fellowships

Section 310. This section authorizes the Foundation to award career transition fellowships to unemployed or underemployed technical personnel to enable them to pursue a course of study through which they can acquire specialized technical skills in new fields.

Placement Assistance

Section 311. This section authorizes the Foundation to support placement programs for unemployed or underemployed technical personnel.

Education Program

Section 312. This section authorizes the Foundation to support the design of courses and curriculums intended to prepare students for careers in civilian research and engineering activities.

Authorization of Appropriations

Section 313. This section authorizes $560 million to the National Science Foundation over fiscal years 1973, 1974, and 1975 to carry out the provisions of this title.

Title IV—Protection of pension rights of scientists and engineers

Section 401. This section declares as the policy of the United States to seek to protect scientists and engineers from undue forfeiture of pension benefits under private pension plans.

Section 402. This section requires the Foundation, in consultation with other agencies and appropriate outside groups, to develop recommendations for changes in Federal procurement regulations to insure (to the extent feasible) protection against forfeitures of pension or retirement rights or benefits, as a consequence of job transfers or loss of employment resulting from terminations or modifications of Federal contracts or procurement policies.

Section 403. This section requires that the

Foundation develop such recommendations within six months after enactment of this Act and publish such proposed changes in the Federal Register within fifteen days thereafter, for comment by interested parties.

Section 404. This section provides that, after incorporation of additional changes based on the comments received, the recommended changes in procurement regulations shall be adopted by each Federal agency within sixty days, unless the head of such agency vetoes the application of such regulations for his agency.

Title V—General provisions

Definitions

Section 501. This section defines terms used in this Act.

Administrative Provisions

Section 502. This section sets forth certain administrative provisions necessary to enable the Director of the National Science Foundation to carry out his responsibilities under this Act.

Payments and Withholding

Section 503. This section provides for payments and withholding under this Act.

Records and Audit

Section 504. This section requires the maintenance of appropriate records by grantees or contractors under this Act; and authorizes the Director of the Foundation and the Comptroller General of the United States, or their duly authorized representatives, to have access to such records for the purpose of audit and examination.

Patent Rights

Section 505. This section provides for the protection of the public interest and the equities of contractors and grantees in the disposition of inventions produced under the programs carried out under this Act.

EXPLANATION OF NEED

Science and technology have become central to our civilization. Throughout history science and technology have had occasional but significant impacts on military capabilities and economic development. But only since World War II have the effects of science and technology become pervasive in our society. Our military security depends on scientific research and development. Our economic development and productivity, along with our international competitive position, depend on increasing technical innovation to provide new products and services which meet changing needs. And the quality of life in our society—the adequacy of health care, the preservation of the environment, the adequacy of educational programs, the provision of transportation and communication services, and the very sources of energy which make other services possible—all are interwoven with, and depend in part on, the efficacy of scientific and technical progress.

Since the Second World War the principal focus of the Nation's scientific programs has been on defense, and since Sputnik on space. The achievements of the Nation's scientists and engineers in these areas have been sweeping in scope, and staggering in their impact. The development of an overwhelming arsenal of nuclear weapons, ballistic missiles, travel to the Moon and probes to other planets are now commonplace facts to our children.

These developments have had some spinoff effect on the civilian area of our economy and society. Computers, the vast expansion in electronics, and passenger jet aircraft are all derived from military and space programs. But most areas of civilian industry have not yet been significantly affected by scientific research. Textiles, shoes, and furniture are three examples of civilian industries which are still dependent on traditional methods and which have not reaped the benefits which scientific advance can provide.

And in the public service sector of the economy, the situation is even worse. Trash in our city streets is still collected in the same inefficient manner, and still disposed of in vast rubbish heaps that mar our countryside and pollute our air. Transportation in our metropolitan areas becomes more snarled and inconvenient all the time. And adequate health care for all our citizens continues to become more costly, even when it is available.

In the civilian sector of our economy and in the social area, the vast promise of science has been nowhere near matched by its performance. The reason for this is simple. We have not made the investment of scientific talent and resources which the situation demands. The bulk of our technical effort has been focused on defense and space with only marginal attention given to other problem areas.

The Committee's favorable recommendation with respect to this bill in no way implies any criticism of that past allocation of effort; nor does the bill in any way aim at limiting that effort in the future. (As a matter of fact, Section 2(a)(1) of the bill would assure continuing growth for all areas of research and development.) But the bill is aimed at assuring that our civilian science programs are adequate to meet our needs over the coming years.

It is important to note that for the first time in our history we have a large surplus of scientific and technical manpower which is not engaged in productive technical employment. This has resulted from Federal cutbacks, over recent years, in defense and space research and development, without corresponding increases in civilian science and technology.

So at the very time that the Nation's problems with the environment, with health, with economic productivity, and the quality of life in our society need to be tackled with all the talent we can get from our technical workforce, we find technical unemployment higher than it has ever been in history.

The exact figures on technical unemployment are shrouded in obscurity. The data on unemployment gathered by the Labor Department are not collected in such a way as to lend themselves to analysis for technical unemployment. The National Science Foundation attempted to shed additional light on the situation by conducting surveys of technical unemployment in the Spring of 1971.

But in the words of the Director of the National Science Foundation (in a letter addressed to the subcommittee chairman, dated June 20, 1972): "Our special 1971 surveys were designed to measure the changes which had taken place during a twelve-month period for a selected group of scientists and engineers. We knew that these 1971 results were not totally representative of the complete U.S. scientific and engineering manpower pool . . . We had been considering the advisability of an additional special survey of the employment status of scientists and engineers in 1972. However, a number of factors convinced us that it would be preferable not to proceed at this time. These include: the currently changing conditions of the job market, the limitations of the available sample (we were planning to use the same population that was used in the 1971 surveys), and the fact that some information concerning the unemployment situation for scientists and engineers will become available later in 1972 from the Foundation sponsored Postcensal Survey of Professional, Technical, and Scientific Personnel."

Thus the National Science Foundation surveys in 1971 "were not totally representative of the complete U.S. scientific and engineering manpower pool", and in 1972 the National Science Foundation has not conducted any follow-up survey. Whatever the precise extent of technical unemployment, it is prudent to assume that it lies somewhere between the admittedly incomplete NSF estimates and the much higher estimates emanating from the scientific and technical community. When one takes into account the large number of technical personnel who are working at jobs which do not draw on their professional skills, it is reasonable to assume that several hundred thousand scientists, engineers, and technicians are either unemployed or are underemployed (by working at jobs well below their skill levels). In terms of the total technical workforce, it is reasonable to assume that from five to ten percent of the Nation's approximately three million scientists, engineers, and technicians are either unemployed or seriously underemployed.

This obviously represents a serious human hardship to the individuals involved and to their families. It also represents a substantial economic loss to the communities in which they live; for this group was among the highest income producing groups in their communities, and their reduction in income depresses their communities' economic activity in greater measure than their numbers would indicate.

But apart from the human hardship involved, this situation represents a tragic waste of one of our most valuable national resources. For the Nation's scientists and engineers must be viewed as a national resource. An enormous national investment has gone into their education and on-the-job training, through Federal fellowships, scholarships, institutional aid to education, and Federal funding of research and development. As long as this group stands idle or applies its talents to tasks well beneath its skill levels, this national investment is going to waste.

It should be used to reap a vast return in economic and social benefit to the nation. In this connection it is worth pointing out that the noted economist, Dr. Leonard Lecht of the National Planning Association has estimated that for every scientist or engineer put to work through Federal funds, jobs are created throughout the economy for six to ten other workers.

Yet at this time of maximum need, when the Nation's domestic economy is still lagging, when our international competitive position needs strengthening, when the problems of our cities, our environment, and our public services are so insistent in their pressure—at this very time we have permitted a sizable segment of our technical workforce to waste its enormous talent.

It is time to reformulate our national science policies and to redirect our priorities for civilian research and engineering. The statute establishing the National Science Foundation was enacted in 1950. Although a significant strengthening of that statute was enacted in the Daddario-Kennedy NSF Act Amendments of 1968, and although the Foundation has made efforts in recent years to apply scientific knowledge more effectively to the problems of society, the problems have far outstripped the institutions we have for dealing with them.

It is for these reasons that the National Science Policy and Priorities Act has been developed by the Committee on Labor and Public Welfare and favorably recommended to the Senate.

BACKGROUND

The Committee on Labor and Public Welfare began serious consideration of these issues in the Ninety-First Congress. On December 1 and 2, 1969, the Committee held hearings on Postwar Economic Conversion. The Committee heard testimony from Professor Warren L. Smith, Department of Economics, University of Michigan and former member of the Council of Economic Advisers; Dr. Seymour Melman, economist and professor of industrial engineering at Columbia University; the late Walter P. Reuther, President of the United Auto Workers; Dr. Wilfred Lewis, Jr. of the National Planning Association; the Honorable Archibald S. Alexander, former Assistant Director for Economics of the U.S. Arms Control and Disarmament Agency; and Nathanial Goldfinger, Director of Research, AFL–CIO.

Additional hearings on Postwar Economic Conversion were held before the Committee in Lexington, Massachusetts on March 23, 1970, and in Framingham, Massachusetts on April 3, 1970. At those hearings the Committee heard testimony from General James Gavin, Chairman of the Board, Arthur D. Little, Inc.; Dr. George Gols of Arthur D. Little; Carroll Sheehan, Commissioner of the Massachusetts Department of Commerce and Development; Bernard O'Keefe, President of E.G. & G. Corporation; D. Justin McCarthy, President of Framingham State College; Joseph Hyman, President of Hycor Corporation; Dr. Arthur S. Obermayer, President of Moleculon Corporation; Dr. Duncan MacDonald, business consultant; and William Alexander, President of the Research, Development, and Technical Employees Association, MIT Laboratories.

The testimony and statements for the record submitted at these hearings provided the Committee with a comprehensive background on the problems of economic conversion and a realization that national legislation was required to enable the country to build a strong base of civilian science and technology.

As Chairman of the Special Subcommittee on the National Science Foundation, Senator Edward M. Kennedy, began developing legislation aimed at meeting needs in this area. On August 14, 1970, he introduced S. 4241, the Conversion Research and Education Act. Although it was not possible to hold hearings on the bill before the end of the Ninety-first Congress, the bill was subjected to close scrutiny by leading authorities in this field throughout the Nation.

After careful consideration of their comments and suggestions, the bill was revised and re-introduced by Senator Kennedy in the Ninety-second Congress on January 25, 1971, as S. 32, the Conversion, Research, Education, and Assistance Act. The bill was referred to the Committee on Labor and Public Welfare and assigned to the Subcommittee on the National Science Foundation.

The bill was circulated among leading authorities throughout the Nation who were expert in various of its aspects, and their comments and suggestions were carefully studied by the Subcommittee. At the same time a companion bill to S. 32 had been introduced in the House of Representatives as H.R. 34, by Congressman John W. Davis and Robert N. Giaimo and one hundred and eleven cosponsors in January 1971. H.R. 34 was virtually identical to S. 32. Consequently the eight days of comprehensive hearings which the House Committee on Science and Astronautics held on H.R. 34 on June 22, 23, 24, July 13, 14, 15, and August 5 and 6, 1971 proved extremely helpful in the National Science Foundation Subcommittee's consideration of S. 32.

Based on the extensive comments and suggestions which were received over these months, from various experts and organizations throughout the country and through the House hearings, Senator Kennedy filed Amendment 469, a major amendment to S. 32 on October 13, 1971. This amendment was designed to take account of many of the suggestions which the Subcommittee had received.

On October 26 and 27, 1971, the Subcommittee on the National Science Foundation held hearings on S. 32, including consideration of Amendment 469. (The hearings also considered S. 1261, the Economic Conversion Loan Authorization Act, which is still under study by the Subcommittee on the National Science Foundation.) Testimony was heard from the Administration spokesman, Dr. William D. McElroy, Director of the National Science Foundation; Paul Robbins, Executive Director of the National Society of Professional Engineers; Jack Golodner, Executive Secretary of the Council of AFL–CIO Unions for Scientific, Professional, and Cultural Employees; Sanford V. Lenz, Chairman, Professional, Technical, and Salaried Conference Board, IUE, AFL–CIO; Mrs. Betty Vetter, Executive Director, Scientific Manpower Commission; Professor Paul H. Thompson, Graduate School of Business Administration, Harvard University; and four unemployed engineers—Robert Fraser from Lincoln, Massachusetts, S. Robert Salow from Newton, Massachusetts, Charles Laible from Cherry Hill, New Jersey, and Nathan N. Budish from Seattle, Washington.

In addition to the testimony received at the hearings, the hearings record also included statements on the legislation from the Comptroller General and the Administration and from twenty-seven organizations and individuals with special competence in this area. Since the hearings record was published, scores of other statements have been received from interested organizations and individuals with respect to S. 32.

Based on all of the information and the views which were received, the bill was further revised and considered by the Special Subcommittee on the National Science Foundation in an Executive Meeting on April 5, 1972. At that meeting, upon the suggestion of Senator Dominick, the Subcommittee agreed to submit the bill (in its revised form) to the Executive Agencies and the General Accounting Office for further comment. Letters were received from sixteen agencies and the GAO, and the specific comments were taken into careful account by the Subcommittee.

Based on those comments, the bill was further revised and considered again by the Subcommittee in Executive Meeting on May 30, 1972. At that meeting, the Subcommittee, without opposition, favorably reported the bill to the full Committee with an amendment in the nature of a substitute and with a title amendment.

The bill was considered by the full Committee on Labor and Public Welfare in Executive Meetings on June 21 and June 28, 1972. At the June 28 meeting, the Committee on Labor and Public Welfare ordered the bill, with a modified amendment in the nature of a substitute and with a title amendment, reported favorably to the Senate. On the roll call vote to report, all seventeen members of the Committee were recorded as voting to report the bill favorably.

COMMITTEE VIEWS

National science policy

The policy statement in section 2 is perhaps the most significant section of the bill. This section recognizes that Federal funding for science and technology represents an investment in the future, and declares that that investment must be raised to an expenditure level which is adequate to the needs of the Nation.

Federal funds for research and development as a percentage of the gross national product have been dropping steadily over the past decade. In 1963 Federal funds for research and development were 2.6% of the gross national product (GNP). By 1971, they had dropped to 1.6% of the gross national product. This decline of one percent represents about $10 billion on the base of the present gross national product. This means that if Federal funds for research and development in 1971 had been the same percentage of the GNP as they had been in 1963, they would total about $10 billion more than they now do. When one takes into account the fact that there has been a considerable inflation in R & D costs during that period, one realizes that the decline in relative resources allocated to R & D has been even more substantial during that time.

But just as each major industrial corporation tends to allocate a portion of its funds each year as a long-term investment in the future development of the firm, so must the Nation make an annual investment in its future through research and development. This is especially true because there are certain types of R & D of great potential benefit to the Nation, which are too extensive for any individual firm to undertake; and other types of R & D which are not likely to prove profitable to a particular firm, but which nevertheless can provide great benefits for the Nation as a whole.

So Federal funds for R & D must be seen as a continuing investment in the Nation's future. Their precipitous decline over the past eight years, as a percentage of the GNP, which parallels a period of low productivity in the economy, indicates that they should be restored to a higher level, and that the Nation would benefit from such a restoration.

Once they have been increased to an appropriate level, they should grow from year to year in proportion to the growth in the GNP. In this way the Nation can assure to the generations to come the benefits which can only flow from research which we are farsighted enough to undertake today.

This section also establishes as national policy that there should be continuing employment opportunities for scientists and engineers in positions commensurate with their capabilities. This emphasizes the recognition that our technical manpower pool is a national resource which must be utilized to the fullest.

This section also stipulates that Federal funds for civilian research and engineering should be maintained at or above a level of parity with Federal funds for military research and engineering, except when inconsistent with overriding considerations of national security.

Finally this section establishes as national policy that Federal funds for civilian research and engineering should be focused on meeting human needs in priority problem areas such as health care, public safety, pollution, productivity, education, transportation, and energy resources.

Title I—Science Policy and Priorities for Civilian Research and Engineering

This title is intended to provide the National Science Foundation with the broad authority needed for it to exercise a leadership role in determining national science priorities and in developing national policies which foster the application of scientific and technical knowledge to the solution of national problems. In addition, this title clarifies the policy-making role of the National Science Board and broadens the composition of the Board which has been traditionally oriented toward academic, basic science, to include increased representation of people with an industrial or technical background. In this connection, the Committee notes that it considers the last phrase of section 105 ("by other scientific, technical, or educational associations.") to include unions of scientists, engineers, and technicians.

Over a three year period, $50 million is authorized for the programs carried out under sections 103 and 104. These would involve approximately 100 research projects at an average cost of about $500,000 each; and would provide jobs in the peak third year directly for about 1600 scientists, engineers, technicians, and research assistants.

Title II, Sec. 204—Establishment of Civil Science Systems Administration

The Civil Science Systems Administration (for which $1.2 billion is authorized over a three year period) is intended to be a NASA-like organization which would channel technical talent and resources toward the problems of our society in much the same way the National Aeronautics and Space Administration has focused such efforts on the problems of outer space. The Civil Science Systems Administration would function primarily through the award of contracts to industry, universities, and other research organizations. It would also be empowered to transfer some funds to other agencies when it was more appropriate for particular program components to be carried out by some other agency. The contracting approach would be similar to the NASA model in that there would be considerable reliance on systems contracts, with the prime contractors in turn subcontracting specific portions of the task to other contractors. Federal Procurement Regulations would, of course, prevail for these contracts, so that most contracts would be awarded on a competitive basis.

Sec. 207—Planning for Civil Science Systems

It is expected that the $55 million authorized over a three year period for this program would provide for about 110 planning projects at an average cost of about $500,000 per project. In its peak first year, this program would provide jobs directly for about 2,000 scientists, engineers, technicians, and research assistants.

Sec. 208—Applied Social Research

It is expected that the $140 million authorized for this program over a three year period would provide for about 233 applied social research projects at an average cost of about $600,000 per project. In its peak third year this program would provide jobs directly for about 2,500 scientists and research assistants.

Sec. 209—Civil Science Systems Research and Design

Over a three year period $790 million is authorized for this program, which is the major component of the overall Civil Science Systems Program. It is expected that this authorization would permit funding for research and design in about twelve major areas, such as: routine health care services; emergency health care services; public safety (crime control); public safety (fire prevention and control); power supply (gas and electric utilities); innovative mass transit; innovative construction technology; educational systems; water pollution control; air pollution control; solid waste disposal systems; communication systems; etc. It is expected that over the three year period, the program could mount in each such area (in very rough terms) about forty research projects at about $1 million each and about five major design projects at about $5 million each. Thus, for all areas of activity over the three year period, it is roughly estimated that there might be about 480 research projects and about sixty design projects. It is expected that in the peak third year, this program would directly employ about 15,000 scientists, engineers, and technicians.

Subsection (c) of section 209 states that "Each contract awarded under this section shall contain provisions which assure that specific performance objectives, and any applicable physical, environmental, economic, social, and esthetic constraints are specified with particularity for each project conducted under said contract." The Committee requires that the National Science Foundation, in implementing the provisions of this subsection, take special account of the particular problems of persons with physical handicaps and take steps to assure that any architects working on contracts awarded under this section develop their architectural plans with full attention to the needs of such persons.

Sec. 210—Testing and Evaluation

It is estimated that the 105 million authorized for this program over the three year period would provide for about sixty testing and evaluation projects at about $1.75 million each. And it is expected that this program would employ about 2,000 scientists, engineers, and technicians in the peak third year.

Sec. 211 and 212—Information Dissemination and Systems Demonstration

Over the three year period, $110 million is allocated for the Information Dissemination and Systems Demonstration programs, which are essential to the overall success of the Civil Science Systems Administration. For it is essential that the results of the Civil Science Systems programs be widely disseminated and demonstrated so that they can be put into practical use throughout the Nation. Only through a concerted program of information dissemination and demonstration of the systems which have been developed will it be possible to assure maximum benefit to society from these programs. The information dissemination program is similar to the NASA technology utilization program, but is of more critical importance to the Civil Science Systems activity. For technology utilization of the innovations resulting from the Space Program is a byproduct of the main effort to explore outer space; it is an added benefit, not a central output. But in the Civil Science Systems Program, the major purpose is to develop technical knowledge which can be of direct benefit to society. Through the information dissemination and systems demonstration programs, the new knowledge developed through this effort will be made widely available throughout our economy and its benefits will accrue to society at large.

It is estimated that the $80 million authorized for the systems demonstration program over the three year period would permit the initiation of about forty systems demonstration projects at about $2 million each. It is expected that the information dissemination program would directly provide about 500 jobs for technical information specialists; and that the systems demonstration program would directly provide about 2,000 jobs for engineers and technicians.

Title III—Transition of Technical Manpower to Civilian Programs (Sec. 302)

The scientific and technical community has experienced significant dislocations over the past few years as major Government programs have been terminated or significantly reduced, and programs of comparable magnitude have not emerged to absorb the manpower resources which have been released. Because of different patterns of operation in civilian markets and in meeting needs in the public sector of our economy, as opposed to the patterns which prevail in defense and aerospace programs, it is important that the Government aid in planning and assisting in the transition of technical manpower from one mode of operation to the other.

The U.S. Arms Control and Disarmament Agency has sponsored some research in the past to consider the problems of such transition. And the Labor Department has mounted some programs to aid in the actual transition. But these have been modest efforts relative to the need. And moreover, the problems of technical manpower are unique in their characteristics. The National Science Foundation has unique capabilities and experience in dealing with scientific and technical manpower, and the Committee deems it appropriate that the Foundation be the lead agency for coordinating the Government's program for dealing with the transition of technical manpower.

Sec. 304—Research on Transition to Civilian Programs

It is estimated that the $15 million authorized for this program over the three year period would provide for about thirty research projects at about $500,000 each; and would directly provide jobs for about 200 scientists and research assistants.

Sec. 305, 306, and 307—Assistance to State and Local Goverments

In arranging for the orderly transition of technical manpower into civilian research and engineering programs, it is imperative that State and local governments and regional governmental agencies play a key role in the planning and implementation of programs which will impinge on their jurisdictions. It is for this reason that the Civil Science Systems Advisory Council and the Advisory Panel on Transition of Scientific and Technical Manpower to Civilian Programs include representatives of the National Governors Conference, the National Association of Counties, and the National League of Cities and the United States Conference of Mayors. In addition the bill includes a three year authorization of $95 million which would go to State and local governments and regional governmental agencies. These funds would enable such governments to hire unemployed technical personnel on their staff and to conduct programs designed to facilitate the transition of scientific and technical activities to civilian programs within their particular jurisdiction. In addition, these funds would permit government officials at the State, local, and regional level to receive specialized training which would acquaint them with the potential contributions of science and technology to the resolution of public problems in priority areas, and teach them how to utilize scientific and technical talent in an effective and economical manner. For the most part, officials at these levels of government have not had the experience in dealing with research and engineering programs which officials of the Defense Department or Space Agency have had. Since planning, contracting for, and monitoring such programs take specialized understanding and skills, it is desirable that officials at the State, local, and regional levels have the opportunity for such training, in order to maximize the results which society will receive from these programs. It is estimated that the $75 million authorized for section 305 over a three year period would provide directly for about 2,000 jobs per year for technical professionals; and that sections 306 and 307 would provide training for about 6,000 state, regional, and local governmental officials throughout the Nation, or about an average of 120 per State.

Sec. 308—Community Conversion Corporations

The purpose of the Community Conversion Corporation Program is to provide a mechanism for enabling communities which have been substantially affected by cutbacks in research and engineering programs to help themselves. Under this program (for which $90 million is authorized over a three year period) such communities could charter a community conversion corporation, which meets the criteria of subsection (a) of section 308. This corporation could be an existing nonprofit corporation which meets those criteria; a subsidiary of an existing corporation specially designed to meet those criteria; a non-profit corporation set up under the auspices of a local or regional governmental agency; or an entirely new non-profit entity with no ties to any existing organizations.

The community conversion corporation would, if it qualified, be eligible to receive a grant from the National Science Foundation to fund its overall operations, while it sought specific grants and contracts from other government agencies, private foundations, community organizations, and private business firms. Since "the National Science Foundation will give preference in awarding such community conversion grants or contracts to those corporations which show a likelihood of being able to obtain such additional financial support," existing organizations which qualified as community conversion corporations would have a certain competitive advantage over entirely new organizations established for this purpose. On the other hand, a newly established community conversion corporation of higher caliber, with imaginative leadership, would still be able to compete effectively with community conversion corporations which were tied to existing organizations.

The community conversion corporation would "conduct, contract for, or stimulate the conduct of civilian-oriented research and development activities which focus on the particular problems, or draw on the particular resources, of the community within which the corporation is located." Thus it would have a catalyzing effect in generating research and engineering activity throughout the community and stimulating other economic activity as a consequence.

It is estimated that the $90 million authorized for Community Conversion Corporations over the three-year period would provide for the launching and three-year funding of about twenty community conversion corporations throughout the country, at about $1.5 million each per year. It is expected that this program would directly provide about 1,000 jobs per year for scientists, engineers, and technicians.

Sec. 309—Job Transition Program

The job transition program (for which $275 million is authorized over a three-year period) is the major program in Title III. The $275 million provided under this section would be awarded as job transition grants to industrial firms and research organizations "to enable them to hire scientists, engineers, and technicians for work on projects for which they are not yet fully qualified." In other words, firms undertaking civilian research and engineering projects could hire unemployed or underemployed technical personnel whose experience had been in defense and aerospace programs and who were not yet fully qualified for the particular civilian research or engineering project on which they would work. The job transition grants would subsidize all or a portion of their salary, within stipulated limits, while they, in effect, received on-the-job training (i.e., learned by doing).

The same kind of subsidization process occurred in the early years of the Space Program and in the research and development of various defense systems; only in those instances it occurred in the form of cost overruns. In this situation it would be clearly recognized that there is an on-the-job learning process which must occur in new kinds of research and engineering activity, and that the country should openly and honestly budget for it.

This program would, of course, be of great benefit to industrial firms seeking to enter new civilian research and engineering markets. But it would also be of considerable benefit to the unemployed scientists and engineers who would be able to find jobs because of it.

It is estimated that the $275 million authorized for this program over the three year period would directly involve about one hundred firms and provide partial employment subsidies for about 10,000 scientists and engineers in each of the peak (second and third) years.

Sec. 310—Career Transition Fellowships

Although the testimony and views received on this bill indicated that the vast bulk of displaced technical personnel did not need extensive academic re-training, it was the consensus that some smaller segment of that group would require or strongly desire academic re-training to prepare them for more substantial shifts in their special fields of expertise. The Career Transition Fellowship Program has been developed with this group in mind. It is estimated that the $55 million authorized for this program over the three year period would provide for about 2,000 fellowships in each of the second and third years. In determining the amount of stipends to be paid to fellows under subsection (d) of this section, the Committee expects that the National Science Foundation will establish criteria to assure that such stipends that it pays are in keeping with other stipends that are paid by the Foundation and other Government agencies for comparable programs.

Title IV—Protection of Pension Rights of Scientists and Engineers

Because of rapid and frequent changes in Federal procurement objectives and policies, engineering and scientific personnel suffer a uniquely high rate of forfeiture of pension benefits under private pension plans. In its Executive Meeting on June 28, 1972, the Committee unanimously adopted, as a new Title IV, an amendment offered by Senator Javits to help protect the pension rights of scientists and engineers working under government contracts, by providing for the development of amendments to the procurement regulations of government procurement agencies to require such protection, to the extent feasible.

The Labor Subcommittee of this Committee has under consideration several bills designed to establish minimum Federal standards for private pension plans; but the evidence in hearings on these bills demonstrates that the high labor mobility of scientific and engineering personnel makes it unlikely that they will benefit directly from such legislation. For example, the primary bill under consideration in the Labor Subcommittee would require, as a minimum, that pension plans provide vesting of a thirty percent non-forfeitable interest after eight years of work for an employer with a pension plan. But most engineers and scientists working under government procurement contracts never work that long for a single employer, shifting instead, from job to job as Federal procurement contracts expire and procurement objectives change from year to year.

Accordingly, the Committee concluded that it would be desirable for the Federal Government to investigate the matter and attempt to develop new procurement standards which would provide adequate protection of the pension rights of these mobile professionals, particularly since, under the Federal procurement regulations pension cost is normally treated as a reimbursable cost even through very few scientists and engineers receive benefits from the plans, the costs of which are reimbursed by the Government.

Section 402 of the bill states that the NSF Director shall develop his recommendations for changes in Federal Procurement Regulations "in consultation with appropriate professional societies." The Committee considers this phrase to include unions of scientists, engineers, and technicians.

IMPACT ON ECONOMY

As indicated in the foregoing discussion of specific programs contained in S. 32, enactment of this measure would directly provide positions for about 41,000 scientists, engineers, and other technical personnel in its peak year. And as has been pointed out above, each professionally active scientist or engineer creates jobs for six to ten other workers throughout the economy. Thus enactment of this measure and subsequent appropriation of the full amount authorized would create a total of about 290,000 to 450,000 jobs throughout the economy.

But creating jobs would only be one aspect, albeit it a very important one, of its economic impact. The bill would also create a host of new products, services, industries, and markets, it would help increase productivity; and it would have a strong revitalizing effect on the entire civilian economy. Moreover, it would greatly assist the Nation in strengthening its international economic competitive position: through technical innovations which could be used to advantage in international trade and in U.S. business operations abroad.

IMPACT ON SOCIETY

In addition to its direct impact on the economy, enactment of S. 32 would have a powerful impact on the shape of our society for years to come. For it could bring to our domestic problems and social issues the same reservoir of talent, the same dedication of purpose, the same dramatic imagination which have characterized our Space Program over the past decade. And in strengthening our economy and helping to solve our social problems, S. 32 could also serve as a catalyst for recapturing the commitment of the Nation's youth.

In the words of one of the authorities who submitted a statement on S. 32 (John P. Eberhard, Dean of the School of Architecture and Environmental Design, State University of New York at Buffalo): "I think that your proposed legislation could open the door to a new period of scientific and engineering exploration that was as exciting as any we have engaged in during the past twenty years. It could make it possible for us to do something substantial about the quality of life in our urban centers. It could give many of our young people who are disenchanted with previous value systems . . . a new kind of hope and enthusiasm to do something about our environment. It could give us all an opportunity to make an investment in the future cities which our children and our children's children will inherit from us."

Or in the words of former Senator Joseph S. Clark, Chairman of the Coalition on National Priorities: "S. 32, the National Science Policy and Priorities Act is a noble beginning. It will help get our most able brains about the real needs of the global village. By setting our thinking people on an enlightened course, our civilization will prosper."

Agency comments

At the April Executive Meeting of the Subcommittee on the National Science Foundation it was decided to send a committee print of S. 32, as revised, to all Government agencies that might conceivably have an interest in the bill for further comment on the revised version. Responses were received from the General Accounting Office, the Office of Management and Budget, and fifteen other Government agencies whose responses were coordinated by the Office of Management and Budget. The fifteen Executive agencies were: the Departments of Commerce; Labor, Health, Education, and Welfare; Defense; Transportation; and Housing and Urban Development; National Science Foundation; National Aeronautics and Space Administration; Atomic Energy Commission; Environmental Protection Agency; Arms Control and Disarmament Agency; Office of Economic Opportunity; Council on Environmental Quality; Council of Economic Advisers; and the Office of Science and Technology.

The comments received included a number

of suggestions for changes in the bill, all of which were carefully considered, and many of which served as the basis for further revision of the bill. With the exception of the General Accounting Office whose comments were entirely technical and a few agencies that deferred substantive comment to the judgment of the National Science Foundation, all of the comments which were received were in opposition to enactment of S. 32.

Since the agency comments, which were coordinated by the Office of Management and Budget, overlap considerably, their various arguments against enactment of S. 32 are summarized and discussed in turn below:

Need for S. 32

The Administration's first point is that there is no need for such legislation. In asserting this argument, the Administration assumes that the problem to which the legislation is addressed is solely that of technical unemployment. With respect to that problem, the letters made the following points: (1) the extent of technical unemployment is not so bad as has been claimed by the scientific and technical associations; (2) the anticipated general upturn in the economy will provide jobs for a large portion of the technical unemployed; (3) the budget request for a fiscal year 1973 increase in military and civilian R&D programs will provide still other jobs for technical personnel; and (4) existing programs in the Department of Labor and Housing and Urban Development and in the National Science Foundation (for job research, placement, and retraining) are adequate to provide for the remainder of the unemployed technical personnel.

The Committee believes that the extent of technical unemployment in the Nation is greater than that admitted by the Administration. The fact that the National Science Foundation admits its 1971 surveys of technical unemployment were inadequate, and that the Foundation has failed to conduct any further surveys this year indicates that the Administration estimates are out of date and not entirely accurate. In addition, the fact that the scientific and technical associations are convinced that technical unemployment is much higher leads the Committee to conclude that technical unemployment is substantially higher than is recognized by the Administration. Moreover, the fact that a large number of other technical personnel are seriously underemployed significantly adds to the problem.

A general upturn in the economy, even if it proves as substantial as the Administration predicts, will not directly create the kind of jobs which draw upon the skills of the technical unemployed. An increase in automobile production will not of itself create jobs that draw on the untapped skills of the aerospace engineers. The kinds of jobs these people have held in the past have been created by direct Government funding of research and engineering in defense and space; only through Federal funding of civilian research and engineering can jobs which really use these professional skills be created over the next few years. Over the longer run it is highly desirable for industry to generate research and engineering jobs directly for these professionals; but that can only be stimulated through Federal funding of civilian research and engineering in the next few years.

It is true that the Administration's budget request for a $1.4 billion increase in research and development, to the extent the money is appropriated and subsequently expended, would create a substantial number of technical jobs. However, $800 million of the $1.4 billion additional requested was in Defense Department research and engineering, and the figure authorized by Congress for that category is likely to be about $400 million less than the Administration request. Thus, if the amounts appropriated for all other programs did in fact net out to the amount of the Administration request, the total increase would be only $1 billion. Using the most recent National Science Foundation figures, one can calculate that the $1 billion in additional Federal funding for R&D would produce about 18,900 jobs for scientists and engineers. This falls far short of the current need for technical jobs. And the Labor Department, HUD, and NSF programs for unemployed technical personnel have at the most optimistic estimates found positions for no more than 13,000 persons; and there is no indication of how many of those were placed in positions in which they could utilize their technical skills.

In short, it is the Committee's view that the extent of technical unemployment is much greater than the Administration admits; and that the Administration predictions, proposals, and programs for dealing with technical unemployment will fall far short of the actual need for technical jobs.

The most important point to be made with respect to the need for S. 32, is that this bill is not primarily directed at solving the technical unemployment problem. It is directed at focusing the Nation's technical talent on the solution of our pressing social problems.

The need for S. 32—the need for a reshaping of our national science policies and priorities—does not arise from technical unemployment. It arises because the Nation has pressing problems which must be solved, because the economy needs new sources of innovation and new means of increasing productivity, because the quality of our environment and the quality of our lives are not up to the standards all Americans deserve. And because the Nation's scientists and engineers have the talent and the imagination to help move the Nation toward those goals. That is why the Committee believes enactment of S. 32 is in the national interest.

National Capability to Carry Out S. 32

The second Administration argument against enactment of S. 32 is that we do not have the necessary knowledge and experience to carry out such a program successfully. For example, how do we know it is desirable for Federal funds for research and engineering to grow in proportion to the GNP? How do we know it is desirable for civilian research and engineering to be maintained at a level of at least parity with military R&D?

The answer is that these are policy determinations based on the recognition that Federal funding for research and engineering is an investment in the Nation's future and that, while military R&D must be maintained at an adequate level, so too must civilian R&D be maintained at a level adequate to the needs of our society.

It is true that the Nation does not have much experience for dealing with the program set forth in S. 32; but neither did the Nation have much experience with a space program before NASA was formed. The way to gain the experience is to tackle these problems with the best thought and talent we can bring to bear on them; not to wait for them to go away of their own accord.

A variation on this argument in the agency letters is the assertion that the civilian economy is not structurally adapted for undertaking science and technology programs of this magnitude. In this connection the Committee points out that the first year funding authorized by S. 32 is $362 million, which is only twenty percent of the total three year authorization, that the aerospace industry did not exist in its present form two decades ago, and that the way to adapt civilian industry to these problems and needs is to initiate a program such as S. 32.

Potential Overlap and Duplication With R. & D. Programs of Other Agencies

A number of the agency letters pointed out the potential problems of overlap and possible duplication between the programs of S. 32 and the R&D programs of various other Government agencies. This is a real problem which has been taken into careful account in the drafting of the legislation. The bill provides for the establishment of the Civil Science Systems Advisory Council and the Advisory Panel on Transition of Scientific and Technical Manpower to Civilian Programs. These bodies are given the responsibility of advising the NSF Director with respect to his responsibilities under Title II and Title III of the bill respectively. Both bodies include ex officio representatives of all other Government agencies with whose programs there might be any overlap or duplication, so that these representatives would participate in the shaping of policy for S. 32 programs to avoid such overlap and duplication. In addition, the bill explicitly requires continuing consultation and coordination with other Government agencies through the Advisory Council and also through appropriate staff contacts at other levels of the agencies involved. The bill also permits the transfer of funds from NSF to other Government agencies when a portion of a particular program could more appropriately be carried out by another agency. Finally, it should be pointed out that the Federal Council on Science and Technology is an existing interagency committee with continuing responsibility for coordinating the Government's science and technology programs. The new programs of S. 32 would fall under the jurisdiction of this interagency group, which is chaired by a representative of the White House Office of Science and Technology; and any disputes which could not be resolved through other forms of coordination could be resolved by the Federal Council on Science and Technology.

A more basic point that should be made in this connection is that science cuts across all fields and all problem areas, so that the existing programs of the National Science Foundation themselves cut across many other agencies' jurisdictions and have potential overlap and duplication with agency R&D programs. These potential problems have never proved insurmountable in the past with existing NSF programs, and there is no reason to assume that S. 32 programs could not be similarly handled. It is the Committee view that each Government agency needs a research and development program of its own, which can focus on its particular needs. The R&D programs contained in S. 32 are in no way intended to supplant, but merely to supplement and, indeed, stimulate the R&D programs of other agencies.

But while there will always be a need for agency R&D programs which can focus on their particular needs, there is also a major, presently unfilled need, for a concerted civilian R&D program as set forth in S. 32. For only through such a single, coordinated effort can the major problems be tackled and mastered; since most of these problems cut across the limited scope and resources of particular agencies.

To understand this point clearly, it is worth examining a particular example in detail. Consider the systems design for a new community, in which the prime contract called for the design of a comprehensive underground network that would provide central heating and air conditioning; electric, gas, and telephone lines; cable TV; an integrated computer network for schools, hospitals, business firms, and home study on computer consoles; an integrated automatic alarm system for police and fire fighting; underground systems for the movement of mail and bulk transport (boxes and crates); water supplies; solid waste disposal systems; etc. Such systems would, of course, be designed in such a way to provide access for maintenance and change in the systems so that they could be routinely accomplished without ripping up the streets. If designed in an integrated way as outlined here, the waste heat which individual air conditioners, toasters, etc. put out could be conserved and recycled to aid in the central heating system. This would not only greatly reduce the cost and consumption of energy in the community; it would also greatly reduce pollution due to the use of energy.

The Civil Science Systems Administration could contract for the design and demonstration of such a system, and could coordinate the various prime contractors and subcontractors involved, in much the same way as NASA has handled its moon program. The advantages of such an approach are obvious, in the opportunity for innovative technology and in the ability to take an overall systems approach to the problems involved. Yet the case outlined above cuts across the jurisdictions of many Government agencies. It overlaps with the Departments of Commerce, Interior, Transportation, Housing and Urban Development, and Health, Education, and Welfare, the Environmental Protection Agency, the Federal Power Commission, and other agencies.

No one of these agencies has the mandate or resources to treat the problems in their total systems context; yet only through such an approach can the full power and potential of modern science be brought to bear on these problems, with resulting benefits for all our citizens. Accordingly, the Committee feels it is essential that the programs, set forth in S. 32 be administered by a single agency.

The role of the National Science Foundation

A major theme in many of the agency letters, including the comments of the National Science Foundation itself, is that NSF is not the agency to carry out the programs contained in S. 32.

An argument can be made for setting up the Civil Science Systems Administration as an independent agency. But this would add to the proliferation of Federal agencies without offering any significant advantages in turn. While the head of an independent agency would report directly to the President, the head of the Civil Science Systems Administration reports to the Director of NSF who in turn reports directly to the President. Moreover by locating the new Administration within the National Science Foundation, the new program can draw on all the accumulated expertise of the Foundation relating to research in all fields of science and engineering.

Many of the letters state that NSF does not have the experience for these kind of programs and could not carry them out effectively. The Committee recognizes the Foundation's lack of experience with certain aspects of this program. But the Committee believes that the new management and operating personnel who would be brought in to administer these programs would bring the necessary experience with them. In addition, the bill broadens the composition of the National Science Board to include more of an industrial and technical orientation, and clarifies the scope of NSF responsibilities to include policy development for the application of scientific knowledge to the solution of social problems. While NSF may not now have the capacity to mount the programs set forth in S. 32, the changes in agency structure and authority contained in the bill and the new personnel who would be brought in to administer the program would enable the agency to cope with this problem.

Criticism was also made of the degree of autonomy accorded to the Civil Science Systems Administration within the National Science Foundation. In this connection particular criticism was expressed of subsection (c) of section 202. This subsection exempts Title II from the provisions of the NSF Act, which requires that all contracts in excess of $2,000,000 be specifically approved by the National Science Board, which meets almost every month. The National Science Board is the policy-making body for the National Science Foundation, and also approves specific grants and contracts which exceed $2,000,000.

This approach is fine for the traditional academic programs of the National Science Foundation. But the experience of DOD, NASA, and AEC with management of systems procurement programs makes it abundantly clear that a high technology systems procurement program involving industry cannot be managed by a committee of twenty-four distinguished scholars which meets almost every month. In the Civil Science Systems Program there will be deadlines to be met, subcontract projects to be coordinated, and costs and performance goals to be watched. Such a program requires tight project management which can make the procurement decisions on a day-to-day basis, not a committee of scholars which meets intermittently.

The Committee feels that the inclusion in the bill of subsection (c) of section 202 is essential to the successful management of the program. It should be noted, however, that while this subsection would enable the Civil Science Systems Administration to award contracts (on competitive bidding) without specific Board approval for each contract, the new Administration would still be under Board control with respect to overall policies. The head of the new Administration would "report and be responsible to the Director" of NSF. And the existing NSF Act provides: in Sec. 4(a) that "the Board shall establish the policies of the Foundation" and in Sec. 5(d) that "the formulation of programs in conformance with the policies of the Foundation shall be carried out by the Director in consultation with the Board."

Finally some of the letters expressed the fear that the introduction of such new programs into the National Science Foundation might in some intangible way impair the Foundation's traditional programs in basic science and education. It is the view of the Committee that the safeguards which have been built into the bill would prevent any damage to existing programs. Indeed, the new program might help NSF's traditional programs by enlisting greater public support for them, by showing what science can do to aid society.

A Special Program for Scientists and Engineers

Some of the agency letters criticized the notion of having a special program which was directed at scientists and engineers. They viewed it as being designed for the benefit of the scientists and engineers who would participate in it. But while S. 32 would provide many thousands of jobs for scientists and engineers, its primary purpose is not to aid them as a special group, but rather to aid the Nation. Each scientist or engineer who is put to work generates jobs for six to ten other workers throughout the economy. The research and engineering projects on which they work generate technical innovations which can lead to new products, increased productivity, services, and industries, thereby revitalizing the economy and strengthening our international competitive position. Moreover, the efforts not only benefit the economy, but they also can have a major impact on enhancing the quality of life in our society; through solving many of the problems which are currently despoiling our Nation. Finally, an enormous national investment has gone into the education and on-the-job training of our scientists and engineers. The country is entitled to receive a major return on that investment in economic and social benefit. But that return can only be realized when they are engaged in work which utilize their high talent and skills. The Nation's scientists and engineers are one of our most valuable resources. S. 32 is not aimed at aiding them as individuals, but at utilizing that resource for the benefit of all our citizens.

Administration Budget Ceiling

A final argument made in the agency commentary on S. 32 is that enactment of the bill would violate the Administration's budget ceiling. In this connection the Committee notes that the first year authorization is for $362 million, which is only twenty percent of the total three year authorization. Based on the consensus of the experts consulted in the development of this legislation, the Committee believes that this is the minimum amount for effective initiation of such a program. More importantly, the Committee believes that the authorization for S. 32 must be viewed as an investment in the Nation's future—an investment which will bring great economic and social returns to the Nation for years to come, including increased Federal tax receipts flowing from the new economic activity generated by these programs.

ROLLCALL VOTES

The committee cast two rollcall votes on this bill. In accordance with section 133(b) of the Legislative Reorganization Act of 1946 as amended, the votes were as follows:

(1) On a motion by Senator Dominck to amend the bill by deleting subsection (c) of section 202, Senators Beall, Dominick, Javits, Packwood, Schweiker, Stafford, and Taft voted aye; Senators Cranston, Eagleton, Hughes, Kennedy, Mondale, Nelson, Pell, Randolph, Stevenson, and Williams voted nay. The motion was defeated by a vote of ten to seven.

(2) On the motion to report the bill favorably to the Senate, Senators Cranston, Eagleton, Hughes, Kennedy, Mondale, Nelson, Pell, Randolph, Stevenson, Williams, Beall, Dominick, Javits, Packwood, Schweiker, Stafford, and Taft voted aye. The committee voted to report the bill favorably to the Senate by a unanimous vote of seventeen to nothing.

COST ESTIMATES

In accordance with section 252(a) of the Legislative Reorganization Act of 1970, the committee estimates that costs which would be incurred in carrying out this bill for fiscal years 1973, 1974, and 1975 would be as follows:

Fiscal year 1973—$362 million (Title I—$10 million; Title II—$200 million; Title III—$152 million)

Fiscal year 1974—$18 million (Title I—$15 million; Title II—$400 million; Title III—$203 million)

Fiscal year 1970—$830 million (Title I—$25 million; Title II—$600 million; Title III—$205 million)

No estimated expenditures were provided by the executive branch.

A detailed funding chart of the programs authorized by S. 32 is given below:

S. 32, NATIONAL SCIENCE POLICY AND PRIORITIES ACT, TABLE OF AUTHORIZATIONS OF APPROPRIATIONS

	1973	1974	1975	Section total	Title total
Title I: Science policy and priorities for civilian research and engineering	$10,000,000	$15,000,000	$25,000,000		$50,000,000
Title II	200,000,000	400,000,000	600,000,000		1,200,000,000
Sec. 207: Planning for civil service systems	25,000,000	20,000,000	10,000,000	$55,000,000	
Sec. 208: Applied social research	30,000,000	50,000,000	60,000,000	140,000,000	
Sec. 209: Civil science system and research design	120,000,000	270,000,000	400,000,000	790,000,000	
Sec. 210: Testing and evaluation	150,000,000	30,000,000	60,000,000	105,000,000	
Sec. 211: Information dissemination	5,000,000	10,000,000	15,000,000	30,000,000	
Sec. 212: Systems demonstration	5,000,000	20,000,000	55,000,000	80,000,000	
Title III	152,000,000	203,000,000	205,000,000		560,000,000
Sec. 304: Research on transition to civilian programs	5,000,000	5,000,000	5,000,000	15,000,000	
Sec. 305: Assistance to State and local governments	15,000,000	25,000,000	35,000,000	75,000,000	
Sec. 306: Training government officials	4,500,000	9,000,000	4,500,000	18,000,000	
Sec. 307: Government employee participation	500,000	1,000,000	500,000	2,000,000	
Sec. 308: Community conversion corporations	30,000,000	30,000,000	30,000,000	90,000,000	
Sec. 309: Job transition programs	75,000,000	100,000,000	100,000,000	275,000,000	
Sec. 310: Career transition fellowships	15,000,000	20,000,000	20,000,000	55,000,000	
Sec. 311: Placement assistance	5,000,000	10,000,000	5,000,000	20,000,000	
Sec. 312: Education program	2,000,000	3,000,000	5,000,000	10,000,000	
Total	362,000,000	618,000,000	830,000,000		[1] 1,810,000,000

[1] Bill total.

Mr. President, I do not know whether the Senator from Colorado would like to make some remarks. I know that one or two other Senators would like to make some general comments. If not, we can begin to discuss the various amendments of the Senator from Colorado, and I will be glad to receive them in whatever way he desires.

Mr. President, I ask unanimous consent that Herbert Jasper be permitted the privilege of the floor during consideration of the bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DOMINICK. Mr. President, I do not know whether this has already been ordered, but I would ask unanimous consent that Mike Gordon be permitted the privilege of the floor during consideration of the bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DOMINICK. Mr. President, the Senator from New York (Mr. JAVITS), the ranking member, has asked me to be the designee of the time, and I yield myself 15 minutes on the bill.

The PRESIDING OFFICER (Mr. MOSS). The Senator from Colorado is recognized for 15 minutes.

Mr. DOMINICK. Mr. President, this bill, like so many others that we get in Congress, has a title with an ideal behind it. It deals with problems, as many of these bills do, which were valid as of 3 years ago. Some of the other bills that have been proposed were valid for problems as of 3 years ago. But it does not deal with the situation as we have it now.

The stated dual purpose of S. 32 is to apply science to domestic problems and alleviate underemployment and unemployment among the Nation's scientists and engineers. In justification of this legislation, emphasis has been placed on the numbers of unemployed and numbers of jobs to be provided.

There is, however, a failure to describe how the talents of the unemployed would match, in numbers and skills, the jobs to be done. For example, one professional organization, the American Institute of Aeronautics and Astronautics, stated to the committee that technological projects in such areas as crime control, pollution, mass transit, and health care cannot reach sufficient maturity to employ more than a few thousand unemployed scientists and engineers. The technological component of urban problems is relatively low and as an area of employment offers little promise to specialists in such areas as fluid dynamics, combustion, atmospheric physics, and propulsion, who must be employed in technology-intensive projects

The declaration of policy of this legislation—section 2—ties the investment level in science and technology to the gross national product and calls for a Federal level of investment in civilian research and engineering activities which at least equals our level of investment in defense research and development—R. & D. Neither the gross national product nor the level of investment in defense R. & D. are a valid indication of the demand for, or the effectiveness of, the R. & D. expenditures authorized by this bill, and could potentially distort and misallocate resources hereby resulting in a perpetuation of the professional unemployment problem.

Mr. President, I remember talking before the National Association of Cryogenics some years ago. The talk I gave I thought would irritate them. To my complete surprise, I found out they were in agreement with me, but they did not know what to do about it. My talk revolved around the fact that the scientists of this country have lost their independence. They have lost their independence by virtue of the fact that they rely on Federal financing to do anything in the research and development area.

Inevitably, when 98 to 99 percent of the research money in science is provided by the Federal Government, it will be done in the areas that the Federal Government wants it done and not in the basic or independent research which most scientists would like to operate in, in order to give them more freedom so that they can choose what they want to do and not what the Federal Government wants them to do. Once again, if we feel we are going to put the Federal level of investment on a par in this bill with what goes on in research and development in defense, and what proportion of the GNP this constitutes, we are totally misallocating resources.

Let us suppose, for example, that Senator MCGOVERN becomes President of the United States. I can say truthfully, as a Republican, that I hope that will not happen. But let us suppose that it does and he cuts $32 billion out of the defense budget. A great deal of that will come out of research and development. Does that mean automatically that we will have a cutback in the Federal level of expenditures solely because the President has changed the signals and decides that he will do something different in the research and development field in defense? Tying them together with this makes no sense to me whatsoever; yet this bill specifically would do just that.

It should be emphasized that both the administration and Congress have initiated constructive programs with very similar objectives, and these programs should be given time to demonstrate their value before being superseded. Perhaps the most immediately effective action to alleviate the problem, as I say, a good deal of this is no longer as great a problem as it was 2 years ago. The most immediately effective action has already been taken with regard to the fiscal year 1973 budget requests for research and development of $17.8 billion, an increase of $1.4 billion over fiscal year 1972. These funds will translate directly into jobs for those associated with the research and development enterprise.

To help alleviate unemployment among scientists and engineers, the Department of Labor has established several programs, the most comprehensive of which is the technology mobilization and reemployment program—TMRP. It includes: Testing and feasibility of employing former aerospace engineers and scientists in professional jobs in State and local governments—one of the few things that is talked about in this bill and the Labor Department is already involved in it; improving the methods scientists and engineers use to look for jobs and communicating them to the unemployed; establishing a target list of 14 metropolitan areas most heavily hit by unemployment among scientists and engineers; exploring the use of displaced industrial engineers in health services; establishing a national registry for engineers; relocation grants to those who get jobs outside their present geographic areas—so that they can get support with moving expenses; retraining, where necessary; and finally, support for cooperative activities by related professional societies.

I would say a good deal of the bill that is proposed here is already in effect through the Department of Labor and through the additional money in research which has been provided in the 1973 budget under the Nixon administration.

One example of the TMRP effort is the volunteer engineers, scientists, and technicians program—VEST—conducted by the American Institute of Aeronautics and Astronautics. VEST units in more than 20 States provide information and counseling services, as well as office facilities and supplies for job hunters.

Under a Department of Labor project conducted by the National Society for Professional Engineers—in other words, actually conducted by the National Society—study teams consisting of unemployed aerospace and defense engineers analyzed the potential for engineering and scientific employment in a variety of industries. The results show that numerous industries have significant job potential, including food and food products, transportation, wood and wood products, power resources, pollution control, health care and health services, security systems and criminal justice, banking and finance, solid waste management, educational technology, and occupational safety. The job opportunities discovered through this project alone already number more than 30,000.

This is work that is already being conducted by the national scientists and engineers under a grant by the Department of Labor.

The National Science Foundation is administering a TMRP called the Presidential internship program which provides opportunities for 400 unemployed scientists and engineers with advanced degrees to work for 1 year at federally funded research and development laboratories. The projects on which the participants will work are intended to apply scientific knowledge to current social problems, such as pollution, sanitation, and transportation.

The Senate has, through S. 2393, initiated action to alleviate the hardships of unemployment, including scientists and engineers. This measure, which passed the Senate and is presently, or was at the time the report was written, awaiting House action, would amend the Disaster Relief Act by establishing a new category of economic disasters. Individuals in qualifying areas could then obtain aid normally granted to victims of natural disasters, including emergency housing, mortgage payments, food, extended unemployment compensations, relocation assistance, and medical services. Business and local governments would be eligible for loans and grants.

The Congress has also twice extended unemployment compensation beyond the "normal" 26 weeks and passed the Emergency Employment Act, which provided transitional jobs to help improve State and local public services. The latter specifically focuses on workers affected by technological change or cutbacks in Federal employment, which would include the scientists and engineers that we are talking about.

In addition, to help achieve the goal of applying science to domestic problems, the administration has requested increased funding for this fiscal year alone for new and existing programs in this area by 65 percent from fiscal year 1969—$3.295 billion in fiscal year 1969 to $5.406 billion requested for fiscal year 1973. Some of the more significant examples include:

An increase of $88 million for research and development to help meet the Nation's needs for electrical energy without damage to the environment.

An additional $43 million for research and development on natural hazards to improve capabilities to control, predict, or reduce destruction from fires, earthquakes, floods, hurricanes, and severe storms.

An increase of $90 million in research and development by Transportation and Commerce to provide fast, safe, and pollution-free transportation.

A growth of $73 million in National Aeronautics and Space Administration's research and development programs which have greater direct benefits to society, such as weather prediction, communications, and aeronautics.

A significant expansion of problem-related research programs by the National Science Foundation to permit an increase of more than 40 percent in research on such problems as preventing environmental degradation through better land use, improving municipal services through the application of science and technology, and improving materials and manufacturing processes to advance economic productivity.

An additional $40 million to explore ways of stimulating the overall national investment in, and use of, science and technology.

The Department of Housing and Urban Development administers the urban systems engineering demonstration program, a grant program designed to utilize systems engineering, analysis techniques, and computer technology in establishing economic and efficient public service systems. This significantly overlaps with title II of S. 32.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. DOMINICK. Mr. President, I yield myself another 10 minutes.

The PRESIDING OFFICER. The Senator from Colorado is recognized for 10 minutes.

Mr. DOMINICK. Mr. President, we are now considering in Congress several programs which apply scientific research to civilian problems, including the National Environmental Data Systems Act, water and air pollution control bills, Toxic Substances Control Act, National Environmental Laboratories Act, and research and technology in rural areas through the Rural Development Act. In short, there are numerous programs, both legislative and administrative, which focus on the same problems as S. 32. The chances for wasteful duplication are not only substantial, but they are also inevitable if we pass this bill in its present form.

Title II of S. 32, which has a 3-year authorization of $1.2 billion, provides for grants and contracts to develop "civil science systems," which is defined as any set of interrelated technological applications which are designed to perform certain public services. "Public services" are defined as any set of interrelated organizations and activities which collectively perform certain related functions normally associated with life in our society. Because these definitions are something less than restrictive, and because the chances for duplication and overlap with other programs are so great, fiscal responsibility dictates a reduction in the authorization and gradual implementation of this legislation, if we are going to have it at all.

It seems to me that the $1.81 billion authorized by S. 32 could well be reduced without jeopardizing the potential of this legislation to achieve its stated objectives. Such a reduction would also insure that S. 32, as administered by the National Science Foundation, would not overlap with nor detract from the above-mentioned programs administered by other Federal agencies.

Finally, I am concerned about the placement of the Civil Science Systems Administration—CSSA, title II—within the National Science Foundation and exempting the Administration from NSF Board control. Section 202(c) of S. 32 exempts the CSSA from the established requirement in NSF's enabling legislation of Board approval for grants or contracts which exceed $500,000 in 1 year or $2 million in total.

Mr. President, this Civil Science Systems Administration has been set up more or less along the same lines as NIH, the National Institutes of Health, where we have cross fertilization of ideas, where we have panels determining whether or not the grant application is really worthy of continuing study, and where they are able to make much more progress in the health field with this cross-fertilization.

The National Science Foundation has been set up not only in the same order, but also with the same idea, that where we will have a new program with over $500,000 in a year or a new program which, regardless of its length, involves $2 million or more, the National Science Foundation's board of approval is required.

Yet in this case we are proposing $1.81 billion without any control by the board on a contract which could be let by the administrator, even though it is supposed to be part of the National Science Foundation.

There is an agreement, it seems to me, among most of the Members of the Senate, and I believe almost without exception, frankly, that the National Science Foundation should at a minimum, have clear responsibility for policies with regard to the Civil Science Systems Administration.

If not, there is no sound reason for placing the Civil Science Systems Administration within the National Science

Foundation. I am concerned about the deleterious effect this provision would have by decreasing the National Science Board's autonomy and impartiality, which have significantly contributed to NSF's success since its inception in 1950.

I understand from brief conversations with the Senator from Vermont that he and former Senator Smith of New Jersey were very active in getting the National Science Foundation started. I would hate to see this format which they developed and which has worked so successfully, changed by this bill.

In summary, our level of investment in science and technology should not be tied to the GNP or the level of investment in defense R. & D., which could further distort resource allocation. The Board of Directors of NSF should retain their traditional control over programs within their agency, especially in view of the committee's action in strengthening the Board by increasing technical and industrial representation under title I, which I think is a good idea.

Because of the requested increases in the administration's proposed budget for research and development, the Department of Labor's technology mobilization and reemployment program, including the volunteer engineers, scientists, and technician program and NSF's presidential internship program, and the promising Department of Labor project conducted by the National Society for Professional Engineers, the recently passed economic disaster amendments to the Disaster Relief Act, the unemployment compensation extensions, HUD's urban systems engineering demonstration program, and the administration's requested increases in the proposed budget to achieve the goal of applying science to domestic problems in such areas as energy, pollution, weather prediction, and control of natural hazards, I am persuaded to the conclusion that the authorization level of S. 32 should at the very least be reduced because in no way can we possibly void duplication of programs under the system as set up under this bill.

These supplemental remarks, which were printed from pages 55 through 58 of the committee report, which I have largely referred to in my comments here today, were also signed by the Senator from Oregon (Mr. PACKWOOD) and the Senator from Ohio (Mr. TAFT) of the committee.

What I am saying in general is: Why do we constantly proliferate programs with cross jurisdiction, creating problems between agencies, with no one in the outside world having the foggiest idea where to go to find where they can get help and assistance?

I do not know how many people I have had call me in the 10 years I have been here and say, "Will you please tell me what to do? Just where do I go? Whom do I talk to?"

If it is in the area of education, I say to them, "What type education are you talking about?" We have 23 different agencies and departments dealing with education programs.

I do not know how many programs we have dealing with the problems of engineers and scientists who are either unemployed or underemployed. It would seem to me that simply adding a program on top of this mess, if we keep on doing that, sooner or later will cause this whole system of government to topple.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. DOMINICK. I yield to the Senator from Vermont.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. DOMINICK. I yield myself 3 additional minutes.

The PRESIDING OFFICER. The Senator is recognized.

Mr. DOMINICK. I yield to the Senator from Vermont.

Mr. AIKEN. This bill, as I read it, is an effort to provide employment for unemployed technicians, scientists, and so forth.

Mr. DOMINICK. That is correct.

Mr. AIKEN. I would like to ask this question. When a scientist who earned $30,000 a year becomes unemployed, what is the amount of his unemployment compensation?

Mr. DOMINICK. It would vary, I presume, from State to State, depending on where he is located. It would largely depend on the unemployment compensation laws of the State.

Mr. AIKEN. Would it be a percentage of his earnings?

Mr. DOMINICK. Yes, it is a percentage of the salary he was last paid. Let us say it is 50 percent.

Mr. AIKEN. An employee who made $150 a week would draw about $75 a week in many States now. But what I was asking was with respect to a scientist earning $30,000 a year. Is it possible his unemployment would amount to $15,000 a year?

Mr. DOMINICK. It runs very close to that in some States. Some States are different, I have to say in all fairness, but it could easily run that high. We have extended it in many areas beyond the normal 39 weeks. There are problems. We should be frank about it. For example, during the letdown in the Boeing contract in Seattle we definitely had areas of problems there and we tried to do something about it. In connection with the shuttle program at NASA, this contract was going to North American, and Grumman and Marietta, a team that was bidding on that contract, had not gotten it. Grumman had been in some trouble already in connection with the F-14. There were problems there. But that does not say that the programs we have now are not taking a portion of that without adding on.

Mr. AIKEN. There is a great deal of apprehension in other fields from existing agencies which have done excellent work over the years. They feel that their authority and responsibility, and their privilege to do good work, may be taken away from them by this legislation. Is there any danger in this bill that the good work being done by existing agencies will be taken away from them and given to a new agency which may be set up with entirely different personnel?

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. DOMINICK. I yield myself 2 additional minutes.

There is certainly that possibility because under title II of this bill we set up a civil service system administration under NSF, and this does a good number of things or provides for programs for a good number of items presently being conducted by the National Science Foundation or by the Labor Department under grants from them, and from a number of other agencies. So presumably there will be a jurisdiction fight. I say presumably, but surely there will be. The question is: who is going to win and take over projects authorized under two or three different groups? So there will be that problem, I assure the Senator.

Mr. President, I reserve the remainder of my time.

Mr. KENNEDY. Mr. President, I wish to indicate to the Senator from Vermont that obviously we do not intend, with this legislation, to take away any of the valuable work which other agencies are performing in a wide variety of areas. As a matter of fact, there is discretionary authority to the administrator to help some of these agencies to augment their research programs by transferring some funds to the various agencies, when appropriate. So I would like to believe that this program would be a stimulation to the various agencies that are doing superb work. I think albeit woefully too little, because they have inadequate resources.

I wanted to indicate that it is my intention that this administration would attempt to cooperate with and stimulate the research that is being done in these various agencies.

Mr. AIKEN. Then, the purpose of the Senator is to develop new fields, rather than to encroach upon the prerogatives and authority of those that are already doing this work?

Mr. KENNEDY. The Senator has stated it correctly.

Mr. AIKEN. I am asking for information.

Mr. KENNEDY. What we are trying to do is use the same kind of institutional framework to provide for civilian research needs what we have in the Defense Department to resolve areas of military need. If anyone wants to work on development of a weapon of any kind, he can go to the Department of Defense; but, as the Senator from Colorado has pointed out, if education is involved, one can go to any one of 22 different agencies. We ought to be able to provide a single kind of institution or agency that will be the principal civilian research agency, and will help stimulate and will supplement research in the other civilian agencies.

Mr. AIKEN. Would the Senator from Massachusetts say the purpose of his bill is to establish an agency which would supplement the work of the other agencies of Government, and would not have priority over them?

Mr. KENNEDY. That is correct. It is not our intention in any way to discourage or infringe on the very legitimate and worthwhile research programs that are being done in the other civilian agencies. It is to expand, stimulate, broaden, and utilize that expertise, and really, in a deeper sense, to bring the enormous technical and scientific research potential of this Nation into focus on the priority areas of civilian need.

Mr. AIKEN. The new work could expand into areas from the deepest bottom of the seas to beyond the atmosphere and all areas in between.

Mr. KENNEDY. There would be that potential, particularly in title I, which has modest amounts of money provided, but the real focus and thrust would be to utilize the scientific reseach potential for application to human problems that affect the community, rather than basic undirected research which is the thrust of many ongoing NSF programs. But there are important provisions in the bill that would help move toward the outer limits of the scientific state-of-the art in priority areas. I think we provide some of the freedom which the Senator from Colorado mentioned earlier. It would provide some resources to promote scientific research in those far horizons.

The problem, as my good friend from Vermont knows, is that when budgetary cuts are made for some of these agencies—and we are seeing more and more cuts made now—among the first programs to go are the research programs; and within the research area, the first to go is long-term research. This practice runs contrary, as my friend from Vermont knows, to very sound business investment practices, which realize that there must be both long-term and short-term research. We are trying to build that kind of concept into this program.

Mr. AIKEN. I am simply asking for information from the Senator from Colorado and the Senator from Massachusetts because my initial interest in this work was in 1947 and 1948, when several of us in the Senate joined with Senator Alexander Smith of New Jersey, to promote a bill to establish the National Science Foundation. I do not think too many people know what the work of the National Science Foundation has been, but, apparently, if one looks into it, he finds a great deal has been accomplished by it.

I just want to make sure that, by enacting new legislation, we are not taking over or preempting the work of that agency.

Mr. KENNEDY. I appreciate that statement, and I recognize the work of the Senator in the early development of the National Science Foundation. Let me underline my own belief that the work the Foundation has done in helping this Nation achieve its position in scientific research has been one of the great success stories of any agency of Government since the founding of the Republic. I think the agency has done work that is absolutely superb. I think all of us remember the time of the sputnik success of the Soviet Union and the challenge that was put on the scientific community in the period of the 1950's. The National Science Foundation responded in a most significant way in the area of research.

What we are attempting to do now is not only to continue that effort and that success, but to give an opporunity to the scientific and technical community to use their extraordinary talents in meeting urgent civilian needs.

Mr. TUNNEY. Mr. President, will the Senator from Massachusetts yield?

Mr. KENNEDY. How much time does the Senator want?

Mr. TUNNEY. Seven or 8 minutes.

Mr. KENNEDY. Mr. President, I yield 10 minutes to the Senator from California.

Mr. TUNNEY. Mr. President, I congratulate the Senator from Massachusetts on this legislation. I am proud to be a cosponsor of it.

I think it is a national disgrace that the United States, the greatest industrial power in the world, with supreme technology, should have in its midst over 400,000 or 500,000 unemployed aerospace workers in California alone. These people are capable, if fully employed, of improving the quality of life in this country by a quantum jump.

There is no question that the technology which has been developed in the aerospace industry is capable of being used in civilian areas. There is no doubt that transportation systems can be established by using the insights of advanced technology. In the field of crime prevention, some very interesting work has already been done, and much more could be done, particularly with the development of hardware. In oceanographic work, in the exploration of the seas, and in the areas of health, sanitation, and pollution control the aerospace industry and the use of advanced technology could do much to find ways in which many of the ills that plague this country could be cured.

I read with interest in the newspaper the other day that McDonnell Douglas plans to lay off 13,500 workers in southern California by the end of 1973. In California we have, right now, more than 400,000 aerospace workers who have been laid off the job. It is no mystery why they have been laid off. There was a time when we spent almost twice as much on our space program as we are spending today, and more than 50 percent of the prime contracts were in California. Moreover, we had far greater expenditures in advanced technology in the defense sector. There has now been a curtailment of spending on advanced technology in that sector as well.

But the point I am making is that we were not dealing with a market economy in the traditional sense of the word when we had a curtailment of space and defense contracts being signed with the aerospace industry.

The Federal Government itself was making the decisions to cut back on those expenditures. The administrators of the defense programs and space programs knew, when they were cutting the budget by $1, $2, $3, or $4 billion, that 50,000, 100,000, 200,000, 300,000, 400,000, or 500,000 aerospace workers and engineers would be laid off.

I think it is absolutely inexcusable that we have never developed a mechanism at the Federal level to determine what we were going to do in human terms with our technical resources when space funds and defense funds were cut back. There has been a lot of weeping and moaning and gnashing of teeth by career civil servants as well as political appointees in the executive branch of Government, but it was very clear to these people, in the years when the funds were being cut back, that men would be laid off unless there could be found an alternative form of work to be done by those aerospace engineers.

I think that S. 32 is one of the most far-reaching, progressive pieces of legislation to combat the social problems that affect our country that has come through the Senate in a long time. The legislation recognizes that technology does not have to malfunction in this country, that technology does not have to be developed just for the sake of development, but that it can be used for solving many of the pressing, urgent problems that we face.

I think it is clear that we will have only ourselves to blame if we allow this opportunity to pass without getting the aerospace industry and advanced technology generally involved with civil systems. I hope that this legislation will pass overwhelmingly in the Senate, and that when it moves on to the House of Representatives, it will receive strong support there.

PURPOSES OF S. 32

Let me elaborate a bit on the specifics of the legislation. While the National Science and Priorities Act of 1972 would not be the answer to all the problems attendant to national conversion, it would be a major step in bolstering civilian-oriented research and development. In declaring a national science policy in S. 32, the Federal Government would adopt the following goals:

First, Federal funding for science and technology should be raised to an adequate level and be adjusted annually in proportion to the increase in the GNP.

Second, scientists and engineers would have continuing opportunity for jobs commensurate with their level of education and their skills.

Third, Federal funding for civilian-oriented research and development would be raised to a level of parity with military research and development and continue at this level, possibly exceeding it.

Fourth, the Federal programs for civilian-oriented research and development would concentrate on solving the Nation's high-priority problems in areas such as health, housing, pollution, public safety, education, transportation and energy resources.

By establishing a framework of national policy and priorities for civilian science and technology, the National Science Policy and Priorities Act would establish the means to protect the Nation's scientific and technical talent against rapid and unexpected obsolescence.

S. 32 would provide the means to better conserve our brainpower and protect it against wastage once a Federal mission has run its course.

NEW FUNCTIONS FOR THE NATIONAL SCIENCE FOUNDATION

Under S. 32, the National Science Foundation would be responsible for developing a national policy for applying science to new problems. The composition of NSF would be broadened, and $50 million would be authorized to advance the state-of-the-art in priority areas of civilian R. & D.

THE CIVIL SCIENCE SYSTEMS ADMINISTRATION: A CIVILIAN NASA

Title II of S. 32 would establish a Civil Science Systems Administration—CSSA. This is perhaps the most innovative and interesting aspect of the bill. Not only would it serve to alleviate the unemployment problem of scientists and engineers, but it would harness their talents to design and demonstrate technical systems which would provide improved public-services. $1.2 billion would be authorized over a 3-year period. Programs would be carried out through contracts with industry, universities, nonprofit organizations and public agencies and would include provision for transfer of funds to other Government agencies.

The CSSA would function in a manner similar to NASA, and would share many of NASA's goals, including the development and operation of systems to implement programs through the utilization of scientific and technological expertise. The early history of NASA—in the late 1950's—was largely one of forming a national aerospace program out of projects, facilities, and personnel of the Government agencies, the scientific community and the aerospace industries. The early years of CSSA will probably follow the same pattern as the constituent parts for this new agency are at hand, waiting to be put together. The main difference would be in the desired ends rather than the means. NASA was formed to conquer space while the Civil Science Systems Administration would humanize our cities.

The CSSA would not replace NASA but would work in harmony with it. Current projections on funding for NASA over the next few years indicate that appropriations to this agency will continue at levels comparable to the present one. When one considers the tremendous success of the NASA program over the past decade especially in achieving the goal of landing a man on the moon, speculations on what a similar urban-based agency could achieve, given the same drive and dedication, are limitless.

TECHNICAL MANPOWER TRANSITION

Title III of S. 32 would authorize $560 million to aid States and local communities, companies and individual technical personnel in making the transition from defense and space to civilian programs. A range of programs is included—from research grants and fellowships to training and placement opportunities, as well as grants to develop university courses and curriculums oriented toward civilian engineering projects. $90 million is provided to community conversion corporations which would channel research and engineering programs into hard-hit communities.

PROTECTION OF PENSION RIGHTS OF SCIENTISTS AND ENGINEERS

Title IV of S. 32 is a start on getting effective solutions to what my colleague, Senator JAVITS, called "this disturbing neglect of our engineering and scientific community." It would require the Director of the National Science Foundation, after appropriate consultation with the engineering and scientific community and the heads of the various procurement agencies involved, to promulgate standards for Government contractors which would, to the extent feasible, provide more adequate pension protection to scientists and engineers working on Government contracts.

In conclusion, I have a question or two to ask the Senator from Massachusetts about the legislation. As I stated, the bill authorizes $1.8 billion over a 3-year period: $50 million to advance the state-of-the-art; $1.2 billion to design and demonstrate civil science systems which can provide improved public services in areas such as pollution control, housing, health, sanitation, transportation, et cetera; and $560 million to assist in transition of scientific and technical manpower from research and engineering programs which have been terminated or reduced to other civilian-oriented programs.

It seems to me that many of the projects to be undertaken would be better served if we could authorize funds for a period longer than 3 years; indeed, I understand that NASA's experience shows that long-term contracts for large-scale projects for which technical management is provided by suitable entities, such as Government field centers, have been most successful in bringing the promise of advanced technology to bear on pressing problems. Thus, I would hope that this program will be continued beyond the initial 3 years. What is the thinking of the Senator from Massachusetts on that point?

Mr. KENNEDY. I would say that I agree with the Senator from California that programs of this nature and description, to be effective, have to be ongoing and continuous, not unlike the whole NASA effort. But a 3-year period was, in the judgment of the committee, a sufficient time to test out this idea and provide the resources necessary for a full opportunity to examine it.

I think the figure that has been arrived at, the $1.8 billion, is an absolute minimum figure in relationship, for example, to the start-up cost of NASA in its first years. The appropriation for NASA's first fiscal year—1959—was $369,000,000. And the appropriation for NASA's first 3 fiscal years was $1,820,000,000. It is comparable to the start-up cost for NASA, which was more limited in its scope. Taking into account inflation, one would have to spend $2.5 billion today to match the $1.8 billion spent by NASA in its first 3 years.

Accordingly, I think these are bare minimum figures.

I think they are fully justifiable figures, and I believe, hopefully, that this program will prove itself out and develop a continuing life of its own, because I think the area of need to which this program directs itself will long be with us, and I think there will be a continuing need to focus the Nation's technical and scientific resources on these needs.

Mr. TUNNEY. I think the Senator is correct when he says this is a minimum amount of money to start the job. For example, in my State, in the San Francisco-Oakland area, there is a new rapid transportation system going in called BART. To build just that one system to serve the needs of the people of that area will cost about $1.5 billion. So when we talk about a program which will affect the entire Nation, and which is intended to develop civil systems not only in such areas as rapid transit, but also in crime control, oceanographic studies, and pollution control, we are talking about an awful lot more than $1.8 billion if we are to build the hardware alone. I think that $1.8 billion is good for a start, but clearly much more in the way of funding will be needed as time goes on. These are expensive programs that we are talking about.

I have another question I would like to address to the distinguished Senator from Massachusetts. It is my understanding that serious problems in effectively utilizing the fruits of advanced technology include the inability of many Federal departments to formulate specific technical goals, to identify tasks as projects—with corresponding line items in the relevant agency's budget—to identify fixed time schedules for accomplishment of those tasks, and most importantly, to interface with large research and development organizations where much of the basic talent resides for this kind of work.

Studies show that the three agencies whose experience in dealing with these problems has been most satisfactory are NASA, DCD, and the AEC. Thus, I am pleased to note that on page 35 of the committee report on S. 32 there appears the following statement:

> The contracting approach (for the Civil Science Systems Administration) would be similar to the NASA model in that there would be considerable reliance on systems contracts, with the prime contractors in turn subcontracting specific portions of the task to other contractors.

Thus, would the Senator agree that we are talking here again about many large-scale contracts and about contracts with the same or similar organizations to those who received contracts under NASA?

Mr. KENNEDY. The Senator is correct. As I understand, DOD, NASA, and AEC research and development funds amount to more than $10 billion a year. That is a great deal more money, as compared with approximately $1.8 billion we are talking about here over a 3-year period.

The way we have established this administrative responsibility is to track what I think has been a reasonably successful program. I think all of us are concerned about cost overruns and many other features of the Defense Department. But we have still patterned the new activity after the administrative setup established by those agencies. I think it is sound administratively, and it has the general support of administrative officials who believe that this should be the most effective way of proceeding.

As the Senator knows, we have outlined in considerable detail the targeting of the different sections of the program, and overall policy still will be established by the national science board. We think that this provides sufficient responsibility and sufficient flexibility and flexibility should be built into this kind of program. I think it is sound administratively, and I believe it is the best way to proceed.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. KENNEDY. I yield myself 3 additional minutes.

Mr. TUNNEY. I agree with what the Senator has said.

I should like to make one point with respect to the cost overruns. It is clear that when you are pushing technology and you are developing the hardware at the same time you are doing the research and development, there are going to be overruns above and beyond what originally was contemplated. I think that one of the main problems with our defense program has been that we failed to do the research and development ahead of time, before starting the construction of the hardware. Had we done this, we would have saved ourselves, as taxpayers, billions and billions of dollars.

We are making the same mistake all over again with the Trident submarine. We have started construction of the hardware before we have adequately done the research and development.

In the decade of the 1960's it was considered to be an important national priority to get to the moon. NASA was able to do this at a cost of perhaps $60 billion. Because it was considered to be important, technology was pushed; people were satisfied with it being pushed and were satisfied with the expenditure of the money. Now our priorities have changed, and we do not want to see such a tremendous allocation of resources to the space program.

What I am saying is that if the NASA approach can be used in such a way that the research and development is done prior to the time that the hardware is built, we will be able to set up civil systems and use the systems analytical approach without incurring substantial cost overruns. This is the way we ought to run our military programs as well.

I am hopeful that we will be able to avoid substantial cost overruns under this legislation. Congress, which always looks with a miserly eye, when we are dealing with social programs, will help to achieve this result. In contrast, when we are dealing with the defense budget, we seem to be perfectly willing to look the other way and allow a hemorrhaging of the budget.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. KENNEDY. I yield myself 2 minutes.

That, if for no other reason, is a good reason to assure parity between research and development on civilian programs to defense research. I think the point is well made.

Let me say, finally, that I appreciate the comments of the Senator from California. I do not think any other State, in total numbers, has as many unemployed technical, scientific, and engineering personnel. They have shown their ability time and time again in the aerospace industry to provide enormous contributions to this country in a wide variety of areas in space and defense. I know from the Senator from California and from conversations with the skilled people of my own State that they welcome the opportunity to use their talents in areas of human need.

I thank the Senator from California for his comments.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. KENNEDY. I yield 8 minutes to the Senator from Minnesota.

Mr. HUMPHREY. Mr. President, I rise in support of the measure before the Senate, S. 32. I am privileged to be one of the many cosponsors of this very important piece of legislation.

First of all, I want to commend the distinguished Senator from Massachusetts for bringing this measure out of subcommittee and the committee and for his leadership as the main sponsor of the bill. I am very pleased that I have had the opportunity to be associated, at least in part, with it.

Mr. President, many people talked about converting the defense industry to domestic problem solving. I have listened well, studied this issue, and have been involved in it since 1955.

At that time, I was a member of the Senate Foreign Relations Committee and chairman of the Subcommittee on Disarmament.

That subcommittee undertook a lengthly study of the entire reconversion problem—as it then existed in 1955, following our participation in the struggle in Korea. Since that time, the Military Establishment has grown considerably—and the reconversion problem has become paramount to the continued well-being of this Nation.

For the information of the Senate, the report on conversion that was prepared under the sponsorship of the Subcommittee on Arms Control and Disarmament is now in the files of the Committee on Foreign Relations.

For some unusual and, I think, indescribable reason, the Committee on Foreign Relations never published that report for the edification of the American people. I say this because it seems to me that it is very important that we have that information available to us. Every major defense industry in the United States at that time was surveyed in terms of what the problems of reconversion would be from military production to civilian needs. Cost estimates were made, time elements were included, and I believe that that was perhaps the most comprehensive study we have had on the problems of moving from military production to civilian production.

Mr. President, if a conversion program is going to work, it must have substance. The proposed legislation has been developed with the cooperation of scientists, engineers, technicians, and managers of the aerospace industry. These men and women—like all Americans—want good jobs, clean air, pure water, and remedies for crime, ignorance, poverty, disease, and the many other pressing domestic ills; people who want good neighborhoods and quality schools. S. 32 provides one of the foundations for putting talented people to work on these problems.

It is nothing short of a national tragedy that we have literally thousands of highly skilled and talented people idle or underemployed, people who have been educated in our best technical institutes and our greatest universities, people who have had years of experience in laboratories, research establishments, and industries. Yet, these people represent human waste today.

I know that the President has just vetoed a great measure known as the appropriation bill for health, education, and welfare. One of the reasons for his veto, with which I do not agree—in fact, in which I sharply disagree—was that it was beyond the budget estimates; that it added to the problems of the Nation, added to our indebtedness, and, as he would say, was an element that would increase inflation.

I wish the President of the United States would direct his attention to what I consider to be the most incredible waste of all; namely, unemployment, and particularly unemployment of skilled and talented people. We have a greater unemployed force of skilled engineers and scientists than many countries have in their total work force. We have that group of people idle, doing little or nothing, despite their desire to be of great help to the Nation and their desire to be at work utilizing their talents. I believe that the record will demonstrate we have more people today, engineers, scientists, technicians, people of talent and ability, that are either underemployed or unemployed than many countries have in their total work forces at work. The loss in this human equation is beyond calculation.

Mr. President, about 2 months ago I was in the State of California, the State of the distinguished Presiding Officer right at this moment in the Senate, the distinguished Senator from California (Mr. TUNNEY), and I saw the dimensions of the problem. The dimensions of a badly needed conversion program became exceptionally clear to me. I talked to hundreds of people in that State who were literally crying out for some assistance. At that time, 510,000 Californians were out of work. In the aerospace industry alone, employment declined 173,000 workers since the peak of employment in 1968. More than 35,000 engineers were unemployed.

My fellow Americans, most of the nations of the world do not even have 35,000 engineers. Yet we leave them unemployed, as if they were unwanted and unneeded. Yet we have unbelievable problems in this country that go unmet and unsatisfied. Another 65,000 engineers work only part time in their professions and have taken nonengineering jobs.

I remember being in Florida and talking to a man who had been working in the aerospace programs for 9 years and he was laid off along with 23,000 others. He was running a fishing tackle shop along the highway, trying to eke out a living. He did not want to go on welfare because that violated his every sensibility and every standard of his life. Here is a man with a Ph. D. degree, a competent, talented man with hundreds of other men just like him, selling fish bait, trying to make a living for his family. I visited with that man and many others, I went to community centers, to city halls, and visited with hundreds of men and women who were unemployed or underemployed or underutilized in their skills, with loss of productivity of meaningful talents. They all have the desire to move toward developing new enterprises, new businesses, and building up neighborhoods, and cities, and making America livable.

So that is why I am proud to be a cosponsor of the National Science Policy and Priorities Act of 1972. I believe this bill is the real key to this issue.

This legislation developed out of the EDICT foundation—the Ecological Development and Implementation Commitment Team 'Foundation in California. EDICT, I am proud to say, is the prototype of the community conversion corporation proposed by this bill. It is a working model. But it needs to be expanded. And the legislation before the Senate today provides the means to accomplish this expansion.

What we need is hope for the aerospace or defense worker because a man is laid off, he wants a job now, not next year or in 5 years, and we need a plan for the non-aerospace employee, the gas station manager, the small businessman.

A viable plan for conversion must have the following elements:

First. Employees must be protected. Jobs must start immediately.

Second. Communities must be protected. Communities must not be allowed to die.

Third. Adjustment assistance programs must be adequate.

Fourth. Community conversion corporations to hire workers, mobilize effort, make plans, work with citizens, identify and define needs, must be organized and funded.

These principles are the essence of S. 32.

Three major obstacles are constantly cited by both business and government in coping with domestic problems. They are lack of money, lack of technology, and lack of a systematic approach which can win cooperative support.

Herein lies the prime reason for developing community conversion corporations—to plan and manage regional programs for raising the quality of life in America.

These programs would match solutions from industry with the problems of society.

This approach would allow immediate employment of thousands now and hundreds of thousands as the programs for progress unfold throughout industry. Jobs need programs and that is what community conversion corporations are all about.

By 1980, more than 50 percent of the American population will be living in 25 super cities. The problems of metropolitan communities will multiply to staggering proportions as we constantly increase our demand for life supporting services. To prepare for this pending crisis, we must have the systematic introduction of aerospace and defense technology to improve our daily lives.

The National Science Policy and Priority Act of 1972 provides a means to build the jobs that are so badly needed. And, people want jobs—not grants, welfare, or unemployment compensation.

Community conversion corporations are long overdue as a sound approach to prosperity without war, and as a means of producing badly needed social progress.

What is needed now is responsible political leadership which can understand the value of this approach and deliver the necessary Federal legislation.

I commend the Senator from Massachusetts for the leadership he has shown on this matter—and I am proud to stand in support of this legislation.

Mr. President, may I just say, in conclusion, to the Senator from Massachusetts, that he has performed a tremendous service for the country. I hope it passes the Senate, as I am sure it will, with no weakening amendments, because this bill is well thought out. The Senator from Massachusetts has told us of the tremendous amount of research which has gone into it and the testimony that was taken. We should have had this legislation 4 years ago. It is desperately needed. The hour is late. The need is now. The time for action is right now.

Mr. KENNEDY. I thank the Senator from Minnesota for his comments and his helpful statement on this matter. His views will be of great value and interest to Members of the Senate. I appreciate very much his kindness and generosity.

Mr. President, how much time do I have remaining?

The PRESIDING OFFICER (Mr. TUNNEY). The Senator from Massachusetts has 7 minutes remaining.

Mr. KENNEDY. Mr. President, I reserve the remainder of my time.

AMENDMENT NO. 1444

Mr. DOMINICK. Mr. President, I call up my Amendment No. 1444 and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

On page 31, beginning with line 3, strike all through and including line 8.

On page 31, line 9, strike out "(2)" and insert in lieu thereof "(1)".

On page 31, beginning with line 13, strike all through and including line 19.

On page 31, line 20, strike out "(4)" and insert thereof "(2)".

Mr. DOMINICK. Mr. President, first of all, I listened to the Senator from California (Mr. TUNNEY) who is now presiding, and I listened to the Senator from Minnesota who was here just a second ago, and Mr. President, I agree with them. Probably the greatest source of imagination and ability we have in this country today is our engineers and scientists. There is no doubt about that. No one is contesting that. But one might think, from the impassioned oratory we hear, that anyone who thinks that the mechanics of a bill may not be right is against scientists and engineers. This happens to me every time I try to bring some logic into legislation.

I remember when I did not sponsor the original bill of the Senator from Massachusetts on cancer, a cancer research doctor in my State wrote a letter to every single newspaper saying, "Write your Senator and ask him why he is in favor of cancer and against good health." I was flooded with letters. When I finally was able to work out with the Senator from Massachusetts a cancer research program within the NIH, that cancer research doctor was kind enough to write a letter to all the newspapers, this time saying that we had done a good job. But that is the kind of "flak" we get, any time we try to make sense out of legislation which we think is badly drawn.

Politically I know this, but politically if a thing will not work and is ineffective or if it duplicates itself, I will continue to try to make sense out of it, so that it can become an effective program and not a purple ballon in the sky so that someone can say, "Isn't that a beautiful thing up there."

This amendment will, I hope, accomplish part of that but before I continue, I should like the opportunity to recite some figures.

The Senator from California referred to 400,000 or 500,000 scientists who were out of work. The testimony we have from the record, from the Executive Director of the Scientific Manpower Commission, indicates that as of 1971 there were 60,000 scientists and engineers at all degree levels who are unemployed, and that is found on page 93 of the hearings record.

The Director of the National Science Foundation, Mr. McElroy, reported on page 113 of the hearings record that it is estimated there are about 50,000 to 65,000 unemployed scientists and engineers out of a total of 1.7 million. He testified that this represents an unemployment rate of about 3 percent.

The recent labor statistics that have come out show that the scientists and professional people have approximately a 2.3-percent unemployment rate, and the engineers have a 2-percent unemployment rate, as compared to the second quarter of 1972 unemployment rate of 5.6 percent for the general population.

So let us not get into a hue and cry and say that this is the most mistreated group in the country. That is something that will not be borne out by the facts.

What I am saying, and surely what we want to deal with, is that we want to get everyone employed wherever we can. Scientists, engineers, and technicians are certainly the basic ingredient of a further development of technology to better all mankind. We all know that, and we are trying to do our best. But let us not go on the assumption that these people are in far worse shape than the youth who are unemployed, the black who are unemployed, or the Spanish who are unemployed, or many of the other groups of people who do not have the advantage of the education and resources that the scientists do.

I am hoping that we can do something in the bill to improve the situation. However, I am also hopeful that we can do it with the benefit of my amendment, so that it becomes more effective.

This particular amendment which I have offered for the consideration of the Senate is designed to cut out of the bill one of the problems which I covered in my original speech on the bill. We are tied by a policy statement on the responsibility of the Federal Government to make sure that the total Federal investment in civilian science and technology must be raised to an expenditure level which is adequate for the needs of the Nation, and then continue to increase it annually in proportion to the growth in the GNP or a rate which is greater than such growth.

I might say to my friends that this is a great statement. However, what is the GNP? In most cases it is determined by the level of Federal spending, and to the degree that we spend more, the GNP goes up, and to the degree that inflation goes on, the GNP goes up.

What we really need to talk about is what is the real growth of this country, and not tie it into some kind of fictitious picture which some economists say is no indicia of any kind as to the economic growth in this country.

The other thing that my amendment would delete is the policy statement in S. 32 requiring a general relationship between civilian research and development and Federal research and development work in defense. That does not have any relationship to what we are talking about here.

I might say parenthetically and somewhat ironically that it is the Members on the other side of the aisle who have been trying to cut back on defense expenditures and on a variety of other things which have created many of the problems that we are dealing with today.

All I can say is that there is no point to tying it in with defense expenditures, because if we do that, if by some mishappenstance, as far as I am concerned, the Senator from South Dakota (Mr. McGovern) should become President of the United States, we would have an immediate $30 billion cut in defense, and we will not have this level. We want to go forward on this.

I would say that it is a good idea from the standpoint of the Senate to get rid of those two provisions. There is not any connection or relationship between growth in GNP with the level of investment in civilian research and technology. The level of defense spending gives no indication of the optimum level of civilian R. & D. spending.

The companies themselves ought to be doing more on that. The local and State governments ought to be taking the unemployed scientists and engineers on as rapidly as they can. However, the fact that the Federal funds have to be used is totally different. And to mandate the expenditure for this type of investment and this type of policy matter does not make any sense to me.

Our objective, as I have said before, would be to move the unemployed scientists into jobs within the private sector. What we are trying to do is to get less unemployment and less underemployed than there are now. I agree with that.

There is no point in tying it to the two totally unrelated policy statements we have in the bill at the present time.

I hope that the manager of the bill would agree to accept the amendment and that we could cut these out without going through a rollcall vote.

Mr. President, I reserve the remainder of my time.

Mr. KENNEDY. Mr. President, I yield myself 5 minutes.

The PRESIDING OFFICER. The Senator from Massachusetts is recognized for 5 minutes.

Mr. KENNEDY. Mr. President, we earlier printed in the Record a letter from the National Science Foundation about the extent of unemployment. However, I will read parts of the letter sent to me on June 30 from Dr. Steves, when he was talking about the national survey on technical unemployment:

> Our special 1971 surveys were designed to measure the changes which had taken place during a 12-month period for a selected group of scientists and engineers. We knew that those 1971 results were not totally representative of the complete U.S. scientific and engineering manpower pool.

Then he goes on to say:

> We had been considering the advisability of an additional special survey of the employment status of scientists and engineers in 1972. However, a number of factors convinced us that it would be preferable not to proceed at this time.

The NSF is very much guarded in their own estimates on the extent of technical unemployment, and when we balance that against what the American Chemical Society talks about with relation to their increase in the unemployment of young chemists from 7 percent in 1971 to in excess of 23 percent in 1972, and the testimony from the various scientific groups that appeared before our committee and indicated worsening technical unemployment and underemployment—we get considerably different figures than the very minimum figures that have been given to us by the administration, the administration that is opposed to the legislation.

I will read an excerpt from the Science and Government Report. It is a highly respected report on key developments on science and Government which is published as a newsletter. I read a couple of brief excerpts from this report:

> Unemployment among scientists and engineers is far worse than Government figures indicate, and it is getting still worse.
>
> That is the conclusion that emerges from an effort by SGR to pin down the source of the "50,000 to 65,000" that administration officials routinely cite as the range of current professional unemployment in the research and development community.

Then, it asks:

> Where, then, does the 50,000 to 65,000 come from? The suggestion of one White House aide is that "it comes out of people's heads."

Mr. President, this report already is in the Record of March, 20, 1972, but I ask unanimous consent that it may be printed at this point in the Record.

There being no objection, the report was ordered to be printed in the Record, as follows:

Science and Government Report

Unemployment among scientists and engineers is far worse than government figures indicate, and it is getting still worse.

That is the conclusion that emerges from an effort by SGR to pin down the source of the "50,000 to 65,000" that administration officials routinely cite as the range of current professional unemployment in the research and development community. Whatever the realism of the numbers, their durability cannot be faulted, though the period over which they have been stated has been characterized by a continuing deterioration in the employment situation. The debut of 50,000 to 60,000 took place last February when the Department of Labor's Division of Labor Market Information issued a special study. Though the information that went into that study was a bit stale at the time, the Division has not returned to the subject, and officials there still recite the study numbers when asked about unemployment among scientists and engineers.

The next appearance apparently was in March, when Malcolm R. Lovell, Assistant Secretary of Labor for Manpower, addressed a meeting of science advisers to state governments. This time, however, technicians were added and the scope was narrowed to aerospace, and defense employment. "Our best estimates," Lovell said, "are that these cutbacks have resulted in unemployment for 50,000 to 65,000 engineers, scientists and technicians who formerly worked in defense and aerospace jobs."

Then, on October 27, NSF Director William D. McElroy, apparently talking about scientists and engineers everywhere, but not technicians, told a Congressional committee, "Our current estimates are based on a variety of information which includes Bureau of Labor Statistics (BLS) information and our own just completed surveys. We estimate that there are now about 50,000 to 65,000 unemployed scientists and engineers . . ."

In response to an inquiry, a BLS official said the Bureau does not compile figures on scientists and engineers. "We just cover professional, technical, and kindred personnel in our monthly surveys," he said. "The only detail we have is on engineers, but that's only for administration use. We never publish it." It was learned, however, that the BLS figure for unemployment among engineers is approximately 3 percent, as compared with the 3.4 percent that NSF found in the survey referred to by McElroy. Based on a study conducted for NSF by the Engineers Joint Council, the survey drew a 65 percent response last June and July from 100,000 engineers, which constitutes a 20 percent sampling of a mailing list of members of major engineering societies. Into the figure of 3.4 percent unemployed went only those who were out of work and who wanted work. Not included were the 6.9 percent employed in non-engineering work; of this percentage, it is significant to note, about one-third had accepted non-engineering employment since March 1970. In any case, the engineer driving a taxi does not show up in the figures as an unemployed engineer. Nor do the figures cited in October by McElroy reflect the difficulties that recent graduates have encountered in finding employment. According to the November Engineering Manpower Bulletin, published by the Engineers Joint Council, 9 percent of engineers at the bachelor's level were without job offers or "firm plans" at the time of graduation last June. "Although this may not appear high in absolute terms," the publication observes, "it is about double the figure for 1970 and in sharp contrast to the boom years of 1965–1969 when practically every graduate was employed." It also noted that bachelor degree graduates entering military service totaled 14 percent of the group—the highest figure since placement surveys began, in

1958. "If this number of graduates had not gone into the armed forces," the Bulletin states, "they would probably have had to join the group with no job offers."

A far grimmer picture is found in the results of a survey conducted by the American Chemical Society following last June's graduations. "Unemployment among new graduates was the highest reported by the Society in the last twenty years," according to the ACS analysis. "In chemistry, unemployment doubled—from 5.1 percent in 1970 to 10.3 percent this year. Among new chemical engineers, an alarming 12.8 percent were unemployed in 1971. This situation may be one reason why the largest number of chemical engineering students in ACS history (10 percent) reported that they had entered military service."

NSF's study of scientists, drawing on a 35 percent response to questionnaires sent to the 300,000 scientists listed in the 1970 National Register of Scientific and Technical Personnel was tabulated May 25, and therefore misses out on the fate of last June's graduating class. In addition, the figure that it cites of 2.6 percent unemployment among scientists does not reflect any of the 5.6 percent holding down non-science related jobs. Of these, 1.6 percent had accepted their positions since March 1970, which may fall within the normal order of things, but in science as in engineering, the Ph. D. cabbie doesn't show up in the tabulations of unemployment.

Where, then, does the 50,000 to 65,000 come from? The suggestion of one White House aide is that "it comes out of people's heads"—which may be the case. Working with figures derived from NSF's studies of unemployment among scientists and engineers, one finds the folowing: NSF put the scientist population at 500,000, and found that 2.6 percent, or 13,000 were out of work; the engineers were estimated at 750,000, which means that with a 3.4 percent unemployment rate, 25,500 were jobless. Grand total: 38,500.

The most realistic estimate of the situation was provided October 26 by Betty M. Vetter, executive director of the Scientific Manpower Commission, in testimony before the Senate Labor and Public Welfare Committee. Mrs. Vetter's numbers and forecasts were indeed grim:

"As nearly as I can determine," she testified, "there are about 60,000 scientists and engineers, including 1971 graduates at all degree levels, who are literally unemployed. Using the generally accepted ratio of seven technicians for each 10 scientists, an additional 40,000 technicians may be jobless.

"There are perhaps half again as many who are employed part-time, temporarily or performing work in some way related to their lated to their scientific training. The majority of these are seeking employment in their fields, or would be seeking such employment if they thought there was any chance of finding it.

"A third group of unknown magnitude are under-employed, in the sense that they are performing work in some way related to their training, but which could be done by persons with lesser training."

Mrs. Vetter concluded that the groups she had described had almost doubled in a year "and there seems little indication that we have yet reached the peak unemployment level in this population."

Mr. KENNEDY. Mr. President, it is our belief from the hearings that there is extreme, significant unemployment and underemployment in the technical community. As one who supported the expansion of unemployment compensation, disaster relief, and all of those programs to provide some financial assistance to those who are in need, I wish to say that this bill would do what is more important; it would provide them with a job.

We know that every scientist or engineer who is employed creates jobs for six to 10 other workers. This bill will help people to get to work; and it will have a major impact among the unemployed in this country.

The other provision, relating the increase in research and development to GNP, and parity with the Department of Defense arises from the general recognition that research and development for all civilian programs should at least be the equivalent of research for defense.

Of course, this is just a policy statement. But I hope it will establish goals which we should seek and which are realistic, given the kinds of social needs we have at this time.

So I would hope that the amendment of the Senator from Colorado would not be accepted.

Mr. President, I would suggest the absence of a quorum.

Mr. DOMINICK. Mr. President, if the Senator will withhold his request, I would like to yield myself an additional 5 minutes.

Mr. KENNEDY. Mr. President, I withdraw my request.

The PRESIDING OFFICER. The Senator from Colorado is recognized.

Mr. DOMINICK. Mr. President, this is the first of three amendments that I will offer. If the Senator from Massachusetts is going to object, I expect I will have to take enough time to get enough Senators here to ask for the yeas and nays.

My amendment would leave in, as the continuing policy and responsibility of the Federal Government, the wording—

> The Congress declares that it is the continuing policy and responsibility of the Federal Government to take appropriate measures directed toward achieving the following goals:
>
> (2) scientists, engineers, and technicians must have continuing opportunities for socially useful employment in positions commensurate with their professional, technical capabilities;
>
> (4) Federal programs for civilian research and engineering must be focused on meeting the human needs of the Nation in such priority problem areas as health care, poverty, public safety, pollution, unemployment, productivity, housing, education, transportation, nutrition, communications, and energy resources.

Mr. President, it is pretty hard to see how you can go much further than that, yet the Senator from Massachusetts and the majority of the committee have gone beyond that in the bill by saying our level of investment in civilian R. & D. has to be tied in with gross national product. It also says the increase shall reach the same level as defense expenditures.

All I am saying is cut out the two unrelated things and make the policy exactly what we are trying to accomplish.

Do we really want to tie research and development to the growth of the Gross National Product, and have an automatic increase in expenditures each year which comes close to violating the policies of the Committee on Appropriations by requiring an increase all the way through? Do we really want to get them in a position where they will be relying on what the research in defense is? Suppose we get an agreement where there is a great deal of reduction there. Will we reduce those expenditures here? I do not think that is what the committee wants.

Mr. President, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. DOMINICK. I want to say again I think these two issues of the policy statement of the bill are not only unnecessary but detract from the rest of the bill.

Mr. KENNEDY. Mr. President, I suggest the absence of a quorum on my time.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KENNEDY. Mr. President, I yield myself 3 minutes.

I wish to place in the Record the latest figures provided by the National Science Foundation, which show that, in 1967 dollars, discounting inflation, total Federal obligations for research and development are as follows:

In fiscal 1967, when Federal R. & D. spending reached its peak, it was approximately $16.5 billion for Federal R. & D. In 1968, the figure dropped to $15.3 billion. In 1969, it dropped to $14.3 billion. In 1970, it dropped to $13.3 billion. In 1971, it dropped to $12.9 billion. In 1972, it was $13.5 billion.

The budget for fiscal 1973 did include a modest increase to $13.9 billion in 1967 dollars. But even at that proposed level, the 1973 proposed budget will be 16 percent below what it was in 1967.

So over all these years in which national needs for R. & D. have been skyrocketing, Federal expenditures in these areas have been declining in real dollars. We want to try to avoid that by the policy statement. It is one of the reasons why it has been included.

Mr. President, I am prepared to yield back the remainder of my time and vote.

Mr. DOMINICK. Mr. President, I yield myself 3 minutes.

I have already commented on that at some length in my supplemental views with Senators Packwood and Taft on the amount of research that is being conducted and the efforts that are being made that this bill could duplicate. The budget has been rather substantially increased in order to try to meet the problems of unemployed scientific and technical people, for whom I have great respect and great honor.

But the amendment I am talking about does two things. First, it says, let us, for heaven's sake, say what we mean in the bill and not what we do not mean. What we mean in the bill, and the whole purpose of the bill, is to be able to take these people and transfer them into areas of domestic concern.

So let us not—my amendment No. 1444 says—tie it into an annual growth rate which could interfere with both the Finance Committee's and the Appropriation Committee's functions. And let us not tie it into the Federal research defense budget. At the present time that calls for some $8 billion. It has already passed the Senate.

If we are going to do that, we would immediately be putting into this bill not even the amount they asked for, which is $1.81 billion. Let us not do that and say that the Senate itself, in its own bill, is not following the policy which it sets out in its own bill. Let us just delete these things and tie it into the exact things and policies which we seek, which is that these scientists, engineers, and technicians have useful employment in positions commensurate with their professional and technical capabilities, and that they have priority in using those talents in the fields of health care, poverty, public safety, pollution, unemployment, productivity, housing, and so forth. Let us keep that in, but let us not tie it up with the remainder of paragraph (1) and paragraph (3), on page 31, none of which are necessary or even in consonance with the tenor of the bill.

I am prepared to yield back the remainder of my time.

Mr. KENNEDY. I yield back the remainder of my time.

The PRESIDING OFFICER (Mr. Tunney). All remaining time has been yielded back. The question is on agreeing to the amendment (No. 1444) of the Senator from Colorado (Mr. Dominick). On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. ROBERT C. BYRD. I announce that the Senator from Louisiana (Mrs. Edwards), the Senator from Georgia (Mr. Gambrell), the Senator from Oklahoma (Mr. Harris), the Senator from Wyoming (Mr. McGee), the Senator from South Dakota (Mr. McGovern), and the Senator from Rhode Island (Mr. Pell) are necessarily absent.

On this vote, the Senator from Georgia (Mr. Gambrell) is paired with the Senator from South Dakota (Mr. McGovern). If present and voting, the Senator from Georgia would vote "yea," and the Senator from South Dakota would vote "nay."

Mr. SCOTT. I announce that the Senator from Colorado (Mr. Allott), the Senators from Tennessee (Mr. Baker and Mr. Brock), the Senators from Nebraska (Mr. Curtis and Mr. Hruska), the Senator from Kansas (Mr. Dole), the Senator from Michigan (Mr. Griffin), the Senator from Illinois (Mr. Percy), the Senator from Ohio (Mr. Taft), the Senator from Texas (Mr. Tower), and the Senator from Connecticut (Mr. Weicker) are necessarily absent.

The Senator from South Dakota (Mr. Mundt) is absent because of illness.

The Senator from Iowa (Mr. Miller) is detained on official business.

If present and voting, the Senator from Nebraska (Mr. Curtis), the Senator from Ohio (Mr. Taft), and the Senator from Texas (Mr. Tower) would each vote "yea."

On this vote, the Senator from Iowa (Mr. Miller) is paired with the Senator from Illinois (Mr. Percy). If present and voting, the Senator from Iowa would vote "yea" and the Senator from Illinois would vote "nay."

The result was announced—yeas 35, nays 46, as follows:

[No. 383 Leg.]

So Mr. Dominick's amendment (No. 1444) was rejected.

Mr. KENNEDY. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. GRAVEL. I move to lay that motion on the table.

The motion was agreed to.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Hackney, one of its reading clerks, announced that, upon reconsideration, two-thirds of the House had not agreed to pass the bill (H.R. 15417) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1973, and for other purposes, which had been returned by the President of the United States with his objections.

The message also announced that the House had passed the following bills in which it requests the concurrence of the Senate:

H.R. 16071. An act to amend the Public Works and Economic Development Act of 1965;

H.R. 16251. An act to release the conditions in a deed with respect to certain property heretofore conveyed by the United States to the Columbia Military Academy and its successors;

H.R. 16233. An act to amend the Maritime Academy Act of 1958 in order to authorize the Secretary of the Navy to appoint students at State maritime academies and colleges as Reserve midshipmen in the U.S. Navy, and for other purposes; and

H.R. 16201. An act to authorize the Secretary of the Navy to construct and provide shoreside facilities for the education and convenience of visitors to the U.S.S. *Arizona* Memorial at Pearl Harbor and to transfer responsibility for their operation and maintenance to the National Park Service.

ENROLLED BILLS SIGNED

The message further announced that the Speaker had affixed his signature to the following enrolled bills:

S. 3824. An act to authorize appropriations for the fiscal year 1973 for the Corporation for Public Broadcasting and for making grants for construction of noncommercial educational television or radio broadcasting facilities;

H.R. 10676. An act for the relief of Lester L. Stiteler; and

H.R. 16254. An act making certain disaster relief supplemental appropriations for the fiscal year 1973, and for other purposes.

The enrolled bills were subsequently signed by the Acting President pro tempore (Mr. Metcalf).

HOUSE BILLS REFERRED

The following bills were severally read twice by their titles and referred as indicated:

H.R. 16071. An act to amend the Public Works and Economic Development Act of 1965; to the Committee on Public Works.

H.R. 16251. An act to release the conditions in a deed with respect to certain property heretofore conveyed by the United States to the Columbia Military Academy and its successors;

H.R. 16233. An act to amend the Maritime Academy Act of 1958 in order to authorize the Secretary of the Navy to appoint students at State maritime academies and colleges as Reserve midshipmen in the United States Navy, and for other purposes; and

H.R. 16201. An act to authorize the Secretary of the Navy to construct and provide shoreside facilities for the education and convenience of visitors to the United States Ship Arizona Memorial at Pearl Harbor and to transfer responsibility for their operation and maintenance to the National Park Service; to the Committee on Armed Services.

AUTHORIZATION FOR PRINTING OF H.R. 14896

Mr. ALLEN. Mr. President, I ask unanimous consent that H.R. 14896, which was passed by the Senate yesterday, be printed in the form in which it was passed.

The PRESIDING OFFICER. Without objection, it is so ordered.

NATIONAL SCIENCE POLICY AND PRIORITIES ACT OF 1972

The Senate continued with the consideration of the bill (S. 32) to authorize the National Science Foundation to conduct research, education, and assistance programs to prepare the country for conversion from defense to civilian, socially oriented research and development activities, and for other purposes.

AMENDMENT NO. 1443

Mr. DOMINICK. Mr. President, I call up my amendment No. 1443.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk proceeded to read the amendment.

Mr. DOMINICK. Mr. President, I ask

unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered; and, without objection, the amendment will be printed in the RECORD.

The amendment is as follows:

On page 37, line 6, strike the "period" and insert in lieu thereof the following: ": *Provided, however,* That the Director must inform the Board of all grants and contracts made under title II of the National Science Policy and Priorities Act of 1972, and the Board, in cases of grants and contracts over $2,000,000 in total, may within thirty days of such notification vote its disapproval which shall be binding on the Director.".

Mr. DOMINICK. I yield myself 5 minutes.

Mr. President, I ask for the yeas and nays on this amendment.

The yeas and nays were ordered.

Mr. DOMINICK. Mr. President, I am not going to take very long, but I think this is an extremely important amendment to this bill, because it involves the jurisdictional control by the National Science Foundation of a whole new group of systems that are put within the National Science Foundation but over which and NSF's board of directors are given no control.

Under the National Science Foundation setup as it now exists, any contract which involves $500,000 or more in 1 year or $2 million in total must be approved by the National Science Board. Otherwise, they cannot go forward. Under title II, this is specifically eliminated, so that they can go forward with any projects or programs regardless of the amount we are talking about, without having any prior approval of the National Science Board. There is absolutely no control by the National Science Board to determine whether or not the contract or grant is the type of project they really want.

I am just saying that any grant or contract involving $2 million may, within 30 days of notification of this, be disapproved by the Board, which is the same situation we have now.

This would say, therefore, that notice must be given to the Board, and the National Science Foundation Board would have a chance to review it. If they do not approve it, the Board can then say, "OK, this is not the type of project you ought to go forward with."

This insures the continuity of the direction of the National Science Foundation, which has been a magnificant organization. It has done an enormous amount, not only in basic research, but also in a great number of areas of national significance.

I think it is important. Board control is something we ought to start. It will enhance the bill substantially if we do. If we do not, all we are doing, in effect, is creating another agency, and we are hiding it under the pseudonym of the National Science Foundation.

Mr. President, I reserve the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. KENNEDY. I yield myself 5 minutes.

Mr. ROBERT C. BYRD. Mr. President, may we have order in the Senate?

The PRESIDING OFFICER. The Senate will be in order.

Mr. KENNEDY. Mr. President, it was the judgment of the committee, and the consensus of the advice received from outside experts that the Civil Science Systems Administration should operate with the same kind of administrative authority that we find in the Defense Department, in NASA, in the Department of Transportation, and in other agencies. In regard to this program, there are the same kind of safeguards, the same kind of procedures. We are following them and tracking them in the pending legislation. Under the National Science Foundation generally, the Senator from Colorado has explained the procedures followed. Those grants for research which the Foundation provides usually do not have the kind of time or cost constraints that contracts similar to those of the Department of Transportation, the AEC, or the Department of Defense have. If a university is going to get a grant for a research program, it can wait for a month until the National Science Board of 24 members comes together. They usually meet once every month. Some members attend. Some members do not. If the university has to wait, the nature of basic research is such that it is not so much a problem for the university as it would be for a business firm which has to meet time deadlines and keep within cost constraints.

What we are trying to do is to make sure that the Board will have policy control over administration of the program and the responsibility for it. But what we are also trying to do is to take the Foundation Board out of the day-to-day running of the program. What we should do is to get the best administrator we can to run the program and give him the responsibility and have him report the contractual obligations he has to the Foundation Board at its monthly meetings. But we do not want to try and tie the administrator's hands in this way, just as we do not tie them when it comes to the Department of Transportation, the AEC, or NASA programs. We give them the authority to do it. We give them the responsibility to do it and then we hold them accountable for it.

If the Senator from Colorado would consider writing into the language a provision which would require that any contract of $2 million be reported to the National Science Board, to insure that the Board then would have the full knowledge and understanding as to what direction the administrator was moving toward, I think this would make some sense.

I would be interested in the reaction of the Senator from Colorado, to a proposal that would say that any kind of grant or contract that would be made under this program in excess of $2 million would be reported to the Board, so that they would be informed as to the direction and scope of a program. I would think that this would move along the way toward achieving what the Senator from Colorado would want to achieve.

Finally, I would say, with regard to existing and ongoing programs under the National Science Foundation, that we are not changing the existing procedure. That would still be maintained. As the Senator has pointed out, $500,000 in 1 year or $2 million contract in total—grants of that magnitude to universities and colleges and other research groups would still be approved by the Board. It is a valuable procedure as it relates to the National Science Foundation Board and the university world, which does not have great time pressure. I would be willing to support a provision that would provide notice to the Board on contracts which had been let in excess of $2 million, so that we could carry through the thrust of the amendment; that is, full notification to the Board as to the direction they would be moving in.

It seems to me we do not want to be setting up a procedure where we have 24 part-time members coming down here once a month. Some of them will come and others do not. They should be informed and have an understanding of the direction and policy considerations. But certainly we do not want to inject them into the day-to-day administration of the program. What we want to do is to get the best and most effective business type we can get to run the program, give him the authority and the responsibility for doing so, and make him accountable for policy to the Board; but not require that they intervene in his day-to-day procurement operating decisions.

So I would be interested in the reaction of the Senator as to a substitute to requiring notification to the Board, so that we can insist that the Board be informed, in accordance with policy considerations which brought about the granting of such contracts. I would be interested to see whether the Senator from Colorado would be willing to accept that as a compromise.

Mr. DOMINICK. Mr. President, I yield myself 5 minutes.

The PRESIDING OFFICER (Mr. TUNNEY). The Senator from Colorado is recognized for 5 minutes.

Mr. DOMINICK. The Director must of necessity keep the Board advised of what is going on. I see no possibility, with an enlarged Board, of their being in ignorance of the fact that they are in effect authorizing a program of $2 million or more. So, under title I of the bill which enlarges the Board, it gives the opportunity for more people to be involved who will have actual industrial and technical skills and expertise.

The fact of advising the Board is implicit in the amendment I am offering. Our disagreement is not on the question of advising the Board but on the question of whether the Board has the right of veto. That is what the Senator from Massachusetts is objecting to, really, as I understand it; yet the right of veto is exactly what is given in the present National Science Foundation program.

What we would be doing without my amendment is setting up two totally different groups, one group under existing laws for the National Science Foundation that would be subject to a veto, and this new group under title II not subject to Board control.

Let me show the need for the change. We define the Civil Service system as:

> Any set of interrelated technological applications which are designed to perform certain public services.

Public services are in turn defined as:

> Any set of interrelated organizations and activities which collectively perform certain related functions normally associated with life in our society.

One cannot get anything much broader than that. Let us suppose that the civil service system, all of a sudden, decided that one of its projects should be a redoing of the subway system of New York. Frankly, that would be a thoroughly good program. It could be done under this. But before they go through with it, they should interrelate with other Government bodies to see whether it is worthwhile. The Board should go into it to see whether it is a viable proposition. Someone could be awarded a grant or contract which would give him a lifetime tenure to decide what we should do about, for example, mass transit all over the country, a mass transit system from here to San Francisco.

My point is that there ought to be some discipline here, and there is not any discipline whatsoever once the Administrator of this Civil Science Administration decides to move forward with a program. If we could put title II of S. 32 in the same context with the National Science Foundation, where the Director consults monthly with the National Science Board and they would have a right to disapprove of contracts over $2 million, then I think we would make a lot more sense out of the bill. And in all frankness, unless I can get some of these amendments agreed to, I have no intention of voting for this bill.

Mr. KENNEDY. Mr. President, I yield myself 5 minutes.

The PRESIDING OFFICER. The Senator from Massachusetts is recognized for 5 minutes.

Mr. KENNEDY. Mr. President, the Secretary of any Government department or agency has extraordinary powers today. If the Secretary of HEW wants to provide a contract or grant for hundreds of millions of dollars, he has authority to do so. If the Secretary of the Department of Transportation wants to decide to build a rapid transit system going up through New England, he has extraordinary power to do so.

The duty that we in Congress have is the responsibility to look over various appropriations and when they come back and come before the Appropriations Committee, they will have to justify the expenditure of this amount of money. And final authority will be in the Congress of the United States, where it should be.

On these programs, if we are interested in getting sound management built into the programs, we ought to take the same kind of procedures we take with any of the other Departments of Government, with DOD, NASA, or any of the various agencies. We give power to them and we hold them accountable for grants to various programs. We ought to get the best manager in the country that we can get to run this program and then permit him to do it. The National Science Board sometimes meets once every 2 months. Are we going to say that they will be unable in their day-to-day operations to carry on the contracting that we expect to be done? There could be nothing worse than having a committee running the program. We ought to have one individual run this program and hold him accountable and have Congress be the ultimate arbiter in terms of appropriating procedures. I think that is the way to do it.

We always have the GAO that can review this program, as it can review any of the other programs. We hope that they will review this and find out if there is any inefficiency or wastage occurring such as crops up in other programs.

We have this protection. However, we have to decide whether under the pending amendment we would have a man responsible for a program that is run by an administrator who has a board over him in terms of policy considerations. I would be willing to insist that every time he awards a contract he inform this board so that they are kept informed of what directions the program is moving in. And the administrator would have to come up and justify these programs, as with any other program, before the Congress.

We in the Senate and in the House of Representatives will be able to debate the programs and provide the kind of justification that is necessary. However, to provide an additional way of tying an administrator's hands never seemed to be a sound procedure when it came to the space program, Defense procurement, or any other kind of Government program which today are channeling hundreds of millions of dollars, indeed billions of dollars, of funds into the economy.

As we mentioned, the Department of Defense, the AEC and the NASA do not have a board that looks over them. However, they have to justify what they do. And I think that this administrator ought to justify his responsibility to the policy group or the board itself and also to Congress. We ought to permit him to carry on his day to day administrative responsibility in order to permit him to do the job.

The PRESIDING OFFICER. Who yields time?

Mr. DOMINICK. Mr. President, I yield myself 5 additional minutes.

The PRESIDING OFFICER. The Senator from Colorado is recognized for 5 additional minutes.

Mr. HARTKE. Mr. President, will the Senator yield for a question?

Mr. DOMINICK. I yield for a question.

Mr. HARTKE. Mr. President, in the bill itself, omitting this amendment, is there any criteria or standard for awarding a contract in the first place?

Mr. DOMINICK. No, there is not.

Mr. HARTKE. In other words, what we have here is an open-ended operation of awarding contracts, not only on amount, but also on the ultimate and result. Is that correct?

Mr. DOMINICK. The Senator is correct.

Mr. HARTKE. Is there any procedure like this in any other measure that is in Congress at the present time?

Mr. DOMINICK. We have the National Science Board which we have enlarged which will be told, I am sure, by the Director what kind of programs will be considered.

Mr. HARTKE. Is it not true that the National Science Foundation itself has expressed disapproval of the total program?

Mr. DOMINICK. The National Science Foundation has not approved of enactment of this bill, I would say, and certainly is not happy with the fact that they have no control over how the programs will be originated and what kind of money will be spent.

Mr. HARTKE. Mr. President, is that the intent of the amendment of the Senator from Colorado, to provide for some kind of control in the absence of standards and criteria?

Mr. DOMINICK. The Senator is exactly correct. I thank the Senator from Indiana for making the point very clear.

Mr. KENNEDY. Mr. President, will the Senator yield?

Mr. DOMINICK. I yield.

Mr. KENNEDY. Mr. President, the Senator understands that these contracts are like any other Government contracts and are governed by Federal procurement regulations. Let us not leave the record open that there are no procedures or regulations by which these grants are covered. They are covered like every other contract granting money under any other Government contracting agency.

Mr. HARTKE. Mr. President, let me clarify the matter. As I read the bill, I find nothing in the bill to provide that any standard is set forth to provide how much is to be spent. It is completely an open-ended operation. I do not know of any legislation passed in this Congress that leaves no standards or criteria whatever and is open-ended.

If the amount that is totally appropriated here, if funded, it could be awarded to one contractor without any review and the specifications and procedures could be very broad. They might say, "All we want to do is to try to put all scientists to work."

Mr. DOMINICK. Mr. President, I can frankly say to the Senator that in the bill itself I can see nothing that would prevent that. I think it is unlikely that it would happen. However, it seems to me that it could be done.

Mr. KENNEDY. If the Senator would yield further, the Senator is quite clearly incorrect. Any kind of procedures for the granting of contracts would have to comply with the existing Federal competitive procedures that have been established. And for the Senator to indicate that there are no kind of criteria is not right. The Senator has the bill before him and he can refer to the various sections. I think that this legislation is about as precise and as exact in its scope and description as any measure that I have seen come before the Senate.

Mr. HARTKE. Mr. President, will the Senator from Colorado yield to me for a question to the Senator from Massachusetts along that line?

Mr. DOMINICK. Mr. President, let me comment first on it myself.

The definition of civil science system says, and this is what we are supposed to be operating under:

> Any set of interrelated technological applications which are designed to perform certain public services.

And the definition on public services is defined as:

> Any set of interrelated organizations and activities which collectively perform certain related functions normally associated with life in our society.

That covers the whole landscape and would cover any kind of thing one could think of. I would say that the Senator from Indiana is correct.

Mr. HARTKE. Mr. President, I might ask the Senator from Georgia in a question whether it is perfectly permissible to award a contract to take the grasshoppers off his farm in the State of Georgia.

Mr. DOMINICK. Yes. There is no doubt about it; or planting peanuts, as far as I can see, in the city of New York. I hope they do not do either one.

Mr. BUCKLEY. Mr. President, will the Senator yield, and not to discuss peanuts?

Mr. DOMINICK. I yield.

Mr. BUCKLEY. I am interested in the Senator's remarks that if his amendments are not agreed to he would not find it possible to vote for the bill. I think the Senator's amendments are extremely well taken and I support him, having read the supplemental views and those of the Senator from Oregon (Mr. Packwood) and the Senator from Ohio (Mr. Taft). I wonder why the Senator would vote for the bill even if the amendments were accepted.

But I am particularl- interested in the highly trained specialists in the engineering field who have found themselves on the street because of the major cutbacks we have seen in the aerospace industry.

Will the bill, in the judgment of the Senator from Colorado, provide any meaningful relief or help to these men and women earning from $20,000 a year to $25,000 in getting them retrained for other employment in other fields?

Mr. DOMINICK. The difficulty in answering that question is that I do not know what other jobs in this field at that salary are available, assuming we get them retrained.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. DOMINICK. I yield myself 3 additional minutes.

The PRESIDING OFFICER. The Senator from Colorado is recognized.

Mr. DOMINICK. As we point out, if a man is working in atmospheric physics, it is very hard to take him from that and say we are going to make him the head engineer of the various utilities of the city of Buffalo. It is very hard for him to be retrained in that instance.

I cannot give a categorical answer, but the purpose is to give them hope, which I think in many cases will not be fulfilled.

Mr. BUCKLEY. Is my understanding correct, based on the Senator's remarks and the report that there are other programs which have been approved which will more specifically extend such hope as it is possible to extend?

Mr. DOMINICK. A great many programs are now being geared specifically to the purpose of trying to find other spots for these underemployed and unemployed scientists and technicians. They are being worked through the National Science Foundation and the Department of Labor, HUD, and other areas. The degree of effectiveness has been that the National Society for Professional Engineers has already uncovered about 30,000 jobs for these citizens.

Mr. BUCKLEY. I thank the Senator.

Mr. DOMINICK. I am ready to yield back my time.

Mr. KENNEDY. Mr. President, I yield myself 3 minutes.

The PRESIDING OFFICER. The Senator from Massachusetts is recognized.

Mr. KENNEDY. Mr. President, I would like to direct my remarks to the question raised by the Senator from New York. In the program we concede a number of different ways and means of trying to take advantage of unemployed technical and scientific personnel. We would provide grants to be made to individual companies and corporations that are in the process of making a transition into programs, on-the-job training for technical people who might have skills in a defense related industry, and interested in going into an area of civilian need.

We provide help and assistance to companies and corporations in that area. We also provide some funding for those individuals who want to go back to universities and colleges to be able to transfer their skills. There is a fellowship program involved there.

Third, it would provide resources to communities that want to be able to take scientific and technical personnel and use them in areas of civilian need. We provide grants to the various local communities for a limited period of time.

So we have tried to provide in this program the best of the various suggestions that have come from the technical community.

I was prepared to make some comments to my friend, the Senator from Indiana, but he is not here at the present time, so I will withhold the remainder of my remarks.

Mr. President, I yield back the remainder of my time.

Mr. DOMINICK. I yield back the remainder of my time.

The PRESIDING OFFICER. All time is yielded back. The question is on agreeing to the amendment of the Senator from Colorado. The yeas and nays have been ordered, and the clerk will call the roll.

The second assistant legislative clerk called the roll.

Mr. ROBERT C. BYRD. I announce that the Senator from Louisiana (Mrs. Edwards), the Senator from Georgia (Mr. Gambrell), the Senator from North Carolina (Mr. Jordan), the Senator from Louisiana (Mr. Long), the Senator from Wyoming (Mr. McGee), the Senator from South Dakota (Mr. McGovern), and the Senator from Rhode Island (Mr. Pell) are necessarily absent.

On this vote, the Senator from Louisiana (Mr. Long) is paired with the Senator from South Dakota (Mr. McGovern). If present and voting, the Senator from Louisiana would vote "yea" and the Senator from South Dakota would vote "nay."

On this vote, the Senator from Georgia (Mr. Gambrell) is paired with the Senator from Wyoming (Mr. McGee). If present and voting, the Senator from Georgia would vote "yea" and the Senator from Wyoming would vote "nay."

Mr. SCOTT. I announce that the Senator from Colorado (Mr. Allott), the Senators from Tennessee (Mr. Baker and Mr. Brock), the Senators from Nebraska (Mr. Curtis and Mr. Hruska), the Senator from Kansas (Mr. Dole), the Senator from Michigan (Mr. Griffin), the Senator from Illinois (Mr. Percy), the Senator from Ohio (Mr. Taft), the Senator from Texas (Mr. Tower), and the Senator from Connecticut (Mr. Weicker) are necessarily absent.

The Senator from South Dakota (Mr. Mundt) is absent because of illness.

If present and voting, the Senator from Nebraska (Mr. Curtis), the Senator from Ohio (Mr. Taft), and the Senator from Texas (Mr. Tower) would each vote "yea."

The result was announced—yeas 37, nays 44, as follows:

[No. 384 Leg.]

So Mr. Dominick's amendment (No. 1443) was rejected.

Mr. KENNEDY. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. MANSFIELD. Mr. President, will the Senator from Massachusetts yield?

Mr. KENNEDY. I yield to the majority leader.

RURAL DEVELOPMENT ACT OF 1972—CONFERENCE REPORT—TIME LIMITATION AGREEMENT

Mr. MANSFIELD. Mr. President, I ask unanimous consent that following the disposition of the pending business, the Senate proceed to the consideration of conference report on the Rural Development Act (H.R. 12931), and that there be a time limitation of one-half hour on that conference report, to be equally divided between and controlled by the Senator from Georgia (Mr. TALMADGE) and the Senator from Iowa (Mr. MILLER).

Mr. SCOTT. Mr. President, that has been cleared, and is satisfactory.

The PRESIDING OFFICER. Without objection, it is so ordered.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Hackney, one of its reading clerks, announced that the House insisted upon its amendments to the bill (S. 3230) to provide for the disposition of funds appropriated to pay a judgment in favor of the Assiniboine Tribes of Indians in Indian Claims Commission docket No. 279–A, and for other purposes, disagreed to by the Senate; agreed to the conference asked by the Senate on the disagreeing votes of the two Houses thereon, and that Mr. ASPINALL, Mr. HALEY, Mr. EDMONDSON, Mr. ABOUREZK, Mr. SAYLOR, Mr. STEIGER of Arizona, and Mr. CAMP were appointed managers on the part of the House at the conference.

The message also announced that the House had disagreed to the amendment of the Senate to the bill (H.R. 3337) to authorize the acquisition of a village site for the Payson Bank of Yavapai-Apache Indians, and for other purposes; asked a conference with the Senate on the disagreeing votes of the two Houses thereon, and that Mr. ASPINALL, Mr. HALEY, Mr. EDMONDSON, Mr. ABOUREZK, Mr. SAYLOR, Mr. STEIGER of Arizona, and Mr. LUJAN were appointed managers on the part of the House at the conference.

The message also announced that the House had disagreed to the amendments of the Senate to the bill (H.R. 6797) to provide for the disposition of funds appropriated to pay judgments in favor of the Rickapoo Indians of Kansas and Oklahoma in Indian Claims Commission dockets Nos. 316, 316–A, 317, 145, 193, and 318; asked a conference with the Senate on the disagreeing votes of the two Houses thereon, and that Mr. ASPINALL, Mr. HALEY, Mr. EDMONDSON, Mr. ABOUREZK, Mr. SAYLOR, Mr. STEIGER of Arizona, and Mr. CAMP were appointed managers on the part of the House at the conference.

The message also announced that the House had disagreed to the amendment of the Senate to the bill (H.R. 7742) to provide for the disposition of funds to pay a judgment in favor of the Yankton Sioux Tribe in Indian Claims Commission docket No. 332–A, and for other purposes; asked a conference with the Senate on the disagreeing votes of the two Houses thereon, and that Mr. ASPINALL, Mr. HALEY, Mr. EDMONDSON, Mr. ABOUREZK, Mr. SAYLOR, Mr. STEIGER of Arizona, and Mr. CAMP were appointed managers on the part of the House at the conference.

The message further announced that the House had disagreed to the amendment of the Senate to the bill (H.R. 8694) to provide for the disposition of funds appropriated to pay a judgment in favor of the Yavapai Apache Tribe in Indian Claims Commission dockets Nos. 22–E and 22–F, and for other purposes; asked a conference with the Senate on the disagreeing votes of the two Houses thereon, and that Mr. ASPINALL, Mr. HALEY, Mr. EDMONDSON, Mr. ABOUREZK, Mr. SAYLOR, Mr. STEIGER of Arizona, and Mr. LUJAN were appointed managers on the part of the House at the conference.

The message also announced that the House had disagreed to the amendments of the Senate to the bill (H.R. 10858) to provide for the disposition of funds appropriated to pay a judgment in favor of the Pueblo de Acoma in Indian Claims Commission docket No. 266, and for other purposes; asked a conference with the Senate on the disagreeing votes of the two Houses thereon, and that Mr. ASPINALL, Mr. HALEY, Mr. EDMONDSON, Mr. ABOUREZK, Mr. SAYLOR, Mr. STEIGER of Arizona, and Mr. LUJAN were appointed managers on the part of the House at the conference.

NATIONAL SCIENCE POLICY AND PRIORITIES ACT OF 1972

The Senate continued with the consideration of the bill (S. 32) to authorize the National Science Foundation to conduct research, education, and assistance programs to prepare the country for conversion from defense to civilian, socially oriented research and development activities, and for other purposes.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. KENNEDY. Mr. President, I suggest the absence of a quorum, with the time for the quorum call to be equally divided.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Massachusetts? The Chair hears none, and it is so ordered. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. DOMINICK. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DOMINICK. Mr. President, I suggest the absence of a quorum, and I ask unanimous consent that the time consumed not be charged to either side.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. BEALL). Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to proceed for 2 minutes without the time being charged against either side.

The PRESIDING OFFICER. Without objection, it is so ordered.

TIME LIMITATION AGREEMENTS ON CERTAIN CRIME BILLS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent—and this has been cleared with the distinguished Republican leader and the distinguished majority leader—that at such time as S. 2087, a bill to amend the Omnibus Crime Control and Safe Streets Act of 1968, as amended, and S. 2567, a bill to facilitate prosecutions for certain crimes and offenses committed aboard aircraft, are called up and made the pending business before the Senate—and it will not be today or tomorrow—there be 1 hour of debate on each of those two measures, with the time to be equally divided and controlled by the Senator from Arkansas (Mr. MCCLELLAN) and the Senator from Nebraska (Mr. HRUSKA); that at such time as H.R. 9323, an act to amend the Narcotic Addict Rehabilitation Act of 1966, and H.R. 9222, an act to correct deficiencies in the law relating to the crimes of counterfeiting and forgery, and S. 16, a bill to amend title IX of the Organized Crime Control Act of 1970, are called up and made the pending business before the Senate, time on each of those measures be limited to one-half hour to be equally divided and controlled by the Senator from Arkansas (Mr. MCCLELLAN) and the Senator from Nebraska (Mr. HRUSKA); that time on any amendment to any of the five measures mentioned be limited to 20 divided and controlled between the mover minutes, with the time to be equally of such and the distinguished manager of the bills, the Senator from Arkansas (Mr. MCCLELLAN), except in any instance in which the distinguished manager of the bill (Mr. MCCLELLAN) would favor such, in which instance time in opposition thereto would be under the control of the distinguished Republican leader or his designee; that with respect to each of the bills, time on any debatable motion or appeal be limited to 20 minutes, with the time to be equally divided between the mover of such and the manager of the bill; except in any instance in which the manager of the bill would favor such, in which case time in opposition thereto would be under the control of the distinguished Republican leader or his designee; and that the agreement with respect to all of said bills be in the usual form.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent—this likewise has been cleared with both the distinguished majority leader and the distinguished Republican leader—immediately upon the conclusion of morning business on September 5, 1972, that the following bills be called up and be considered in the order mentioned, and that the unfinished business be temporarily laid aside and remain in a temporarily laid aside status until the disposition of the following bills, or until the close of business on September 5, 1972, whichever is the earlier:

Calendar No. 1019, S. 2087, to amend the Omnibus Crime Control and Safe Streets Act;

Calendar No. 999, S. 16, to amend the Organized Crime Control Act;

Calendar No. 1020, H.R. 9323, to amend the Narcotic Addict Rehabilitation Act;

Calendar No. 1021, S. 2567, relating to crimes and offenses committed onboard aircraft; and

Calendar No. 1023, H.R. 9222, relating to counterfeiting and forgery.

The PRESIDING OFFICER. Without objection, it is so ordered.

The text of the unanimous-consent agreement is as follows:

> *Ordered*, That on September 5, 1972, when the Senate proceeds to the consideration of S. 2087, a bill to amend the Omnibus Crime Control and Safe Streets Act of 1968; S. 16, a bill to amend title IX of the Organized Crime Control Act of 1970; H.R. 9323, an act to amend the Narcotic Addict Rehabilitation Act of 1966; S. 2657, a bill to facilitate prosecutions for certain crimes and offenses committed aboard aircraft; and H.R. 9222, an act to correct deficiencies in the law relating to the crimes of counterfeiting and forgery, debate on any amendment, debatable motion or appeal to each of the above bills shall be limited to 20 minutes, to be equally divided and controlled by the mover thereof and the manager of the bill, Mr. McClellan: *Provided*, That if the manager of the bill is in favor of any amendment, debatable motion or appeal, the time in opposition thereto shall be controlled by the Minority Leader or his designee: *Provided further*, That no amendment that is not germane to the provisions of any of the said bills shall be received.
>
> *Ordered further*, That on the question of the final passage of the said bills debate shall be limited to 1 hour each on S. 2087 and S. 2567, and ½ hours each on H.R. 9323, H.R. 9222, and S. 16, to be divided and controlled in each case, respectively, by the manager of the bill and the Senator from Nebraska (Mr. Hruska): *Provided*, That the said Senators, or either of them, may, from the time under their control on the passage of the said bill, allot additional time to any Senator during the consideration of any amendment, motion or appeal.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that it be in order to order the yeas and nays at any time on each of the five measures, and that the yeas and nays on all the five measures may be ordered with one show of seconds.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MAGNUSON. Mr. President, on Tuesday, September 5, 1972, at what time does the Senator intend that we come in?

Mr. ROBERT C. BYRD. I would imagine, under the resolution providing for the recess of both Houses, the Senate will probably return at 10 a.m. on Tuesday.

Mr. MAGNUSON. I ask that, because there are those of us on the west coast, because of airplane schedules, who will have trouble getting here at 10 a.m. We can get here about 11:30 a.m., on what we call the "Redeye Special." That means we stay up all night in order to get here, but we can usually make it by noon.

Mr. ROBERT C. BYRD. We will have some morning business on that day. There will be some debate on the first bill to be called up before there will be any rollcalls, so perhaps it will all work out to the convenience of most all Senators.

AUTHORIZATION FOR CERTAIN ACTION TO BE TAKEN DURING THE ADJOURNMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that during the adjournment from the close of business tomorrow, August 18, 1972, until 10 a.m. on Tuesday, September 5, 1972, the President pro tempore and the Acting President pro tempore of the Senate be authorized to sign duly enrolled bills, that the Secretary of the Senate be authorized to receive messages from the President and from the House of Representatives and that they be appropriately referred and that on Friday, September 1, 1972, committees be authorized to file reports between the hours of 10 a.m. and 3 p.m.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD subsequently said: Mr. President, in connection with the unanimous-consent order today for the signing of bills and receiving of reports, I ask unanimous consent that the Vice President be added, as well as the President pro tempore and the acting President pro tempore.

The PRESIDING OFFICER. Without objection, it is so ordered.

Does the Senator also ask unanimous consent for authority to sign duly enrolled joint resolutions?

Mr. ROBERT C. BYRD. Yes, I do. I thank the Chair.

The PRESIDING OFFICER. Without objection, it is so ordered.

QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum, and I ask unanimous consent that the time not be charged against either side.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR YEAS AND NAYS ON CALENDAR ORDER NOS. 1019, 1020, 1021, 1023, AND 999

Mr. ROBERT C. BYRD. Mr. President, I ask for the yeas and nays on Calendar No. 1019, Calendar No. 1020, Calendar No. 1021, Calendar No. 1023, and Calendar No. 999.

The yeas and nays were ordered.

QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum and I ask unanimous consent that the time not be charged against either side.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

NATIONAL SCIENCE POLICY AND PRIORITIES ACT OF 1972

The Senate continued with the consideration of the bill (S. 32) to authorize the National Science Foundation to conduct research, education, and assistance programs to prepare the country for conversion from defense to civilian, socially oriented research and development activities, and for other purposes.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MILLER. Mr. President, I send to the desk an amendment and ask that it be read.

The PRESIDING OFFICER. The clerk will read the amendment.

The legislative clerk read as follows:

> On page 31, line 5, insert the word "human" before the word needs semicolon and.
>
> On page 31, strike out all after the comma in line 5, and all of lines 6, 7, and 8, and insert in lieu thereof the following—

Mr. MILLER. Mr. President, may I ask that the clerk reread the amendment? I do not believe there was a semicolon intended to be included in the quotation.

The PRESIDING OFFICER. The clerk will reread the amendment.

The legislative clerk read the amendment, as follows:

> On page 31, line 5, insert "human" before the word "needs"; and
>
> On page 31, strike all after the comma in line 5, and all of lines 6, 7, and 8, and insert in lieu thereof the following:
>
> "and then continue to increase to the degree required to achieve an annual qualitative growth in the gross national product needed to sustain a full employment economy;"

Mr. MILLER. Mr. President, the first part of the amendment inserts the word "human" before the word "needs" on line 5. This was done at the suggestion of a member of the staff, and I believe it accords with the intention of the manager of the bill, because what they are seeking here is needs in terms of people and needs which would include the quality of life.

The second part of the amendment, Mr. President, is designed to state with greater precision the input that these expenditures are expected to make as far as our economy is concerned. The way the bill is worded now, gross national product is emphasized, whereas I am quite sure economists are all agreed it is the quality of the gross national product that really counts, and more particularly counts in connection with the achievement of our national goal of full employment as set forth in the Full Employment Act of 1946.

That is why the amendment emphasizes qualitative growth in the gross national product, and also, it emphasizes an annual qualitative growth in the national product which is necessary to sustain a full employment economy.

I have discussed this amendment with the distinguished Senator from Massachusetts. I hope he will accept it.

Mr. KENNEDY. Mr. President, I yield myself such time as I need.

The Senator is correct when he mentions the fact that just the inclusion of "gross national product" does not reflect as accurately as perhaps any of us would want the real growth and the qualitative growth, which may, as a matter of definition, be more precise, and it certainly is consistent with all the other provisions in the bill.

I am generally quite reluctant to change the declaration of policy section. In many respects, it is really the most important aspect of the bill. Even though it does not have a dollar figure, it will set as the national goal, or at least set the Senate, and hopefully the Nation, on record that there is a strong national commitment to use the extraordinary technical resources of this country to meet the areas of human needs, and that we are going to increase the efforts in research and development for human needs annually.

I have no objection to this amendment. I think the Senator from Iowa has legitimately pointed out the distinction between "qualitative" and just "gross national product," the term "qualitative" being more meaningful; and it reiterates the desire for a full employment economy which was articulated in the 1946 act as, again, being a legitimate, worthwhile goal. These are all matters which I support. So, I am willing to accept the amendment.

Mr. MILLER. I thank my colleague.

I might say further that it has been our experience in the Joint Economic Committee that we have been able to obtain from the Council of Economic Advisers a qualitative breakdown of their forecasts of the gross national product, and when they give the qualitative breakdown there are many items included which make up the qualitative measurements in each item.

I think this will rivet the attention of those who are going to be engaged in budgeting for these expenditures on these areas on a qualitative basis, which compromise the qualitative makeup of the gross national product, and will give them a much better guidance than if we did not spell it out. I believe it will be helpful in achieving the purpose that I know the Senator from Massachusetts has in mind.

Mr. KENNEDY. Mr. President, I yield myself 2 minutes.

It does seem that mentioning the gross national product, even recognizing that it reflects a variety of inflation, goods and services, and so on, is not as precise as mentioning qualitative gross national product. The Senator from Iowa has reviewed with us the progress that has been made in defining qualitative growth in the gross national product, and has pointed out the precision with which it can be defined, and has been defined, by the Council of Economic Advisers. Therefore, I think the amendment is perfectly satisfactory. I think, in some respects, it may prove more useful than the language which we have in the bill. So I would urge its acceptance. I thank the Senator from Iowa.

The PRESIDING OFFICER. Do Senators yield back their time?

Mr. KENNEDY. I yield back the remainder of my time.

Mr. MILLER. I yield back the remainder of my time.

The PRESIDING OFFICER. All remaining time having been yielded back, the question is on agreeing to the amendment of the Senator from Iowa.

The amendment was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. KENNEDY. Mr. President, I believe the Senator from Indiana has an amendment.

Mr. HARTKE. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

Title III, Sec. 302 at line 20, insert the following:

The Foundation is further authorized to plan and assist in the transition of scientific and technical manpower from research and engineering programs which have been terminated or significantly reduced due to the transfer abroad of technical activities of American based transnational firms to other civilian-oriented research and engineering activities.

Mr. KENNEDY. Mr. President, will the Senator yield while I ask for the yeas and nays on passage?

Mr. HARTKE. I yield.

Mr. KENNEDY. I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. HARTKE. Mr. President, the measure before the Senate, the National Science Policy and Priorities Act of 1972, laudably draws attention to one of the major problems facing technical manpower in the United States—Government termination of scientific and technical programs.

My amendment focuses on a second major problem facing every American scientist and engineer—the transfer abroad of American manufacturing and technical operations. The first step in this problem saw the American based transnational firms move manufacturing facilities from the United States abroad. Tax incentives, low foreign wages and foreign barriers to American exports combined to attract an unprecedented amount of American capital.

The American production worker has already felt the brunt of this rush to invest abroad. Jobs lost to imports alone have mounted to over a million since 1966. Additional jobs have been lost because firms chose to invest abroad rather than export, because capital needed at home was invested overseas, and because new products were not even developed in the United States.

Design functions, engineering projects and than basic research and development always follow the manufacturing plant. There is a lag to be sure, but American firms abroad are relying more and more on foreign scientific manpower and less and less on American scientific personnel. This trend has merely exacerbated the problems of American scientists and engineers.

Mr. President, the Hartke amendment merely seeks to bring scientists and engineers hurt by the transnationals within the scope of the National Science Policy and Priorities Act. Until our foreign trade and investment policies are put in order, a growing number of scientists, engineers and technicians will suffer from the foreign investments of American based transnational firms.

In my opinion, Mr. President, this amendment probably coincides with the basic intent of the act. I just wanted to make sure it was not the intention to omit those individuals, and confine the coverage merely to employees who had lost their jobs because of employment on Government contracts.

I have discussed the amendment with the manager of the bill, and yield to him at this time.

Mr. KENNEDY. Mr. President, I yield myself such time as I may require.

This amendment is completely consistent with the thrust and purpose of the legislation. There has been woefully little information developed about the impact of shifting U.S. operations into foreign countries. There has been some work by the Arms Control and Disarmament Agency, and some very modest work and research done by the Labor Department.

This quite clearly is an area completely consistent with the thrust and purpose of the bill before us. I think it is an area of considerable urgency and importance. The Senator from Indiana has long been interested in and concerned about the movement of jobs from this country overseas in the blue collar field, and is exercising a similar interest in the white collar field. I think this is a useful, helpful, and strengthening amendment, and I urge that it be accepted.

Mr. HARTKE. Mr. President, I ask unanimous consent to have printed in the RECORD as a part of my statement that part of the hearings record, beginning on page 168 and ending on page 192, which comprises the testimony of the International Electrical, Radio, and Machine Workers Union, given by Mr. Sanford Lenz and Mr. Henry Zylla.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

TESTIMONY BY SANFORD LENZ, P.E., AND HENRY ZYLLA, PRESIDENT OF THE ENGINEERS ASSOCIATION, LOCAL 445 IUE

My name is Sanford Lenz, and I am appearing today on behalf of the International Union of Electrical, Radio and Machine Workers, AFL–CIO–CLC and the International Brotherhood of Electrical Workers, AFL–CIO; both are member of the AFL–CIO Council of Unions for Scientific, Professional and Cultural Employees, representing over 100,000 engineers, scientists, other professionals and related technical personnel.

I am a registered Professional Engineer, with over 20 years of engineering experience in the electronics and aerospace industries and I am presently the Chairman of the IUE Professional, Technical and Salaried Conference Board.

We are pleased to have this opportunity to present the viewpoint of the organized engineer during your deliberations on the problems of converting our skills resources toward the solution of urgent domestic needs.

The IUE and the IBEW jointly support the stated purposes of H.R. 34—to utilize our scientific and engineering skills to solve the urgent problems now confronting our society and to raise and maintain the level of Federal investment in non-Defense science and technology. We are, however, seriously concerned regarding the thrust of the provisions of this bill as well as their implementation.

We agree it is imperative that the professional and technical skills so painstakingly developed in the past 25 years through Defense and Aerospace programs must be mobilized toward the solution of the nation's pressing domestic problems. In appearing before this committee, we are attempting to give voice, not only to the frustrations of the professional engineer and scientist, who knows his skills can be used to successfully attack such problems, but to the equal frustration of all our people who, as citizens, know our national resolve is only minimally, certainly far from adequately, focused on increasingly urgent problems of health care, transportation, the environment, education and housing, with which they are now confronted.

The first purpose of any legislation must be commitment to the priority of curing the nation's basic ills. Therefore, we would caution against legislation directly or indirectly disguised or designed as a welfare program for capable professionals. America's technological community will not respond to artificial programs unrelated to the real problems and needs of the American people. They will respond very positively to a call to utilize their skills in the real, immediate and permament interests of the public—and they will use all their talents effectively to help realize the purposes of a positive and healthy society.

We repeat: we seek no dole, no pork-barrell; we seek, we are interested in, only real, constructive work. In substance, our presentation is in three parts—the first is our concern that the remedies not take the form of "adapting" the engineer since he is the victim and not the cause of the problem we are here to discuss; secondly, our recommendations for what must be done in the legislation; and third, some examples of how a comprehensive program can be implemented.

1. Engineers are basically problem-solvers. They do not invent the problems; they do not, for the most part, even select the problems on which they will work. It is not the engineer that is responsible for the present misalignment of resources and needs. It is essential that we observe the caveat against blaming the victim—that we do not announce we will change the victim to solve a problem.

We believe that Administration programs as well as programs advanced by the Technical and Professional Engineering Societies have already fallen into that trap. They are solutions that attempt to remake the engineer, implying the fault lies with him. Just look at the present Administration programs, developed jointly with the technical societies, to observe that principle in action; tion:

a. The establishment of workshops and counseling to teach engineers how to look for jobs. That suggests that there are plenty of jobs, but engineers don't know how to look for them. Patent nonsense because the jobs don't exist.

b. The establishment of a computerized Job Bank and National Registry, implying that engineers and jobs exist in relatively equal numbers and need only to be brought together. The "success" of such a program can best be measured by Secretary Hodgson's statement that as of April of this year, 5000 engineers, scientists and technicians had been registered, 1800 of those had been referred to 800 job openings and, perhaps delicately, no figure was given as to how many, if any, had been employed in those jobs.[1]

c. Relocation allowances—implying that a problem exists in the willingness of the engineer to move to the job unless someone pays his moving bills. In fact, the history of the electronic and aerospace engineer in the last two decades, is one of great mobility—braceros with baccalaureates, they have been called—willing to follow the work wherever it was placed. While technical unemployment is most severe in particular areas, no part of the U.S. has a shortage of skilled people.

d. Retraining in alternate fields has been the grossest kind of deception. Engineers have been retrained as teachers—a field in which a surplus already exists—and in the environmental field, but at a recent NSPE conference, Sandy Hale of the Environmental Protection Agency advised against such retraining saying "We really don't know how many of the people in pilot retraining programs will find jobs in the environmental area after retraining. We're still in the early stages of projecting markets for these fields."[2]

The retraining concept is a carryover of the now-discredited "technical obsolescence" canard. We have learned from having taken this bait in the early sixties that engineers who kept their skills current by continuing education could not compete with new graduates because of salary differentials. They were not even able to accept lower-paying jobs, because they were declared "overqualified."

When Sputnik first circled the earth, no retraining of engineers in the laws of physics was required by the Federal Government—only the national resolve to meet the challenge which provided the funds to enable our engineers to make a moonwalk a reality. The development of missiles did not require retraining in navigation or propulsion, just the advances in the state-of-the-art of technology that funds and commitment made possible.

In every case where this country posed its problem clearly and committed itself to a solution, the technological community responded with success.

e. Programs of public employment. While certain tasks of government must be performed by engineers, putting large numbers of unemployed engineers on the public payroll in the hope that some will find useful occupation is degrading. It is the private sector which must be encouraged to be involved in our domestic problems.

In summary, the programs focus on the areas of counseling, job information banks, relocation allowances, retraining schemes and make-work public employment.

While these may be necessary in a few instances, as peripheral or supplementary programs, they do not go to the heart of the problem—which is, that there are many more available engineers than places for them to work. Whether these programs are sincerely or politically motivated, the fact, as we have already pointed out, is that engineers do not want or need a welfare program. The technical skills of this country have provided a secure defense posture, industrial leadership and moonwalks. Those who have these technical skills are now asking "What next? Show us which problems you sincerely want solved and we will solve them. We will take care of our own training, relocation, job-hunting and counseling." But the nation must put its money where its real, important needs are.

2. We have, thus far, concentrated on what the legislation should not be. But far more important is what legislation should attempt to accomplish. In general terms, our position on the necessary overall objectives of any legislation is incorporated in the following document prepared by Abe Morganstern, Research Director of the IUE.

PREREQUISITES FOR A SOUND DOMESTIC AND FOREIGN ECONOMIC PROGRAM *

1. American society and the American economy must direct its energies to the satisfaction of long-neglected needs and the achievement of major, long-postponed goals if we are to emerge from our present condition of uncertainty, frustration, spreading blight, high rates of unemployment, and rapidly spreading poverty. While our needs are urgent as well as real, the goals are realizable.

We are a work-oriented society with an expanding labor force. In such a society, full employment must become the normal, natural, routine condition, the continuing reality, rather than a pious concept or elusive, unattainable goals. We can neither resign ourselves to joblessness as the chronic affliction of our economic system, nor tolerate much longer the outrageously high levels of unemployment and underemployment among professionals, technicians, white collar workers, craftsmen, semiskilled, unskilled, minority groups and youth. A nation confronted with massive housing shortages and urban blight, with totally inadequate public transportation and health services, with inadequate and poor education facilities, with the continued pollution of its air and water, and with a host of other critical problems—has enough socially and economically productive work that needs to be done to keep its people fully employed for a generation.

2. It follows therefore that the nation can no longer afford to waste its energies and resources, either human or physical. It is clear that, rather than an abundance, there is a shortage of essential resources. After years of neglect, we have a great deal of urgent catching up to do in areas of the greatest importance to our future well-being, requiring careful husbanding and use of such limited resources. The affluent society has become a threatened—in many ways, diseased and unhealthy—society because of the overriding concern with the growth of the private sector without the necessary, balancing concern for the preservation of the environment and the excluded segments of our people.

Whatever we undertake, therefore, in economic and socioeconomic spheres must be carefully examined in terms of what it is likely to contribute toward the elimination of poverty, toward our economic well-being, and the improvement in the quality of our surroundings and our way of life. Since we can only afford to undertake programs that add to our real wealth, that enrich our way of life and restore and improve our institutions and surroundings, every program or activity undertaken must, in addition to creating a sufficient number of jobs, be reasonably adequate to the needs to which it is addressed: more housing, improved education, cleaner environment, better transportation, etc. Serving real needs adds to wealth. Serving presumed needs may waste resources and provide no real benefits or, indeed, negative results.

3. Full employment as the normal, natural, permanent condition of our economic system, and the allocation of energies and resources to programs that add to our real wealth and help to improve our institutions, environment and way of life requires a comprehensive, continually updated inventory of economic and socioeconomic needs, resources and objectives. It also requires faith in the value and possibility of a viable, full employment economy which is not so heavily

---

[2] Chemical & Engineering news—June 28, 1971.

* Prerequisites for a Sound Foreign Economic Program here omitted.

dependent on Defense and Space programs or on various artificial stimulants to create jobs. And one of our major purposes should be the introduction of greater flexibility, planned, timely transfers of manpower, tools, material, plants, labs and equipment with minimum of dislocation among various programs, Defense, non-Defense—programs subsidized or invested with a large public interest. This would mean, for example, that a science and technology center like Boston would be preserved intact, despite Defense and Space cutbacks, and that problems related to housing, transportation, health, etc., would be brought to the center for solution. There should be several such centers throughout the U.S., so organized that their research and productive energies could be shifted smoothly and quickly from Defense and Space projects to these non-Defense programs with a large public interest, essential to our economic and socioeconomic well-being, to our environment and institutions.

4. To restore and preserve our faith in the value and viability of a full-employment economy, we must recognize ourselves as a people of diverse skills and of diverse ethnic and racial groups—Whites, Blacks, Indians, Orientals, Chicanos and other Latin Americans; professionals, technicians, skilled, unskilled, etc.—and that our economy has to be made to work for all.

We are the only industrialized nation in the world which, despite consistently high unemployment levels, exports thousands of jobs annually, thereby aggravating an already serious unemployment problem. Currently, our unemployed includes not only the semiskilled and unskilled factory workers but scientists, professional engineers, technicians and highly skilled craftsmen. Other industrialized nations have had to import workers, and several still do, because of a scarcity of domestic labor Their employment levels have increased, and their unemployment levels have been reduced, by U.S.-owned multinational corporations, which have established major plants within their borders. Employment growth of a growing number of giant U.S. multinational firms is primarily among their foreign plants.

In the last few years, employment in the U.S., on the other hand, has been sharply reduced by plant shutdowns in various industries and transfer of production offshore. TV, picture tubes and other electronic components, shoes and pianos are only a few of the industries and product lines affected. Over the years, we have exported quite a number of industries like household sewing machines and portable typewriters, and we are now in the process of exporting others in wholesale fashion. Whenever plants are shutdown and their jobs exported abroad, companies argue (1) they were forced to do so because of low-wage foreign competition, and (2) somehow the removal results in more jobs saved for the U.S. economy than are lost The facts—regardless of how rationalized—are quite different.

We urgently need a determined program, backed by the full power and resources of the Administration, to reverse this trend and keep the jobs at home.

5. If we are to improve our worsening international trade position, we must retain our technological lead—where we have it—and improve our technology through vast R&D programs. There must also be a firm, continuing emphasis on the importance of foreign trade expansion to the U.S. economy. Publicly supported R&D, the fruits of which are privately appropriated, too often result in licensing and joint venture agreements that provide revenues to American firms, although the products are manufactured abroad and either sold here or in other former U.S. markets.

Taxpayer-financed patents should be brought under government regulation in order that a maximum number rather than a minimum number of domestic jobs should be realized from them. Exporting our technology as freely as we have results not only in a shrinkage of employment opportunities for our domestic labor force, but in a quick lessening of our technological advantage.

6. We have failed to improve production techniques and processes in a wide variety of industries to the extent necessary to retain our initial advantages over Japanese and other competitors. Too much government seed and R&D money (over 50 percent) has gone into Military and Space programs that have paid very little in the form of growth dividends to the economy. Far more emphasis, money and talent now needs to be devoted to the improvement of production techniques as well as the improvement of product quality.

Education and training programs should stress, particularly in engineering and technical schools, efficient quality production methods; and far greater emphasis should be placed on the training of expert production engineers, who will have been educationally conditioned to obtain efficient, maximum quality production from the work force. Quality production training should be emphasized and made available to all levels of management from executives to foremen.

Government funds should be appropriated to establish quality productivity centers and productivity clinics, drawing upon universities, engineering schools and research facilities to assist threatened or distress industries in overcoming production and related problems. Marketing assistance should likewise be made available to them. Regional productivity, research and assistance centers should be set up in various parts of the country. Troubled industries may have to be helped in other ways, too—with credit, for example.

Within the executive branch of government, there should be a single agency solely concerned with the problems of sick or threatened industries, analyzing and reporting on each and making recommendations for their support and their salvaging, where possible. The agency should be empowered to arrange for financial assistance as well as productivity, marketing and other needed assistance, as already mentioned.

3. Specifically, we would propose

a. that a Commission on Research Development Priorities should be established to provide many of the functions assigned under Titles I & II to the National Science Foundation to identify the priority areas and, with the concurrence of the legislative and executive branches, to fund or to authorize other departments to fund advances in the state-of-the-art through grants, and development contracts to institutions, local governments and private industry, particularly small businesses.

b. That the NSF would provide review and evaluation of ongoing programs and could recommend and oversee the supplementary areas of retraining, relocation and manpower allocation.

Thus, we would achieve the more rational approach of having the nonprofessional establish the priorities and tell the professionals what problems must be solved. The role of the professional would be to determine how best to solve those problems. We would further propose:

c. that retraining efforts would be better spent in skills upgrading of nonprofessionals, such as factory workers, returning veterans, minority group members, and noncollege-bound young people to train them as subprofessionals in technical fields. That would reduce costs, encourage more people into more skilled jobs and permit professional engineers to function at a higher, more professional level. Of course, the present encouragement to educational institutions to produce more and more engineers must be stopped.

d. That, on the recommendation of the Commission on Priorities, the various related Executive Departments could relieve local, municipal and state governments of development costs by releasing contracts for design & development efforts in the same manner as NASA and the Defense Department have done; that is, by separating design, development and production into separate contracts. The completed designs and specifications could be offered to local governments and their purchases would then be made against low-bidder, production cost contracts, offering encouragement to small business.

I would like to introduce at this point, Mr. Henry Zylla, an engineer and president of one of our locals at the largest, single employer of defense-oriented professional engineers represented by the IUE.

Mr. Zylla's group has had considerable experience in the conversion process and will cite some examples of past and potential programs.

TESTIMONY OF HENRY ZYLLA

My name is Henry Zylla. I have been a professional engineer for over 20 years, and I am President of the Engineers Association, Local 445 of the International Union of Electrical, Radio and Machine Workers, AFL–CIO–CLC.

Thousands of engineers were employed in the electronics and aerospace industries in the period following World War II. Very few of these engineers received specialized training as radar experts, sonar experts or computer experts prior to their employment in industry. They brought with them training in basic engineering and scientific principles, principles which apply regardless of whether the work is related to defense or civilian needs.

Experience has shown that many engineers have moved from work on Defense products to projects such as communications, medical electronics, traffic control systems, etc., with very little need for retraining. Engineers are basically problem solvers; as such, they can be assigned to a variety of work for which their training will be found to be suitable.

Over the years, numbers of Sperry engineers left our Company to find employment in such fields as medical electronics and communications. Recently, a number of our laid off engineers were hired by the New York Telephone Company, After a short, three-to-four week training period, they were sent out on their own. The Telephone Company now indicates these former Sperry, ex-Defense engineers are among the best they have ever recruited. Considerable improvement in the nation's telephone system through the infusion of currently unemployed, highly skilled engineers, is not hard to imagine. Indeed, it is highly probable—and it is badly needed.

A number of Defense-oriented companies have set up departments that now concentrate their efforts on producing products for civilian markets. In most such cases, the manpower for these departments is obtained through transferring engineers employed on Defense production prior to the time of transfer. No difficulty has arisen as a result of the previous training of engineers so transferred.

We are all aware of the fact that numerous and significant technological breakthroughs, made as a result of Defense and Space programs, are now applied to the production of civilian products. Training gained on Defense production cannot and should not be considered a handicap for engineers; on the contrary, it should be considered an asset since it is in the Defense field where the state-of-the-art—and of the science—has really advanced.

What we must develop are the methods necessary to bring together the required funds and the available skills—and at the same time, bring both to bear on the problems which have, or ought to have, the highest national priority.

We would like to give this committee some examples of how this may be accomplished:

Example 1. It is generally agreed that our nation's cities are in desperate need of far more sophisticated automobile traffic control systems. A number of our cities have already installed such systems, but these represent only a small fraction of the number that need them and the systems installed generally cover only a small, selected portion of the city's total traffic-congested area. Several companies have developed Traffic Control Systems designed to ease urban traffic congestion. However, in attempting to obtain municipal or metropolitan traffic control contracts they find themselves faced with the following problems: First, the cities do not have the funds required to finance the project. Secondly, the low potential return usually does not justify the high expense to the company of negotiating traffic control contracts on a city-by-city basis.

May we suggest that a far more logical way to handle this problem would be for the federal Department of Transportation, or a similar federal agency, to allocate funds for the development of Traffic Control Systems for our nation's cities. The Department of Transportation, or other federal agency, should employ on its permanent staff an adequate number of engineers to develop specifications for Traffic Control Systems that would meet the requirements of various sizes and types of cities. Once these specifications had been developed, the Department would then be in a position to request bids from industry for the design and development of systems, including all equipment and hardware, that would meet its specifications. Companies with the required engineering talent would then find it worthwhile to bid on such contracts in view of the high potential involved in such a coordinated national effort. After the systems had been designed under federal auspices, cities with a need to solve their chronic and increasingly serious traffic problems could contact the Department of Transportation, or other federal agency, and receive both advice and assistance regarding the traffic control system best suited to their needs. In some cases, federal money could be made available for the purchase of needed equipment and services from the private contractor or contractors who had successfully developed the best or most suitable and appropriate system.

Example 2. A similar procedure could be used in the field of medical electronics. The H.E.W., or other federal agency concerned with the improvement of the health of the American people, would request private contractors to bid on medical diagnostic equipment, or on electronic equipment to be used for monitoring patients in the intensive care rooms of hospitals. Once the designs and equipment had been developed by contractors in response to the federal agencies' requests for bids, they would be available for use by the thousands of hospitals throughout the country. Again, we suggest that federal funds be allocated to assist hospitals needing such assistance, in order to make it possible for them to purchase such equipment.

We believe procedures similar to those we have outlined could be utilized effectively in the fields of pollution, control, civilian air traffic control, mass transit systems, crime prevention and other fields requiring urgent, adequate, intelligent national attention.

In order to solve our national problems—indeed, in order to cope with them adequately—utilizing for that purpose the skills of our engineers and scientists, we must provide the federal agencies with sufficient funds to coordinate the total effort in these critically important problem areas. It is not possible, and it is far too costly, for private firms or contractors to deal with the hundreds and thousands of cities, counties and agencies on an individual basis, custom tailoring solutions to individual needs. For, in too many cases, funds aren't there. Federal government must, therefore, adopt a more active role in allocating contracts, in purchasing equipment, and in making the equipment available to the cities, counties and states, where and as needed.

Mr. HARTKE. I yield back the remainder of my time.

Mr. KENNEDY. I yield back the remainder of my time.

The PRESIDING OFFICER (Mr. Beall). All remaining time having been yielded back, the question is on agreeing to the amendment of the Senator from Indiana.

The amendment was agreed to.

Mr. KENNEDY. Mr. President, I yield myself whatever time I may use on the bill.

For the information of the Senate, there is one final amendment by the Senator from Colorado (Mr. Dominick), who is working out the exact funding levels at the present time. I do not think there will be a rollcall vote on that amendment, and it will be accepted. Then we will have a vote on passage of the bill itself.

I suggest the absence of a quorum.

The PRESIDING OFFICER. On whose time?

Mr. KENNEDY. Without the time being charged to either side.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. HUMPHREY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KENNEDY. Mr. President, the Senator from South Dakota (Mr. McGovern) is one of the earliest supporters of economic conversion to meet better the needs of the American people. Since he is not able to be with us today, I ask unanimous consent that his statement on S. 32 be printed in the Record.

The PRESIDING OFFICER. Without objection, it is so ordered.

Senator McGovern's statement follows:

Statement by Senator McGovern

I fully support S. 32, The National Science Policy and Priorities Act, which will establish national science policies and programs aimed at further focusing the nation's scientific talent and resources on its civilian priorities.

In our effort to establish new peacetime priorities, we must pay special attention to science and technology. This legislation will permit the nation to harness its technological efforts in the pursuit of peaceful, civilian development.

It will, for example, let us take advantage of the great potential for quiet, clean, and dependable transportation systems. Development elsewhere, notably the French "aerotrain", the British "hovertrain", and German and Japanese magnetic suspension vehicles, illustrates how far the United States has lagged behind in this area. We should be working on both propulsion and track systems and on such prospects as automated computer-controlled self-service systems for the cities. And we should be exploring entirely new approaches, new in hardware and in overall design.

Similar attention is required in the case of air transportation. Present air traffic control systems are dangerously inadequate. We need more and better automatic control systems for guiding aircraft in airspace near the terminal, and we need automatic monitoring and control of planes when they are not near airports. And we should be much further ahead in developing quiet, pollution-free short or vertical take-off and landing aircraft for commercial aviation.

In another area, we must have new technology to meet the imminent energy crisis in the United States, and we must have it fast. Engineering of the most creative kind is required to turn existing knowledge into feasible energy technology. And fundamental research is required to make possible new methods of energy production, transportation and storage, and also to prevent and counter the environmental impact of energy technology.

The need for new science and technology is especially acute in the realm of environmental protection. Priorities include steps to minimize waste, to render harmless those wastes which are produced to economize on scarce resources, to recover and reuse materials which have served an initial function, to monitor our environment and to reclaim the air, water and land resources which have already been gravely damaged.

The list on new priority areas is, of course, endless. Yet these few areas well exemplify our country's vast demands for new technology and for intensified effort in all scientific disciplines. They demonstrate a great opportunity for science to serve mankind in far more productive and helpful ways than has been the case in the past. And they suggest that it is appropriate to plan for total Federal support to research and development substantially above present levels.

Moreover, this legislation will help ease the roles of the nation's unemployed scientists, technicians and engineers—the very persons to whom the Nation must turn for social and economic advancement. Over 100,000 of these highly trained individuals are presently jobless throughout the country, swelling the unemployment roles as yet another tragic consequence of the Federal Government's neglect in planning for new priority technology.

Indeed, to a substantial degree, the Federal Government's recalcitrance in converting arms and aerospace industries to peacetime facilities is a result of decreases in Federal Dollars appropriated to civilian Research and Development. Presently, we spend only 1.1% of our Gross National Product on civilian R and D directed toward economic growth. This figure is literally one-half of the 2.2% investment made by such major Industrial Nations as West Germany and Japan. It is no surprise then, that the United States—the most technologically advanced nation on earth—has been compelled to import a greater and greater share of our consumer goods from abroad: typewriters, sewing machines, automobiles, and hand tools to mention only a few. Moreover, our export of technology-intensive products in 1960 was three times our import—now it is only 50% greater.

Thus, the nation's research and development effort must be increased and new institutional arrangements must be made if we are to effectively deal with this ever-growing international technology gap, and with the acute unemployment crisis facing American scientists, technicians, and engineers. Similarly, such an increase in R and D spending would enable us to grasp important new technological advances and employ them in solving some of our pressing domestic problems.

The initiatives and priorities set forth in this legislation assure that our Nation will finally begin to use its scientific and technological genius in ways beneficial to all Americans. New priorities will be established, new goals will be set, new advances will be achieved only with the increased Research and Development commitment inherent in this most important legislation. I strongly urge its prompt passage.

Mr. DOMINICK. Mr. President, I send an amendment to the desk.

The PRESIDING OFFICER. The clerk will report the amendment.

The assistant legislative clerk proceeded to state the amendment.

Mr. DOMINICK. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered; and, without objection, the amendment will be printed in the RECORD.

The amendment reads as follows:

On page 35, line 21, strike out "$10,000,000", and insert in lieu thereof "$5,000,000."

On page 35, line 22, strike out "$15,000,000", and insert in lieu thereof "$10,000,000."

On page 35, line 23, strike out "$25,000,000", and insert in lieu thereof "$15,000,000."

On page 51, beginning with line 2, strike all through and including line 4, page 52 and insert in lieu thereof the following:

"SEC. 214. (a) To carry out the provisions of this title, there are authorized to be appropriated $95,000,000 for the fiscal year ending June 30, 1973; $290,000,000 for fiscal year ending June 30, 1974; and $410,000,000 for fiscal year ending June 30, 1975.".

On page 65, beginning with line 16, strike all through and including line 3, page 67 and insert in lieu thereof the following:

"SEC. 313. (a) To carry out the provisions of this title, there are authorized to be appropriated $50,000,000 for the fiscal year ending June 30, 1973; $75,000,000 for the fiscal year ending June 30, 1974; and $75,000,000 for the fiscal year ending June 30, 1975.

Mr. DOMINICK. Mr. President, I yield myself 5 minutes.

The PRESIDING OFFICER. The Senator from Colorado is recognized for 5 minutes.

Mr. DOMINICK. Mr. President, I just want to comment to the Senator from Washington that I was not trying to cut him off just when he was in full oratorical style on the campaign stump. I thought he was very good. I thought that the Senator from Pennsylvania was good. I thought that the Senator from Minnesota was also good. However, let us not make these speeches on the floor when we are considering a bill.

I want to explain the simple amendment we have here which I think the Senator from Massachusetts and I have agreed upon. This bill as originally proposed was a 3-year bill with an authorization of $17,810,000,000 for programs which duplicate, as I pointed out, many of the programs which are already in effect.

With the cooperation of the Senator from Massachusetts, we have now cut that authorization down. We are down to $1,025,000,000, which means a cut of approximately $800 million in the total amount of the pending bill. It would leave this as a 3-year bill instead of a 2-year bill which my original amendment would have required.

There is not very much difference in the actual amount of money between the 2-year bill as originally proposed and the 3-year bill as the bill now stands. Since it will take a considerable amount of time to pass this through the House and get the program into action, what we have done is to make a larger cut in the first year authorization and then cut it proportionately to 1974 and 1975 for the programs that are initiated under any situation. Assuming that this bill is enacted, the programs will then have a chance to be put into operation in 1974 and 1975 and hopefully successfully.

I repeat again, that we are at this point cutting almost $800 million out of the authorization. Unfortunately, too many people will read they are going to get a lot of money out of the Committee on Appropriations, and as many of us know, that usually does not happen. So there are a lot of promises going out around the country which will not be borne out.

I think this is a much more realistic set of figures, even though I doubt the Committee on Appropriations would go even this far in 1974 and 1975.

There have been discussions between the Senator from Massachusetts and myself, and other Senators concerning the unemployment situation. I ask unanimous consent to have printed in the RECORD at this point a table showing quarterly unemployment rates prepared by the Bureau of Labor Statistics, for 1964 through the second quarter of 1972, and also an article from the New York Times, dated June 24, 1972, and a report from the Library of Congress, on similar programs, that are now being conducted by HUD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

EXHIBIT NO. 2

QUARTERLY UNEMPLOYMENT RATES FOR ALL WORKERS, PROFESSIONAL AND TECHNICAL WORKERS, AND ENGINEERS, QUARTERLY, 1958-72 [1]

	Unemployment rates		
Year and quarter	Total	Professional and technical	Engineers
1972:			
4th			
3d			
2d	5.6	2.3	2.0
1st	6.3	2.3	2.8

[From the New York Times, June 24, 1972]

GRADUATES FIND MORE JOBS OPEN

For the first time in three years, job openings for college graduates increased this year, the College Placement Council reported today after a major survey.

The increase, though modest, ended the worst decline in job openings since the Depression.

"Over all," the council said, "employers responding to the year-end study indicated they have hired, or plan to hire, 6 per cent more college graduates than a year ago."

The general improvement, however, signaled only the beginning of a possible end to the tight job market for graduates. A check by The New York Times at several colleges around the country confirmed the general upturn but indicated that many students still found job-hunting hard. Some were unable to find jobs at all. Other settled for openings they did not particularly want.

The council's study showed the following sharp shifts in hiring patterns this year.

Aerospace employers increased their hiring 43 per cent over last year. Other areas of sharp increase were research and consulting, up 88 percent; chemicals and drugs, up 52 per cent; public accounting, up 37 per cent; electrical machinery, up 32 per cent, and building materials manufacturers and construction, up 27 per cent.

The Federal Government, the second-largest employer group surveyed, hired 28 per cent fewer graduates than last year. Merchandising and services, the largest employer group, hired 8 per cent more graduates.

At the doctoral level, 36 per cent more engineers were hired than last year, and 17 per cent more Ph.D's were hired in science and mathematics.

At the master's level, 33 per cent more engineers were hired than last year.

At the bachelor's level, 7 per cent more business students were hired than last year. But other nontechnical majors found an even bleaker market than last year; they faced a 6 per cent decrease in openings.

A DRAMATIC CHANGE

The most dramatic change in the hiring outlook since December, when the council made a preliminary study of the job market and predicted at 5 per cent general increase, came in aerospace. In December, aerospace employers estimated that they would hire 7 per cent fewer college graduates than last year.

The College Placement Council is a nonprofit organization, with headquarters in Bethlehem, Pa., that provides services for colleges and employers to help students in career planning.

The council's survey covered organizations in business, industry, government, as well as nonprofit organizations. It did not include teaching positions in educational institutions. Four general categories at all degree levels were surveyed in the study. They were engineering; science, mathematics and other technical graduates; business, and other nontechnical graduates.

Many of the percentage increases were large because only a small number of jobs were involved. The job market, though better than last year, was still very cramped compared with 1970, when about 70,000 jobs were opened by a comparable number of organizations. Last year there were 45,000 job openings. This year there were 47,600.

"I see people, bright people with degrees, squirming around for work or working as cocktail waitresses," said Roland C. Rautenstraus, the University of Colorado's vice president for university relations. "It's pathetic."

Students, however, have not rushed toward graduate schools as an alternative to working, he said. "Most of the kids know there is not much of a market for those with graduate degrees either."

But they are "clawing at each other for admission where there is an open field," he added. "Applications for law and medical school are way up."

VERSATILITY STRESSED

One job placement official at Boston University commented, "You can't bind yourself geographically in this day. You've got to be versatile in training, but just as important, you've got to be mobile. There are jobs to be found if one is willing to search around and be reasonably patient."

"The black woman with some special training is the most marketable person this year," said Dr. Evart W. Ardis, director of the University of Michigan Placement Service.

In conjunction with the study the council also surveyed a selected group of 144 college placement directors about college graduates this year. The report said:

"A substantial number of placement directors noted that this year's class was more practical in its job-seeking efforts and showed more awareness of the reality of the depressed job market. However, some pointed out that liberal arts students are generally lacking in knowledge about the world of work and the process of becoming part of it."

Provisions in Housing Laws Applying Advances in Technology to Housing and Urban Development

1. Urban Renewal. Title I, Sec. 101, Housing Act of 1949, as amended. [P.L. 171, 81st Cong.; 63 Stat. 413, 414; 42 USC 1950.]

This section encourages "housing cost reductions through the use of appropriate new materials, techniques, and methods in land and residential planning, design, and construction, the increase of efficiency in residential construction, and the elimination of restrictive practices which unnecessarily increase housing costs."

2. Applying advances in technology to housing and urban development. Sec. 1010, Demonstration Cities Act of 1966 [P.L. 89–754, 80 Stat. 1255, 1286; 42 USC 3372].

Among other things, this section authorizes the Housing and Urban Development Secretary to "conduct research and studies to test and demonstrate new and improved techniques and methods of applying advances in technology to housing construction . . ." Funds are authorized in Sec. 1010(d).

3. Urban environmental studies. Sec. 1011 [repealed effective July 1, 1971 by sec. 503 Housing and Urban Development Act of 1970, P.L. 91–609], same Act.

This section of the Demonstration Cities Act "authorizes a comprehensive program of research, studies, surveys and analyses to improve understanding of the environmental conditions necessary for the well-being of an urban society, and for the intelligent planning and development of viable urban centers."

4. Experimental housing. Sec. 233, National Housing Act [P.L. 479, 73d Cong., 48 Stat. 1246, 12 USC 1701 et. seq.], added by Sec. 103, Housing Act of 1961, P.L. 87–70, approved June 30, 1961, 75 Stat. 149, 158.

The Secretary of HUD is authorized to insure experimental housing and, among other things, "may make such investigations and analyses of data, and publish and distribute such reports, as he determines to be necessary or desirable to assure the most beneficial use of the data and information to be acquired as a result of this section."

5. New technologies in the development of housing for lower income familes. Sec. 108. Housing and Urban Development Act of 1968 [P.L. 90–448, 82 Stat. 476; 12 USC 1701 u et. seq.].

The Secretary of HUD is authorized, among other things, to institute a program under which certain parties "submit plans for the development of housing for lower income families, using new and advanced technologies, on Federal land . . ." The Secretary is instructed to report findings "at the earliest practicable date . . ."

6. Title IV, guarantees for financing new community land development. Sec. 402, same Act.

States that one of the purposes of the New Communities Act of 1968 [Title IV, above Act] loan guarantee program is to "provide opportunities for innovation in housing and community development technology . . . [and to] include, to the greatest extent feasible, the employment of new and improved technology . . ."

7. National housing partnerships. Sec. 906, same Act.

Authorizes corporation, established under Title IX of the Act, among other things, "to conduct or contract for research and studies related to the development, demonstration, and evaluation of improved techniques and methods of constructing, rehabilitating, and maintaining housing."

8. Research and technology. Title V, Housing and Urban Development Act of 1970. [P.L. 91–609, 84 Stat. 1791; 42 USC 4501].

This title consolidates HUD Department research authorities and, among other things, clarifies and broadens HUD's research authorities and powers.

9. Comprehensive planning grants. Sec. 701, Housing Act of 1954 [P.L. 560, 83d Cong.; 68 Stat. 590, 640, 40 USC 461].

Provides comprehensive planning grants for a variety of urban development purposes.

Mr. DOMINICK. Mr. President, I might point out that among professional and technical people the unemployment rate is 2.3 percent, for engineers it is 2 percent, and for the general population it is 5.6 percent. The New York Times article, among other things, states:

> Aerospace employers increased their hiring 43 percent over last year.

In the Congressional Library report there is reference to urban problems in which technology is being used and in which many people in the scientific and technical world will have a chance to be employed.

Mr. President, I sincerely trust the Senator from Massachusetts will follow this agreement on authorizations and, if so, we can finish the bill rapidly.

Mr. MAGNUSON. Mr. President, will the Senator from Massachusetts yield to me for 1 minute?

Mr. KENNEDY. I yield.

Mr. MAGNUSON. Mr. President, I wish to compliment the committee for working out what I think is going to be a better approach to the matter of the National Science Foundation. I have more than a passing interest in this matter. I am the author of the original Science Foundation bill, ably abetted by the former distinguished Senator from Massachusetts, Leverett Saltonstall.

I think the Senator has done a good job in reaching the goals and objectives in the bill.

Mr. KENNEDY. I thank the Senator.

Mr. President, I yield myself 3 minutes.

The PRESIDING OFFICER. The Senator from Massachusetts is recognized.

Mr. KENNEDY. Mr. President, I reluctantly accept the amendment of the Senator from Colorado on this program.

Mr. President, the Senator is correct. We will be getting started late with this program and, therefore, it does make some sense to reduce the total authorization to make some accommodation for that fact and, therefore, to scale the other parts of the bill, taking that into consideration.

I am reluctant to see this kind of cut made, but it is late in the session and we will have a 3-year program, and these funds will still be a very significant amount, so I will accept the amendment of the Senator from Colorado and expect that within those respective titles we would allocate the resources, as has been done in the initial bill. Is that the understanding of the Senator from Colorado?

Mr. DOMINICK. The Senator is correct.

Mr. KENNEDY. Mr. President, I am prepared to accept the amendment.

Mr. DOMINICK. I yield back the remainder of my time.

Mr. KENNEDY. I yield back the remainder of my time.

The PRESIDING OFFICER. All time is yielded back. The question is on agreeing to the amendment of the Senator from Colorado.

The amendment was agreed to.

The PRESIDING OFFICER. If there be no further amendment to be proposed, the question is on agreeing to the committee amendment in the nature of a substitute, as amended.

The committee amendment, as amended, was agreed to.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading and was read the third time.

Mr. EAGLETON. Mr. President, the bill now before this body, S. 32, is one of the most significant pieces of legislation to be considered by the 92d Congress. If enacted, signed by the President, and funded at the authorized levels, the programs it establishes will effect a fundamental—and healthy—change in the American economy, and will touch in positive ways the day-to-day lives of millions of Americans.

The committee report on the National Science Policy and Priorities Act of 1972 accurately characterizes the capabilities of scientists, engineers, and technicians in the aerospace and defense industries as one of our most valuable national resources. Our pursuit of a course of action which largely ignores this vital human resource is a gross miscalculation.

Mr. President, it is not my purpose to duplicate the information and analysis in the committee report on this bill or to restate the arguments which have been made so eloquently by my colleagues—and particularly the distinguished chairman of the Special Subcommittee on the National Science Foundation in which this bill originated. I would, however, like to make additional points which are pertinent to the deliberations on this important piece of legislation.

The National Science Policy and Priorities Act of 1972 is neither a duplication of, nor a substitute for public service employment legislation. Under S. 32, the individuals engaged in the civil science programs will not be on the Government payroll but will remain in the private sector. S. 32 does not propose the establishment of a Federal, in-house capability which would duplicate resources that already exist in the private sector. The sponsors of S. 32 have recognized the redundancy of such an effort and have consciously avoided it. We believe that it is a wise choice.

We have instead chosen to build upon the pioneering efforts of a number of firms which have over the years consciously and intentionally redirected and refocused their resources away from purely defense and aerospace work and toward civilian needs. McDonnell Douglas Corp. in my own State of Missouri is one of the best examples of this type of firm. The work it has done in such fields as aircraft collision avoidance systems, safe handling and transportation of hazardous materials, computer utility services, and a number of other endeavors is outstanding and represents the type of enlightened corporate management our peacetime economy so badly needs. Enactment of S. 32 will assist those companies which have voluntarily undertaken conversion efforts on their own, and will encourage those which have not yet begun this important effort.

By choosing not to duplicate public service legislation we do not mean to imply that the employment impact of S. 32 will not be considerable, and positive. It will be.

The program authorized by S. 32 will provide employment. It will steady employment, and it will be longer-range than the defense contract-type employment that has heretofore characterized the aerospace and defense industries. Because S. 32 will meet real human needs, those who are engaged in the programs will find their work more satisfying and productive than may have been the case in the past.

Mr. President, I think it is apparent that the pattern of past Federal investment in military and space programs has drawn scientists, engineers, and technicians away from the private sector. This diversion of valuable human resources has made it extremely difficult for American industry to attract and retain the personnel it needs to keep up with foreign competition. Much of the "R. & D. lag" or "technology gap" which are widely discussed in international trade circles is undoubtedly attributable to this unfortunate condition. S. 32 and the programs it authorizes would reverse that trend and enable American industry to begin to close the technology gap which our overcommitment to defense and space expenditures has helped to create.

Our "booming" wartime economy has done more to aggravate serious trade deficit with our western trading partners than any other single factor. When we were strong economically because our aerospace and defense industries were working at full capacity—at the height of the Vietnam war—consumer demand was at a high point. But the demand could not be met by our domestic industries which were producing the goods of war—and still are. Enter Japanese and German products and exit the dollar.

We still cannot meet the demands of our own consumers. S. 32 will change that.

In closing, Mr. President, I want to commend the distinguished chairman of the Special Subcommittee on the National Science Foundation, Senator KENNEDY, for the vision and hard work he has invested in S. 32. I also want to express my appreciation to the chairman of the full committee, Senator WILLIAMS, for his invaluable support and assistance in reporting out this landmark piece of legislation.

Mr. President, we spend billions each year on aerospace and military programs. We send men to the moon, satellites to distant planets, and proliferate weapons of violence and death. S. 32 offers our own people the opportunity to reap the benefits of American science, technology, and industry. Americans deserve to enjoy the fruits of their own labor.

I commend this bill to the attention of all Members of this body, and urge that the Senate act favorably on it. The action we propose today is long overdue.

Mr. MONDALE. Mr. President, I am delighted to speak in support of S. 32, the National Science Policy and Priorities Act, which I had the privilege to cosponsor. As a member of the Subcommittee on the National Science Foundation, which considered the bill, I became thoroughly convinced that we must enact this legislation. I wish to congratulate the subcommittee chairman (Mr. KENNEDY) for his leadership and vision in bringing this matter before the Senate.

There are approximately 200,000 unemployed engineers, scientists and technicians in the United States today. Many of them were trained to meet the needs of Federal programs. Many of them received Federal financial assistance which encouraged them to pursue their engineering and scientific courses. Now, they find themselves unemployed because the Government has changed its priorities.

According to a column by Sylvia Porter in the Minneapolis Tribune for August 3, 1972:

> Of every 4 chemists under age 25, 1 is jobless—At least 5,600 chemists and chemical engineers were jobless when 13,000 more graduates in these categories poured into the job market early this summer.

The problem is concentrated in major centers of technical employment, including the Twin Cities in the State of Minnesota. It has been estimated that there are about 1,400 unemployed technical personnel in the Twin Cities.

In some respects, unemployment for engineers and scientists is even more serious for them and the economy than unemployment for other types of personnel. First, it is far harder for them to find new jobs and they are unemployed, on the average, for a longer period of time. Second, unemployment compensation, or welfare, makes up a far smaller percentage of their previous salaries so they are forced to sell their houses, their cars, and so forth when they lose their jobs. Finally, there is a multiplier effect in such technical employment and an estimated 10 blue collar jobs are dependent on each engineer and scientific job.

As discussed in another column by Sylvia Porter in the Minneapolis Tribune for August 4, 1972, we are also:

> Permitting an unforgivable amount of 'subemployment' among Ph. D's who are working far below their skill levels.

Mr. President, the problem has been growing worse in the past 2 years. The administration, however, tells us that it is getting better. But it has discontinued the special survey of technical unemployment which the National Science Foundation was conducting. Thus, we are denied current information which would accurately report on technical unemployment.

We do know from the various professional societies that employment in their professions is declining. In the face of national employment rolls which are generally expanding, this clearly shows a growth in unemployment among scientists and engineers.

At the same time, the national needs for the talents of such individuals greatly exceed the capacity of State and local agencies, and private employers, to pay for them. What we need is a program which will match the available talent with the unmet need. That is what this bill would do.

The bill would directly provide jobs for about 40,000 scientists and engineers and indirectly create some 400,000 jobs throughout the economy. These jobs would be part of a 3-year program for civilian research and engineering projects in pollution control, public safety, mass transit, health care services, education, nutrition, and other areas. A new Civilian Science Systems Administration, within the National Science Foundation, would administer the programs.

It would make possible the use of interdisciplinary systems analysis approaches to the complex problems of urban life. It has been all too clear that the piecemeal efforts of Federal, State, and local governments to deal with such problems as housing, transportation, and the environment cannot do the job. Furthermore, there are some extremely critical problems facing the world in the now foreseeable future with respect to pollution and energy supply. We have technical personnel who could deal with these problems and many of them are idle. The bill would match the manpower with the problems.

These developmental efforts would also spawn greatly increased expenditures by local and State government, and by the private sector, without direct Federal assistance. Thus, there would be created substantial continuing job opportunities for some of the same scientists and engineers. This would put an end to the unfortunate decline in investment in the future which has set in during the past few years. America's leadership role in technology is now threatened and we must take prompt action to restore the quality and momentum of our scientific and technical enterprises.

In the August 4 column by Sylvia Porter which I referred to, Dr. Eli Ginzberg, is cited as calling for "a long-range policy for the support of science instead of indulging in the fits and starts which recently have caused such serious manpower fluctuations and distortions." The bill would establish such a national policy for the support of science.

It provides that Federal funds for science should grow in proportion to the gross national product and that technical manpower should have continuing employment opportunities at their professional skill levels. It also specifies that Federal civilian research and development funds must be raised to parity with those for military programs and that the civilian research must be focused on national priority needs.

The bill also provides assistance in transition of scientific and technical manpower from research and engineering programs which have been terminated or reduced to other activities meeting current national needs. The bill would provide assistance to States, communities, companies, and individuals to assist in such transition.

We can no longer accept the continuing high level of scientific and engineering unemployment. Even if we had confidence that the mere reduction of excessively high unemployment rates would correct the problem, we would have little basis for optimism. A year and a half ago, the administration announced a target to reduce unemployment to the neighborhood of 4½ percent. Early this year, 12 months later, the target had been changed to the zone of 5 percent in a year. With the year more than half gone, we are still at 5.7 percent.

Surely, the time has come to act. Furthermore, as I have already indicated, there is distressing evidence that some fundamental shifts have taken place in the capacity of industry and government to provide the needed jobs for scientists and engineers. I call upon my colleagues to join in support of this measure which can make such a significant contribution of putting these talented people to work in the national interest.

Mr. President, I ask unanimous consent that the two articles which I referred to be included in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

LARGE NUMBER OF SCIENTIFIC PERSONNEL OUT OF WORK

(By Sylvia Porter)

During the last presidential election year in 1968, among the most wanted of our young people were the most highly educated, highly trained—newly graduated physicists, chemists, sociologists, political scientists, computer scientists, Ph.D.s trained for basic research or specializing in pure math and the like.

During this presidential election year, among those having the toughest times getting or holding a job in their own fields are precisely these same groups of workers.

Of every four chemists under age 25, one is jobless, reports the American Chemical Society. At least 5,600 chemists and chemical engineers were jobless when 13,000 more graduates in these categories poured into the job market early this summer.

Large numbers of Ph.D.s, rejected by the job market, are stretching out their educations (in biological sciences nearly 40 percent of the new Ph.D.s are continuing their studies). Or they are switching to such professional schools as law and medicine. Or they are shifting out of science altogether.

Many younger, more mobile Ph.D.s are battling it out with older scientists and engineers, replacing the older scientists' higher paychecks with their lower ones. Many who aspired to university jobs have turned and are turning to far less demanding positions in high schools and two-year colleges.

The least fortunate are taking jobs driving taxis, selling ice cream, wasting their educations in similar ways.

What really happened in so short a time span? Why the Ph.D. glut? What if you are caught in this squeeze?

Obviously, a first key reason for the glut originated with the astronomical level of federal defense, aerospace, research spending during the 1960s which lured tens of thousands of our most gifted youngsters into scientific careers and graduate schools.

During the 1960s, too, the federal government made huge infusions of money available to graduate students and universities, in the form of scholarships and loans—again tempting thousands to go for the most advanced training in their areas.

Also, a frequently overlooked but significant point is that many middle-class, intelligent young Americans who could afford it stayed in the universities—climbing from degree to degree—for no other reason than to escape the draft.

In 1970, the number of Ph.D.s graduating from U.S. colleges and universities rose an astounding 14 percent over 1969, the most dramatic growth rate in decades.

In 1970, the United States turned out an extraordinary 29,000 Ph.D.s and, at this rate, we are slated to turn out an even more startling 60,000 by 1980.

But the spending in the areas where students were most concentrated peaked with the Johnson administration. When President Nixon took over, the cutbacks began—and the impact was directed and intense. (Out of every three dollars paid to Ph.D.s today, whether in government jobs or in private industry or in universities, two dollars stem from the federal government.)

At the same time, the Nixon administration has come up with no short-term—or certainly long-term—policies to help solve the very special employment problems of these workers.

What's the meaning of all this to you, if you are now in graduate school or headed in that direction?

Don't go for a Ph.D. unless you really want to do so. And if you do want this higher degree, veer toward applied science rather than toward basic research. Or pick applied math instead of pure math.

Avoid, if at all possible, narrow specialization so that you can broaden your options in the job market. And this goes for teachers as well as for research and development Ph.D.s.

WORK NEEDED FOR SCIENTISTS

(By Sylvia Porter)

In 1968 the U.S. government was piping every possible tune to lure students into graduate schools—particularly in the physical sciences but in many other fields as well.

In 1972 the U.S. government is giving a massive cold shoulder to these same youngsters—among our most highly educated men and women.

We are permitting an unforgivable amount of "subemployment" among Ph.D.s who are working far below their skill levels.

We are creating an ever-expanding economic class of the "new poor"—thousands of young people who have training and skills to qualify for $20,000–$25,000-a-year jobs but who are doing ridiculously undemanding work, if they are working at all.

We are inviting the anger of those who feel doublecrossed by the nation that first led them to believe they were badly needed in the job market and then summarily rejected them.

And on top of all these points of personal frustration is the fantastic financial waste implied by the fact that it costs between $50,000 and $100,000 to turn out a single Ph.D. today.

Warned John Gardner, head of the Common Cause "citizens' lobby," not long ago: "The future is necessarily hazardous for the individual who trains himself to do a specific job, receives an advanced degree for that line of work and believes that society owes him a living doing it."

Our society does not owe this to us, as individuals.

But what we as individuals do owe to our society is the development of a far more rational approach to the training and hiring of highly educated specialists.

And how might we devise this? In answer, Dr. Eli Ginzberg, nationally known expert in manpower planning and director of Columbia University's Conservation of Human Resources project, proposes that the federal government:

Must take into account in the federal budget implications for highly educated manpower of any large military or civilian programs it launches, expands or continues to fund. In Ginzberg's words: "We can no longer afford to be nonchalant with starting and stopping large government programs—space, atomic energy, defense and research and development."

Must develop a long-range policy for the support of science instead of indulging in the fits and starts which recently have caused such serious manpower fluctuations and distortions.

Must draw up long-range federal policies for continuing support via grants and loans of higher education at the graduate-school level—particularly designed to guarantee the solvency of the top 100 universities now turning out most of our Ph.D.s.

Must think through with utmost care the design of the enormous new manpower programs it is funding—which involve the training of large numbers of highly specialized workers.

For instance, we are investing more than $3 billion in vastly expanded health manpower training programs to multiply the numbers of physicians, dentists, nurses and other professionals in this field. Are we, Ginzberg asks, somewhat ominously, failing to take into account the significant expansion already under way which will increase by 100 percent the "output" of U.S.-trained physicians in one decade? Failing to note the signs of oversupply of such specialists as surgeons and neurosurgeons? Failing to appreciate that what we need to keep medical care costs from skyrocketing are more paraprofessionals earning $10,000 a year, not more physicians earning $50,000?

Must develop a stable national "science policy" plus better techniques for forecasting scientific manpower needs.

And must explore much more thoroughly the concept of the federal government as a creator of jobs in times of economic recession. Under the Emergency Employment Act of 1971, this idea is being gingerly pioneered for lower-skilled, lower-paid workers, but the "public service jobs" concept is equally applicable to Ph.D.s.

During the 1970s, the number of Ph.D.s may soar 115 percent. Are we ready to put this tremendous body of talent to work in challenging, rewarding jobs? Or must we start right now to curb the forces behind this Ph.D. surge?

PROTECTION OF PENSION RIGHTS OF SCIENTISTS AND ENGINEERS

Mr. JAVITS. Mr. President, I support S. 32, the "National Science Policy and Priorities Act of 1972," and commend it favorably to my colleagues.

I wish to direct specific attention to title IV of the bill—Protection of Pension Rights of Scientists and Engineers—which is the result of an amendment I offered to the bill in the executive meeting of the Committee on Labor and Public Welfare and which was unanimously adopted by the committee.

By the way of background, on June 18, 1970, I observed in a speech to the United Steelworkers of America that:

> The large layoffs that have occurred in [the aerospace] industry due to the massive cutbacks in defense and aerospace contracts has resulted in an extreme curtailment of pension expectations for many of those who have been unfortunate enough to have been separated from their employment.

I want to say—

> I believe that the federal government has a clear responsibility to take into account the effects of its programs on employees engaged in industries dependent upon government contracts. About all the government does now is to see to it that the pension plans of these contractors meet Treasury Department standards and that the employers' contributions to the plans are reasonable. If these standards are met the Government permits the contractor's contributions to be included as a reimbursable item of cost with respect to the defense and aerospace contracts it negotiates.
>
> Since the Government is also indirectly subsidizing the plans in these industries—by tax indulgence—it follows that the Government should insure that these plans are realistically structured and that the pension expectations of the employees are made more secure than is presently the case. I think it is incumbent on those agencies involved to consider ways and means of requiring more adequate standards for pension plans of Government contractors . . . There is ample precedent for the use of Government's contracting authority as a basis for setting such standards, and I urge the Administration to take active steps along the lines I have suggested.

Unfortunately, the administration did not pursue this recommendation, and, it is quite distressing that despite being alerted to this situation 2 years ago, and despite the increasing tempo of layoffs in aerospace and defense in this period, the administration has chosen to remain inactive on this subject.

Of course, the administration has come forward with a legislative proposal to provide vesting protection against loss of pension rights owing to changes in employment, and to encourage individual retirement plans through tax incentives. It is also true that there are pending before the Senate Labor Subcommittee several bills designed to establish minimum Federal standards for private pension plans, including S. 3598—the bipartisan Williams-Javits bill which has been cosponsored by 15 of the 17 members of the full committee.

Nonetheless, experts within the administration as well as the Senate Labor Subcommittee have recognized clearly that none of these legislative proposals will protect the existing pension expectations of scientists and engineers in an adequate fashion. The reason is that special problems are presented in the defense and aerospace industries due to unpredictable expansions and contractions of Government procurements and the fact that engineers tend to "follow the contract." Accordingly, a very early eligibility for vesting rights, probably after 1 or 2 years, would need to be incorporated into general pension legislation in order to protect the engineers.

Most employees in this country are not as mobile as engineers and scientists, and to incorporate this type of very early vesting formula in pension reform legislation that will affect every industry and occupation in the country would be most unwise and would result in unduly imperiling the private pension plans. On the other hand, as the committee report indicates, "the high labor mobility of scientific and engineering personnel makes it unlikely that they will benefit from such legislation," as S. 3598, which provides for a degree of vesting after 8 years of service and full vesting rights after 15 years of service.

It is appropriate, therefore, that the needs of engineers and scientists in aerospace be considered as a special case, and it is particularly fitting that the Government take responsibility for dealing with their needs. It is the Government, after all, which encourages the rapid mobility of engineering and scientific talent in order to obtain the best effort in furtherance of its procurement objectives. It is also the Government and the taxpayer which stand to lose the most if these procurement objectives are frustrated owing to an unresolved anxiety over loss of pension rights.

Mr. President, just a few weeks ago, the McDonnell Douglas Corp. announced plans to lay off 13,500 workers in southern California by the end of 1973. In my own State of New York, the Grumman Corp. just announced a layoff of 300 employees—at least half of whom will be engineers—as a result of losing out on the space shuttle contract—and it appears that further large-scale layoffs are in store.

I suppose this sort of thing is, to a certain extent, an occupational hazard in the aerospace industry. But it is not and should not be an occupational hazard to forfeit pension right after pension right every time these layoffs occur, so that some of the most gifted, hard-working and dedicated Americans in this country are reduced to living exclusively from social security in their old age, despite years of private pension plan coverage in the aerospace and defense industry.

I have received numerous letters from aerospace scientists and engineers on this subject. Many of these letters are quite painful to read. Here is just one example:

MAY 4, 1971.

Senator JACOB JAVITS,
Senate Office Building,
Washington, D.C.

DEAR SENATOR JAVITS: May I begin this letter by saying that you come in for your share of publicity here in the South, and that in my opinion it's favorable publicity. I always find your name in the media in connection with doing something. Usually I also find myself supporting your point of view.

There is an article in The Nashville Tennessean today, a syndicated article by columnist Clayton Fritchey, that discusses the upcoming Congressional hearings (and we hope, action) on private pension systems. Mr. Fritchey expresses his doubt that anything so faulty could be called a "system." With more than a little experience in systems engineering and systems integration, as well as employee experience in the "system", I can tell a system when I see one—and the private pension system is a living masterpiece. A masterpiece, in my view, of things like fraud, deceit, and exploitation.

It needs your attention, and the attention of Congress as a whole.

I'll give you a few particulars regarding my experience with the system. In 1955 I began work with Lockheed and subsequently continued with Temco, Ling-Temco, LTV Inc., and Boeing. My career in aerospace engineering and management was then terminated in February, 1970, by lay-off from Boeing. The question might be asked, why so many companies? The answer is also a question, why does the Government move the defense/aerospace work around from place-to-place? I suppose many know why, but not so many experience the deprivation of the opportunity to earn a pension.

At all of these employers I performed professional work on Government defense/aerospace contracts. In those 15 years I was never once assigned to a commercial, i.e., domestic program. At one of those companies—Temco—I received a pension cash payment of several hundred dollars upon leaving. As well as I recall, I was employed by Temco and its successors through LTV for 4½ years and was considered 20% vested. (Actually, only about 3½ years were counted in pension computations; my last year there I was company-transferred to Chance Vought Corp., a Division of LTV, Inc., and all Temco plan benefits were discontinued. * * *

When I was laid off from Boeing, after 7½ years with it on the Saturn V and Saturn V/Apollo NASA programs, I was told by company officials to my complete astonishment that I had absolutely no pension benefits due me—though I had been "on" the standard Boeing engineering management pension program right along.

No pension. Zero.

Senator Javits, I'm now 45 years old, expertized in a professional field that has gone away—so far as hundreds of thousands of professionals are concerned—to oblivion. It departed the scene due to Government policy, just as so many of us were attracted to it originally through Government policy. It departed the scene paying out a few dollars in pension benefits and retaining, under its own rules, millions upon millions of funds in "employee" pension systems.

Yes, sir. It's a system, and it works just as it was intended.

We all know that pension funds offered by employers are offered as an inducement to a person to accept employment. We also know that in many industries these funds are never disbursed to the employees generally, i.e., to all of the employees but only to those who are fortunate enough to survive on the employment rolls long enough to be vested. We also know that these pension funds are not portable. An employee leaves his employer, for any reason, and his non-vested pension benefits are left behind forever. Forever is an awful long time.

I am in whole-hearted agreement with you that the injustices of the private pension system must be corrected through Federal legislation. Such systems should be administered uniformly under Federal statute. The people—the workers—should be fully informed by the Government and their employers what the statute provides, when we get one.

I would like to provide you my thoughts, also, on what this legislation should call for:

(1) Pension eligibility for any worker should occur mandatorily after 6 months on his first adult job.

(2) Pension eligibility should thereafter mandatorily occur on the first day of subsequent employment by all subsequent employers. (Mr. Javits, we're only here once, we don't have several lifetimes to gain pension benefits.)

(3) Vestment of pension benefits offered should be one-hundred percent (100%) upon initial eligibility, and should remain 100% thereafter.

(4) The solvency of all private pension systems should be guaranteed by the Government; the provisions of the guarantee clause should be such to require proof of solvency, ability to pay, initial private capitalization and continuing private bonding such that only private employers having a workable employee pension program—without useage of Government funds—are guaranteed as a last resort by the Government.

(5) All private pension systems not meeting the above requirements should be declared unlawful; violators should be prosecuted by the Government.

(6) Government contracts exceeding some dollar value, say $1,000,000, should not be awarded to private enterprises not having a (lawful) private pension system. Nor should Government loans. Nor should State and Local Governments make such contract awards or loans where a substantial part of their funds for the purpose are received from the Federal Government. One more: Nor should private enterprises make such subcontracts, purchases or loans where their funds for the purpose are received from any Government agency.

Well, there it is, Senator. It's probably more than you were looking for from Fayetteville, Tennessee, in fact, maybe it's more help than you're getting from some of your New York constituents. Best of luck, Senator. Naturally I'd like to hear from you about your views and efforts.

Very truly yours,

——— ———.

Title IV of S. 32 is a start on getting effective solutions to this disturbing neglect of our engineering and scientific community. Title IV of S. 32 would require the Director of the National Science Foundation, after appropriate consultation with the engineering and scientific community and the heads of the various procurement agencies involved, to promulgate standards for Government contractors which would, to the extent feasible, provide more adequate pension protection to scientists and engineers working on Government contracts.

The key words are "to the extent feasible." I recognize—we all recognize—that this is a problem that is not susceptible to simplistic solutions or one in which major changes can be accomplished overnight. Complexity, however, is not a valid reason for simply standing still and, in effect, turning our backs on a rapidly eroding situation which has assumed nightmarish proportions for our Nation's engineering and scientific personnel.

The element of "feasibility" compels the Director of the National Science Foundation to take account of the existing provisions of law affecting private pension plans, the circumstances surrounding the establishment and operation of such plans by Government contractors, the impact of plan revisions on existing industrial relations in aerospace and defense, as well as the economic consequences of any specific approach or series of approaches to securing greater pension protection through governmentally imposed standards.

Thus, any alarm that has been sounded over the impact of title IV in terms of producing an immediate adverse effect on Government contractors is misplaced or exaggerated. I can say with complete frankness that the bill does not compel nor is it intended to compel the adoption of any particular formula for the safeguarding of engineers' pension rights.

Instead, it is intended that the Director of the National Science Foundation explore in depth a number of alternatives, some of which could be implemented fairly rapidly while others might require a longer period. I have described in an article in the Professional Engineer magazine a number of these alternatives and I ask unanimous consent that the text of that article be printed in the RECORD following my remarks. A number of these ideas have been successfully implemented in one form or another in industries other than aerospace and they should be evaluated carefully.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. JAVITS. Mr. President, in closing, I should just like to cite from the findings of the Senate Labor Subcommittee's pension study with respect to the loss of pension rights in the plans of two major aerospace contractors.

CASE HISTORY NUMBER 38

This is a pension plan of a major aerospace company. It was established in 1957.* The plan covers salaried employees only and has 36,903 active participants and 1,241 retired as of December, 1969.

Since the plan was established over 60,000 employees have participated with more than 20,000 employees having left the scope of the plan without entitlement to any benefit, over 5,000 of whom had more than five years of service.

---

* The plan was in existence prior to 1957, but in that year the changes in the plan were so great for purposes of this study, it is considered to have been established in 1957.

CASE HISTORY NUMBER 52

This is a pension plan of a large aerospace firm: it was established in 1955 and has over 105,904 active participants. The plan is collectively bargained.

Of the over 81,000 employees who have left the scope of the plan since it was established over 66,000 have left without entitlement to any benefit. None of the 66,000 had more than five years of service.

(*See Preliminary Report of the Private Welfare and Pension Plan Study, 1971, Senate Subcommittee on Labor, Nov. 1971 at pp. 18, 20*).

Mr. President, the professional organizations of engineers support this measure 100 percent. If the Government hopes to continue to attract and maintain the talent necessary to stimulate the technological progress so indispensable to the achievement of our defense, aerospace and conversion objectives, it must act affirmatively in this matter of providing more realistic pension protection to engineers and scientists. S. 32 provides a practical vehicle for this purpose, and its passage will assure the evolution of a Government policy that will safeguard a most valuable resource—this Nation's engineering and scientific community—from the ravages of economic insecurity in old age.

EXHIBIT 1

PRIVATE PENSIONS AND THE PROFESSIONAL ENGINEER: A BLUEPRINT FOR CHANGE

(By Senator JACOB K. JAVITS)

In 1968, in the Temporary Society, Warren G. Bennis characterized modern American industrial society as one of "temporary systems, nonpermanent relationships, turbulence, uprootedness, unconnectedness, mobility, and, above all, unexampled social change."

It may now seem insensitive to recall these words in light of the fact that thousands of professional engineers and scientists have been displaced or downgraded by the massive cutbacks in defense and aerospace spending. No doubt their immediate concerns do not encompass prior prophecies. Yet, it is precisely the experience of rapid unprecedented change analyzed by Bennis and others, which has a direct bearing on the private pension expectations of professional engineers and provides the clue as to what needs to be done to make these expectations more secure.

One of the more interesting examples of employee initiatives is the Teachers' Insurance & Annuity Association—College Retirement Equities Fund (TIAA-CREF) plan for college teachers in this country, and I understand that several societies of engineers have been actively exploring the model to determine whether it would be a desirable approach to the problems encountered by their profession. The TIAA-CREF is a pension plan for college teachers in which over 2100 educational institutions—public and private colleges, universities, community colleges—participate. The plan is contributory with no fixed benefit formula. Benefits are provided to participating teachers on the basis of the amount of contributions made to the plan on their behalf, but the individual participant can elect to have a portion of his contributions invested by an equity fund with the expectation of improving his benefit by increases in the values of common stocks.

Because it is contributory and because it is, in effect, an industrywide plan, a participant in the plan is fully vested from the outset, and his pension is completely "portable" in the sense that he can carry it with him from one teaching position to another.

It is clearly an attractive model for professional engineers and one whose attractiveness would be considerably enhanced if the Internal Revenue Code were amended to provide a tax deduction for employees' contributions to this kind of arrangement as well as other private pension plans. Tax deductions for contributions made by self-employed persons to so-called Keough (H.R. 10) retirement plans are already authorized by law, and elementary fairness would seem to indicate similar treatment with respect to the employed.

There are certain limitations, however, to the TIAA-CREF approach which need to be clearly understood. The most important one is that benefits are based only on the amount of contributions made and the number of years worked during which the contributions are made. Unlike a typical industrial pension plan, there is no promise of an ultimate benefit, with the employer having the responsibility to fulfill that promise by making appropriate contributions. Accordingly, when considering the adoption of the TIAA-CREF approach, comparisons should be made with the benefit levels achieved under the more standard industrial plans, particularly taking into account the adequacy of the vesting and funding.

Special problems are presented in the defense and aerospace industries due to unpredictable expansions and contractions of Government procurement policies and the fact that engineers tend to "follow the contract." Obviously, plans which are built in this industry upon the assumption of long-term employment and long-term receipts of contracts are unrealistic.

Last year, in a speech before the executive board of the steelworkers union, I suggested that pension plans of Government contractors should be treated as a special case and that the Administration should consider tightening up the standards for defense contractors in connection with pension plans. Specifically, I recommended that consideration be given to requiring every contractor, as a condition of his doing business with the Government, to join in industrywide pooled pension funds which would provide early vesting and complete portability and which would minimize the risk of inadequate funds to pay promised pension benefits in the event a specific contractor went out of business.

While the merits of this and other proposals are now being actively studied, it seems clear to me that they both indicate growing recognition that the specific circumstances of the defense and aerospace industries warrant special pension treatment. It would, for example, be a natural extension of some of these ideas to have the government require that all defense and aerospace contractors vest their employees on permanent layoff, regardless of what other forms of vesting are established or required. This would only be fair in view of the economic uncertainties in these industries.

Those who advocate pension reform, as I do, see great advantages in continuing to maintain the dual retirement systems of Social Security and private pension plans. These systems together can offer a balanced mix of the best of both public and private retirement initiatives. By being uniform, universal, and compulsory, Social Security provides the basic minimum retirement income for almost the entire work force. Naturally, continual efforts must be exerted to insure that Social Security does in fact meet this objective. The governing justification for private pensions is that they can provide a supplemental level of income to improve retirement benefits beyond the modest living standard provided by Social Security. By being flexible and responsive to the needs of particular groups of employees and by providing funds for capital formation, private plans can function as a useful and integral part of retirement planning.

However, the success or failure of this dual system depends almost entirely on whether private pensions deliver to an adequate number of the workers covered by these plans. If there is a failure in delivery, then the public-private approach to securing a satisfactory retirement income is destined for extinction.

Early vesting is central to the successful delivery of private pensions for reasons I have outlined above. The bill I have introduced in the Senate—S. 2—would require every private pension plan to provide a ten percent vested right after six years of service. The vested right would increase by ten percent each year thereafter, so that at the end of 15 years of service the employee would be 100 percent vested.

The needs of professional engineers, particularly those working in aerospace or defense, represent, in my judgment, a special case which requires further measures as well. The principal possibilities are: 1) establishing a professional engineers pension plan along the lines of TIAA-CREF; 2) providing, by legislation, tax deductions for employees' contributions to their pension plans and for individual retirement savings plans; 3) imposing rigorous standards on Government contractors regarding pension funds for their employees; and 4) a combination of the foregoing proposals.

In addition, my bill also provides for a voluntary system of portability of vested rights (i.e. a system whereby employees could transfer the value of their vested rights from one employer to another or into a Federal clearinghouse central fund where monies could be invested by qualified financial institutions.) The bill also provides for more rigorous funding standards, fiduciary standards, and a Government program of insurance for pension rights (similar to Federal deposit insurance for savings accounts in banks).

Many professional engineers and scientists, particularly those with recent experience in the aerospace industry, have critically commented on these proposals, claiming they are too modest. They are particularly concerned that the vesting schedule in my bill is not "fast enough" to adequately protect the extremely mobile members of their profession, and they are probably right.

Nevertheless, in drafting major reform legislation that will affect every industry and occupation in the country, it would be unwise to set standards for all on the basis of the greater mobility of some. At the outset, it is preferable to tune vesting and portability to the point on the dial where most can benefit without, at the same time, unduly imperiling their pension plans. The difference is between setting minimum or maximum standards, and my bill does the former. This does not mean, however, that further steps cannot be taken by or on behalf of professional engineers to improve their pension arrangements beyond the minimum standards proposed by my bill. In general, this seems to call for a greater degree of supplementary pension initiatives along the lines previously discussed.

Whether employees realize it or not at the time they are hired, pensions are an important and valuable part of their compensation package. In my testimony before the House Labor Subcommittee on April 28, 1971, I observed that "contrary to the assumption on which most private pension plans are built, in today's modern industrial society, labor mobility is the rule rather than the exception. Very few employees work for one employer all their working lives. In fact, very few work for one employer as long as 30 years or even 20 years. Despite undeniable evidence of the enormous velocity in job changes among the nation's work force, private pension plans continue to be structured in a manner which can only result in an abnormally high loss of pension benefits."

If this evaluation is sound—and I believe that it is—then it is clear that the fundamental remedy is to provide adequate pension protection. Unfortunately, too many private pension plans do not deliver when the employee comes to call for his pension. Generally, it is my belief that reform legislation of the type represented by my bill will do the job of guaranteeing delivery of private pensions to many more of the employees who will be covered by private pension plans in the future.

PROTECTION OF PENSION RIGHTS OF SCIENTISTS AND ENGINEERS

Mr. TUNNEY. Mr. President, I want to focus particular attention on the provisions in this bill designed to help protect pension rights of scientists and engineers. I congratulate the committee, and Senator JAVITS particularly, for the recognition manifested in title IV of this bill that Government procurement decisions affect not only a person's present job in a defense industry but also his prospect for retirement without the poverty that affects so many of our senior citizens.

The massive cutbacks in defense and aerospace contracts, which have occurred in the past few years, have often meant not only loss of jobs but also loss of pensions for thousands of persons throughout the country.

The problem has two aspects—both highly undesirable. In past years when employment in defense and aerospace industries was at its peak, engineers and scientists moved from one company to another within that industry as contract awards and priorities shifted. Result was a high level of mobility which had the unfortunate effect of preventing such persons from accumulating pension benefits which would serve them in later years.

The problem is even worse at the present time, however, because layoffs in these industries have reached the point where it may no longer be possible for such employees "to follow the contract" from one employer to another. Three of the major aerospace and defense contractors in my own State have informed me that their own layoffs have reached such a high level that the jobs created by the award of a new contract are filled primarily by their own former employees. Thus, in many cases, persons formerly employed in these industries have been forced to seek entirely new lines of employment and embark upon entirely new careers.

For these reasons, I believe it is essential that a thorough examination be undertaken of ways in which to protect employees in these industries—and all other industries as well—against loss of pension rights due to layoffs or forced changes in occupation.

And thus I welcome the provisions in this bill which declare a Federal interest in extending, to the extent feasible, more adequate pension protection to those employed in industries which have been drastically affected by Federal cutbacks in defense and aerospace contracts.

I must add, however, that I believe this is only a first step toward assuring every working person the opportunity to obtain and retain an adequate pension. The human cost which results from the loss of pension rights when a man or woman changes his or her occupation is a real one—a very real one. We see the evidence of our failure to reform the pension system among thousands of our senior citizens whose incomes are inadequate to provide decent housing and the bare necessities of life.

But more than that, we have become a mobile society—a society which encourages and often requires its citizens to seek new jobs and new opportunities. Yet an essential part of that mobile society must be financial security for later years.

Title IV of this bill represents the first tangible recognition of that problem. I hope we can build upon it and extend its promise to every working person in this country.

SENATOR RANDOLPH COSPONSORS NATIONAL SCIENCE POLICY AND PRIORITIES ACT—RECALLS FOR RECORD OF 1972 HIS EFFORTS IN 1936 TO BEGIN THIS JOB

Mr. RANDOLPH. Mr. President, the bill which the Senate is about to pass is a significant step forward in focusing our Nation's scientific talent and resources on civilian problems and needs.

It is my privilege to cosponsor this measure, the National Science Policy and Priorities Act of 1972. As a member of the Committee on Labor and Public Welfare, I joined with the able Senator from Massachusetts (Mr. KENNEDY) and other Senators on the committee in bringing this vital and progressive proposal to the Senate for consideration.

I feel it is important to emphasize that this measure will provide the National Science Foundation with explicit authority for the development of national policies for applying science to our national problems and priorities. This, in my opinion, is an action we should have taken many years ago. However, just as it took a long period of time to bring the original National Science Foundation concept to fruition, it has taken time to mobilize full support and agreement for utilizing NSF in the resolution of urgent and complex national problems. Now, in 1972 that support and agreement have been mobilized and the Senate will shortly give approval to the National Science Policy and Priorities Act.

Just as important as the establishment of a national science policy to focus on national priorities are the civil science systems and the manpower transition programs which are authorized in the pending bill. There is no question of the critical need to harness scientific talent and resources for the purpose of research, design, and testing of systems for improved health care, safety, housing, pollution control, and many other social and economic needs. This measure is directed toward that objective. It also contains provisions for the transition of scientific and technical manpower from reduced or terminated research and engineering programs to other civilian-oriented research and engineering activities. If our Nation is to develop a viable national science policy, it is essential that we have the most effective and efficient utilization of our scientific talent. The transition provisions of this bill will help insure that such utilization is achieved.

Mr. President, consideration of the National Science Policy and Priorities Act today brought to my mind that over 35 years ago, as a Member of the House of Representatives, I introduced legislation to provide for the promotion of the general welfare in relation to the economic effects flowing from scientific and technological developments. This measure introduced by me in 1936 and 1937 and in subsequent years contained provisions for the establishment of a Scientific Research Commission. These proposals were a part of the early efforts which led to the creation of the National Science Foundation.

Prior to hearings in 1937 on my proposal, I placed in the CONGRESSIONAL RECORD a speech which I made on a national radio program outlining the concept and importance of a scientific research program for America. I ask unanimous consent that my address at that time be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NEW INDUSTRY TO EMPLOY MILLIONS

(By Hon. JENNINGS RANDOLPH of West Virginia, in the House of Representatives, Friday, July 23, 1937)

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address which I delivered recently over the radio:

SCIENCE IS READY TO HELP MANKIND

Most people recognize the fact that science has made possible much of the development of our modern civilization. Born in the depths of ancient philosophy, it was cradled in the arms of alchemy and mysticism. Flouted and crushed by early religious zeal, it has revolutionized man's knowledge and understanding. Neglected and starved in attics and dungeons, it has created a world of untold wealth. Today science stands an adolescent—a young Hercules—waiting to perform the tasks we command to be done.

Science has opened up a hundred different branches of knowledge in the fields of physics, chemistry, and biology. The countless benefits showered upon us as a result have been mainly in the forms of means to preserve and protect our health and in the form of strong strides in the march of our economic progress.

Today we are just beginning to realize what a great ally we have. More wonderful than Aladdin's lamp, science stands ready to lend us a helping hand in our struggle against economic disaster and unemployment as well as against such sinister diseases as cancer and influenza. We have only to command—science stands ready to do our bidding.

Thousands of patents are granted each year to American scientists, investors, and engineers. We cannot help wondering what effect this constant flow of inventions is having upon our social and economic life. Are inventors failing to produce jobs-making inventions as fast as they turn out labor-saving devices? Why has science seemed to fail in providing the new industries we need to take up the slack in employment? In our ungrateful neglect, have we failed to use the help of our strongest ally in the determined war on unemployment?

INDUSTRY PROFITS BY SCIENCE

Industries both great and small have profited much by using science and the inventor's skill to reduce production costs. Lower prices and greater profits have resulted from their use of improved methods and labor-saving devices. Aided by this industrial patron, flush with vast resources, science has accomplished miracles.

It is said that a miller living in the time of Caesar could make in a day only a barrel and a half of low-grade flour while our modern flour mills can turn out more than 30,000 barrels a day—and much better flour at that. A good brickmaker, working from sunrise to sunset in the early days, could fashion only 450 bricks a day, but a modern brick plant can produce nearly 1,000 times that many.

Only a hundred years ago, 83 percent of the workers were needed to produce food for all of the people. Today only 17 percent are needed. Many of the others have been absorbed into the new industries created by invention.

Industry has not hesitated to command the aid of science. It has been forced to do so. If it still took 83 out of every 100 workers to provide the food for the Nation there would not be enough workers left to man the rest of our great industrial system. We could not have our millions of automobiles because not enough people would have time to make them. Great cities like New York, Chicago, and Los Angeles could not exist because nearly everyone would be busy trying to eke out a scant supply of food on his own little plot of ground.

COUNTERBALANCING LABOR-SAVING MACHINERY

President Roosevelt has recognized the importance of science and technology as it affects all of us. The report of the National Resources Committee on Technological Trends and National Policy, recently submitted to the President, pointed out that "if the productivity of 1935 (the last year for which figures are available) continues the same in 1937, and the composition of the Nation's total product remains unchanged, production would have to be increased 20 percent over that of 1929 to have as little unemployment as existed then." This is in itself evidence of the continuous and rapid growth of labor-saving devices and improved methods of production. Again technological improvements have cleared the way for new industry to move in, and it is up to us to see that the opportunity is not wasted.

The genius of the American inventor has fathered the problem of providing employment for those workers who are robbed of their jobs by labor-saving machinery and improved production methods. Strange as it may seem, we must turn to this same inventive genius for the final solution of the problem it has helped to create.

It must give us more industry-creating, job-making inventions and discoveries. This is the need of today. But what is being done to bring forth such new industries to relieve the disease of unemployment that has afflicted the Nation these many years?

Private industries can hardly be expected to lay out funds to promote research just to create another industry. For them there is no point in such outlay. Who, then, is to sponsor and promote this scientific work so necessary to society as a whole?

Dr. Karl T. Compton, president of Massachusetts Institute of Technology and chairman of the former Science Advisory Board, declared recently that while "private industry should continue to bear the responsibility for developing new industrial products, there is nevertheless an initial stage in the development of such products which industry cannot be expected to support on the basis of expected profits. This is the early state of fundamental scientific work in such fields as physics, chemistry, and biology * * *. For this reason the support of fundamental scientific research must be a community rather than an industrial responsibility, and it therefore seems to me to be a proper concern of the Federal Government."

The support of fundamental scientific research is a national responsibility. It is a duty which society and its agent, the Government, have neglected with a consequent maladjustment between available labor and jobs. When an industry adopts a labor-saving device which displaces a thousand workers, society should be in a position to furnish new jobs within a reasonable time—jobs provided by the industry-making inventions and discoveries developed by a foresighted government.

AN AID FOR THE UNEMPLOYED

This is no idle dream. Only six major inventions or groups of inventions account directly for more than half as many jobs as exist in all of the manufacturing industries in the entire Nation. These six inventions alone have furnished greater opportunities for increasing the income of the Nation than all the gold mines in the world have provided since time began.

Great industries now supplying our daily necessities of food, clothes, and shelter are built around three of these key inventions—the discovery of how to can food, the invention of spinning and weaving machinery, and the art of making steel.

Not many years ago our modern conveniences of transportation, communication, and amusement had little or no place in our economic life. As industries, they scarcely existed. But three key inventions, the telegraph, steam and gasoline engines, photography, and related inventions have developed them into great industries we could not do without today. Just imagine our predicament if the motion-picture industry, the automobile, railroad, the airplane, the telegraph, the telephone, and radio industries were suddenly taken from us. Millions of people would be out of jobs. The distress of the 1933 depression would seem mild in comparison to such a disaster.

In mentioning the radio, I must pause to pay tribute to the memory of Marconi, the inventor of wireless telegraphy, as one of the few great industry-creating inventors of our day.

These and other such inventions have transformed the drudgery of household duties or the dreams of a Jules Verne into great industries which provide jobs for millions of workers, and which represent an aggregate of wealth that surpasses the riches of any nation in all recorded history. It is far more profitable to find an industry-making invention than a great gold mine.

We have taken only the first few faltering steps on the road of industrial progress that stretches far in the distance before us. We need, now, to take the next step—we need to find the next new industry that science can provide for us.

When found, it will supply more employment, stimulate increased business, and produce a greater national income. Such inventions are the cornerstones of prosperity, and science is the tool we must use to unearth them and to shape them into useful products.

NATIONWIDE SEARCH PROPOSED

Common sense dictates that an intensive scientific search be started at once to bring forth those inventions which will form the basis of our future prosperity and welfare.

That is why I introduced the scientific research bill, H.R. 7939, in Congress. This bill aims, first, to provide for the continuous study "of the social and economic aspects of scientific and technological developments", as recommended by the report of the National Resources Committee. Second, it aims "to hasten the relief of unemployment through the development of industry, commerce, and agriculture, to provide for the public health, and for the maximum social and economic benefits to be derived from the advancement of scientific knowledge and its application to the resources of the Nation."

This bill is now being studied by Congress. A hearing will be held tomorrow before the research subcommittee of the House Committee on Interstate and Foreign Commerce.

Just as industry aids science in producing the labor-saving devices it needs and must have, so does the scientific research bill propose to aid scientists and inventors in producing the industry-making, job-creating inventions the workers of the Nation need today. By counterbalancing labor-saving devices with new industries, we may eventually rid ourselves of unemployment and give the workers of the Nation better jobs and higher wages than they ever had before.

Of course, while science is waiting for the command to go forward in the search, there remains the alternative of relief and subsistence doles. The result is an ever-increasing national debt.

GOVERNMENT MUST SOW IN ORDER TO REAP

New industries, however, will help us pay off the Government indebtedness. One of the most recent additions to our industrial family, the automobile, contributes to Government treasuries—Federal, State, and local—more than $1 billion a year. Isn't it logical to expect the new industries of the future to play a similar part in providing Government revenues? If so, just one new industry, comparable in size to the automobile industry, may be expected to contribute an additional sum to Government treasuries equal to the present national debt with a period of less than 50 years.

If for no other reason, this justifies the Government to invest some of the vast resources in the business of "raising" more industries. We sow seed in the springtime in order to reap grain in the fall. Likewise, the Government must sow now in order to reap the revenue it will need in the years to come.

FEEDING OUR ECONOMIC SYSTEM

New industries, the bread and meat of our economic system, have nearly always just happened along. We have given little forethought to cultivating a supply. Our experience of the past few years is convincing evidence of the fact that although our granaries and warehouses may be filled, yet when our economic system starves, we starve with it. The time has come when we can no longer let chance govern the supply of new industries—the life substance of our economic world.

The younger members of our society are not content with emergency measures good for only 5 or 10 years. They have longer lives to live; they have families to rear, homes to build, careers to make. As one of them, I speak the conviction that we must have a healthy, well-fed economic system.

If we only give the command, science can create new jobs for the unemployed and provide new opportunities for the underprivileged. It can aid materially in doing away with relief and subsistence doles. It is a chief hope in exterminating the national debt. Science is the gateway to a new frontier. The conquest of this promised land will make us a happier, healthier, and more prosperous Nation than the world has ever known.

Mr. DOMINICK. Mr. President, I yield myself 3 minutes.

As the ranking minority member of the subcommittee, I ask unanimous consent to have printed in the RECORD a statement by the National Science Foundation showing the increased emphasis they are giving to the very type work that is being considered here.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

EXHIBIT No. 1

Experimental R. & D. incentives program........ $22,000,000

OBLIGATIONS

	Actual, fiscal year 1971	Estimate, fiscal year 1972	Estimate, fiscal year 1973
Cooperative research initiatives	0	0	$11,000,000
R. & D. in the service sector	0	0	7,000,000
Human resources for technology innovation	0	0	4,000,000
Total	0	0	22,000,000

ACTIVITY SUMMARY

It is becoming clear that the nation must expand its total investment in research and development and in other ways must act to improve the innovative process if it is to create the new and improved products and services necessary for social progress, to provide jobs for the expanding U.S. work force, and to increase productivity at a rate that will enable the United States to compete on a better basis with the other industrialized nations of the world.

The objectives of these NSF research initiatives are to find through carefully designed experiments those incentives that will (1) increase non-Federal investment and participation in R&D oriented toward improving economic growth and productivity or leading to the solution of social problems; (2) develop new and more effective cooperative R&D efforts by universities, industries and government; and (3) promote applications of R&D to the development of improved products and services.

The U.S. industrial system is being put to a severe test today by the rapid technological advances being made by other industrialized nations. Immediately after World War II and through the 1950's, the United States occupied a dominant technological position among the nations of the world. Since 1960, however, our technological advance has eroded, and although it was generally accepted that the U.S. lead would be narrowed by the rapid development of such nations as West Germany and Japan, that lead has deteriorated to a greater degree than had been anticipated. This situation is attributable to a number of factors, but important among them has been the willingness of foreign governments to underwrite portions of industrial research and development and, in one instance even, marketing costs. This practice, combined with the fact that after World War II other industrial nations rebuilt their industries with the most modern plants and equipment available, and are applying new technologies to their industrial process, has produced rapid economic growth rates. The new technologies have resulted in new and improved products and increased productivity.

An indication of the growing need to update U.S. capabilities is evidenced by statistics on population and employment. Since 1965, the number of people employed in the United States has increased from 71,088,000 to 80,100,000 or by about 9,000,000. Over the same period, the labor force grew from 74,455,000 to 85,200,000, over 10,000,000. This shows that our economy must grow at an extremely rapid rate to keep pace with the growing U.S. work force. Therefore, it is imperative for the Nation to increase its investment in activities which will lead to improvements in industrial output and increased employment opportunities.

There is ample evidence that a direct and positive correlation exists between investments in R&D and the creation of new products and services. For example, such inventions as air conditioning, automatic transmissions, Bakelite, cellophane, jet engines, computers, television, stereophonic sound, xerography, and penicillin were all made possible through organized research efforts.

Economic analysis indicates that the private sector, by itself, underinvests in the R&D required to meet the Nation's employment and other economic and social goals over the long term. This is due to the fact that these investments produce benefits which are not fully recaptured by the firm that undertakes them.

Although the long-range national social and economic interests would be best served through major industrial investments in R&D programs designed to advance technologies over the long term, there are forces in the free market economy which do not provide sufficient incentives for such investments. Industrial R&D in the United States is dependent upon the willingness of private firms to invest their funds in R&D programs which are by their very nature, high risk—both in terms of the possible failure of the program to achieve its objectives and in terms of the exclusive capture of benefits by the firm making the investment. Under these circumstances, the R&D efforts of U.S. industry are often aimed at low-risk, small step, product and process improvement that offers maximum assurance of payoff in the short term.

In the past two years some segments of American industry have decreased their resource commitment for R&D. If one looks at the research effort, rather than the dollars invested, the case becomes worse because research costs have generally risen more rapidly than the general economy. Further, there are indications that firms in the petroleum, steel, and electronic industries are reducing their research capabilities even further.

Finally, the bulk of the dollars spent on R&D in the United States is concentrated. Some forty companies spend 70 percent of the R&D dollars. Many firms which could make important contributions to the Nation's socio-economic progress are not large enough to undertake R&D effectively, either because of the absolute scale required or the risk of the individual firm implied by the possible failure of the R&D effort.

Based on the above, NSF proposes to undertake some experimental programs to provide incentives to increase non-Federal investment in research and development and its applications, particularly in areas related to domestic opportunities. However, the form and the optimum amount of this activity are not clear. The experimental incentives to be tested under this program will be designed to assure that the critical variables affecting R&D investments and utilization of research findings by the private sector and non-Federal Governments will be identified, isolated, and tested in a controlled fashion.

Thus, in FY 1973 a new effort will be undertaken by NSF to find effective means for stimulating more rapid application of research findings and for increasing non-Federal investment and participation in R&D through the use of incentives which provide maximum leverage for limited Federal funds. The incentives program will be aimed at controlled experimentation with different incentives and institutional arrangements as well as with achieving particular technical results. A detailed research design for these experiments will provide a framework within individual experiments will be carried out. As part of the design, a systematic evaluation procedure will be developed to assure that the most effective guidance for future Federal efforts in this area will be secured.

Initially, the Deputy Director of the NSF will assume personal responsibility for the management of the Experimental R&D Incentives Program. A panel of advisors will be assembled to verify the soundness of the research designs, the critical variables to be tested, the methodology for controlling and measuring changes in institutional behavior and output, and to assure the validity of the evaluation plan.

The experiment will be closely coordinated with the complementary effort being undertaken in the Department of Commerce, by the National Bureau of Standards. A joint NSF–Department of Commerce Committee co-chaired by the Deputy Director of the National Science Foundation and the Assistant Secretary of Commerce for Science and Technology has been established for this purpose.

Cooperative Research Initiatives ---------------------- $11,000,000

The purpose of this program is to experiment with and test incentives that will encourage universities, industry or industrial associations, and government laboratories to undertake joint research programs that will benefit from combinations of their unique capabilities and mutual interests. These cooperative research efforts will be designed specifically to spur and expand a wide variety of R&D activities, including basic research. They will create new linkages between universities, industry, and government laboratories and experiment with mechanisms for these organizations to work jointly toward specific R&D objectives. They will acquaint universities with the needs, problems and capabilities of industrial research; make industries and government more aware of the capabilities of university research facilities; encourage formation and more active roles for research associations and help build stronger ties between and within universities, industry, and government. The cooperative research initiatives will demonstrate the benefits that can be derived from such joint efforts and the extent to which new stimuli for increased R&D investments by the non-Federal sector can be developed.

In the past, the Nation's experience has shown that university, industry, and government research teams can complement each other effectively when working on specific major technological problems. This is exemplified by their successful efforts in the conduct of the military and space research programs. However, such cooperative efforts have not yet been applied, to any significant degree, to the solution of many problems in the civilian sector.

The diversity and magnitude of the technological challenges and economic risks involved in finding solutions to these problems are such that private industry has been traditionally unwilling to invest adequate funds in R&D efforts designed to meet the long-term needs of the Nation. The mechanisms needed to stimulate these initiatives are largely untried. Therefore, the NSF program of cooperative research initiatives will provide support for a variety of cooperative research efforts to employ and test a broad range of incentives. The programs listed below are illustrative of those that will be tested by NSF in FY 1973.

Support of individual academic institutions or consortia of universities in joint projects involving research associations, industrial firms, or industry associations.

Support for cooperative research efforts, involving investment on the part of State or local governments and universities, on problems of public concern at the State, regional, or local level.

Cost sharing grants to special ad hoc research associations to work on problems that cut across traditional industrial lines.

Cost sharing grants to research and industrial associations for research on highly specialized problems of a particular industry where the solution is vital to the economic interest of a particular region of the United States or where there are important benefits to the Nation as a whole beyond those capturable by an individual firm.

Awards to research and industrial associations to permit them to employ on a temporary basis qualified people from universities or industry to formulate R&D programs.

More specifically, NSF would test coupling programs that promote joint research between corporations, research associations and universities. The funding arrangements would consist of matching funds, with NSF providing part of the cost and industry providing the remainder. University research proposals would be encouraged which include financial and technical coupling to industrial research. Industry would be encouraged to sponsor research at universities, matched by NSF grants to the university. As another variant, NSF sponsored research scientists and engineers from industry would join NSF sponsored research programs at the universities. The problems to be addressed in such coupling programs would be selected by the government, universities, or industry.

NSF will also test the investment incentives to private industry for fundamental research managed by industrial associations, research associations, professional societies, or other appropriate organizations. This form would be best suited to industries that are fragmented, or in which the individual enterprises are unlikely to be able to sponsor significant amounts of basic research that might relate to their long-term development or to receive the benefits of having basic research scientists in contact with the firm's R&D programs of a more applied nature. The long-term objectives would be to maximize industry's own funds. Professional societies and academies could play a comparable role in the development of research capabilities in specialized but important disciplines.

Research and Development In the Service Sector---------------- $7,000,000

The purpose of this program is to experiment with incentives that would encourage additional investment in science and technology to improve the productivity of the service sector of the economy, both public and private. Methods to attain more rapid utilization by the service sector of the latest technologies available will also be tested.

These problems are important because:

The service sector lags significantly in productivity improvement; and

It is the most rapidly growing sector of economy, currently employing 64 percent of work force.

Public Service Sector ($4,000,000)—This program provides support for experiments and tests of a variety of mechanisms to determine which are most effective in encouraging State and local governments, universities, nonprofit research organizations, and others to undertake collaborative research and other exploratory efforts to identify, develop, evaluate, and apply existing and emerging technologies or products which have potential for major improvements in State and local governments.

Between 1950 and 1969, the annual revenues of State and local governments increased from $23.2 billion to over $113.0 billion. At the same time, expenditures increased from $27.9 billion to $131.6 billion. The outstanding debt of these governments rose from $24.1 billion at the end of 1950 to $133.5 billion at the end of 1969.

These massive increases in outlays and in debt outstanding are illustrative of the growth in programs and services of State and local governments and of the need to improve their productivity wherever possible.

For example, fire protection in urban areas costs an average of $12 per capita. Yet, it is reported that one community has brought its fire protection costs down to $2.30 per capita through improvements in technology, manpower utilization and organization. With approximately 150 million people now residing in our urban areas, the potential for savings in this single service sector is significant.

In view of the large Federal investment being made to assist State and local governments ($43.5 billion planned in FY 1973) it is in the Federal interest to find appropriate incentives to stimulate State and local governments to maximize the employment of science and technology in dealing with these problems. Different incentive mechanisms will be tested to determine which are most conducive to assuring that more advanced and cost-effective techniques are developed and applied to the solution of public problems at the State and local level. The programs listed below are illustrative of the kinds to be tested by NSF in FY 1973:

Provision of user-oriented research funds to selected State and local governments as an alternative to direct Federal R&D funding to determine the feasibility of generating State and local funds for research on problems peculiar to the State or locality. A variant of this approach would permit the State and local governments to use Federal funds to attract private investment and involvement aimed at alleviating public problems.

Application of aerospace resources and skills to improve decisionmaking and service delivery by State and local governments.

Development of multi-state or regional university-business-governmental arrangements to achieve pooling of resources, economies of scale, aggregation of user needs, and accelerated diffusion of proven technologies on a broad basis.

Service sectors in which science and technology could be better utilized and in which incentives will be tested include:

Trash collection and disposal;
Sanitation and sewage;
Traffic control;
Crime prevention;
Fire prevention and control;
Medical care; and
Environmental protection.

Private Service Sector ($3,000,000)—This program provides support for experiments on a variety of mechanisms to determine which are most effective in encouraging universities, colleges and junior colleges to provide technical assistance to local businesses in the service sector to increase their productivity through more effective utilization of science and technology.

Many smaller private and nonprofit firms, particularly those in the service sector, have neither the expertise to identify those problems which could be alleviated through the application of science and technology nor the resources to conduct adequate research for the best solutions to these problems.

These experiments will be designed to find ways of employing the pool of technical expertise that exists in academic institutions that could, if proper incentives were provided, participate in programs to upgrade the capabilities of business firms in the service sector. This program will provide support to study and improve through science and technology the procedure of local firms by faculty, students and research staffs and a variety of other mechanisms designed to provide technical assistance through colleges and universities to local commercial firms. Such procedures may involve, for example, management services, cost saving procedures, work and material flow scheduling, make or buy decisions and production processes.

Human resources for technology innovation ________________ $4,000,000

Although it has long been recognized that the most effective way to move new ideas through the innovation process is by the timely interchange of people, the process remains highly compartmented. The purpose of the Human Resources in Technological Innovation program is to seek incentives that will facilitate the flow of concepts and ideas from laboratory to consumer. It is generally recognized that there are many good and innovative ideas and products in the embryonic stage "on the shelf" within industry, university and government laboratories that, if joined with the most advanced science and technological capabilities available, could be transformed into new products and services that would have a great beneficial impact on the economy. The problem is finding ways to link these fledgling ideas and products with the needed science and technological capabilities, to grow them into practical and useful products and services. One of the major efforts of the NSF Experimental R&D incentives program will be to explore mechanisms for promoting the exchange of highly skilled professional and technical personnel between government laboratories, university and industrial laboratories and other science and engineering oriented organizations where such exchanges can facilitate the cross fertilization of ideas and knowledge.

Incentives to promote such cross fertilization are needed for a variety of reasons, some of the more significant of which are discussed in the following paragraphs.

Personnel policies, regulations, employee benefit programs and other personnel practices have increasingly acted to compartmentalize the Nation's skilled technical and professional work force. For example, barriers are built into the personnel development and maintenance programs of major institutions, both public and private, that discourage the temporary exchange of personnel among and between industries, government at the various levels, academic institutions and other organizations. These barriers include such routine procedures as those for handling payroll deductions for retirement, health, and other fringe benefits. In addition, seniority and problems of tenure also enter the picture and further constrain efforts to effect such exchanges.

The NSF program for Human Resources and Technological Innovation will provide support to test various incentives to overcome these roadblocks in order to promote the types of human linkages between university and government laboratories that will help move ideas and products into the market economy. Support under this program will be generally tied to projects supported under cooperative research industries and R&D in the service sector.

The types of programs that will be examined in an effort to achieve these objectives include the following:

Grants to academic institutions to combine the resources of engineering and business schools for the development of joint curricula and research on the innovation process.

Grants and contracts with universities and industry to encourage exchange of professional and technical personnel between universities, industry, and government.

Incentives for support of cooperative work-study programs designed to attack specific research problems and to aquaint industry with the capabilities of science and engineering students and to familiarize students with the problems, challenges and opportunities of the private sector.

Incentives to universities and Federal laboratories to encourage a more effective employment of Federal labortaory facilities in support of university research related to projects that are part of this experimental program.

Support under this program would generally be part of an overall project supported under cooperative research and service sector programs.

National R&D assessment programs ______________________ $2,500,000

Obligations National R. & D. Assessment Program

Actual fiscal year 1971	0
Estimate fiscal year 1972	0
Estimate fiscal year 1973	$2,500,000

This new program is proposed to provide a national R&D assessment capability consonant with the expressed needs of Congress and the Executive Office for more intensive study and assessment of how science and technology contribute to the achievement of national goals and objectives, including improvements in the quality of life, job creation, and economic growth. Through this program, NSF will analyze overall national R&D patterns; the incentive structures and decision points that have produced existing patterns for support, performance, and utilization of R&D in industry, government, nonprofit institutions; and universities; and the implications that our choice of options will have in shaping future R&D patterns.

If the United States is to maintain its economic health and its competitive position in an increasingly technology-dependent world, we must acquire a greater understanding of the processes of invention, innovation, and diffusion of science and technology; and of how decisions on R&D investments and utilization are made in various sectors of the economy. Viewed from the national interest, much remains to be learned about the kinds of incentives which would produce greater investment in or utilization of science and technology, and how such incentives work in achieving their objectives. A wide range of incentive structures has been tried by other nations. However, the diverse experiences of foreign countries in this area have not been comprehensively examined. In some cases, there are indications of significant gains in economic output due to governmental-industrial "partnerships." In other cases, the incentive structures apparently did not produce desired objectives. Because of the large differences in social, political, and economic structures among nations, considerable care must be exercised in directly transferring the experiences of others to the United States. Nevertheless, there is much that may be learned from the experiences of foreign countries.

This program represents a new effort to meet the needs of United States policymakers in the area of science and technology. The effort will focus on:

Analysis of data on national R&D trends and forecasting.

Analysis of the processes of invention, innovation, and diffusion of new technologies.

The public and private rates of return from R&D; and how R&D is related to more efficient utilization of resources, employment opportunities, productivity and foreign trade balance.

The role of science and technology in society; its impacts, potential contributions, costs, and relationships to existing and future institutional structures.

Foreign experience in the area of science and technology policy, particularly those countries, such as Japan, which have recently experienced rapid economic growth, to determine implications for United States policies.

Multi-national efforts at developing policies for R&D (such as OECD), and the implication of these efforts for the United States.

The impact of Federal policies through legislation and regulation on the use of science and technology and on the total innovative process in the United States.

Analyses of the relative impact of Federal and private R&D investments on innovation and economic growth, including an assessment of the results of the new experimental incentives program.

The new program will be structured to

examine research & development and their relationships to national objectives in the broadest sense. The work will be performed by a select group of analysts employing carefully designed, closely monitored grants and contracts with universities and other appropriate organizations.

Existing data and studies will be utilized wherever possible. New research will be conducted, as necessary, to fill knowledge and data gaps in order to provide public policy decision makers with the best attainable assessment of the actual and potential contribution of science and technology to the nation's intellectual, cultural, social, educational, and economic well-being.

Mr. DOMINICK. Mr. President, I think the statement is very effective because it shows full well the efforts we are trying to make in the scientific world to move toward aid and assistance to many of our citizens.

Mr. President, I ask unanimous consent to have printed in the Record a statement by the distinguished Senator from Texas (Mr. Tower), who could not be here supporting the bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Statement by Senator Tower

I am pleased to be a co-sponsor of S. 32, the National Science Policy and Priorities Act.

While I intend to support a number of amendments to modify certain provisions of the legislation, I am in favor of the general intent of the bill and believe that its basic framework represents an excellent opportunity to improve a very difficult problem.

The dual purpose of S. 32 is to apply science to our domestic problems and at the same time significantly reduce underemployment and unemployment among our nation's engineers and scientists.

I strongly believe that our nation's scientists, technicians and engineers can make a meaningful contribution towards achieving our national goals in such areas as environmental quality, mass transportation and housing. At the same time, I think that we as a nation have a responsibility to those individuals in our society who have lost their jobs due to cutbacks in defense related endeavors.

I would like to make it clear, however, that my sponsorship of this legislation does not detract from my basic position that this nation must maintain a strong defense posture, taking into consideration the need for a continuing reliance on Research and Development efforts emanating from the Department of Defense and NASA. I am confident that a reasonable level of Defense R & D will be maintained into the future along the lines called for in the Defense Department budget for fiscal year 1973.

However, due to Federal cutbacks in recent years in Defense and Space R & D programs many extremely qualified individuals have joined the ranks of the unemployed or have taken jobs not at all related to their educational and past employment experiences. Many Texans have been adversely affected by these cutbacks. It has been conservatively estimated that there are 6,000 aerospace technicians and engineers presently unemployed in Texas. Furthermore, this of course does not take into consideration those who have taken employment that is not at all related to their working experiences. Some of us may disagree over whether Congress has acted responsibly in making cuts that caused this problem, but none of us can deny that the problem exists.

The bill we are now considering would mobilize the talents of these people by utilizing proven mechanisms of the National Science Foundation. It will build upon the efforts of the Nixon Administration which has established a number of responsive programs to relocate and retrain unemployed aerospace technicians and engineers. For instance, the Technology Mobilization and Reemployment Program, operated through the Department of Labor, has assisted thousands of people in finding new employment opportunities. One of its main areas of concentration has been the Dallas-Fort Worth area where the problem of unemployed aerospace personnel is very severe.

The Fifty Cities Project is another Labor Department program which seeks to assist unemployed engineers through the development of jobs and employer contacts by an engineer or scientist hired in each of fifty cities. In Texas alone, specialists have been hired in Dallas, El Paso, Fort Worth, Houston and San Antonio. Additionally, the American Institute of Aeronautics and Astronautics under Department of Labor contracts has established two programs for the assistance of unemployed engineers, scientists and technicians. All of these efforts will be strengthened by enactment of this legislation.

Title II of the pending bill would establish a Civil Science Systems Administration which would be authorized to do research, testing and demonstration of civil science systems in order to provide improved public services in a wide variety of domestic fields. This is the major section of the bill. Placing this agency within the already established National Science Foundation will best insure that our federal effort will result in positive accomplishments. I am hopeful that Congress' further deliberations on this proposal will clarify the relationship of this new Administration so that its services will not duplicate existing programs already operating through the National Science Foundation or other federal agencies.

Through contracting with industry, academic and technical educational institutions, nonprofit agencies and public agencies the broad program envisioned by this legislation can bring together the best talents of our nation in meeting some of the crucial problems facing us in this nuclear age. It is not, however, a panacea for all of our problems, technical or ecological, and should not in any way be interpreted as such. However, it does represent a national commitment in the form of a partnership with many interested individuals and groups within our society and for that reason I urge its adoption.

Mr. DOMINICK. Mr. President, I said earlier that if my amendments were not adopted I would find it difficult, if not impossible, to vote for this bill. I must say that the Senator from Masachusetts has, through his cooperation on the last amendment, made it much more feasible for me to vote for the bill because I believe with the authority and reduction in the overall amount we are approaching a level where this program might possibly be made to work and I do believe that what we have in mind here is to try and persuade those people in the scientific community to devote more of their time to those areas in which all of us are thoroughly concerned, and would be greatly benefited.

This may be the program to accomplish that purpose, but until the House takes action on this and we have a chance to see it, I am going to withheld my decision at this time.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass?

The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. BUCKLEY. Mr. President, on this vote I have a live pair with the Senator from Connecticut (Mr. Weicker). If he were present and voting, he would vote "yea." If I were permitted to vote, I would vote "nay." I, therefore, withhold my vote.

Mr. FANNIN (after having voted in the negative). Mr. President, on this vote I have a live pair with the Senator from Texas (Mr. Tower). If he were present and voting, he would vote "yea." I have already voted "nay." I, therefore, withdraw my vote.

Mr. ROBERT C. BYRD. I announce that the Senator from Georgia (Mr. Gambrell), the Senator from Wyoming (Mr. McGee), the Senator from South Dakota (Mr. McGovern), the Senator from Rhode Island (Mr. Pell), the Senator from Louisiana (Mrs. Edwards), the Senator from North Carolina (Mr. Jordan), and the Senator from Oklahoma (Mr. Harris) are necessarily absent.

I further announce that, if present and voting, the Senator from Georgia (Mr. Gambrell), the Senator from Wyoming (Mr. McGee), and the Senator from South Dakota (Mr. McGovern), would each vote "yea."

Mr. SCOTT. I announce that the Senator from Colorado (Mr. Allott), the Senators from Tennessee (Mr. Baker and Mr. Brock), the Senators from Nebraska (Mr. Curtis and Mr. Hruska), the Senator from Kansas (Mr. Dole), the Senator from Michigan (Mr. Griffin), the Senator from Illinois (Mr. Percy), the Senator from Pennsylvania (Mr. Schweiker), the Senator from Ohio (Mr. Taft), the Senator from Texas (Mr. Tower), and the Senator from Connecticut (Mr. Weicker) are necessarily absent.

The Senator from South Dakota (Mr. Mundt) is absent because of illness.

If present and voting, the Senator from Colorado (Mr. Allott), the Senator from Nebraska (Mr. Curtis), the Senator from Ohio (Mr. Taft), and the Senator from Illinois (Mr. Percy) would each vote "yea."

The respective pairs of the Senator from Texas (Mr. Tower) and that of the Senator from Connecticut (Mr. Weicker) have been previously announced.

The result was announced—yeas 70, nays 8, as follows:

So the bill (S. 32) was passed, as follows:

S. 32

An act to amend the National Science Foundation Act of 1950 in order to establish a framework of national science policy and to focus the Nation's scientific talent and resources on its priority problems, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "National Science Policy and Priorities Act of 1972".

DECLARATION OF POLICY

SEC. 2. (a) The Congress hereby finds that—

(1) Federal funding for science and technology represents an investment in the future, which is indispensable to sustained national progress;

(2) the manpower pool of scientists and engineers constitutes an invaluable national resource which should be utilized to the maximum extent possible at all times;

(3) the Nation's scientific resources can contribute significantly to meeting America's human needs in such priority problem areas as health care, poverty, public safety, pollution, unemployment, productivity, housing, education, transportation, nutrition, communications, and energy resources; and

(4) at this time of maximum need, much of the Nation's technical talent is being wasted or misapplied because of inadequate programs of civilian science and technology.

(b) The Congress declares that it is the continuing policy and responsibility of the Federal Government to take appropriate measures directed toward achieving the following goals—

(1) the total Federal investment in science and technology must be raised to an expenditure level which is adequate to the human needs of the Nation, and then continue to increase to the degree required to achieve an annual qualitative growth in the gross national product needed to sustain a full employment economy;

(2) scientists, engineers, and technicians must have continuing opportunities for socially useful employment in positions commensurate with their professional, technical capabilities;

(3) Federal obligations for civilian research and engineering activities must be increased so as to reach a level of parity with Federal obligations for defense research and engineering activities, whereupon the level of parity must be maintained or exceeded, except when inconsistent with overriding considerations of national security; and

(4) Federal programs for civilian research and engineering must be focused on meeting the human needs of the Nation in such priority problem areas as health care, poverty, public safety, pollution, unemployment, productivity, housing, education, transportation, nutrition, communications, and energy resources.

TITLE I—SCIENCE POLICY AND PRIORITIES FOR CIVILIAN RESEARCH AND ENGINEERING

SHORT TITLE

SEC. 101. This title may be cited as the "Science Policy Act".

AUTHORITY OF THE NATIONAL SCIENCE FOUNDATION

SEC. 102. Section 3 of the National Science Foundation Act of 1950 is amended by striking out subsection (d) and inserting in lieu thereof the following:

"(d) The Foundation shall recommend and encourage the pursuit of national policies designed to foster research and education in science and engineering, and the application of scientific and technical knowledge to the solution of national problems."

RESEARCH AND ENGINEERING PRIORITIES

SEC. 103. (a) The Foundation shall identify priority areas of civilian research and engineering likely to contribute to the resolution of national problems in areas such as health care, poverty, public safety, pollution, unemployment, housing, education, transportation, nutrition, communications, and energy resources. In making such identifications, the Foundation shall—

(1) take account of the results of its programs conducted or assisted under section 207;

(2) consult with appropriate scientific and technical organizations such as the National Academy of Sciences, the National Academy of Engineering, and the National Institute of Medicine; and

(3) coordinate and correlate its activities with respect to such identification with other agencies of the Federal Government undertaking programs relevant to these problems.

(b) From funds available pursuant to section 107, the Foundation may employ by grant or contract such consulting services as it deems necessary to carry out the functions assigned to the Foundation under this section.

RESEARCH PROGRAM

SEC. 104. From funds available pursuant to section 107, the Foundation is authorized to make grants to, or enter into contracts with, appropriate organizations for the conduct of basic and applied research and engineering designed to advance the scientific and technical state-of-the-art in such priority areas as are identified under section 103.

NATIONAL SCIENCE BOARD

SEC. 105. Section 4 of the National Science Foundation Act of 1950 is amended—

(1) by inserting before the period at the end of subsection (a) a comma and the following: "within the framework of applicable national policies as set forth by the President and the Congress" and

(2) by striking out subsection (c) and inserting in lieu thereof the following:

"(c) The persons nominated for appointment as members of the Board (1) shall be eminent in the fields of science, social science, engineering, agriculture, industry, education, or public affairs; (2) shall be selected solely on the basis of established records of distinguished service, and (3) shall be so selected as to provide representation of the views of leaders from a diversity of fields from all areas of the Nation. The President is requested, in the making of nominations of persons for appointment as members, to give due consideration to any recommendations for nomination which may be submitted to him by the National Academy of Sciences, the National Academy of Engineering, the National Association of State Universities and Land-Grant Colleges, the Association of American Universities, the Association of American Colleges, the Association of State Colleges and Universities, or by other scientific, technical, or educational associations."

POLICY APPRAISAL AND REPORTING

SEC. 106. In order to carry out the purposes of this Act, the National Science Foundation shall—

(1) analyze information regarding Federal expenditures for research and engineering activities, and the employment and availability of scientific, engineering, and technical manpower, which the Foundation has assembled pursuant to paragraphs (1), (5), (6), and (7) of section 3(a) of the National Science Foundation Act of 1950 in order to appraise the implementation of the policies set forth in section 2 of this Act;

(2) develop and recommend to the President and the Congress programs and activities which will contribute to carrying out the policies set forth in section 2 of this Act; and

(3) prepare and submit to the President for transmittal to the Congress not later than January 31 of each calendar year, a report on its activities under this Act and an appraisal of the extent to which the policies set forth in section 2 are being successfully implemented, together with such recommendations, including recommendations for additional legislation, as it deems appropriate.

AUTHORIZATION OF APPROPRIATIONS

SEC. 107. (a) To carry out the provisions of sections 103 and 104 of this title, there are authorized to be appropriated $5,000,000 for the fiscal year ending June 30, 1973, $10,000,000 for the fiscal year ending June 30, 1974, and $15,000,000 for the fiscal year ending June 30, 1975.

(b) Funds appropriated pursuant to subsection (a) of this section shall remain available for obligation, for expenditure, or for obligation and expenditure, for such period or periods as may be specified in Acts making such appropriations.

TITLE II—DESIGN AND DEMONSTRATION OF CIVIL SCIENCE SYSTEMS

SHORT TITLE

SEC. 201. This title may be cited as the "Civil Science Systems Act".

AUTHORITY OF THE NATIONAL SCIENCE FOUNDATION

SEC. 202. (a) (1) The Foundation is authorized to initiate and support programs which use science, technology, and advanced analytical techniques, such as systems analysis, to design civil science systems which are capable of providing improved public services in such areas as health care delivery, public safety, public sanitation, pollution control, housing, transportation, public utilities, communications, and education.

(2) The Foundation, insofar as is practicable, is authorized and directed to develop alternative civil science systems in order to promote a wider range of choice for the application of such systems.

(b) The Foundation is authorized to initiate and support the public demonstration of civil science systems which have been designed under this title.

(c) Section 5(e) of the National Science Foundation Act of 1950 is amended by adding at the end thereof the following new sentence: "The provisions of this subsection shall not apply to the authority granted to the Director under title II of the National Science Policy and Priorities Act of 1972."

PROGRAMS AUTHORIZED

SEC. 203. In order to carry out the purposes of this title, the Foundation is authorized and directed to—

(a) initiate and support programs of applied research and experimentation, in order to design civil science systems capable of providing improved public services;

(b) test and evaluate the alternative civil science systems designed under this title, and appraise the results of such tests in terms of applicable technical, environmental, economic, social, and esthetic factors;

(c) disseminate and demonstrate the results of programs conducted or assisted under this title so that such civil science systems may be effectively utilized in the development of new communities, and in the improvement of living conditions in existing communities; and

(d) assure that the programs conducted or assisted under this title make maximum effective use of the Nation's scientists, engineers, and technicians, including those who are unemployed.

ESTABLISHMENT OF THE CIVIL SCIENCE SYSTEMS ADMINISTRATION

SEC. 204. There is hereby established within the National Science Foundation, the Civil Science Systems Administration to administer Federal programs carried out under this title.

SEC. 205 (a) The Administration shall be headed by an Associate Director for Civil Science Systems who shall be appointed by the President by and with the advice and consent of the Senate.

(b) The functions of the Director under this title and any other functions of the Civil Science Systems Administration shall be carried out through the Administration by the Associate Director, who shall be responsible to and report to the Director.

(c) There shall be a Deputy Associate Director for Civil Science Systems who shall be appointed by the President, by and with the advice and consent of the Senate, and shall perform such duties and exercise such powers as the Associate Director may prescribe. The Deputy Associate Director shall act for, and exercise the powers of, the Associate Director during the absence or disability of the Associate Director or in the event of a vacancy in the office of Associate Director.

(d) There shall be two Assistant Directors for Civil Science Systems who shall be appointed by the President, by and with the advice and consent of the Senate, and shall perform such duties and exercise such powers as the Associate Director shall prescribe, with the stipulation that one Assistant Director shall be responsible for advising and assisting the Associate Director with respect to the engineering and technical aspects of the Administration's programs, and the other Assistant Director shall be responsible for advising and assisting the Associate Director with respect to the behavioral and social science aspects of the Administration's programs.

(e) (1) Section 5314 of title 5, United States Code, is amended by adding at the end thereof the following new paragraph:

"(58) The Associate Director for Civil Science Systems of the National Science Foundation."

(2) Section 5315 of title 5, United States Code, is amended by adding at the end thereof the following new paragraph:

"(95) The Deputy Associate Director for Civil Science Systems of the National Science Foundation."

(3) Section 5316 of title 5, United States Code, is amended by adding at the end thereof the following new paragraph:

"(131) Assistant Directors for Civil Science Systems of the National Science Foundation."

(f) Section 14 of the National Science Foundation Act of 1950 is amended by striking out subsection (b) and inserting in lieu thereof the following:

"(b) Neither the Director, the Deputy Director, the Associate Director, the Deputy Associate Director, nor any Assistant Director shall engage in any other business, vocation, or employment while serving in such position; nor shall the Director, the Deputy Director, the Associate Director, the Deputy Associate Director, or any Assistant Director, except with the approval of the Board, hold any office in, or act in any capacity for, any organization, agency, or institution with which the Foundation makes any grant, contract, or other arrangement under this Act."

CIVIL SCIENCE SYSTEMS ADVISORY COUNCIL

SEC. 206. (a) There is hereby established a Civil Science Systems Advisory Council to be composed of thirty-one members, of whom eighteen members shall be appointed by the Director for terms of three years, and thirteen shall be ex officio members designated in subsection (c) of this section. Appointed members shall be chosen from among persons who have, by reason of experience or accomplishments, demonstrated their qualifications to serve on the Council, in equal numbers from among the following categories—

1. business;
2. labor;
3. engineers, design, professionals, and natural scientists;
4. social and behaviorial scientists;
5. environmental and other community groups; and
6. consumers.

(b) (1) Of the members first appointed, six shall be appointed for a term of one year, six shall be appointed for a term of two years, and six shall be appointed for a term of three years, as designated by the Director at the time of appointment.

(2) Any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed only for the remainder of such term. Members shall be eligible for reappointment and may serve after the expiration of their terms until their successors have taken office.

(3) Any vacancy on the Council shall not affect its powers, but shall be filled in the same manner by which the original appointment was made.

(4) Each appointed member of the Council shall, while serving on business of the Council, be entitled to receive compensation at a rate not to exceed the daily rate prescribed for GS–18 of the General Schedule under section 5332 of title 5, United States Code, including traveltime, and while so serving away from their homes or regular places of business, they may be allowed travel expenses, including per diem in lieu of subsistence, in the same manner as the expenses authorized by section 5703(b) of title 5, United States Code, for person in the Government service employed intermittently.

(5) The Council shall annually elect one of its members to serve as Chairman until the next election. The Council shall meet at the call of the Chairman, but not less often than four times a year.

(6) Eleven of the voting members of the Council shall constitute a quorum necessary for the transaction of official business.

(c) The Associate Director for Civil Science Systems; the Assistant Secretary of Commerce for Science and Technology; the Assistant Secretary of Health, Education, and Welfare for Health and Scientific Affairs; the Assistant Secretary of Housing and Urban Development for Research and Technology; the Administrator of the National Aeronautics and Space Administration; the Chairman of the Atomic Energy Commission; the Assistant Secretary of Transportation for Systems Development and Technology; the Administrator of the Environmental Protection Agency; the Director of the Office of Economic Opportunity; and the Chairman of the Council on Environmental Quality shall be nonvoting ex officio members of the Council.

(d) A representative designated by the National Governors Conference; a representative designated by the National Association of Counties; and a representative jointly designated by the National League of Cities and the United States Conference of Mayors shall be voting ex officio members of the Council.

(e) The Council shall—

(1) advise the Director with respect to the discharge of his responsibilities under this title;

(2) review and evaluate the effectiveness of Federal programs under this title;

(3) prepare and submit to the Director and the National Science Board such interim reports as it deems advisable, and an annual report of its findings and recommendations, together with any recommendations for changes in the provisions of this title; and

(4) disseminate its findings and recommendations to such extent and in such manner as it deems effective and advisable.

(f) The Director shall make available to the Council such staff, information, and other assistance as it may require to carry out its activities.

PLANNING FOR CIVIL SCIENCE SYSTEMS

SEC. 207. (a) From funds available pursuant to section 214, the Director is authorized to conduct planning studies, to transfer funds to other departments and agencies of the Federal Government, and to make grants to, or to enter into contracts with, academic institutions, nonprofit institutes and organizations, State, regional, and local governmental agencies, and private business firms, for the conduct of planning studies for the design and demonstration of civil science systems capable of providing improved public services. Such studies will—

(1) be directed toward the objective of designing, testing, evaluating, and demonstrating civil science systems for subsequent incorporation in new communities, and for subsequent use, with appropriate adaptations, in existing communities;

(2) include long-range planning studies as well as intermediate and short-range studies;

(3) make maximum use of the results of activities undertaken under section 103 and 104 and the scientific and technical information provided under section 211;

(4) encompass studies of a wide range of public service areas, including but not limited to health care, public safety, public sanitation, pollution control, housing, transportation, public utilities, communications, and education;

(5) include specific studies of the economic, sociological, psychological, legal, administrative, and political factors which affect the design, development, and implementation of civil science systems to provide public services;

(6) include total civil systems studies which integrate the specific studies carried out under paragraphs (4) and (5) of this subsection.

(b) In delineating the goals and establishing the priorities for such planning studies as are conducted under subsection (a) of this section, the Director shall consult with the Civil Science Systems Advisory Council.

APPLIED SOCIAL RESEARCH

SEC. 208. (a) From funds available pursuant to section 214, the Director is authorized to transfer funds to other departments and agencies of the Federal Government, and to make grants to, and to enter into contracts with academic institutions, nonprofit institutes and organizations, public agencies, and private business firms, for the conduct of applied social research into the economic, sociological, political, legal, administrative, and psychological aspects of the design, development, and implementation of civil science systems capable of providing improved public services.

(b) The scientific information which is currently available in these areas and which is generated as a result of the research undertaken under this section shall be fully taken into account by the Foundation in the development of programs and the design and evaluation of civil science systems under this title.

(c) In making grants or entering into contracts under this section, the Director shall take appropriate account of the results of the planning studies conducted or assisted under section 207.

CIVIL SCIENCE SYSTEM RESEARCH AND DESIGN

SEC. 209. (a) From funds available pursuant to section 214, the Director is authorized to transfer funds to other departments and agencies of the Federal Government, and to make grants to, and to enter into contracts with, academic institutions, nonprofit institutes and organizations, public agencies, and private business firms, for research with respect to, and design of, civil science systems capable of providing improved public services in areas such as health care, public safety, public sanitation, pollution control, housing, transportation, public utilities, communications, and education.

(b) In making grants or entering into contracts under this section, the Director shall take appropriate account of the results of the planning studies conducted or assisted under section 207, and the applied social research studies conducted or assisted under section 208.

(c) Each contract awarded under this section shall contain provisions which assure that specific performance objectives, and any applicable physical, environmental, economic, social, and esthetic constraints are specified with particularity for each project conducted under said contract.

(d) To assure that civil science systems designed under this section are responsive to public needs and desires, the Director shall obtain community and public views in his determination of the performance objectives and priorities to be met by such systems.

TESTING AND EVALUATION

SEC. 210. (a) (1) From funds available pursuant to section 214, the Director is authorized to transfer funds to other departments and agencies of the Federal Government, and to make grants to, and to enter into contracts with, academic institutions, nonprofit institutes and organizations, State, regional, and local governmental agencies, and private business firms for testing and evaluating civil science systems which make use of advanced science and technology.

(2) Such testing and evaluation shall utilize all available, applicable analytical techniques, such as computer simulation, systems analysis, and technology assessment, to test and appraise such systems in terms of their conformance to performance objectives; adherence to stipulated constraints; costs and ancillary consequences; impact on the environment; impact on esthetic values; responsiveness to public needs and desires; and their comparison with alternative civil science systems which may provide similar public services.

(b) From funds available pursuant to section 214, the Director is authorized and directed to carry out final evaluations of civil science systems which make use of advanced science and technology, taking appropriate account of the results of the tests conducted or assisted under subsection (a) of this section, and the results of the applied social research conducted or assisted under section 208.

(c) In making grants or entering into contracts under this section, the Director shall take account of the results of the planning studies conducted or assisted under section 207.

INFORMATION DISSEMINATION

SEC. 211. From funds available pursuant to section 214, the Director is authorized to establish a computerized Civil Science Systems Information Service, which shall collect and integrate the scientific, technical, and social information pertaining to civil science systems resulting from programs under this title, and shall provide such information to interested organizations in Federal, State, and local government, industry, academic institutions, and the nonprofit sector, upon request from such organizations, in accordance with such administrative procedures as are established by the Director.

SYSTEMS DEMONSTRATION

SEC. 212. (a) From funds available pursuant to section 214, the Director is authorized to transfer funds to other departments and agencies of the Federal Government, and to make grants to, and to enter into contracts with, academic institutions, nonprofit institutes and organizations, State, regional, and local governmental agencies, and private business firms, for the construction and public exhibition of civil science systems demonstration projects, which illustrate the functioning and associated benefits of alternative, effective civil science systems resulting from research and design activities conducted or assisted under this title.

(b) Such grants or contracts shall contain provisions which assure that such demonstration projects include—

(1) accurate and complete representations of the civil science systems involved in the demonstration, indicating the improved public services which they are capable of providing; and

(2) public exhibitions which are announced in advance and are open for inspection by any interested organization or individual in accordance with such administrative procedures as are prescribed by the Foundation.

(c) Prior to entering into any demonstration project grant or contract, the Director will consult with all State and local governments in whose jurisdictions such demonstration may occur, and will take account of the views of such governments in determining to award such a grant or contract.

COORDINATION WITH OTHER GOVERNMENT AGENCIES

SEC. 213. In planning and conducting or assisting programs under this title, the Director shall maintain continuing consultation and coordination with appropriate Federal, State, regional, and local governmental agencies, including, but not limited to, the Departments of Commerce; Health, Education, and Welfare; Housing and Urban Development; and Transportation; the Council on Environmental Quality; the National Aeronautics and Space Administration; the Atomic Energy Commission; the Office of Economic Opportunity; the Environmental Protection Agency; the National Governors Conference; the National Association of Counties; the United States Conference of Mayors; and the National League of Cities. Such consultation and coordination shall be carried out through the Council established under section 206, and through appropriate staff contacts at other levels of the agencies involved.

AUTHORIZATION OF APPROPRIATIONS

SEC. 214. (a) To carry out the provisions of this title, there are authorized to be appropriated $95,000,000 for the fiscal year ending June 30, 1973, $290,000,000 for fiscal year ending June 30, 1974; and $410,000,000 for fiscal year ending June 30, 1975.

(b) Funds appropriated pursuant to subsection (a) of this section shall remain available for obligation, for expenditure, or for obligation and expenditure, for such period or periods as may be specified in Acts making such appropriations.

TITLE III—TRANSITION OF TECHNICAL MANPOWER TO CIVILIAN PROGRAMS

SHORT TITLE

SEC. 301. This title may be cited as the "Technical Manpower Transition Act".

AUTHORITY OF THE NATIONAL SCIENCE FOUNDATION

SEC. 302. The Foundation is authorized to plan and assist in the transition of scientific and technical manpower from research and engineering programs which have been terminated or significantly reduced to other civilian-oriented research and engineering activities. The Foundation is further authorized to plan and assist in the transition of scientific and technical manpower from research and engineering programs which have been terminated or significantly reduced due to the transfer abroad of technical activities of American based transnational firms to other civilian-oriented research and engineering activities.

ADVISORY PANEL ON TRANSITION OF SCIENTIFIC AND TECHNICAL MANPOWER TO CIVILIAN PROGRAMS

SEC. 303. (a) There is hereby established an Advisory Panel on Transition of Scientific and Technical Manpower to Civilian Programs to be composed of thirty-one members, of whom eighteen members shall be appointed by the Director for terms of three years, and of thirteen ex official members designated in subsection (c) of this section. Appointed members shall be chosen from among persons who have, by reason of experience or accomplishments, demonstrated their qualificatios to serve on the Panel, in equal numbers from the following categories:

(1) Engineering and natural sciences, including the environmental sciences;

(2) Economics and social sciences;

(3) Industry;

(4) Labor;

(5) Public affairs, education, and manpower training; and

(6) Unemployed or underemployed scientists, engineers, and technicians.

(b) (1) Of the members first appointed, six shall be appointed for a term of one year, six shall be appointed for a term of two years, and six shall be appointed for a term of three years, as designated by the Director at the time of appointment.

(2) Any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed only for the remainder of such term. Members shall be eligible for reappointment and may serve after the expiration of their terms until their successors have taken office.

(3) Any vacancy on the Panel shall not affect its powers, but shall be filled in the same manner by which the original appointment was made.

(4) Each appointed member of the Panel shall, while serving on business of the Panel, be entitled to receive compensation at a rate not to exceed the daily rate prescribed for GC–18 of the General Schedule under section 5332 of title 5, United States Code, including traveltime, and while so serving away from their homes or regular places of business, they may be allowed travel expenses, including per diem in lieu of subsistence, in the same manner as the expenses authorized by section 5703(b) of title 5, United States Code, for persons in the Government service employed intermittently.

(5) Eleven of the voting members of the Panel shall constitute a quorum necessary for the transaction of official business.

(c) The Panel shall annually elect one of its appointed members to serve as chairman until the next election. The Panel shall meet at the call of the chairman, but not less often than four times a year. The Associate Director for Civil Service Systems: the Chairman of the Council of Economic Advisers; the Assistant Secretary of Commerce for Science and Technology; the Assistant Secretary of Labor for Manpower; the Assistant Director for Economic Affairs of the United States Arms Control and Disarmament Agency; the Administrator of the National Aeronautics and Space Administration; the Director of Defense Research and Engineering; the Chairman of the Atomic Energy Commission; the Commissioner of Education; and the Assistant Secretary of Health, Education, and Welfare for Health and Scientific Affairs shall be ex officio nonvoting members of the Panel.

(d) A representative designated by the National Governors Conference; a representative designated by the National Association of Counties; and a representative jointly designated by the National League of Cities and the United States Conference of Mayors shall be voting ex officio members of the Panel.

(e) The Panel shall—

(1) advise the Director, with respect to the discharge of his responsibilities under this title;

(2) review and evaluate the effectiveness of Federal programs under this title;

(3) prepare and submit such interim reports as it deems advisable, and an annual report of its findings and recommendations, together with any recommendation for changes in the provisions of this title; and

(4) disseminate its findings and recommendations to such extent and in such manner as it deems effective and advisable.

(f) The Director shall make available to the Panel such staff, information, and other assistance as it may require to carry out its activities.

RESEARCH ON TRANSITION TO CIVILIAN PROGRAMS

SEC. 304. From funds available pursuant to section 313, the Foundation is authorized to—

(1) make grants to, or to enter into contracts with, academic institutions, nonprofit institutes and organizations, public agencies, and private business firms, for the conduct of research designed to study and appraise the social, economic, and managerial aspects of transition from defense research and engineering activities to civilian-oriented research and engineering activities; and

(2) disseminate publicly, or enter into contracts with academic institutions, nonprofit institutes and organizations, public agencies, and private business firms for the public dissemination of, the significant results of such research conducted under subsection (1) of this section, as appear likely to aid in the transition from defense research and engineering activities to civilian-oriented research and engineering activities, particularly those directed toward the resolution of priority national problems, as identified under section 103.

ASSISTANCE TO STATE AND LOCAL GOVERNMENTS

SEC. 305. (a) From funds available pursuant to section 313, the Foundation is authorized to make grants to State and local governments and regional governmental agencies for—

(1) the conduct of programs at the State, local, or regional level, which are designed to facilitate the transition of scientific and technical activities to civilian programs within the particular State, local, or regional areas; and

(2) the hiring of currently unemployed or underemployed scientists, engineers, and technicians to work within State, local, or regional governmental agencies in positions which utilize their technical skills.

(b) The Director shall prescribe applicable salary rates for different types of technical positions in different areas of the country, none of which shall exceed the rate paid a person occupying grade GS–13, step 1.

(c) No one hired by a State, local, or regional governmental agency under this section may—

(1) receive compensation from Federal funds at a rate which exceeds the applicable rate as set by the Director; or

(2) remain in a position compensated under this section for a period in excess of two years.

TRAINING GOVERNMENT OFFICIALS

SEC. 306. (a) From funds available pursuant to section 313, the Foundation is authorized to make grants to, and to enter into contracts with, academic institutions, nonprofit institutes and organizations, and private business firms, for the purpose of their planning, developing, strengthening, or operating training programs for officers and employees of Federal, State, and local government who will be responsible for, or participate in, determining or administering government-assisted or conducted programs for civilian, socially oriented research and engineering activities.

(b) Such training programs will be directed at (1) acquainting the program participants with the potential contributions of science and technology to the resolution of public problems in such priority areas as are identified pursuant to this Act; and (2) teaching such participants how to utilize scientific and technical talent in an effective and economical manner.

(c) Organizations conducting such training programs may not charge any fee to a participant or participant's agency, which is not permitted by such regulations as the Foundation may prescribe.

(d) Participants in such training programs will be selected by the grantee or contractor from nominations made by interested governmental agencies, in accordance with such criteria and regulations as the Foundation may prescribe.

GOVERNMENT EMPLOYEE PARTICIPATION

SEC. 307. (a) From funds available pursuant to section 313, the Foundation is authorized to transfer funds to other departments and agencies of the Federal Government, and to make grants to, and to enter into contracts with, State, regional, and local government agencies for the purpose of paying the travel and subsistence expenses of government employees incurred in connection with their participation in training programs carried out under section 306.

(b) Executive agencies of Federal, State, and local governments are encouraged, to the extent consistent with efficient administration, to provide opportunities for appropriate officers and employees of such agencies to participate in training programs carried out under section 306.

COMMUNITY CONVERSION CORPORATIONS

SEC. 308. (a) From funds available pursuant to section 313, the Foundation is authorized to make grants to, or enter into contracts with, local governments or nonprofit corporations for the establishment and operation of community conversion corporations, which—

(1) function as nonprofit corporations:

(2) operate under the direction of a Board of Directors which is representative of a wide range of community interests, including citizen group and consumer participation, selected in accordance with such criteria as may be prescribed by the Foundation;

(3) conduct, contract for, or stimulate the conduct of civilian-oriented research and development activities which focus on the particular problems, or draw on the particular resources, of the community within which the corporation is located; and

(4) give preference in personnel recruitment to unemployed or underemployed scientists, engineers, and technicians, provided that they meet necessary qualifications for effective job performance.

(b) Existing nonprofit corporations are eligible to apply at community conversion corporations for financial assistance under this section, if such corporations meet the qualifications set forth under subsection (a) of this section.

(c) Each community conversion corporation receiving a grant or contract from the National Science Foundation is encouraged to seek additional financial support and payment for services from other agencies of Federal, State, or local government, private foundations, community organizations, and private business firms; and the National Science Foundation will give preference in awarding such community conversion grants or contracts to those corporations which show a likelihood of being able to obtain such additional financial support.

(d) The receipt by a community conversion corporation of a grant or contract from the National Science Foundation under this section does not make said corporation ineligible to receive other categories of grants and contracts from the Foundation.

(e) In awarding grants or contracts to community conversion corporations for specific research and development projects, the Foundation will give preference to those projects which offer the most promise of aiding in the resolution of national problems in priority areas as identified under section 103.

JOB TRANSITION PROGRAMS

SEC. 309. (a) From funds available pursuant to section 313, the Foundation is authorized, upon application, to make job transition grants to nonprofit institutes and organizations and to private business firms in order to enable them to hire scientists, engineers, and technicians for work on projects for which they are not yet fully qualified. Each such application shall contain provision to assure that—

(1) such projects shall consist of civilian-oriented research and engineering activities;

(2) the personnel participating in such job transition programs shall be selected from unemployed or underemployed applicants by the grantees, in accordance with such criteria and regulations as shall be prescribed by the Foundation, including the requirement that the participants shall have a reasonable prospect of achieving full job qualification within a stipulated period of time;

(3) the personnel participating in such programs shall be afforded a reasonable opportunity to attend specialized training courses when such courses are deemed by the grantee to be necessary to supplement the on-the-job training of the participant; and

(4) no one may continue, or be selected, to participate in a job transition program under this section after such time that he receives a career transition fellowship under section 310.

(b) All significant scientific and technical information which is generated by the personnel participating in such programs shall be made available for public use, in accordance with such procedures as shall be prescribed by the Foundation.

CAREER TRANSITION FELLOWSHIPS

SEC. 310. (a) From funds available pursuant to section 313, the Foundation is authorized to award career transition fellowships to unemployed or underemployed scientists, engineers, and technicians to enable them to pursue a course of study through which they can acquire specialized technical knowledge and skills in fields other than the ones in which they are already proficient.

(b) The Foundation shall allocate fellowships under this section in such manner, insofar as practicable, as will—

(1) attract highly qualified applicants; and

(2) provide an equitable distribution of such fellowships throughout those areas of

the United States which are experiencing a higher than average level of technical unemployment.

For the purpose of this section, the Foundation shall consult with the Secretary of Labor to establish for each region in the United States the average level of technical unemployment.

(c) The Foundation shall award at least 10 per centum but not to exceed 20 per centum of the fellowships awarded under this section to scientists, engineers, and technicians who have completed their formal academic education within a five-year period prior to award of the fellowship, as certified in accordance with such regulations as the Foundation may prescribe.

(d) The Foundation shall pay to persons awarded fellowships under this section such stipends (including such allowances for subsistence, health insurance, relocation expenses, job placement expenses, and other expenses for such persons and their dependents) as it may prescribe by regulation.

(e) Fellowships shall be awarded under this section upon application made at such times and containing such information as the Foundation shall by regulation require.

PLACEMENT ASSISTANCE

SEC. 311. (a) From funds available pursuant to section 313, the Foundation is authorized to transfer funds to other departments and agencies of the Federal Government, and to make grants to, and to enter into contracts with scientific, professional, technical, and business associations, and labor unions in order to establish and operate placement programs for unemployed or underemployed scientists, engineers, and technicians.

(b) Such grants and contracts may include provision for relocation expenses of the individual participant and his family when necessary, in accordance with such regulations as the Foundation shall prescribe.

(c) Grantees and contractors shall select applicants for such placement assistance in accordance with such criteria and regulations as the Foundation shall prescribe.

(d) No one shall be eligible for placement assistance under this section when he is—

(1) a participant in a job transition program under section 309; or

(2) a recipient of a career transition fellowship under section 310.

EDUCATION PROGRAM

SEC. 312. From funds available pursuant to section 313, the Foundation is authorized to make grants to, and to enter into contracts with, academic institutions, nonprofit institutes and organizations, and private business firms, for the purpose of their planning, developing, strengthening, or carrying out education programs which design courses and curriculums intended to prepare students for careers in civilian, socially oriented research and engineering activities, in areas such as pollution control, mass transit, solid waste disposal systems, public utilities, public safety systems, and health care technology.

AUTHORIZATION OF APPROPRIATIONS

SEC. 313. (a) To carry out the provisions of this title, there are authorized to be appropriated $50,000,000 for the fiscal year ending June 30, 1973; $75,000,000 for the fiscal year ending June 30, 1974; and $75,000,000 for the fiscal year ending June 30, 1975.

(b) Funds appropriated pursuant to subsection (a) of this section shall remain available for obligation, for expenditure, or for obligation and expenditure, for such period or periods as may be specified in Acts making such appropriations.

TITLE IV—PROTECTION OF PENSION RIGHTS OF SCIENTISTS AND ENGINEERS

SEC. 401. The Congress finds that because of rapid and frequent changes in Federal procurement objectives and policies, engineering and scientific personnel suffer a uniquely high rate of forfeiture of pension benefits under private pension plans, as such employees tend to change employment more frequently than other workers. The Congress declares that it is the policy of the United States to seek to protect scientists and engineers from such forfeitures by making protection against forfeiture of pension credits, otherwise provided, a condition of compliance with Federal procurement regulations.

SEC. 402. The Director shall develop, in consultation with appropriate professional societies and heads of interested Federal departments and procurement agencies, recommendations for modifications of Federal procurement regulations to insure that scientists, engineers, and others working in associated occupations employed under Federal procurement, construction, or research contracts or grants shall, to the extent feasible, be protected against forfeitures of pension or retirement rights or benefits, otherwise provided, as a consequence of job transfers or loss of employment resulting from terminations or modifications of Federal contracts or procurement policies.

SEC. 403. Recommended changes in procurement regulations shall be developed by the Director, as required by section 402, within six months after enactment of this Act, and shall be published in the Federal Register within fifteen days thereafter as proposed regulations subject to comment by interested parties.

SEC. 404. After publication under section 403, receipt of comments, and such modification of the published proposals as the Director deems appropriate, the recommended changes in procurement regulations developed under this title shall be adopted by each Federal department and procurement agency within sixty days thereafter unless the head of such department or agency determines that such changes would not be in the national interest or would not be consistent with the primary objectives of such department or agency.

TITLE V—GENERAL PROVISIONS

DEFINITIONS

SEC. 501. As used in this Act:

(1) The term "academic institution" means any United States institution of higher education as defined in sections 491 and 1201 of the Higher Education Act of 1965.

(2) The term "Administration" means the Civil Science Systems Administration.

(3) The term "Assistant Director" means an Assistant Director of the National Science Foundation.

(4) The term "Associate Director" means the Associate Director for Civil Science Systems of the National Science Foundation.

(5) The term "civil science system" means any set of interrelated technological applications which are designed to perform certain public services, as defined in subsection (11) of this section.

(6) The term "civilian research and engineering activities" means all nondefense research and engineering activities as determined pursuant to regulations of the Director of the Foundation after consultation with the Directors of the Office of Management and Budget and the Office of Science and Technology.

(7) The term "Council" means the Civil Science Systems Advisory Council.

(8) The term "defense research and engineering activities" means any activity which involves—

(i) research, development, or engineering, including necessary supporting services, performed under grant from, or contract with, the Department of Defense or under subcontract to such a grant or contract; or

(ii) the construction, reconstruction, repair, or installation of any building, plant, structure, facility, or equipment connected or necessary to such research, development, engineering, or supporting services.

(9) The term "Deputy Associate Director" means the Deputy Associate Director for Civil Science Systems of the National Science Foundation.

(10) The term "Director" means the Director of the National Science Foundation.

(11) The term "Federal executive agency" means any department, agency, or independent establishment in the executive branch of the Government, including any wholly owned Government corporation.

(12) The term "Foundation" means the National Science Foundation.

(13) The term "Panel" means the Advisory Panel on Transition of Scientific and Technical Manpower to Civilian Programs.

(14) The term "public service" means any set of interrelated organizations and activities which collectively perform certain related functions normally associated with life in our society, including but not limited to such public services as health care, public safety, public sanitation, pollution control, housing, transportation, public utilities, communications, and education.

(15) The term "State" includes each of the several States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Trust Territory of the Pacific Islands.

ADMINISTRATIVE PROVISIONS

SEC. 502. (a) The Director of the Foundation is authorized, in furtherance of the purposes and provisions of this Act, to—

(1) appoint such additional personnel as he deems necessary to carry out this Act;

(2) appoint such advisory committees as he deems advisable;

(3) procure the services of experts and consultants in accordance with section 3109 of title 5, United States Code; and

(4) use the services, personnel, facilities, and information of any other Federal department or agency, any agency of a State, or political subdivision thereof, or any private research agency with the consent of such agencies, with or without reimbursement therefor.

(b) Upon request by the Director, each Federal department or agency is authorized to make its services, personnel, facilities, and information, including suggestions, estimates, and statistics, available to the greatest practicable extent to the Director, or his designee, in the performance of his functions under this Act.

(c) The Director shall establish such additional divisions or offices within the Foundation as he deems necessary to carry out his functions under this Act.

PAYMENTS AND WITHHOLDING

SEC. 503. (a) Payments under this Act may be made in installments, in advance, or by way of reimbursement, with necessary adjustments on account of underpayment or overpayment.

(b) Whenever the Director, after giving reasonable notice and opportunity for hearing to a grantee or contractor under this Act, finds—

(1) that the program or project for which such grant or contract was made has been so changed that it no longer complies with the provisions of this Act; or

(2) that, in the operation of the program or project, there is failure to comply substantially with any such provision—

the Director shall notify such grantee or contractor of his findings and no further payments may be made to such grantee or contractor by him until he is satisfied that such noncompliance has been, or will promptly be, corrected. The Director may authorize the continuance of payments with respect to any projects pursuant to this Act which are being carried out by such grantee or contractor and which are not involved in the noncompliance.

RECORD AND AUDIT

SEC. 504. (a) Each recipient of assistance under this Act pursuant to grants received, agreements entered into, or contracts entered into under other than competitive bidding procedures shall keep such records as the Director shall prescribe, including records which fully disclose the amount and disposition of the proceeds of such assistance, the total cost of the project or undertaking in connection with which such assistance is given or used, and the amount of that portion of the cost of the project or undertaking supplied by other sources, and such other records as will facilitate an effective audit.

(b) The Director and the Comptroller General of the United States, or any of their duly authorized representatives, shall have access for the purpose of audit and examination to any books, documents, papers, and records of the recipients that are pertinent to the assistance received under this Act.

PATENT RIGHTS

SEC. 505. (a) Each grant, contract, or other arrangement executed pursuant to this Act which relates to scientific research or engineering shall contain provisions governing the disposition of inventions produced thereunder in a manner calculated to protect the public interest and the equities of the individual or organization with which the grant, contract, or other arrangement is executed. Nothing in this Act shall be construed to authorize the Foundation to enter into any contractual or other arrangement inconsistent with any provision of law affecting the issuance or use of patents.

(b) No officer or employee of the Foundation shall acquire, retain, or transfer and rights, under the patent laws of the United States or otherwise, in any invention which he may make or produce in connection with performing his assigned activities and which is directly related to the subject matter thereof. This subsection shall not be construed to prevent any officer or employee of the Foundation from executing any application for patent on any such invention for the purpose of assigning the same to the Government or its nominee in accordance with such rules and regulations as the Director may establish.

The title was amended, so as to read: "A bill to amend the National Science Foundation Act of 1950 in order to establish a framework of national science policy and to focus the Nation's specific policy and to focus the Nation's scientific talent and resources on its priority problems, and for other purposes."

Mr. KENNEDY. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. JAVITS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. KENNEDY. Mr. President, now that this bill has passed, I just want to take one very brief moment to thank the members of the National Science Foundation Subcommittee and the members of the full committee, especially the Senator from Colorado (Mr. DOMINICK), who spent a great deal of time on the measure, and the Members on my own side of the aisle who worked on this proposal.

I particularly want to express my appreciation to the staff members who spent a great deal of time on this measure. Roy Millenson, the minority staff member; Tom D'Alonzo, on Senator DOMINICK's staff; Herbert Jasper, for Senator MONDALE; and Ellis Mottur from my own staff. All of these men made a valuable contribution on this enormously technical measure. Others like Michael Gordon, Jonathan Steinberg, Robert Maynard, also contributed. It was an enormously complicated, technical piece of legislation; they all served the committee and the Senate very well in fulfilling their responsibilities, and I express my appreciation to all of them.

Mr. MANSFIELD. Mr. President, the passage of S. 32, is a very significant step in the right direction in the whole process in reordering the priorities of this Nation, in assuring that these new directions of investment of the Nation's limited resources will not be at the expense of the workingman. If this Nation is going to shift direction so that it can have full employment at time other than when it is at war or preparing for war; then the basic infrastructure of the economy of this country must be changed. That takes long-term planning and redirecting of the resources, the rechanneling of the professions so that the specialties in science are useful for peacetime purposes as well as wartime purposes.

S. 32 is a significant achievement along these lines. It is a bill that looks to the future by beginning today. It is a bill that hopefully will receive enactment in this Congress before adjournment. I think that the Senator from Massachusetts (Mr. KENNEDY) deserves the gratitude of the Nation as well as the Senate for conceiving and nurturing this bill to passage.

The matter of science policy has been neglected too long in this country. The science policy of this country has been really determined by who had the money to spend, and the vitality of scientific efforts were determined by that money. It has been to a great extent the Department of Defense and the ease with which it has been able to get resources from Congress that has determined by default the science policy of this country. I think the Congress realizes that the vitality and strength of our society can be enhanced by a more positive attitude toward science policy and the people in science. Senator KENNEDY's leadership in this matter has been outstanding. In addition, I wish to thank the distinguished Senator from Colorado (Mr. DOMINICK) for his constructive proposals and the cooperation he afforded the leadership in bringing them to the Senate.

As always, the Senator from New York (Mr. JAVITS), the ranking member on the Labor Committee, has contributed to this as to all measures that come from the Labor Committee in his usual fashion.

I wish to thank the Senate as a whole for the cooperation they have afforded in permitting the Senate to move so swiftly on this measure.

WAR POWERS OF THE CONGRESS AND THE PRESIDENT

Mr. FULBRIGHT. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on S. 2956.

The PRESIDING OFFICER (Mr. BEALL) laid before the Senate the amendments of the House of Representatives to the bill (S. 2956) to make rules governing the use of the Armed Forces of the United States in the absence of a declaration of war by the Congress, which were to strike out all after the enacting clause and insert:

That the Congress reaffirms its powers under the Constitution to declare war. The Congress recognizes that the President in certain extraordinary and emergency circumstances has the authority to defend the United States and its citizens without specific prior authorization by the Congress.

SEC. 2. It is the sense of Congress that the President should seek appropriate consultation with the Congress before involving the Armed Forces of the United States in armed conflict, and should continue such consultation periodically during such armed conflict.

SEC. 3. In any case in which the President without specific prior authorization by the Congress—

(1) commits United States military forces to armed conflict;

(2) commits military forces equipped for combat to the territory, airspace, or waters of a foreign nation, except for deployments which relate solely to supply, repair, or training of United States forces, or for humanitarian or other peaceful purposes; or

(3) substantially enlarges military forces already located in a foreign nation;

the President shall submit promptly to the Speaker of the House of Representatives and to the President of the Senate a report, in writing, setting forth—

(A) the circumstances necessitating his action;

(B) the constitutional, legislative, and treaty provisions under the authority of which he took such action, together with his reasons for not seeking specific prior congressional authorization;

(C) the estimated scope of activities; and

(D) such other information as the President may deem useful to the Congress in the fulfillment of its constitutional responsibilities with respect to committing the Nation to war and to the use of United States Armed Forces abroad.

SEC. 4. Nothing in this Act is intended to alter the constitutional authority of the Congress or of the President, or the provisions of existing treaties.

And amend the title so as to read: "An act concerning the war powers of the Congress and the President."

Mr. FULBRIGHT. Mr. President, I move that the Senate insist on its amendments and request a conference with the House of Representatives on the disagreeing votes of the two Houses thereon.

The motion was agreed to, and the Presiding Officer appointed Mr. FULBRIGHT, Mr. CHURCH, Mr. SPONG, Mr. CASE, and Mr. JAVITS conferees on the part of the Senate.

Mr. JAVITS. Mr. President, will the Senator yield briefly to me on this matter?

Mr. FULBRIGHT. I yield to the Senator from New York.

Mr. JAVITS. Mr. President, the Senate should know that this bill which has just gone to conference is the war powers bill which we debated here at length, and which was well considered in, I think, an extremely high-level way. The House of Representatives chose to take that bill from the calendar and substitute a bill which the House had theretofore passed directed to the same subject, which was very different from the Senate bill; and our chairman quite properly, as a matter of comity with the House of Representatives, has had conferees appointed, and I thoroughly agree with that. It is our duty to do so.

But I think it would be deceptive if I did not state, having been so importantly concerned with the bill for myself and the major cosponsors, Senator SPONG of our committee, Senator STENNIS, the chairman of the Armed Services Committee, and Senator EAGLETON, that the House version is very, very different, of a totally different order of construction, and different in every conceivable way from what the Senate passed, and therefore I would not wish the bill to be referred to conference without emphasizing that point, that the two proceed on completely diverse principles.

Every Senator should know that, and we should not have some impression that this is just a bill that can be taken to conference and somehow reconciled in the normal way between the two Houses. Deep questions of principle as to the powers of Congress are involved. We have to do our best to wrestle with them, but I thought it was appropriate to spread this well on the record.

Mr. FULBRIGHT. Mr. President, I, of course, completely agree with the statement of the Senator from New York. The Senate will note that I reached down and put two of the principal sponsors of the bill, athough they are relatively new members of the committee, the Senator from New York (Mr. JAVITS) and the Senator from Virginia (Mr. SPONG), on the conference committee, and I have no doubt that the Senate conferees will be very strong in support of the Senate version of this legislation.

Mr. JAVITS. I am very grateful.

Mr. FULBRIGHT. I am very pleased that the Senator raised this point.

ORDER OF BUSINESS

(The following colloquy, which occurred during the consideration of the National Science Foundation Act Amendments, is printed at this point in the RECORD by unanimous consent:)

THE PRESIDENT'S VETO MESSAGE

Mr. HUMPHREY. Mr. President, earlier today, I made a brief comment on the President's veto of the appropriation bill for the Departments of Labor and Health, Education, and Welfare, and related agencies. This bill has had a great deal of comment today, and the veto message has had some comment. I should like to add mine.

First of all, I believe that the action of the President is uncalled for, was indefensible, and is not in the interests of the American people.

I noted with considerable interest what the President had to say in his veto message. He said:

> This Administration is second to none in its concern for America's health, education and manpower program needs. From the very beginning we have consistently proposed and supported desirable programs in both the health research and health service areas, and we will continue to do so.

That is in his veto message today.

My answer, Mr. President, is that this is bunk—pure and simple bunk—and the American people know it.

President Nixon has failed to fulfill his promise to provide adequate health care for all. He has vetoed much needed legislation and impounded millions of dollars appropriated by Congress for health programs. He has slashed funds for the Nation's hospitals and made little effort to meet the critical health manpower crisis and ordered cutbacks in Federal spending for medical research health programs. Supposedly, all of this is in the name of economy. I think it would take a good deal of geometrical gymnastics to be able to justify cuts in health services in light of the health needs of this Nation.

What has the President vetoed in the present measure? For example, the President, in this appropriation bill, vetoed occupational safety and health measures. The Senate bill provided $10,793,000 over the budget. Surely, that money is needed. The President vetoed the mental health appropriation. The committee had recommended $238 million more than the budget. He vetoed the psychiatric training funds. He vetoed funds for the staffing of community mental health centers, despite the fact that we are in a drug addiction epidemic in this country and that these mental health centers are vital to the treatment of drug addicts.

He vetoed the funds for the construction of community mental health centers; and every community in this country, with few exceptions, is begging for this assistance. He vetoed funds for narcotics addiction and drug abuse control. The Senate bill provided $28,702,000 over the budget. Is there any Member of the Senate who believes that we do not need that money for narcotics addiction and drug abuse control?

He vetoed funds for alcoholism prevention control; mental health programs for children; regional medical programs—which, by the way, have been authorized for years and which are desperately needed throughout this country.

He vetoed hospital construction. The Senate bill included $112,200,000 for the construction of hospitals. Everybody knows that we need these hospitals. We need them desperately. We have thousands of hospital beds that do not meet Federal standards. The Federal Government is in violation of the law. The President of the United States has taken an oath to uphold the Constitution. That means he is supposed to do something about the law—this law and order administration.

He has vetoed funds for comprehensive health services. The Senate bill included an additional $20 million for the kind of programs that are needed for comprehensive health centers in rural America and urban America.

He has vetoed funds for the migrant health program; maternal and child health; National Health Service Corps; venereal and other communicable disease programs; lead-based paint poisoning prevention, which has taken its toll of children in this country; and programs for occupational health.

These are just a few. That is what the President did, in the name of controlling inflation.

Yet, the same administration sent Congress a defense budget that has billions added to it. I am not for wild cuts in the defense budget. I happen to believe in prudent reductions. I have even taken on Democratic candidates with respect to this issue. But, Mr. President, this country is not going to be caught up in the flames of inflation because the education and the health of the people are taken care of. That is pure, unadulterated bunk.

Mr. MAGNUSON. Mr. President, will the Senator yield?

Mr. HUMPHREY. If the President of the United States wants to go to the country on this issue then I am ready to join the battle. He has recruited another man "full steam ahead for George." I was going to hold off for about a week but I am entering the fight right now to be of help to the people of this country. This is an unconscionable veto.

Mr. MAGNUSON. As a matter of fact, the educational needs, and taking care of the health and welfare of the people of this country, if we do not do it, we will have more inflation——

Mr. HUMPHREY. The Senator is so right.

Mr. MAGNUSON. It will cost more, right?

Mr. HUMPHREY. The Senator is so right. By the way, the Senator from Washington has been a lifesaver for the American people. I am happy he is in the Chamber now because he and his companion on the minority side, the Senator from New Hampshire (Mr. COTTON), have both rendered great service to this country as the chairman and the ranking member of the subcommittee that brings this bill to us.

Mr. President, if President Nixon cares about the health of the American people, he would have signed this legislation.

If President Nixon had cared about the dilapidated and poorly equipped hospitals in this country, he would have signed this legislation.

If President Nixon had cared about the education of the handicapped and of mentally retarded children, he would have signed this legislation.

I defy the President to show us where this legislation will bring inflation.

Mr. President, do you mean to tell me that we cannot take care of the mentally retarded children in this country? Do you mean to tell me that we should not be taking care of the handicapped. Good God, if we have to make cuts in these fields, we should get out of here.

If President Nixon really cares about building libraries, providing vocational education and funding vocational education programs, he would have signed the legislation.

If he really wants to declare war on drug abuse and alcoholism, it will take more than prayers in the White House—important as that is, and I support that—it takes money, too.

I accuse this administration of failure to act on the verbal commitments to the American people. That is political hypocrisy. It is unbelievable that the President would claim his administration is second to none in caring for the health and welfare of the people of this country when his record is riddled with vetoes and cutbacks.

The slogan of the administration is, as I said the other night, "No, no. Go slow. Not now. Veto." That is it. Put it down there as a kind of litany.

The only thing that has not been cut back in this administration is the number of professional P.R. men. They have added them all on, so anxious are they to publicize this administration's false claims of excellence.

So I say, fire one of those P.R. men so that we can feed a hungry child. I say cut back on the number of budget cutters so that we can build another hospital.

I say, come clean with the people and admit that we are neglecting many of those most in need.

I thought President Nixon would sign this bill. I have not said a word about it because I did not believe that, at least in this election year, he could be so callous, so indifferent—and so foolish.

Mr. President, I have had 9 minutes to speak here. Never have I used 9 minutes of my life for a more worthwhile purpose.

There is no defense that the President of the United States and his aides can make for this veto. None.

I ask this administration to bring its economists up here and prove to us that this bill adds to inflation. For every nickel of inflation, I will show you, Mr. President, a life that is saved. For every dime of inflation, Mr. President, I will show you thousands of children who will be educated.

This country needs a crash program for education.

The PRESIDING OFFICER (Mr. BEALL). The time of the Senator from Minnesota has expired.

Mr. HUMPHREY. That is all I need.

Mr. SCOTT. Mr. President, I yield myself 10 minutes.

THE PRESIDING OFFICER. Does the Senator ask unanimous consent for his request?

Mr. SCOTT. Mr. President, I ask unanimous consent that I may proceed for 10 minutes.

Mr. HUMPHREY. Mr. President, I object. Nine minutes. Go ahead.

Mr. SCOTT. Mr. President, I am overwhelmed by the very thought that I would have enough ideas to exceed the Senator from Minnesota by 1 minute. I have enough good ideas to exceed him indefinitely.

Mr. President, the Senator from Minnesota was out of the Chamber earlier today when we passed the continuing resolution providing for all of these services of which the Senator complains. Therefore, we will go ahead in accordance with the previous decisions made up to now as to the funding of each of these programs.

I also would like to say, in view of the fact that the distinguished Senator from Minnesota has spoken of his enthusiasm for his friend, the candidate, that his friend, the candidate, has submitted only four bills to the Committee on Labor and Public Welfare dealing with mental retardation and education and all the other matters for which tears of compassion flowed so unrestrainedly down the face of my friend from Minnesota. On not one of these has the Senator from South Dakota asked for a hearing. This represents the concern of the Senator from South Dakota (Mr. McGOVERN).

Talk is cheap. Talk is being indulged in cheaply. But, on the floor and in the committee, the Senator from South Dakota has failed the people of this Nation. He has failed to carry through with his resplendent but non-responsive promises.

Mr. President, when the President vetoed this bill—and I support most of the programs in the bill—he gave his reasons.

I might point out in mentioning the reasons, that this administration has done more in the field of mental health than any previous administration—and will do more.

This administration has done more for education than any previous administration—and will do more.

This administration has done more for veterans, for the working people, for job creation, and for the entire secondary and college education programs—and will do more.

This administration recommended for the first time construction and rehabilitation aid to private schools in this country—and will do more.

This administration is prepared to put that record against all the promises and all the easily voiced complaints which are designed to appeal to emotion and to delude the voter who runs and reads, perhaps too carelessly or too quickly, the actual record made by this Congress.

The President points out in his veto message:

> Because this is currently an open-ended program, this Congressional *inaction* could require a later supplemental reaching as high as $3.5 billion. By increasing the face amount of the bill on the one hand and failing to place a limitation on payments for social services on the other, the Congress has produced a budget overrun that could exceed *$5 billion*.

Mr. President, the Senator from Minnesota says he challenges the President to show him how that contributes to inflation.

If the Senator will get out his little adding machine, he can convince himself that $5 billion over the budget contributes to inflation, because $5 billion adds to the deficit, it adds to the debt, and it increases the cost of everything the Senator's constituents buy. It even increases the cost of everything the Senator from South Dakota buys, because while the public is not buying his ideas, he, too, has to go into the marketplace and buy his goods and he would have paid more for them under this bill.

The President points out:

> No program has higher priority than continued expansion of the purchasing power of all the people.

That—

> We have cut inflation in half, but spending such as this bill would require would clearly undermine that progress.
>
> We have reduced Federal income taxes by 26 percent for a family of four making $10,000 a year but spending such as this would undermine that progress.
>
> We have achieved conditions in which the purchasing power of the average production worker with three dependents has gained four percent in one year, the best increase since 1964, but spending such as this would undermine that progress.

Now the President pointed out that in the budget request he submitted a proposed increase of $2.1 billion for HEW. Not a reduction, Mr. President. One would think, from what the Senator from Minnesota has said, that we have turned our backs on the poor, the needy, the underprivileged, and the deserving of this country.

We did not turn our backs. We turned and faced them, and we faced them with a proposal that we would spend $2.1 billion more than we had spent before. However, Congress, seeing a good thing, promptly added to it $1.8 billion on top of that. It is not the good things to which the President objects. It is the unwise things which have been added to the good things which undermine the purchasing power of the dollar.

So the President proposes that the line items in the bill should not, in the aggregate, exceed the budget request. And this could be accomplished either by revising the recommendations for each of the items, or by including a general provision in the bill which would limit spending to this overall aggregate amount.

The President proposes that Congress put a ceiling on this program and the other programs and that we protect the purchasing power of the average working man in this country.

One cannot get up and say, "I am for giving all of the people of this country everything they want, and I do not want to make them pay any taxes." One cannot do it. He can argue that on the stump, but he cannot make sense while he is arguing it. He can only hope that the person listening will be moved before he thinks. However, that is underestimating the intelligence of the American people. They do think, and they know that when we spend more than we have, we have to pay for it in the end. The voter is the one who pays, and he knows that.

I suggest to the Senator from Minnesota that his friend, the candidate, if he is really interested in these programs, he should have asked for hearings. If he is really interested and means what he says, he ought to come in here and propose the $6,500 guaranteed annual income for every family in this country and put one-half of the people in the United States on the welfare rolls, which is what that would do.

He would see how far he would get.

The Senator even proposed a defense cut of $4 billion, and he was voted down by the Senate by about 4 to 1. If he cannot cut it by $4 billion, how does he expect to put half of the people on the welfare rolls. The Senate will not let him do it. That is why he remains away from the Senate on necessary business—necessary indeed. Necessary for the country that we legislate without that kind of assistance, necessary that we not be asked to put half of the people in this country on the welfare rolls, necessary for the safety of the country that he not testify on these various bills he stuck in.

No, Mr. President, if we really want to help the people of this country, do not put on them a burden of inflation so heavy that, while they think they are reaching for goodies, their backs are broken by the endeavors, the meaningless endeavors, of those who have loaded them with the purported goodies in the first place.

Let us do what we can afford to do. Let us do more than we have ever done before. Let us exceed our record in the general welfare area by doing more than has ever been done before. But let us not burden the people of this country with so heavy an inflationary load that their taxes will take away from them that with which they have been able to buy goods in the marketplace.

The PRESIDING OFFICER. Who yields time?

The Senator from Colorado has 21 minutes remaining on the bill. The time of the Senator from Massachusetts has been consumed.

Mr. DOMINICK. Mr. President, this has been an enlivened and heated debate, if I might say so. I would like to get back on the bill if I can.

Mr. MAGNUSON. Mr. President, would the Senator from Colorado yield me 1 minute?

Mr. DOMINICK. Mr. President, I yield 1 minute to the Senator from Washington.

The PRESIDING OFFICER. The Senator from Washington is recognized for 1 minute.

Mr. MAGNUSON. Mr. President, I, too, want to get back on the bill. However, I could not sit here and listen to a recital of what happened on the HEW bill without standing up and saying something.

The Senator from Pennsylvania says that this administration has done a great deal more than has ever been done before in the field of health, education, and welfare.

If we had followed for the last 4 years the President's budgets in the field of health, education, and welfare, we would have been back where we started 5 years ago. So we have added to it. The Senate passed a ceiling on this bill on social services. The House would not accept it. I did not hear one word from the White House about the House of Representatives not accepting that. And that is undoubtedly, I think, what the Senator from Minnesota was talking about—health, education, part of the welfare, rehabilitation, and those things.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. MAGNUSON. Mr. President, I could stand here all afternoon and give budget figures that were lower than the year before. Surely, these came out with little increases. The increases were added here by the Senate and voted for by most Republicans, but not by the House.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. MAGNUSON. Mr. President, when Mr. Nixon gets up and makes his acceptance speech, he will say piously, "I did all this for the people."

I would like to have the television cameras turned around behind the President so that they would see the papers and see what he really did. They would see that he vetoed the measure and would see all the other things that he has not been doing for the neglected people.

(This marks the end of the colloquy which occurred during the debate on the National Science Foundation Act Amendments and which by unanimous consent was ordered to be printed in the RECORD at this point.)

INTERIM AGREEMENT ON LIMITATION OF STRATEGIC OFFENSIVE WEAPONS

Mr. FULBRIGHT. Mr. President, statements have appeared in the press in recent days to the effect that the Soviet Union "lied" to the United States, on the number of submarines which the Soviet Union had "under construction" at the time the President signed the interim agreement on the limitation of strategic offensive arms. Quoting from one press story, reporters were told that—

> The Soviet Union claimed to have 48 *Yankee* class submarines. while "firm intelligence" puts its strength at only 42.

The implication of this statement is that the U.S. negotiators relied on this claimed Soviet strength and thus gave the Soviet Union an artificially strong position from which to bargain, and that our representatives were deceived and unaware of the facts.

The facts are as follows:

First. Dr. Kissinger at a press conference in Moscow on May 26, had the following colloquy:

> Dr. KISSINGER . . . The base number of Soviet submarines is in dispute. It has been in dispute in our intelligence estimate exactly how much it is, though our intelligence estimates are in the range that was suggested.
>
> Question: 41 to 43?
>
> Dr. KISSINGER. I am not going to go beyond what I have said. It is in that general range. The Soviet estimate of their program is slightly more exhaustive. They, of course, have the advantage that they know what it is precisely.

Second. Dr. Kissinger at a press conference in Moscow a day later, May 27, stated in answer to a question:

> Because of the difficulty of the fact that some of the Soviet boats have 12 missiles and some have 16 missiles, the Soviet argument was that they had 48 submarines under construction with 768 missiles. Our assessment was less. The figure we adopted is 710, if you consider new missiles, and 740 if you add in the 30 of the older missiles that they have on submarines.
>
> In either event, if they want to get up to the ceiling of 950 modern submarine-launched missiles, they have to retire 30 of the old submarine-launched missiles plus 210 of the ICBMs.

(The foregoing statements are printed in the hearings of the Senate Committee on Armed Services, at pages 102 and 107.)

Third. The President and the American negotiators were fully informed that the Soviet Union claimed that 48 submarines were—deployed or—under construction. They also knew that our intelligence estimates were that the number under construction was in the range of 41 to 43 or 44.

Fourth. U.S. intelligence estimates have now firmly fixed on the figure of 42 new Soviet submarines deployed or under construction, according to our criteria as to when construction begins.

Fifth. The explanation for the confusion that arises from the difference in U.S. estimates of the number of submarines deployed or under construction and Soviet statements, is a different view as to—that one does not know at—what precise point in the assembly process one can assert that construction begins.

Sixth. I am satisfied after a full briefing that there is no evidence that the United States was deceived with respect to the number of Soviet submarines deployed or under construction at the time the interim agreement was signed by the President.

STRATEGIC EQUALITY AND AMERICA'S SAFETY

Mr. JACKSON. Mr. President, in addressing ourselves to the interim agreement on strategic offensive arms signed by the United States and the Soviet Union, I believe all of my colleagues share a common central conviction: That this agreement and those which may follow are of vital importance to the future well-being of America. Because this is so, many of us now find it imperative that, in ratifying this agreement, the Senate of the United States meet its constitutional responsibility and give the advice without which our consent becomes mere acquiescence.

I have found a most revealing lesson in reviewing this country's recent approach to the limitation of strategic armaments. You might recall, for example, that in the midsixties it was widely predicted that the United States had such an imposing lead in strategic arms that the Soviet Union would not even attempt to catch up. When in subsequent years it appeared that the U.S.S.R. was, in fact, determined to do precisely that, many people predicted that Moscow sought no more than something called strategic parity, defined in terms of generally equal numbers of major intercontinental strategic systems. And now, in so short a time, we find that the Soviet Union has surpassed this Nation, not by small but by substantial margins, in numbers of ICBM's, in numbers of submarine-launched nuclear missiles, and by an enormous margin in the total throw-weight of their offensive weaponry.

This is the situation which confronts us and which must be in the forefront of our deliberations on this agreement. We must ask ourselves whether it can be a matter of indifference that the balance of strategic power has altered so sharply in this short period. And we must ask whether the Senate, as a responsible coequal branch of this Government, wishes to enshrine the existing disparity by approving the interim agreement without additional expression of views. I believe the Senate should declare that it will exercise its solemn responsibility and state to the executive leadership—with a clarity that cannot be misunderstood by the leadership of the Soviet Union—that any final agreement negotiated on this subject must contain far greater equity. I ask the Senate to declare that this country should not, cannot and will not accept an inferior position in so vital an element of our national defense.

This is what my bipartisan, broadly cosponsored amendment says clearly and simply. I confess to wonderment that any of my Senate colleagues could be content with less. I am certain most of my colleagues agree on the necessity that we not accept in SALT II levels of intercontinental strategic weapons that are inferior to the levels of intercontinental forces permitted for the Soviet Union.

I remind you that when we entered into the SALT I discussions we were superior in numbers of intercontinental strategic weapons but were prepared to accept as inevitable, equitable and—some would say—perhaps even desirable, a rough numerical equality between ourselves and the Soviet Union. At a time when our numbers were greatly in excess of theirs we saw this for what it was—a major concession from our earlier position of manifest superiority. But while we were exercising this self-imposed unilateral restraint Soviet efforts proceeded on what can only be described as a crash basis.

In some quarters a myth has grown up that the size of the forces of our potential adversary is a matter of indifference so long as we maintain some minimum level of retaliatory force. The argument is made that anything beyond this minimum is redundant, without meaning for security—mere "overkill." The fallacy of that notion hardly needs to be addressed. People and nations attach meaning to the relative strategic position of the two superpowers: We do, our allies do, and our potential adversaries do. When we had a large strategic advantage in the 1960's, we were confident that there were limits to Soviet adventuresome actions. And even when those limits were breached—as in the case of the Cuban missile crisis—our great superiority in strategic weaponry contributed to a reestablishment of a more satisfactory relationship, that is, the withdrawal of Soviet strategic offensive forces from Cuba.

Mr. President, the political impact of strategic forces is all too frequently overlooked. As a distinguished former Israeli scholar has said it is the perception of the power of the United States and the Soviets that—

> will determine which superpower is likely to "blink first" in a potential confrontation crisis and which one, in anticipation of such a denouement, will be tempted to precipitate such a crisis; it will sway other states and will play a major part in shaping the global "lineup".

If we again find ourselves in a crisis confrontation, as we have in the recent past in the Middle East, would we want our President and our country to face such a crisis with manifestly inferior strategic forces? Would our own fortitude in such circumstances be as great as it was in the past? Would our allies be as confident of our determination? And most dangerous of all, would our adversaries? Such a situation is rife with temptation and opportunity for disastrous miscalculation.

Much American thinking about Soviet behavior has been distorted in recent years by the highly simplistic mechanistic "action-reaction" dialog models, spawned in the 1960's. These models, in effect, deny the significance of Soviet political aims and deny the existence of a deliberate and dynamic Soviet policy in which military power plays a vitally important role. Soviet leaders are good enough Leninists to appreciate the value of the initiative.

And a distinguished student of Soviet policy pointed out:

> Militancy is so deeply entrenched in the mentality of the Soviet elite; it follows so naturally from the character of its personnel and its relationship to the population at large . . .

Accordingly, he observed, the Soviets understand the use of threats of blackmail:

> . . . Soviet methods of waging political warfare is the practice of making limited, piece-meal encroachments on Western positions to the accompaniment of threats entirely out of proportion to the losses the West is asked to bear.

We have learned from recent history that the opportunity to exert political pressure behind the cloak of massive military power is a technique only too well understood by the Soviet Union. Remember Czechoslovakia. Soviet military power can be used to snuff out the freedom of millions of people, by threats and blackmail, without firing a shot.

The question before us now is not whether the United States should attempt to reestablish a massive superiority in the weight of our nuclear armaments. Though our industrial base is much superior in size and sophistication to that of the Soviet Union, I and my colleagues who support my amendment are not advocating that. To the contrary we are insisting only that our nation not make it the law of the land that the United States must accept a position of inferiority. And, as I have said, far from "building up" I would hope the United States would secure a follow-on SALT agreement that would obligate the Russians to "build down."

Some people, including Members of this body, have argued that to give our advice in approving this agreement is to somehow signal a lack of trust and confidence in the Soviet Union. Can we responsibly discharge our duties to the Nation by reliance on an act of faith? I confess I find this a uniquely American naivete which I do not believe the Soviets reciprocate. Let me quote from testimony before our Subcommittee on National Security and International Operations by the director of the Russian Research Center at Harvard University:

> When the United States makes a proposal to the Soviet Union, it invariably includes in it provisions designed to make it palatable to the other party; in other words, it makes concessions in advance of actual negotiations, assuming the other party will do likewise. But where the other party is a country like the Soviet Union, without a great commercial tradition and furthermore impelled by ideology toward intransigence, this assumption does not hold. The Russian position always represents the actual expectations of the Soviet government, weighted down with additional unrealistic demands to be given up in exchange for the other side's concessions. In this sense, the Russians always enjoy an immense advantage in negotiating with a country like the United States. Any compromise works in their favor insofar as the American preliminary position already includes some concessions which need not be fought for at all.

If there are those among my colleagues in the Senate who feel some of us are overly lacking in trust of the Soviet Union then I suggest they cite their basis for adopting a less prudent approach. Is it because Soviet society is liberalizing? Andrei Amalrik, the liberal Soviet writer, would challenge this view. He maintains that not merely is the present degree of freedom in the USSR minimal compared with what is required of a developed society, and is moreover shrinking, but that the whole concept of "liberalization" is misleading, since it implies some sort of deliberate plan to adapt the Soviet system to modern conditions. Amalrik said:

> As we know there was, and there is, no such plan.

At the same time he feels that it is equally false to think of the regime making piecemeal concessions to the pressures of society.

One cannot help but be impressed with the irony that on almost the same day some few months ago the chairman of the Foreign Relations Committee was attacking Radio Free Europe, while Alexander Solzhenitsyn was risking his liberty by speaking out in defense of Radio Free Europe.

Mr. President, over the last 3 years in my capacity as chairman of the SALT Subcommittee of the Committee on Armed Services, I have endeavored to follow the course of the negotiations and the evolution of the American position. I have been dismayed at the rapidity with which we have tended to recede from sound positions related to our strategic objectives to positions dictated only by a hasty desire to accommodate Soviet recalcitrance. In some cases, the result has been the adoption of positions unrelated or even contrary to the requirements for strategic stability. I am not alone in thinking this. I know of no one in a responsible position in the administration who believes that the interim agreement, with the wide disparities in numbers and size of strategic launchers, is acceptable to the United States as a permanent and final agreement.

Mr. President, we are not a nation which has based its survival on unsupportable sociological theories about our adversaries. Nor are we a people who believe that our fate can be entrusted to someone other than ourselves. We are prepared to live in peace with all nations on a basis of mutual tolerance. But this does not mean that we can abandon our military margin of safety.

For all these reasons, Mr. President, it is not in the interest of this Nation, nor is it beneficial to the future of individual liberty, that the United States accept an inferior position in any long-term agreement on strategic offensive weapons. The Senate should join with our SALT negotiators and administration spokesmen in rejecting, for the future, the sort of disparities in strategic weapons that we have agreed to, on an interim basis, in the present agreement. My amendment provides the Senate with the opportunity to declare itself in favor of strategic equality and strategic stability. I am certain that, in view of the fundamental soundness of that position, we will vote to affirm it.

EFFORTS TO VOTE ON SENATE JOINT RESOLUTION 241

Mr. JACKSON. Mr. President, for the past 2 weeks I have endeavored to work with the able Senate leadership in an effort to find agreement on the disposition of Senate Joint Resolution 241. I very much regret that we have failed in our efforts to bring this matter to a vote before the August recess.

From the outset I have announced repeatedly my willingness to agree to limit debate on the interim agreement, on my amendment to Senate Joint Resolution 241 and on all amendments to my amendment. I have rejected the suggestion that we ought to arrive at a piecemeal unanimous-consent agreement that would cover the disposition of some amendments while leaving the disposition of other related amendments for the indefinite future without time limitation.

Mr. President, I have been willing to accept any reasonable and fair procedure for bringing this matter to a conclusion. I was willing—and I worked with the leadership to secure agreement on this—to divide the votes on Senate Joint Resolution 241, some to take place now, before the recess, and some to take place at a time certain after the recess. I have been willing to set aside a generous amount of time for the discussion of any and all amendments. I am sorry to report that all such efforts have met with failure.

As the leadership is aware, I gave immediate approval to a limitation on debate on the ABM treaty. That was disposed of in 1 day. I believe that it would be helpful to include in the Record at this point excerpts from the discussion that took place on the floor on the 11th and the 14th and my statement of the 16th. On those occasions I believe that I made clear my willingness to proceed to an expeditious consideration of these matters and a timely vote.

There being no objection, the material was ordered to be printed in the Record, as follows:

AUGUST 11, 1972

Mr. Mansfield. Mr. President, during the course of the colloquy the Senator indicated he had been waiting for a week to vote, that there had been a delay in the consideration of the interim agreement, and the Senator is correct.

Now, is the Senator prepared to consider this afternoon a time certain to vote on the Senator's amendment?

Mr. Jackson. The Senator is aware that my position on a unanimous agreement has been clear from the very beginning. It was made clear to the Senator from West Virginia (Mr. Robert C. Byrd) last week. What really surprised me was that when the Senator from Washington offered an amendment, the pending business was laid aside. I made no objection to the unanimous-consent request. I made it clear that I would enter into a fair and equitable unanimous-consent agreement. I will be glad, when I complete my statement, to discuss that with the majority leader.

Mr. Mansfield. Well, I think we ought to discuss a few things publicly before we get to that, because we have discussed this privately, and we have reached a tentative agreement—very, very tentative—but would the Senator consider the possibility of voting at a time certain, say on Monday, on his amendment, with a time limitation of 1 hour on all other amendments after that, and with 4 hours on the bill?

Mr. Jackson. Well, I do have to talk to some of my colleagues. I have not been able to do that with one Senator who is away and will not be back until Monday night. I can say this much: I will certainly make every effort to try to reach a unanimous consent agreement to vote some time in the afternoon or early evening on Monday, in any event not any later than Tuesday, and I hope it will be Monday; but I do want to have a chance to do that. I have been holding the floor most of the afternoon, and I want to talk to my colleagues in that regard. But I want to cooperate with the majority leader.

Mr. Mansfield. I appreciate the Senator's cooperation. I would be prepared to give the Senator to whom the Senator from Washington refers a live pair if the one vote did not make a difference in the result of the tally.

Could the Senator meet with his colleagues sometime this afternoon and, for the benefit of the Senate, perhaps make a proposal which would be agreeable to both sides?

Mr. Jackson. I will certainly try, and I will do everything I can. I told the Senator right along I would, and I told the Senator from West Virginia (Mr. Robert C. Byrd), as the majority leader knows, at the very beginning, I was the one who agreed immediately to a unanimous-consent agreement on the ABM treaty that we worked out. I indicated that as soon as I had some idea when the Interim Agreement was going to come up—and I, of course, had no way of knowing when it was going to come up, after it had been set aside each day—that I would agree to a fair unanimous-consent arrangement after consultation with other Senators who might or might not be out of town.

Mr. Mansfield. I thank the Senator.

Mr. Jackson. Again I want to reiterate that I shall do everything I can to achieve that objective.

AUGUST 14, 1972

Mr. Jackson. Mr. President, let us keep the record straight, and I hope the majority leader will note this:

The Senator from Arkansas has said that I am trying to delay this matter. I think the record will disclose that the Senator from Washington has agreed to a time limitation provided that all amendments are included in that limitation. Am I correct? I ask the majority leader.

Mr. Mansfield. Yes, if the Senator will yield.

Mr. Jackson. I do not want to be accused of delaying this matter, because the record is to the contrary.

Mr. Mansfield. We did reach a tentative agreement yesterday in the minority leader's office, at a meeting attended by the distinguished Senator from Washington, and the agreement was to vote on the pending amendment at 4 o'clock today, to be followed by a vote on the Brooke amendment at 6 o'clock at which time the amendment of the Senator from Washington would be laid before the Senate.

I say the agreement was tentative. Then there was another meeting at which it was pointed out that it was only an open ended agreement, and it was thought that all amendments should be considered on a limited time basis.

I endeavored with might and main to reach an agreement on that basis, with the consent of the distinguished Senator from Washington, but my efforts met with failure.

Mr. Jackson. Mr. President, the record will disclose that I have indicated I am willing to reach a unanimous-consent agreement on the bill and on all amendments thereto, under appropriate arrangements. That is my position.

I say to the majority leader that I am not trying to hold up action on his amendment. I am just continuing where I left off. As Senators will recall, I did not finish my formal statement on Friday. I have no desire to delay, but two or three Senators indicated they had amendments to my amendment—and one of them is a member of the Senator's committee—perfecting amendments from the floor.

I just want the record clear here. The facts are that on the ABM treaty debate I joined in advance to the unanimous-consent agreement to vote at a time certain. It was all worked out with the assistant majority leader. I assured them of the same course of action, in connection with the pending agreement. But let us keep the record straight. When the chairman of the Committee on Foreign Relations talks about the Senator from Washington delaying the measure, I think he should state all the facts.

So I shall undertake to do this in a proper way; and I am ready and willing for a unanimous-consent agreement to be entered into under the proper terms, so that we can limit debate. The majority leader understands that, and I stand by my word. I regret that the Senator from Arkansas would deny this arrangement and an effort to reach an accommodation to move along; but if he wants to do it, that is his right.

Mr. Mansfield. Mr. President, will the Senator yield?

Mr. Jackson. I yield.

Mr. Mansfield. The Senator has shown himself to be most cooperative. I wonder whether he would consider another possibility, and that is that the vote on the pending amendment, by itself, occur at a time certain.

Mr. Jackson. Certainly.

Mr. Mansfield. What time?

Mr. Jackson. Four o'clock?

Mr. Mansfield. Fine.

Mr. Allen. Reserving the right to object. Mr. President——

Mr. Mansfield. Mr. President, I suggest the absence of a quorum, with the right of the Senator from Washington to retain the floor.

The Presiding Officer. Without objection, it so ordered.

The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. Jackson. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The Presiding Officer (Mr. Allen). Without objection, it is so ordered.

Mr. Mansfield. Mr. President, if I may have the attention of the distinguished Senator from Washintgon, he may recall that earlier today I suggested that it might be possible to have a vote on the pending amendment. And he indicated that there was a possibility. Could I ask if there is any possibility that the pending amendment could be voted on this afternoon?

Mr. JACKSON. Mr. President, I personally have no objections. However, others want all the amendments on a unanimous-consent agreement brought together as close as possible in one day. So I would have to object.

STATEMENT OF SENATOR HENRY M. JACKSON, AUGUST 16

It will be two weeks tomorrow since I introduced my amendment calling for U.S.-Soviet equality in a SALT II treaty limiting offensive nuclear weapons. Two weeks ago both the ABM treaty and the Interim Agreement signed in Moscow were brought before the Senate. I voted to ratify the ABM treaty which provides for U.S.-Soviet equality.

The time has come for opponents of my bipartisan amendment to end their continuing oblique attacks on the principle of equality in SALT II by permitting the Senate to vote its approval of the Interim Agreement along with the advice of the Senate that we must insist upon equality in the future.

Mr. JACKSON. Mr. President, I very much hope that those of my colleagues who oppose the advice that I should like the Senate to give along with its consent to the interim agreement, would nevertheless agree to a time certain for a vote on final passage following the forthcoming recess. I will make every effort to accommodate a fair and equitable arrangement that will give the President the approval he needs and the advice I believe the Senate will vote to offer.

ESTABLISHMENT OF THE GRANT-KOHRS RANCH NATIONAL HISTORIC SITE, MONT.

Mr. BIBLE. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on S. 2166.

The PRESIDING OFFICER (Mr. BEALL) laid before the Senate the amendment of the House of Representatives to the bill (S. 2166) to authorize the establishment of the Grant-Kohrs Ranch National Historic Site in the State of Montana, and for other purposes", which was to strike out all after the enacting clause, and insert:

> That, in order to provide an understanding of the frontier cattle era of the Nation's history, to preserve the Grant-Kohrs Ranch, and to interpret the nationally significant values thereof for the benefit and inspiration of present and future generations, the Secretary of the Interior (hereinafter referred to the as "Secretary") is hereby authorized to designate not more than two thousand acres in Deer Lodge Valley, Powell County, Montana, for establishment as the Grant-Kohrs Ranch National Historic Site.
>
> SEC. 2. Within the area designated pursuant to section 1 of this Act, the Secretary is authorized to acquire lands and interests in lands, together with buildings and improvements thereon, by donation, purchase or exchange. The Secretary shall establish the Grant-Kohrs Ranch National Historic Site by publication of a notice to that effect in the Federal Register at such time as he deems sufficient lands and interests in lands have been acquired for administration in accordance with the purposes of this Act.
>
> SEC. 3. Pending such establishment and thereafter, the Secretary shall administer lands and interests in lands acquired for the Grant-Kohrs Ranch National Historic Site in accordance with the Act of August 25, 1916 (39 Stat. 535; 16 U.S.C. 1, 2-4), as amended and supplemented, and the Act of August 21, 1935 (49 Stat. 666; 16 U.S.C. 461 et seq.), as amended.
>
> SEC. 4. There are authorized to be appropriated $350,000 for land acquisition and not to exceed $1,800,000 (July 1971 prices) for development plus or minus such amounts, if any, as may be justified by reason of ordinary fluctuation in construction costs as indicated by engineering cost indices applicable to the type of construction involved herein.

Mr. BIBLE. Mr. President, the amendments of the House to S. 2166, to authorize the establishment of the Grant-Kohrs Ranch National Historic Site in the State of Montana, are technical in nature and do not change in any way the substance of the bill as passed by the Senate.

Therefore, Mr. President, I move that the Senate concur in the amendments of the House of Representatives to S. 2166.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Nevada.

The motion was agreed to.

ENROLLED BILL PRESENTED

The Secretary of the Senate reported that today, August 17, 1972, he presented to the President of the United States the enrolled bill (S. 3824) to authorize appropriations for the fiscal year 1973 for the Corporation for Public Broadcasting and for making grants for construction of noncommercial educational television or radio broadcasting facilities.

ORDER FOR ADJOURNMENT TO 10 A.M.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in adjournment until 10 a.m., tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

RURAL DEVELOPMENT ACT, 1972—CONFERENCE REPORT

Mr. TALMADGE. Mr. President, I submit a report of the committee of conference on H.R. 12931, and ask for its immediate consideration.

The PRESIDING OFFICER (Mr. BEALL). The report will be stated by title.

The assistant legislative clerk read as follows:

> The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 12931) to provide for improving the economy and living conditions in rural America, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by a majority of the conferees.

The PRESIDING OFFICER. Is there objection to the consideration of the conference report?

There being no objection, the Senate proceeded to consider the report.

(The conference report is printed in the House proceedings of the CONGRESSIONAL RECORD of June 4, 1972, at pages H5643–H15650.

Mr. TALMADGE. Mr. President, I ask unanimous consent that the following staff members of the Committee on Agriculture and Forestry have the privilege of the floor during the consideration of the conference report: Mike McLeod, John A. Baker, Forest Reece, and James E. Thornton.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. TALMADGE. Mr. President, I yield to my colleague, the ranking minority member of the committee, the distinguished Senator from Iowa.

Mr. MILLER. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. MILLER. Do I understand correctly that there is a 30-minute time limitation on the conference report?

The PRESIDING OFFICER. The Senator is correct—15 minutes to a side.

Mr. MILLER. Mr. President, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. TALMADGE. Mr. President, I do not recall any bill providing for rural areas development ever considered by the Senate that received longer and closer attention than the bill now before the Senate.

The Senate will recall that in the Agricultural Act of 1970, we adopted in title IX a strong, forthright statement of national policy of balanced national growth giving highest priority to rural community development.

Section 901(a) of that act stated:

> The Congress commits itself to a sound balance between rural and urban America. The Congress considers this balance so essention to the peace, prosperity, and welfare of all our citizens that the highest priority must be given to the revitalization and development of rural areas.

To help implement that policy, the Committee on Agriculture and Forestry established a standing Subcommittee on Rural Development. This subcommittee, under the leadership of the junior Senator from Minnesota, joined by a bipartisan group of dedicated Senators, held seven separate field hearings in various parts of rural America.

In addition, the subcommittee held a total of 10 days of hearings in Washington. At these hearings, testimony was received from a broad range of witnesses—Cabinet members and farmers, conservationists and developers, educators and bankers, State Governors and individual citizens, economists and architects, area development specialists and electric power experts, young and old—a total of 350 individual witnesses. Also, the subcommittee received a great deal of information and statistics which were printed in the hearing record.

Following these hearings, the Rural Development Subcommittee met in executive sessions and reported to our full committee two separate bills to improve rural conditions. The full committee then held nine executive sessions over the period from November 2, 1970, to March 21, 1972, to consider the two subcommittee bills and a variety of other rural development bills that had been introduced by many Senators and referred to other subcommittees. From all of these proposals, one or another of which were sponsored or cosponsored by more than 90 Members of this body, the Committee on Agriculture and Forestry worked out a balanced, well-rounded Rural Development Act of 1972.

The committee bill, after adoption of a number of floor amendments, was passed unanimously by the Senate on April 20, 1972.

After passage of the bill by the Senate, a conference was held with the House. The Senate and House conferees sat for 6 days, sometimes in all-day sessions, in attempting to reach agreement, which we did.
